1910.

MINUTES OF EVIDENCE

APPENDIX

A List of the Appendix Volumes to the Reports of the Royal Commission on the Poor Laws and Relief of Distress will be found at the end of this Volume.

LONDON:

PRINTED FOR THE MAJESTY'S STATIONERY OFFICE
BY WYMAN AND BONS, PRINTERS, 15, FLEET STREET, E.C. 4.

As the Commission was directed to report on the state of the law relating to the poor, and on the measures for their relief, it was necessary to collect evidence from all parts of the country. The evidence was collected by the Commission's Agents, who were appointed in each of the principal towns and districts. The evidence was then brought together at the Commission's Office, and was there examined and discussed. The result of the Commission's inquiries is set forth in the following Reports.

ROYAL COMMISSION ON THE POOR LAWS AND RELIEF OF DISTRESS!

MINUTES OF EVIDENCE

TAKEN BEFORE

THE ROYAL COMMISSION

ON THE

POOR LAWS AND RELIEF OF DISTRESS.

ONE HUNDRED AND FORTIETH DAY.

Tuesday, 14th January, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. C. S. LOCH.
Mr. J. PATTEN-MACDOUGALL, C.B.

The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. CHARLES CLEVELAND ELLIS, called ; and Examined.

Mr. Charles
Cleveland
Ellis.

89048. (*Chairman*.) You are in charge of the branch of the Local Government Board for Scotland which deals with the administration of the Unemployed Workmen Act, are you not ?—Yes.

89049. You have been kind enough to prepare for us a very good Memorandum as to the administration of the Unemployed Workmen Act in Scotland, which, if you will hand in, we will take as your evidence-in-chief ?—If you please. (*The Witness handed in the following Statement.*)

1. I am in charge of the branch of the Local Government Board dealing with the administration of the Unemployed Workmen Act and am thus intimately acquainted with the procedure of the Board under the Act, and have been in close personal touch with the various distress committees that have been established.

2. I purpose to place before the Royal Commission statements containing (1) an account of the steps taken by the Local Government Board to carry out the provisions of the Act, and (2) an expression of my own opinion as to the working of the Act, coupled with suggestions for its amendment.

STATEMENT No. 1.

UNEMPLOYED WORKMEN ACT, 1905.

3. The Local Government Board for Scotland are charged with the administration of the above Act in Scotland. The Act is compulsory only in royal, parliamentary or police burghs having a population according to the last census for the time being of not less than 50,000. The Board may, however, extend it to counties, and to burghs having a population of less than 50,000 on the application of any county, town, or parish council, or, if they think it expedient, in certain cases, without any such application.

4. The first step taken by the Board was to issue on October 5th, 1905, a circular to burghs having a population of 50,000 and over, explaining the provisions of the Act. On October 23rd a similar circular was issued to county councils, and on October 25th a circular was also issued to burghs with a population of less than 50,000. For copies of these circulars see pages 100, 107 and 111 of Report of Local Government Board for Scotland, 1905.

5. In pursuance of the Act, distress committees were constituted in the nine burghs with populations of over 50,000, viz., Aberdeen, Dundee, Edinburgh, Glasgow, Govan, Greenock, Leith, Paisley, and Partick. The Board's Order constituting these distress committees was issued on October 17th, 1905. For copy see page 102 of Report of the Local Government Board for Scotland, 1905.

6. The question of the constitution of the distress committees received careful consideration. The Act provides that the distress committee shall consist partly of members of the town council and partly of members of the parish council of every parish situated wholly or partly within the burgh, and partly of persons experienced in the relief of distress, and that at least one member of the committee shall be a woman.

7. Having in view the fact that the Act (Sec. 2 (1)) described the distress committee as a "Committee of the Town Council," it was deemed advisable to give that body a majority of representatives on the committee.

8. Sec. 1 (1) of the Act provides that the number of co-opted persons shall not exceed one-fourth of the total number. The presumption appeared to the Board that the number should, if anything, be less than one-fourth; accordingly they fixed the number of co-opted persons at one-fifth of the whole. It will be observed that the largest number of members of any distress

Mr. Charles Cleveland Ellis. committee was allotted to Glasgow, viz., forty. The number of members in other cases was fixed in proportion mainly to population. The number of town and parish councillors was fixed in the proportion of approximately three to two.

14 Jan. 1908.

Basis for size of Committees.

Establishment of Distress Committees

in burghs having less than 50,000 inhabitants.

Orders constituting Distress Committees.

Constitution of Committees in Dumfries, Inverness, and Pollokshaws.

Queen's Unemployed Fund.

Dalbeattie Central Body and Distress Committee.

9. In four cases the Board exercised the power conferred on them by Sec. 2 (1) of the Act, and established, by request of the respective town councils, distress committees in the burghs of Dumfries, Inverness, Kilmarnock, and Pollokshaws,—each of these burghs having a population of less than 50,000.

10. The Orders constituting the distress committees are similar to the General Order already referred to (*Appendix No. 4*). The constitution of the committees is as follows:—Dumfries, Inverness and Pollokshaws had each fifteen members, viz., seven from the town council, five from the parish council, and three persons experienced in the relief of distress. The Kilmarnock distress committee consists of twenty members, viz., nine from the town council of Kilmarnock, six from the parish council of Kilmarnock, one from the parish council of Riccarton, and four persons experienced in the relief of distress.

11. In addition, an application was received by the Board from the town council of the burgh of Dalbeattie for assistance from the Queen's Unemployed Fund, which, in Scotland, was distributed on the Board's recommendation. The fund was to be allocated among the various distress committees under the Act, and to enable Dalbeattie to participate it was of course necessary to constitute a distress committee. The burgh depends largely on the granite quarries, and these, owing to slackness of trade, having been shut down for several months during the winter of 1905-6, a number of men were thrown out of employment. On inquiry, the circumstances appeared to the Board to be such as the Queen's Fund and the Act were intended to meet. A local committee had been formed to deal with the unemployed, and it was considered advisable to constitute temporarily this committee a central body and distress committee, in terms of Sec. 3 of the Act, until such time as a central body and a distress committee could be permanently established. In due course the central body and distress committee were constituted in terms of the statute. For copies of both Orders see page 104, Report of Local Government Board for Scotland, 1906.

Special Committees.

12. Where it is not considered advisable to have a distress committee, or a central body and a distress committee, the Act provides for the establishment in counties, and in burghs with a population of less than 50,000, but not less than 20,000, of special committees whose duties are merely to collect information with respect to the condition of labour within their area by establishing, taking over, or assisting labour exchanges and employment registers. Special committees have been established for the burghs of Hamilton and Motherwell and the county of Lanark.

13. In two cases the Board declined to put the Act in operation:—

Refusal to put Act in operation in certain cases.

(a) The first case related to an application from the town council of Stornoway to put the Act in operation in that burgh, and in the four parishes of the Lews. The application was based on the ground that there had been a very unsuccessful fishing season, and in consequence a number of people were thrown out of employment. The Board gave the matter very careful consideration, but they arrived at the conclusion that the circumstances were not such as to justify them in establishing organisation under the Act. The Board had regard to Sec. 2 (3) of the statute, which provides that the persons to be assisted are those honestly desirous of obtaining work, but are temporarily unable to do so from *exceptional* causes over which they have no control. They were not disposed to favour the view that an unsuccessful fishing season was an exceptional cause of unemployment in the sense of the Act. It appeared to them rather to be one of those normal causes to which the fishing populations in general were subject, and against which they must continue to provide as they have had to do hitherto.

(b) The second application was received through the Congested Districts Board. That Board forwarded to the Local Government Board a petition they had received on behalf of the inhabitants of the Stoer district of the parish of Assynt in Sutherlandshire. The petition was to the effect that the inhabitants had hitherto depended for their subsistence upon the herring fishing, that the new modes of equipment necessary for the successful prosecution of that industry were beyond their reach, that no available means existed by which they could support their families, that they were on the verge of destitution, and that they would become utterly destitute unless a scheme for relieving their condition was forthcoming. The petitioners suggested that some work of public utility should be initiated by the Congested Districts Board to give immediate employment and so to stave off what threatened to be a grave crisis in that locality. It was obvious that the Local Government Board had no means of dealing with the matter unless by establishing organisation under the Unemployed Workmen Act. The circumstances, however, were practically identical with those obtaining in the Lews, and the Board had no alternative but to decline to take action.

14. Sec. 4 (3) of the Act empowers the Board to make regulations for carrying the Act into effect. They gave the subject anxious consideration, and issued their regulations, with a relative circular, on November 14th. For copies see page 115 of Report of Local Government Board for Scotland, 1905. The Scottish Board had a conference with representatives of the English Local Government Board with a view if possible of making the regulations for the two countries as nearly identical as circumstances would permit. The Board were, however, unable to agree with the English Board on several points, the chief of which may be enumerated as follows:—

(I.) Reference may be made to Art. II. of both the English and Scottish regulations stipulating the conditions under which an application may be entertained by a distress committee. The English regulations provided that a distress committee before entertaining an application were to satisfy themselves: (a) "that the applicant is not, and has not been, during the period of twelve months immediately preceding the date of the application, in receipt of relief (other than medical relief) at the cost of the poor rate"; (b) "that he has not in two successive periods of twelve months immediately preceding the date of the application been employed on work provided by a central body, or on work towards the provision of which a central body have contributed."

No such restrictions are contained in the Scottish regulations. The Board were not disposed to regard as a disqualification the receipt by an applicant of parochial relief, and they further considered that cases might arise where even the restriction marked (b) would operate harshly.

It may here be mentioned that on December 6th, 1905, the English Board issued temporary regulations modifying the principal regulations in respect of applicants who have been in receipt of parochial relief. It was there provided that "where the distress committee have satisfied themselves that an applicant has, during the period of twelve months immediately preceding the date of these regulations, been in receipt of relief (other than medical relief) at the cost of the poor rate," the application may be entertained, if the applicant be otherwise qualified.

On January 13th, owing to representations having been made to the English Board "that cases of hardship sometimes arise where the applicant has been obliged to have recourse to Poor Law relief after October 10th, 1905, but before the distress committees were established or in a position to receive applications," further regulations were issued by the Board repealing the temporary regulations and providing that "a person who has received relief during the period of fifteen months terminating at the end of the first day of January 1906 or, in the case of a distress committee, "whose first meeting is held after that day, during the period of fifteen months terminating at the end of the first month after that meeting, may be dealt with in the manner prescribed by the temporary regulations."

Refusal to put Act in operation in certain cases

Regulation and relative Circular;

Conditions under which applications may be entertained by Distress Committees in England and Scotland respectively

Modification of English regulations.

oval of
applied.

(II.) Art. IV. (3) of the English regulations dealing with the removal of unemployed persons provides that "the central body shall also satisfy themselves that the regular work which the unemployed person will be in a position to obtain at the place of destination will be of such duration, or that the facilities for other regular employment will be such as to afford every reasonable expectation that the person or persons whose removal is to be aided, will not become chargeable to the poor rate at any time during a period of twelve months after the removal.

The Scottish regulation (Art. IV., c) merely provides that the distress committee, "before removing the unemployed person shall obtain the consent of the distress committee or special committee, if any, for the area to which he is to be removed, or if no such committees have been constituted, the distress committee shall satisfy themselves that the removal will not prejudice employment or prospects of employment in the locality of the place of destination."

(III.) The Board could not see their way to go so far as the English Local Government Board in regard to the conditions under which a central body may provide or contribute towards the provision of work. Art. V. (1) (f) and (g) of the English regulations provide that the total remuneration of the person employed for any given period of continuous work shall be less than that which would under ordinary circumstances be earned by an unskilled labourer for continuous work during the same period in the place at which the work is provided.

The Scottish Board did not think it advisable to make any regulation regarding the rate of wages. In their covering circular of November 14th, 1905, they alluded to the matter as follows:—

"The Board have not deemed it necessary in the meantime to frame regulations prescribing the rate of wages to be paid to unemployed persons in respect of whom the distress committee provide or contribute towards the provision of temporary work. In thus leaving the question of wages to be decided by the distress committee, the Board have every confidence that the committee will give the subject their careful consideration and that, in the exercise of their discretion, they will fix such rate of wages as will deter a workman from leaving his employment in order to apply for assistance from the distress committee."

(IV.) Art. V. (iv.) of the English regulations provides that the "central body may, in the case of a person for whom temporary work has been provided, put an end at any time to the provision of temporary work for that person, and shall in no case continue the provision of temporary work for more than sixteen weeks in any period of twelve months except with the consent of the Local Government Board." The words in italics are omitted from the corresponding Scottish regulation.

gisters of
distress
committees.

(V.) Art. VII. of the English regulations provides that the distress committee shall keep a register. There is no similar provision in the Scottish regulations. The latter merely provide for the keeping of an alphabetical index to the record papers, leaving it to the discretion of the distress committee whether a register should be kept or not.

(VI.) The Scottish regulations as to the establishment of farm colonies, the provision of temporary accommodation for workers on land, and the acquisition of land (Arts. VII., VIII., and IX.), are less detailed than the corresponding English regulations (Arts. VIII., IX. and X.).

quisition
land by
central
bodies.

(VII.) Art. X. of the English regulations provides for the acquisition of land by a central body, but confers no powers on distress committees having the powers of central bodies. The English Board took the view that Sec. 4 (1) of the Act did not authorise them to incorporate distress committees, and that in consequence some difficulty might be experienced in granting a proper title in favour of distress committees in the event of their proceeding to acquire land. The English Board, therefore, in their regulations (Art. XXI.), in the case of boroughs and urban districts for which distress committees with the powers of central bodies had been established, provided that if land were acquired it should be at the instance of the councils of the municipal borough or urban district as the case might be. The Scottish Board, on the other hand, were of opinion that the term

"central body" in Sec. (3) (c) of the Act included distress committees with full powers, and their Regulations IX. (1) make provision accordingly. The Board did not, however, incorporate distress committees. It did not appear to them that the non-incorporation of distress committees need occasion any difficulty. In the one case in which a distress committee has acquired land in Scotland the Board advised that the title should be drawn in favour of A. B., chairman of the distress committee, and C. D., clerk to the distress committee, and their successors in office, on behalf of the distress committee.

(VIII.) Art. XX. of the English regulations provides for the co-operation of local authorities and distress committees, and enacts that the consent of the Local Government Board shall be obtained before the services of an officer of a Poor Law authority are placed at the disposal of a central body or distress committee. The Board reserve power to entertain or to refuse to entertain any such proposal. The Scottish regulation (No. XIX.) is unfettered by any restriction of this kind.

The record paper prescribed by the Scottish Local Government Board is in most respects the same as that originally prescribed by the English Local Government Board. The original record paper issued by the English Board was subsequently slightly modified, but the Scottish Board have not yet made any alteration on their form as originally issued.

AUDIT.

15. The regulations provide for the accounts of a distress committee being made up and audited in like manner and subject to the same provisions as the accounts of a county council. Secs. 68 to 70 of the Local Government (Scotland) Act, 1889, regulate the procedure relating to the audit of county council accounts, and they are also made applicable by Sec. 36 of the Local Government (Scotland) Act, 1894, to the audit of the accounts of parish councils. The audit of parish council accounts is under the jurisdiction of the Local Government Board, and the auditors are appointed by them. It appeared, therefore, to the Board to be desirable to appoint the parish auditors to be the auditors of the accounts of the distress committees, and, with one exception, this course was followed. On May 4th, 1906, the Board issued suggestions regarding the audit to the clerks to distress committees and to auditors, together with a form of abstract of accounts. For copies of these documents see page 63 of Report of Local Government Board for Scotland, 1906.

THE QUEEN'S UNEMPLOYED FUND.

16. The grants to distress committees in Scotland from the Queen's Unemployed Fund were made on the Board's recommendation. On January 2nd, the Board issued to distress committees returns on which they were invited to make application for a share of the fund. As stated in the Board's Twelfth Annual Report, p. xlv., the first distribution was made on the returns containing particulars for the period ended December 30th, 1905. Many of the distress committees, however, had not then commenced work, and the Board did not feel justified in recommending the distribution committee to distribute at the first distribution more than £2,250, which sum was apportioned as follows:—

	£
Aberdeen - - - - -	699
Glasgow - - - - -	1,511
Govan - - - - -	40

17. The second distribution was based on returns containing particulars for the period ended January 31st, and after full inquiry into the circumstances of each distress committee the Board, on February 15th, 1906, recommended a distribution of £4,023 as follows:—

	£
Aberdeen - - - - -	179
Dalbeattie - - - - -	200
Dundee - - - - -	478
Edinburgh - - - - -	1,730
Glasgow - - - - -	744
Govan - - - - -	107
Leith - - - - -	542
Partick - - - - -	43
	£4,023

Conditions
for applica-
tions to
board.

18. The Board pointed out to the distribution committee that there were four distress committees newly constituted and therefore not in a position to make a claim, and recommended that a sum of £1,000 should be held over for a further distribution in March, 1906, when these distress committees would have a chance of participating. This was agreed to, but only two of them were able to substantiate claims, viz., Inverness and Kilmarnock, grants of £155 and £23 being paid to them respectively.

19. The total of the general fund amounted to £91,361 3s. 2d. The amount of the grants to London was £28,000, leaving a balance of £63,361 3s. 2d.; 11 per cent. of which was allocated to Scotland, viz., £6,969 14s. 7d.

20. The total amounts paid in grants to distress committees in Scotland during the winter of 1905-6 out of the Queen's Fund amounted to £6,451, and the balance of £518 14s. 7d. was handed to the Board to distribute among distress committees at some future time, as they thought fit.

21. On February 24th, 1906, the Board issued a circular to distress committees stating that it appeared to them to be very desirable that, as soon as possible, arrangements should be made under which the money received from the Queen's Fund should be applied in assisting the unemployed in proper cases. For copy of this circular see page 59 of Report of Local Government Board for Scotland, 1906.

PARLIAMENTARY GRANT.

22. During the year 1906-7 Parliament voted a sum of £200,000 as a contribution in aid of the expenses of distress committees under the Unemployed Workmen Act. This sum was allocated by the Lords Commissioners of H.M. Treasury between the Local Government Boards for England, Scotland and Ireland. The amount received by the Board for distribution was £10,000. The amount spent from the grant was £7,552, and from the Queen's Unemployed Fund £526 11s. 1d. This sum was allocated as follows:—

Distress Committees.	Total Amount paid 1906-7.	
	From the Parliamentary Grant.	From the Queen's Unemployed Fund.
	£ s. d.	£ s. d.
Aberdeen -	1,287 0 0	200 0 0

	£7,552 0 0	£526 11 1*

* Includes £7, 16s. 6d. of interest.

23. The conditions under which the Board were prepared to consider applications were set forth in a circular issued to distress committees on October 19th, 1906, a copy of which will be found on page 80 of Report of Local Government Board for Scotland, 1906.

24. The circular is on similar lines to one of the two issued about the same time by the English Board. The only difference of procedure between the two Boards was that in England the Local Government Board decided beforehand that they would not entertain applications from certain distress committees. The Scottish Board, however, invited applications from all distress committees; but intimated that each case would be considered

and decided upon its merits, and that the Board in no way bound themselves to give any assistance unless they were satisfied that it was genuinely required.

LABOUR EXCHANGES.

25. The Act (Sec. 1 (4)) lays a duty on distress committees to establish, take over, or assist labour exchanges and employment registers, and the Board have impressed on distress committees the importance of this provision. In their circular of November 14th, 1905, (for copy see page 115 of Report of Local Government Board for Scotland, 1905), the Board state that they "regard this as one of the most important duties which the distress committee are called upon to perform, and they trust that special attention and consideration will be given to it." The Board found, however, that although many of the distress committees opened offices and termed them "labour exchanges" there was an absence of any systematic attempt to organise a proper exchange. They accordingly, on October 25th, 1906, issued a circular (a copy of which will be found on page 82 of Local Government Board Report for Scotland, 1906) indicating generally the lines on which distress committees should proceed. The point the Board desired to emphasise was that the labour exchange was not merely an office at which applications for assistance under the Unemployed Workmen Act were to be received. They pointed out that it might be convenient to receive applications for relief work at the exchange, but in such cases the superintendent should be made to clearly understand that he may have to deal with two distinct classes of applicants, namely: (1) those who desire relief work to be provided for them by the distress committee in terms of the Act; and (2) those who do not wish such work, but who desire the assistance of the labour exchange in procuring employment for them at their own trades with ordinary employers of labour.

VACANCIES IN DISTRESS COMMITTEES.

26. The annual retirement in November of a number of town councillors from office may give rise to vacancies on distress committees. This is just the period of the year when it is desirable to lose no time in filling such vacancies. The Board therefore issued a circular directing that any vacancies which may occur among the members of the distress committee appointed by town councils from their own bodies should be filled at the statutory meeting falling to be held on the Friday after the town council election. For copy of this circular see page 91 of Report of Local Government Board for Scotland, 1906.

RECORDING OF APPLICATIONS.

27. The Board were asked whether it was essential to keep the labour exchange open all the year round. In the case in point the exchange was also the office at which applications for relief work under the Act were received, and the question whether the exchange was to be kept always open involved really the further question whether the distress committee were to receive applications for relief work at all seasons.

28. Apparently the distress committee were of opinion that if they declined to provide work they were at liberty to decline to receive applications. Differing somewhat again from the view taken by the English Board (see their circular of October 10th, 1905, to councils of populous burghs and urban districts), the Scottish Board were not disposed to take the view that it was open to the distress committee to decline to receive applications from persons unemployed. The Act (Sec. 1 (2)) provides that the distress committee "shall make themselves acquainted with the conditions of labour 'within their area,' and it seemed to the Board that the most effectual—if not the only satisfactory—way of carrying out that duty was for them to receive and inquire into any applications made to them from persons out of employment. It was of course open to the distress committee to provide work or not as they thought fit.

29. The same question arose in regard to emigration. A distress committee declined to take up the question of emigration, and having so resolved, they inquired whether they must continue to receive applications. The Board intimated that their circular was intended to apply to all applications from persons unemployed. As in the case of relief work, the distress committee

could not be expected to know whether the unemployed desired to emigrate if they declined to receive applications. A copy of the Board's circular will be found on page 63 of the Local Government Board Report for Scotland, 1907.

ACQUISITION OF LAND.

30. The Board have recently consented to the acquisition of about 591 acres of land by the distress committee for the city of Glasgow for the purpose of establishing a farm colony. The estate is situated in the parish of Cumbernauld, in the county of Dumbarton. About 363 acres consist of moorland which the distress committee hope to reclaim by unemployed labour with the aid of refuse to be supplied (some 1,400 waggons per annum) by the Corporation Cleansing Department. The purchase price of the estate was £7,355. A railway siding is to be constructed at a cost of approximately £4,250. The Board have sanctioned the distress committee borrowing to defray the cost, the whole sum to be repaid in a period not exceeding ten years.

31. The Board were also consulted by the Edinburgh distress committee regarding the acquisition of a piece of moss land for reclamation purposes by means of unemployed labour, but the negotiations fell through, and nothing further has in the meantime been done.

32. The distress committee of Govan have also under consideration the acquisition of land for the purposes of the Act.

33. The foregoing statement contains an account of the steps taken by the Board. It only remains to be added that the policy of the Board from the commencement has been to give the Act a fair trial and to encourage distress committees to do the same. The Act has been difficult to work in many respects, but the Board have taken as liberal an interpretation of its provisions, especially the rating provisions, as was consistent with sound administration. A Return containing detailed information as to the first year's working of the Act was published as a Parliamentary Paper (Cd. 3,431, 1907), and a similar Return as to the second year's proceedings is in course of preparation.*

STATEMENT No. 2.

34. In the administration of all Acts of Parliament difficulties invariably arise, and it could hardly be expected that such difficulties would be absent in connection with the administration of an Act seeking to deal with such a complex problem as that of the unemployed. In some quarters the Act has been termed unworkable, but I think it will be found that in those cases where the distress committees have been really anxious to work it, they have been partially, at any rate, successful, and that they have received assistance to that end from the Local Government Board. One advantage that may be claimed by the Act is that it has laid the foundation for the collection of statistics of a valuable character, but I question whether it is, except to a comparatively small extent, assisting the men that it was intended to assist, viz., those who are honestly desirous of obtaining work, but are temporarily unable to do so from exceptional causes over which they have no control. I do not wish to infer that the applicants to distress committees are generally of an undeserving class. On the contrary, I am aware that distress committees have dealt with many deserving cases; but there is no getting away from the fact that the applicants are, to a considerable extent, men who are unemployed, not from exceptional causes, in the sense of the statute, but from permanent causes, over some of which (e.g. old age, or other physical infirmity) they have no control. That many are out of employment through their own fault is beyond question.

35. It is no doubt true that a distress committee is not entitled to relieve the wastrel or loafer, but these men have to live, and they do live either in prison, in the poorhouse, or on the charity of their neighbours. It is desirable to keep them from both the prison and the poorhouse, and to discourage them from continuing a life of indolence, and I confess that for such a class I know of no place other than a penal colony.

36. The most difficult portion of the unemployed problem seems to me to be the question of how to provide

for those men who are of good character but unemployed from old age or possibly some slight physical defect. That they are an increasing class seems unquestionable. The tendency of modern conditions under which work is performed is to leave stranded those who are not quite so well able to run the race of life as they used to be. Employers under modern competition can only afford to engage the best men, their liability under the compensation Acts and otherwise, the clamour for standard rates of wages—all these things have a tendency to make employers pass over those men who are in the slightest degree physically unfit, if any person better qualified is to be found. I have been told that even the wearing of spectacles has been against a man getting a job. Here, then, is a class rapidly growing for whom provision has to be made, and they, in my opinion, form a large proportion of the applicants to distress committees, and they will remain with distress committees so long as they can obtain employment. They are the permanent unemployed, and I fear there is little chance of many of these being reinstated with ordinary employers of labour, certainly not unless there is an exceptional demand in the labour market. The farm colony is probably the best place for these people, and indeed, I think, the only means by which a distress committee can usefully afford relief. But the policy of establishing organisations for the purpose of largely dealing with this class—a superior form of Poor Law authority, so to speak—raises difficult economic questions which I do not purpose to discuss. I merely wish to record my opinion that if the man who is able-bodied but won't work—the loafer—were provided for at a penal colony, and the class just alluded to could be satisfactorily provided for in some other way, a very large section of the unemployed problem would be solved.

37. As an illustration of the class of men that apply to distress committees, I may mention that at the present time there are very extensive works going on at Loch Leven Water Power Works at Ballachulish. The contract, which is being executed by Messrs. Sir John Jackson, Ltd., of London, includes the construction of a large dam on the hills and a waterway running therefrom for four or five miles to an aluminium factory which is in course of construction. In July the contractors were employing over 2,000 men and were in need of an additional 1,000 or 1,500. The Board were informed of the particulars of this work by the clerk to the Glasgow Distress Committee, and they at once communicated the information to all distress committees in case they might have men on their books suitable for the work. The Board pointed out to the distress committees that it would be competent for them to remove the men to Ballachulish if they thought fit and charge the cost to the rate contribution account. As a result, a number of men, said to be specially selected and accustomed to that class of work, were despatched from various centres. When, however, the Glasgow Distress Committee were about to send their contingent, they received the following communication from the manager:—

"We have come to the conclusion that it is quite useless sending men through here.

"Mr. — brought forty-five men on Saturday, and we have not one left now to-day (Wednesday).

"We had a large batch of men through from Edinburgh, Leith and Dundee, who had their fares paid here by the distress committees of those towns, and with the exception of three cases, the men all left before their fare had been paid off.

"We find that the man who wants work can find his own way here, and is doing so, so that we are not prepared to take any further men with fares paid here."

INVESTIGATION BY DISTRESS COMMITTEES.

38. I am inclined to think that the investigation by some distress committees is not as thorough as it ought to be. If reference be made to the returns of the proceedings of distress committees in Scotland, issued by the Local Government Board, it will be observed that in Leith, during the period ended May 15th, 1906, 895 out of 911 were found qualified for assistance, that is 98 per cent.; in Dundee 766 out of 788, or 97 per cent.; in Edinburgh, 2,534 out of 2,740, or 92 per cent.; in Aberdeen, 1,142 out of 1,300, or 88 per cent. Yet in Glasgow only 39 per cent. were passed as qualified.

Mr. Charles Cleveland Ellis.

14 Jan. 1908.

Difficulty in providing employment caused by old age or slight physical defects.

Farm colonies the best form of relief for the permanent unemployed i.e., the aged and physically defective.

Class of persons applying to Distress Committees.

Result of sending unemployed to Ballachulish.

Strict investigation of applications essential. Proportion of applicants eligible for assistance in various towns.

* The return (Cd. 3830-1907) has now been published.

Mr. Charles Cleveland Ellis.
14 Jan. 1908.
Proportion of applicants eligible for assistance in various towns.

Again, if we take the figures for the year ended May 15th, 1907, we find that in Edinburgh the whole of the applicants were found qualified; in Greenock, 1,018 out of 1,057, or 96·31 per cent.; in Dundee, 610 out of 635, or 96·06 per cent.; in Aberdeen, 1,042 out of 1,285, or 81·09 per cent. But in Glasgow again only 915 out of 2,335 were passed, 39·19 per cent.

39. I can hardly believe that the characters of the applicants in Glasgow are so much worse than those in the other towns mentioned, and I am therefore forced to the conclusion that in one case practically every person who comes forward is entertained as qualified for assistance in terms of the Act, irrespective of character, whereas in other cases there is an attempt to confine the benefits of the statute to those honestly desirous of obtaining work and "who in the past have been regularly employed, well conducted, and thrifty." A great deal of course depends on the investigating officer.

THE NECESSITY FOR AN INDEPENDENT BODY TO ADMINISTER THE ACT.

40. I am not convinced that it was necessary to constitute an entirely separate body to administer the Act. So far, practically, distress committees have done nothing more than has been done for years before by the town council. One of the great drawbacks to distress committees is their utter helplessness to provide relief work without the assistance of town councils. In the majority of cases the distress committee have simply applied to the town council to provide relief work, which has been executed under the supervision of town officials, and the distress committee have paid the loss said to result from engaging unemployed workmen. If distress committees are to continue merely to act in this way, it is obvious that their duties could be quite well performed by the town councils themselves, and even assuming that they were going further and establishing farm colonies, etc., I am not sure but that the work would be as well done by town councils and at less cost. One advantage, too, would be gained, viz., the ratepayers would have direct representation on the body that has the spending power, whereas under the present system under which distress committees are elected, that representation is only indirect. A man may be elected to the town council with a view to his representing the community on the distress committee, but the electorate have no guarantee that he will be elected a member of the distress committee by the town council.

Advantage of administration of Unemployed Act by Town Council.

Constitution of Distress Committees.

Objection to administration of Unemployed Act by Parish Councils.

Objection to the term "Distress Committee," alternative term suggested.

Reasons for constitution of a Central Body and Distress Committee at Dalbeattie.

41. If, however, there is to be a separate body to administer the Act, I think the present constitution of distress committees satisfactory. The co-opted members especially, in my experience, have been among the most active of the members of distress committees, and have taken a large share of the work.

42. I would not favour the administration of the Unemployed Act being under the charge of parish councils. I think the endeavour should be to keep relief employment quite distinct from poor relief, and it would be difficult to convince the public that there was no connection if the Act were administered by the parochial authorities.

43. In connection with this aspect of the case I may refer to the fact that great objection has been taken to the term "distress committee." Some committees in advertising their office, etc., have purposely omitted the word "distress," as it conveys to the minds of the public that it is connected with some form of charity, and as a result the *bona fide* working man out of employment—the very man the distress committees want to help—keeps clear of the place until he is driven there by sheer destitution. "Unemployed" committee would be preferable to "distress" committee.

CONSTITUTION OF CENTRAL BODIES AND SPECIAL COMMITTEES.

44. I may refer to the circumstances under which it was deemed advisable to constitute a central body and distress committee for the burgh of Dalbeattie, and I shall endeavour to show how cumbersome is the procedure that has to be followed to put the Act in operation in a burgh having a population of less than 10,000. In such a case there is no power to constitute a distress committee with the full powers of a central body as in the case of a burgh having a population of 10,000 and over.

45. This procedure is unfortunate, and quite unnecessary in places like Dalbeattie. It involves the creation of two bodies where one would suffice. It may be well to describe the steps that had to be taken. In the first place, the Board had to fix the number of members of the distress committee and of the central body. The town council and parish council had each to appoint from their own body the number of members prescribed by the Board's Order, and the clerk to the parish council had to communicate to the town clerk the names of the members appointed by the parish council. The town clerk had then, for the purpose of appointing the persons experienced in the relief of distress, to convene a meeting of the persons appointed by the town and parish councils. The county council and the distress committee had then each to appoint from their own body the prescribed number of members of the central body, and the county clerk was to communicate to the clerk to the distress committee the names of the persons appointed by the county council. The clerk to the distress committee was thereupon, for the purpose of appointing the prescribed number of co-opted persons, to convene a meeting of the members of the central body appointed by the county council and the distress committee. The central body thus completed calls another meeting, at which it may proceed to transact business.

46. It is difficult to conceive anything more cumbrous than the procedure here set forth. The county council, as such, were in no way interested in the distress from want of employment in Dalbeattie, and in constituting the central body care was exercised to limit the number of county councillors to the number representing the burgh. In fact, as far as possible, the central body and distress committee were composed of the same persons so as to avoid any conflict between two separate bodies working in one small area.

47. There may be cases where it is desirable to have within a specified area (e.g. a county) a central body and distress committee, supposing distress from want of employment to exist in various towns throughout the district, but, where the distress is limited to one particular burgh, it would be far better, in my opinion, to allow that burgh, subject, of course, to the consent of the Local Government Board, to have a distress committee with full powers, no matter what its population may be. I consider, therefore, that the words in the proviso to Sec. 2 (1) "with a population, etc.," to "not less than ten thousand" should be repealed so far as Scotland is concerned.

48. Similarly, I do not think it should be compulsory to establish both central bodies and distress committees in landward areas. In the majority of cases a distress committee with full powers is all that is necessary, composed as it is of county and parish councillors and persons experienced in the relief of distress. It should be left to the Local Government Board to decide whether the circumstances are such as to justify the establishment of a central body.

49. Where it is not considered desirable to have a distress committee, or a central body and distress committee, the Act provides for the establishment in certain cases of special committees, whose duties are merely to collect information with respect to the conditions of labour within their area by establishing, taking over, or assisting labour exchanges and employment registers.

50. By the adaptation clause (Sec. 5 (4)) to Scotland "county borough" is to read "royal, parliamentary, or police burgh with a population, according to the last census for the time being, of less than fifty thousand, but not less than twenty thousand." Unfortunately, the result of this is that burghs having a population of less than 20,000 may have a distress committee with full powers so long as they are not below 10,000, whilst they are precluded from having the less pretentious organisation of a special committee. There should be no restriction to the establishment of a special committee in any burgh save the consent of the Local Government Board, and the definition of "county burgh" in Sec. 5 (4) should be amended accordingly. There is no limitation in landward areas, it being open to the county council to apply to the Local Government Board for their consent to the establishment of a special committee in any district.

Cumbrous procedure in the case of burghs having a population less than 10,000.

Absence of necessity for constitution of central bodies and distress committees as well in small burghs and landward areas.

Duties of Special Committees.

Removal of restriction as to establishment of Special Committees desirable.

THE RATING CLAUSE.

51. Perhaps the most disappointing feature about the Act to those who have to administer it, is the rating clause. The absence of power to pay wages and other necessary expenses out of the rates has occasioned much trouble, and would indeed have rendered the Act practically inoperative had it not been for the assistance received the first year from the Queen's Unemployed Fund and latterly from the Parliamentary grant. The impossibility of working an Act of Parliament by the aid of such an uncertain source of revenue as voluntary contributions has been clearly proved, and I venture to submit that a Government grant given as a supplement to voluntary contributions is also a mistake.

52. It is true that where supreme efforts were put forth by some distress committees a fair amount of money was raised by voluntary contributions, but the general result experienced by all was that the effect of rating for the purposes of the Act was to stem the flow of charity. The public in general do not realise that the rates cannot be applied to pay the wages of the unemployed. They observe the item "Unemployed Workmen Act" in their burgh demand note and reach the conclusion that their voluntary subscriptions are no longer necessary.

53. The parliamentary grant was given as a supplement to voluntary contributions, and the Board in their circular to distress committees (October 19th, 1906) pointed out that every effort should be made to obtain contributions. They impressed on distress committees the absolute necessity of taking all practicable steps for the purpose, and added that in the administration of the grant they would have regard to the efforts made with this object. It was found that the efforts varied very considerably. Some distress committees were content merely to put a short advertisement in the local paper; others issued a personal appeal; and in one or two exceptional cases personal effort was made by leading members of the distress committee among their own friends. Now, to administer a grant in supplement of voluntary contributions where in one case a feeble effort had only been made to collect subscriptions and in another case where substantial efforts had been made, and to do justice to all concerned, was a task not easy to accomplish. It was obviously unfair to those who had gone to a lot of personal trouble to gather funds to penalise them by withholding the grant, and equally unfair to give large grants to places where little or no efforts were made. On the other hand, little effort in one locality may produce as much money as great effort in another. The Board, in view of these circumstances, apportioned the grant in proportion to the expenditure incurred by each distress committee, and allowed each distress committee to profit to the extent of its own efforts in raising voluntary contributions so long as the sum standing to the credit of the voluntary contribution account was not excessively large. In future distributions of the grant, I should not be inclined to insist on efforts being made to obtain voluntary contributions. I would prefer to fix an amount (the amount to be based on previous experience) and apportion it among the distress committees in proportion to their needs, and leave them to supplement the grant by voluntary contributions if necessary.

54. Another point of importance in regard to the distribution of a parliamentary grant is to endeavour to prevent its use as a means for relieving the rates. In some cases I regret to say the parliamentary grant has simply been used in relief of rates or other corporation funds, and yet it is difficult to attribute blame to the town councils. As already explained, town councils were in the habit of relieving the unemployed, and frequently the cost (sometimes considerable) was met out of the burgh common good. Immediately on the passing of the Unemployed Workmen Act, however, the town councils felt they were under no further necessity to take action. The distress committee, on the other hand, were penniless, and had to be financed by the Queen's Fund and the parliamentary grant or remain practically inactive. But had there been no Act of Parliament the town councils would have met all expense, and the unemployed would no doubt have fared just as well. Indeed, if a town council take an unscrupulous view of the situation it is not easy to avoid the grant

being spent in direct relief of rates. As already explained, distress committees are helpless to initiate ordinary relief work; they must rely on the town councils or other local authorities. These local authorities provide work, but may quite well decline to pay even the contract value of the work done, and the distress committee, if they are to assist the unemployed at all, must pay the wages. In such circumstances it is possible to conceive committees of the streets of the burgh being repaired by unemployed labour at the instance of the distress committee, and, of course, out of the parliamentary grant. I know of one case where the distress committee have expressed the opinion that the quality of the work done by the unemployed in a town was almost equal to work done under ordinary conditions, and yet the town council asked the distress committee to pay a large proportion of the wage bill.

55. The Board no doubt might refuse to pay a grant under such conditions, but the punishment would rest on the wrong shoulders, viz., on those of the distress committee, and in turn of course on those of the unemployed.

56. I am afraid the principle on which the value of the work done by the unemployed is calculated is not always beyond suspicion. At any rate in one case to my knowledge the loss is never less than the amount of the parliamentary grant received by the distress committee.

57. The only remedy is to compel distress committees to initiate relief work themselves and to give the grant only in respect of such work. But, as already stated, ordinary relief work cannot be provided by the distress committee. If they are to provide work directly they can only do so by means of a farm or labour colony.

RESIDENTIAL QUALIFICATION.

58. The Act provides that a distress committee shall not entertain an application from any person unless they are satisfied that he has resided within their district for a period of not less than twelve months immediately preceding his application. While approving generally of this restriction, I am of opinion that power should be given to the Local Government Board to allow distress committees to relax it in certain cases. Several instances have come under the Board's notice where this rule has operated harshly. Indeed some of the most deserving cases—men who are anxious to get work and who are always on the move looking for it, and, in consequence, are seldom twelve months in one place—are those who have not the residential qualification. The restriction operates very harshly in towns contiguous to one another, e.g., Edinburgh and Leith. It frequently happens that labouring men move from Edinburgh to Leith and *vice versa* without having acquired a residential qualification in either place. Again, a man may have been resident in a place and in regular employment for some time. He leaves perhaps for employment in the country and returns at the completion of the job in (say) three months' time, and is then unemployed. He is thus debarred from registration by the distress committee for relief work of any kind. There should be power, I think, to refer such cases to the Local Government Board, who should be authorised to permit the distress committee dealing with them if that body wishes to do so.

LABOUR EXCHANGES.

59. I think the principle underlying the organisation of labour exchanges is sound, and that in course of time such exchanges may become of great service both to employers seeking workmen, and to the workmen themselves. I am therefore disposed to encourage the establishment of labour exchanges in all populous centres, and I think it should be part of the duty of the Local Government Board to exercise a general supervision over the local authorities with a view to seeing that such exchanges are properly conducted.

60. The exchanges established by distress committees in Scotland cannot, so far, be said to have been a great success. The reason, in my opinion, is that the men who have registered with distress committees—like those applying for relief work—are not the class likely to give satisfaction to employers. The natural impulse of a distress committee is to get the men off their hands, and they send them out with little or no regard for qualification. The distress committee seem to lose sight of the fact that the first step to ensure the success of a labour

labour
exchanges.

exchange is to enlist the support and sympathy of employers, and that this can only be done by supplying first-class workmen.

61. As an example, I may refer to a case that came under my notice of an employer who took a personal interest in the proceedings of a newly established distress committee and its labour exchange, and who applied to the exchange for certain workmen. In response to the application men were sent who had registered as belonging to the particular trade required. The employer informed me that he found it impossible to continue to employ these men for any length of time. He had nothing to say against their character, but, to put it plainly, their best days were past. They took nearly twice as long to perform the duty allotted to them as younger and more efficient men would have done. He stated that he could not afford to engage men of that type, and would naturally hesitate to apply again to the labour exchange.

89050. (Chairman.) We have had a great deal of evidence as regards the Unemployed Workmen Act in England, and a certain amount of the statements which you make in your Memorandum have been rather covered by that evidence; therefore, I only propose to put questions to you on those points where the Scottish practice is different from the English, or where the administration of the Act has produced results rather different from those which have been brought to our notice in England. I see that in pursuance of the Act, distress committees were constituted in nine burghs with populations of over 50,000?—That is so.

89051. And also in five burghs with populations of under 50,000?—Yes.

89052. In addition to that, you received an application, I think, from the burgh of Dalbeattie which presented rather special features?—Yes, that is so.

89053. Then you refused to put the Act in operation in certain cases, that is in the four parishes of the Lews and in the burgh of Stornoway, and you also refused to place the Act at the disposal of the Congested Districts Board in reference to the Stoer district of the parish of Assynt in Sutherlandshire?—That is so.

89054. In both cases you have fully explained your reasons, have you not, for believing that it was not intended that the Act should apply to those places?—Yes.

89055. Previous to the passing of this Act, had the councils in burghs made any special provision for the unemployed, or spent any special sums on the unemployed?—The town councils always had to deal with the unemployed prior to the passing of the Unemployed Workmen Act, and they have frequently had to expend money in the relief of the unemployed.

89056. It has been represented to us, I think, by certain witnesses that this has so far become the practice in certain boroughs in England that one of the objections to the Unemployed Workmen Act was rather that it regularised and legalised this action; had it assumed such dimensions in Scotland?—I think not. With the exception, perhaps, of Edinburgh and Glasgow, I think it had not assumed those proportions in Scotland.

89057. What form did the assistance take? Did they postpone work till winter, or did they set up special works?—Very much with that object work was postponed and relief work organised during the winter months.

89058. I suppose the climate of Scotland is more rigorous than that generally experienced in England, and that has an effect, I take it, on the building trade?—Yes, to a very large extent; and of course it also interferes with the provision of relief work. Very often the weather is such that relief work—out-of-door work that is to say—cannot be carried on.

89059. I see you followed the same course as was followed in the later English regulations, relaxing the rules in respect of applicants who had been in receipt of parochial relief?—The Scottish Regulations have all along differed from the English Regulations in regard to applicants in receipt of parochial relief. Such relief in Scotland is no bar to an applicant receiving assistance under the Unemployed Act.

89060. I think the most important distinction that you made was that you did not lay down the rule that was in force in England that the remuneration of the person employed should be less than that which, under ordinary circumstances, would be earned by an unskilled labourer?—That is so.

89061. Can you amplify the reasons why you arrived at that decision?—I think the main reason was that the Board foresaw at once that it was likely to bring distress committees into conflict with the trade unions, and that it was better to leave the question of remuneration to the distress committees themselves rather than that the Board should lay down any special regulation.

89062. It has been represented to us here that if the remuneration was the same, it would be of great attraction to certain persons?—I understand that has been urged.

89063. Was that the effect in Scotland?—I do not think so; because although the standard rate of wages has been paid in most cases the hours have been shortened and only three or four days' work per week has been given, so that the total pay has been really less than what a man would have obtained under ordinary conditions.

89064. The rate was the same?—The rate was the same, but the hours were less.

89065. It is sometimes represented to us that that is rather an attraction to the class that come for assistance?—Yes. I have heard it said, too, that in the case of the casual labourer it is rather a disadvantage. The casual labourer is sometimes better off under the Unemployed Workmen Act than he would be at his ordinary occupation.

89066. That is to say, that he got more continuous work?—Yes.

89067. Have you got the result of the expenditure tested by the work done?—I have not given that in my Memorandum, but it is given in the Report of the Local Government Board for Scotland.

89068. How did this regulation that the wage should be the same affect the Return, do you think?—Table XI. in the Report by the Local Government Board for Scotland as to the proceedings of distress committees in Scotland for the year ended May 15th, 1907, gives particulars of the receipts and expenditure.

89069. Is the value given there of the work done?—One of the columns in that table gives the receipts for the work performed by the unemployed.

89070. The value was appraised at a certain sum, I take it?—Yes.

89071. I see the total is given as £4,669, and that the wages in connection with that were £12,485; is that right?—Yes, that is so.

89072. I see that Dalbeattie is one of the committees shown on the table?—Yes, but the figures for Dalbeattie are insignificant.

89073. Dalbeattie was a case where there were a number of persons who had been in permanent employ and were thrown out of work owing to the cessation of some particular business, I think?—That is so.

89074. I want to see, if I can, whether the result of the work of persons who were in that position contrasts favourably with the work of those who were more or less in casual employ?—I do not think that is brought out by these tables. I think, as a matter of fact, that it contrasts very favourably, because the men were accustomed to rough work, and they really performed the relief work that was given to them to the satisfaction of the town council.

89075. Then so far as you know, no special inconvenience was experienced by the distress committees as the result of the rule that the wage should be the same?—No, I have not heard that any difficulties have been experienced.

89076. But you have left it optional to the various distress committees to frame their own scale?—Yes; that is really the point—that the Local Government Board for Scotland thought it was not a matter for them to regulate, but rather a matter for the discretion of the local committees.

89077. Did you go behind their action at all? Did you note the difference or was there not any difference between the action of the various committees?—There has been a difference. In some cases, less than the standard rate has been paid and in other cases the standard rate has been paid. That is brought out in the Report of the Local Government Board.

89078. Can you trace any result from the difference?—No, I am not prepared to say that I can. In Table VII., Column 11, you will find particulars, showing where the men were paid at the standard rate or below the standard rate.

89079. Could we put alongside the wages paid the result? I suppose you have not got that?—We have not that information at hand, but it might be quite possible to prepare a statement embodying it.

89080. I think it would be advisable, and I think it would be very interesting if we got that, so that we could see what the effect was of paying a wage at the standard rate and paying a wage below the standard rate—as far as figures can show that. We should only want the amount of wage paid and the result, if you could kindly supply that?—Certainly, I will try. (*See Appendix No. I. (A)*).

89081. Passing on with your statement, I think there is nothing very special as regards the Queen's Unemployed Fund or the Parliamentary grant that I want to put to you. Now as regards labour exchanges, they have not been very successful with you, have they?—No, they have not.

89082. Has that had something to do with the class of application they recorded?—Certain distress committees, I see, though they declined to provide work, thought they were at liberty to receive applications?—That is so. The failure of the labour exchanges I think is largely due to the system on which they were organised. They were not properly organised, and the men, for the most part, who are in charge do not take that interest in the work which is necessary to make a labour exchange anything like successful.

89083. Were they linked up one with another?—No; they are quite independent one of the other.

89084. Was there one established in Glasgow?—There has been a labour exchange in Glasgow for a number of years which has not, I understand, been successful. It has now been handed over to the distress committee and they are taking steps to put it on proper lines.

89085. Do the trade unions object to the establishment of these labour exchanges do you know?—I believe they do, and I believe objection has been taken in Glasgow. On the other hand, however, the Edinburgh distress committee have started a labour exchange which promises to work out very well, and there they have the sympathy and co-operation of the trade unions.

89086. I suppose your department rather had in mind this sort of objection on the part of trade unionism when they did not impose a lower rate?—That is so.

89087. But that action has not had the effect in certain places that was anticipated, that is, it has not conciliated the trade unions?—No systematic effort has been made to co-operate with the trade unions other than in Edinburgh and Glasgow.

89088. I suppose, on the other hand, the employer has not had much recourse to these exchanges because he has assumed that they were connected with the class of person for whom the Unemployed Workmen Act was intended?—That is so. The great difficulty is to enlist the sympathy and support of employers.

89089. We have had a good deal of evidence from the English centres, and some of our witnesses are of opinion that if properly managed and linked up, these labour exchanges might be of great use to unskilled labour; do you agree with that?—Entirely.

89090. As regards the class of unskilled labourers, they might find these labour exchanges of very great use, might they not?—Yes; I am entirely of that opinion, and I think they should be established in all populous centres.

89091. You would, I take it, keep these labour exchanges separate from the Poor Law administration?—Yes, and

entirely apart from the administration of ordinary relief work. *Mr. Charles Cleveland Ellis.*

89092. Would you have them managed if possible, as they are sometimes managed, by joint committees of employers and employed?—Yes, I think that would be an advantage; and I think the system adopted in Edinburgh of having an advisory committee of the trade unions is also an advantage. *14 Jan. 1908.*

89093. Was it due to that, do you think, that the labour exchange was more popular in Edinburgh?—Yes.

89094. Would the big burghs be disposed to take the initiative in establishing labour exchanges, or do you think it would be necessary to have an Act of Parliament and to put compulsion upon them?—I hardly think it would be necessary to go to the length of an Act of Parliament. I believe that if pressure were put upon the municipalities they would undertake the establishment of labour exchanges.

89095. In Scotland, I understand, you suffer very much from the vagrant class, particularly in certain areas?—Yes.

89096. These labour exchanges, I think, might be utilised to a certain extent in reducing that evil, might they not?—Yes, to a certain extent I think they might.

89097. Because they would be able probably to give a pass or some stamp or certificate of character to the bona fide working man who was going about in search of employment?—Yes. Of course, it would really come in time that you would hardly expect the vagrant to be assisted by an ordinary labour exchange. He is not the man that would be sent to work from a labour exchange.

89098. It would distinguish between the man who was walking about really looking for work and the pure vagrant?—Yes, that is so.

89099. Now as regards the class of person that came up before the distress committees, the intention, as I understand it, of the Act was that it should deal with persons of good character who were habitually regularly employed, but for some temporary cause had lost their employment; apparently there were not many of that class who came up before the distress committees?—No. I think the majority of the applicants who are assisted by distress committees are not those who are temporarily out of work from exceptional causes over which they have no control. *Class of unemployed employed be and class actually assisted by Distress Committees.*

89100. Have you got any statement with you as regards their ages?—The ages are given in Table No. III of the Report of the Local Government Board for Scotland.

89101. The ages given in that table show very much the same characteristic as in England; that is to say, about 60 per cent., I think it is, were under forty years of age?—Yes. *Average age of applicants to Distress Committees.*

89102. Therefore, a very large proportion were under the age at which men are supposed to have reached the prime of life?—Yes.

89103. I suppose we may assume that a considerable number of these men are much the same class as go to the Poor Law, though they may be perhaps just a little above that class?—Yes, that is so. *Class of men as go to assisted.*

89104. I am referring to the class of men who are habitually casually and intermittently employed?—Yes, I understand.

89105. Then as regards the investigation, was there much difference in the methods of the various committees?—There was a very great difference indeed. I could give you one or two examples if you like. (Subsequently sent, *see Appendix No. I. (B)*). *Difference in methods of investigation by Committees.*

89106. I will just take some of the figures which you give in Paragraph 38. In Leith, 98 per cent. of those who applied were passed as qualified; in Dundee, 97 per cent.; in Edinburgh, 92 per cent.; in Aberdeen, 88 per cent.; and in Glasgow, only 39 per cent.?—That is so. Those figures that you have quoted are for the year ended May 15th, 1906, but the figures for the following year are more remarkable. In 1907, you will observe that in Edinburgh the whole of the applicants were found to be qualified, in Greenock, 96 per cent. of them, and so forth. *Proportion of applicants eligible for assistance in various towns.*

89107. I think the conclusion is obvious that it cannot be that the characters of the applicants in Glasgow were much worse, but that there was an investigation made

Mr. Charles Cleveland Ellis.

14 Jan. 1908.

Strictness of investigation in Glasgow as compared with other towns.

Administration of Unemployed Act by Town Councils desirable.

Operation of Unemployed Act as affected by illegality of able-bodied relief.

Medical examination of emigrants through Distress Committees. Advantage of administration of Unemployed Act by Town Councils.

Ability to work assumed in case of applicants to Labour Exchanges.

there, whereas in the other places there was scarcely any investigation, and what there was must have been of a very perfunctory character?—That is my opinion. Not only that, but in some cases—at least, in the case of one distress committee to my knowledge—the investigation has been fairly satisfactory, but the decision of the committee on that investigation has been open to question. I know of cases where the investigating officer has reported against an applicant, but the committee have passed him for work.

89108. The conclusion you arrive at is, that you doubt if it is necessary to have an entirely separate body to administer this Act?—Yes; for the reasons given in paragraph 40 of my statement.

89109. What sort of body would you suggest should administer it—something more connected with the administration of the Poor Law?—No. I am rather against coupling it with the Poor Law. I think if you are to relieve the man who is out of employment you need to keep the organisation as far as possible disconnected from the Poor Law.

89110. The co-opted members, in your judgment, did well; if you had a free hand, what sort of body would you suggest?—I think that the corporations might quite well be entrusted with the administration of the Act; my experience so far leads me to that conclusion.

89111. The corporations have not now officials who are accustomed to this class of investigation?—No, but they could appoint the necessary officials and co-operate with the Poor Law authorities, as at present.

89112. Do you think the fact that able-bodied relief is illegal in Scotland at all affected the working of this Act?—I am not prepared to say that it has to any great extent, though I may mention a case which came under my observation the other day of a man who came to a labour exchange to which he had been referred by the sheriff. He had applied first of all to the parish council, and they refused him relief on the ground that he was able-bodied; he then went to the sheriff, who said he could not grant an order for relief on the ground that the man was able-bodied, and he referred him to the labour exchange, adding in a note to the superintendent that he thought it was a deserving case. The labour exchange record of the man was not altogether creditable, and in any case the Superintendent was not in a position to provide him with work. The man said that he was at starvation point and certainly looked it. The difficulty is to know how to deal with cases of that kind.

89113. There was no medical certificate or examination of the individuals who came up under the Unemployed Workmen Act, was there?—No, only in the cases for emigration.

89114. Your idea would be then to make this work an adjunct to the work of the town councils?—I think so, for the reasons given in Paragraph 40 of my Statement. Just now twelve out of fourteen distress committees in Scotland are doing nothing more than the town councils have done hitherto, and it is obviously quite unnecessary to have a separate body if they are merely to go to the town council and ask them to provide relief work.

89115. Do you then assume that the Act, wherever it was in operation, would require you to have two relief bodies in every burgh—the parish council and the town council?—Yes; the parish council for Poor Law purposes pure and simple, and the corporation or the distress committee, as the case may be, for the unemployed.

89116. Is not the dividing line between a great many of those who come up before these distress committees and those who apply to the Poor Law very thin?—Yes, it necessarily is in some cases.

89117. Therefore, would not having two authorities in the same area and in many cases almost doing the same work, lead to great confusion?—I do not think so. I think it would be possible to distinguish between a case that is more suitable for treatment under the Poor Law and one for which work should be provided.

89118. Is it the assumption that all those who come under this Act and who apply for assistance are able-bodied?—That certainly is the assumption.

89119. They belong to the social class which receives relief from the Poor Law, but they themselves are dis-

qualified from receiving that relief, because they are able-bodied?—Yes.

89120. Now let us turn to the special circumstances at Dalbeattie, which you consider in Paragraph 11. I see there was a quarry there which employed a certain number of persons and which ceased working; why did that quarry cease working?—Owing to the depression of trade.

89121. What was the number of persons who, it was calculated, were thrown out of employment in that way?—I think, roughly, about 100.

89122. What has happened to them? What relief was provided for them—were they emigrated or migrated or are they still there?—A few were migrated, but the majority are there. The works opened again after a spell of five or six months and have been in progress ever since.

89123. The Act there, I assume, has, in your judgment, operated beneficially?—Yes. I think it is the best illustration that we have had of where the Act has been of advantage.

89124. (Mr. Patten-MacDougall.) How much money was granted to them?—£200 from the Queen's Fund, I think, and then they raised locally a sum.

89125. (Chairman.) From the rates or voluntarily?—Voluntarily they raised about £200.

89126. Did they get their administrative expenses paid by the rates?—Yes.

89127. You found that the procedure was a cumbrous procedure in the case of a burgh like Dalbeattie which had a population of less than 10,000?—That is so.

89128. But does it not cut both ways? Would it not be rather a dangerous innovation to let any small district set up a distress committee?—I do not think so in the case of burghs. A burgh is a complete unit in itself, and I think it would not be dangerous to have a distress committee in each burgh. Establishment of a Distress Committee in every burgh desirable.

89129. Would you make the Unemployed Workmen Act a permanent Act and allow any burgh to set up a distress committee, or would you make that subject to the sanction and approval of the Local Government Board?—I would make it subject to the sanction and approval of the Local Government Board.

89130. If it was once set up it would be set up only for a certain time and you would require fresh sanction for its renewal?—Not necessarily. I think once the committee was established there would be no reason to disestablish it, because if there was nothing for them to do there would be no need for them to meet and no harm would be done.

89131. Would not great pressure be put on local authorities whenever there was any temporary wave of depression to have recourse to its distress committee and to open works?—That has not been the experience in Dumfries, for instance, where a distress committee has been established. They have done nothing up to the present time.

89132. Going on now to your paragraphs which deal with the Rating Clause, that clause, I assume, is the same in Scotland as in England, where there was a limit as regards the expenditure and it was applied only to administrative purposes?—That is so.

89133. Would you like to go further?—Yes. I think that power should be given to rate for wages; in fact for all expenses I would say. Power to rate for wages desirable.

89134. Assume you have that power, would not the danger I have suggested become a real one; would there not be constant pressure on the local authorities to use these distress committees, and would not the local elections to a certain extent depend upon the replies which candidates gave on that question?—To a certain extent they might, but if the cost has to be borne by the rating authority I think that that is a sufficient safeguard in itself.

89135. In Glasgow, where there is so much casual labour, there will always be a distress committee, I assume?—Certainly.

89136. And in operation?—Yes.

Operation of the Dalbeattie Distress Committee.

89137. Would not the result be rather to increase the amount of casual labour, or, at any rate, not to diminish it? Would it not attract people to come and take up residence in Glasgow, or anyhow prevent persons who had taken up residence there from leaving Glasgow, if they knew there was always this machinery available to help them if they could not get employment?—I am not prepared to say it would, especially looking to the very strict system of investigation which takes place in Glasgow.

89138. Going on with that part of your statement which deals with finance, you are doubtful, I see, as to the method in which the value of the work done is calculated?—Yes; I think there is reason to be suspicious in some cases.

89139. Which way? Is the loss made too great, or not enough?—Too great, as a rule, though there are instances where the loss has been under-estimated.

89140. If you had your permanent distress committees would you associate them with farm colonies or labour colonies?—Yes, I would. I think the farm colony is an indispensable adjunct to the work of a distress committee.

89141. But you would still have a separate authority, I take it; you would not give the whole work over to the parish council?—No, I would have a separate authority.

89142. Would it not be advisable that the parish council should also, if there is a farm colony, have authority to utilise that farm colony or labour colony, as it might be?—Yes. As I said before I think that there should always be co-operation between the authority under the Unemployed Workmen Act and the parish council. That, I think, is essential.

89143. The result of your experience is that you would like the Unemployed Workmen Act renewed or made permanent?—Yes, if it could be amended.

89144. And greater powers given to the burgh councils as regards raising funds?—Yes.

89145. But you would keep the administration of this work separate and distinct from the Poor Law?—I would.

89146. (*Mr. Benthams*.) In Paragraph 35 you refer to what you call the wastrel or loafer; you prefer that this class should be kept from both the prison and the poor-house; do you mean they should not come under the Poor Law?—Yes. My idea is rather to have a penal colony.

89147. The penal colony would require management by some one—by whom?—I think the penal colony should be under the authority that administers the Unemployed Workmen Act, whether that is the distress committee—

89148. Or the town council?—Or the town council.

89149. That would mean that the town council or distress committee would not only be providing work for what you would call the honest unemployed but would also be running a colony for loafers?—Yes. You eliminate the loafer from the ordinary poor who are chargeable to the parish council.

89150. In paragraph 36, you suggest that the “unemployed from old age or possibly some slight physical defect” should also be provided for in some other way than under the Poor Law?—Yes.

89151. By another kind of colony?—That is so.

89152. Who would manage that colony?—The same body.

89153. What would there be left for the Poor Law if you do that?—You would still have the ordinary poor who are more suited for Poor Law treatment and who are not fit for work.

89154. The wastrel is one who may be fit for work but does not like it, and the person who is aged or slightly physically defective is one who cannot do it if it is offered him; and there is the able-bodied person whose case you think is a proper case to be dealt with by the town council. That makes three separate and distinct classes, all of which are to be dealt with by the town council or the distress committee?—Yes. But I would not propose that those who are too old to give a reasonable day's

work should be treated in the farm colony; they, I think, *Mr. Charles Cleveland Ellis.* are more for treatment by the Poor Law authority.

89155. You say “the farm colony is probably the best place for those people,” that is, the people who are aged or physically defective; if that be so, the class you refer to do not come under the designation of Poor Law cases, or of the able-bodied who are now dealt with by distress committee; is that not the idea?—That is so.

89156. If all these three distinct and separate classes are dealt with by the town council, would that not be really making the town council into a kind of Poor Law authority?—To a certain extent that is so; but there is still a line, I think, by which it is possible to distinguish between those who may be chargeable to the Poor Law and those who are better fitted to work.

89157. I am afraid I do not quite see your meaning?—There are some obviously not fitted to work.

89158. Not fit physically?—Yes. There are others who may in a less degree be fit to work, but they might not be able to give a fair day's work, and they might be very much opposed to being put upon the Poor Law. I think for those it would be desirable to give them a chance on a farm colony.

89159. A farm colony not under the Poor Law?—Not under the Poor Law.

89160. In forming these three classes are you disregarding all moral considerations, that is, all questions of character?—No. I think that if you have a penal colony and the other colony, whatever you may term it, it would be possible to have a classification. I would not, for various reasons, put the respectable working man alongside the loafer, or the man, say, who had been convicted.

89161. Is your idea in suggesting that these classes should be dealt with by the town council that it could do it better than the parish council could do it?—No, that was not my intention at all. What I had in view rather was our present experience in Scotland where the distress committees are doing nothing more than what the town council did before. If they are to continue merely to provide work in that way—by simply going to the town council—the distress committees doing the investigation and that is all—if they are to go to the town council and merely ask them to provide work, it seems to me that the town council could quite well do the whole thing.

89162. But you have gone rather a step further than what the town council were doing before in suggesting that the loafer, the ne'er-do-weel, shall be handed over to the town council to be dealt with in a penal colony, and also that the person who is physically unfit and the aged should also be dealt with by the town council. They have not in the past been dealt with either by the town council or by the distress committee, have they?—No. I only make that suggestion if the town council are to become the authority under the Unemployed Workmen Act. I think all these should be under that authority.

89163. That means an extension really of what has hitherto been considered the desirable end of an Unemployed Workmen Act, that is, that the honest deserving man who is temporarily out of work through reasons over which he has no control should not come under the Poor Law, but should be dealt with by some other body. If that were the basis upon which a distress committee should be formed or powers should be granted to a town council, is it not necessary that they should be kept apart altogether from this ne'er-do-weel, and from the physically unfit and the aged?—It would be quite possible to do that, would it not, if you have your two classes of colony?

89164. I meant under a separate body—not dealt with separately under one body. If there is any necessity for the Poor Law at all, surely the ne'er-do-weel who is not a criminal, and the physically unfit, and the aged who have no other means are proper subjects for the Poor Law? Is there any reason for saying in Scotland to-day that those are not properly dealt with by parish councils and could be better dealt with by town councils?—Is there any reason for saying that they could not be?

89165. Are they not properly dealt with to-day, and could they be better dealt with under the town council

Mr. Charles
Cleveland
Ellis.

14 Jan. 1908.

Reasons for
suggesting
Town
Council
as Authority
under Unem-
ployed Act.

than under the parish council?—I do not say that they could be better treated under the town council, and I do not think they could. The parish council have no power to deal with the ne'er-do-well if able-bodied.

89166. You would have to grant the power, would you not, to the town council, so why should you not grant the power to the parish council to deal with these?—Simply because you want to make a distinction between the provision of work and Poor Law relief. That is the object of the Act, I think, to have a clear distinction and to keep the one separate from the other. If you bring it under the parish council I think that the provision of work then comes to be just simply a form of Poor Law; and the object of the Unemployed Workmen Act was to differentiate between the two, I think.

89167. You are drawing a line between that class of person who may do a small amount of work and that class who could do nothing, and you say that those who could do nothing should come under the Poor Law and those who can do a certain amount of work should come under this provision of work by the town council. Is not that the line you take?—Yes.

89168. Then there would only remain to the Poor Law authority the sick and the children; for instance, widows are able to work although they are not considered able-bodied in Scotland. There would still have to be some provision of work in the poor-houses, would there not, so that the people would not lead altogether useless lives there?—Yes. I would not propose to abolish the poor-houses.

Extension of
operations
of Unem-
ployed Act to
women
proposed.

89169. Would you extend this provision for work, if you draw the line at work, to women?—In suitable cases I think it might be extended to women, though the need for that I do not think is so great.

89170. You draw the line at the capacity to do any work rather than at the fact that it may be relief work. It is held, for instance, that there are able-bodied unemployed persons who might be able to earn all they get, in that respect they would not be receiving relief; but most of these two classes, the ne'er-do-weel and the aged and defective, would not be able to earn all they got, and in that way you are making a town council into a relief body just as much so as the Poor Law authority is to-day, because the greater proportion of the people would get what they did not earn?—I would hardly go quite so far as that. I think that the classes to be dealt with by the authority under the Unemployed Workmen Act are those who to a large extent are able to earn what they get.

89171. They are?—They should be.

89172. That is not according to the experience of relief work in Scotland, is it?—Is there not always a loss?—There is always a considerable loss on relief work.

89173. Even with the picked men?—No, not in every case with picked men. I have known of instances of relief work where those who have had the charge of them have expressed themselves as quite satisfied with the work that has been performed—where the men have been picked.

89174. Generally speaking there is a loss on the work that is undertaken by the town councils and distress committees for the relief of unemployed, is there not?—Yes, generally speaking, that is so.

89175. If town councils were the recognised authorities for dealing with the three classes before mentioned, would not all such persons make their applications to the town councils to be dealt with rather than to the Poor Law authority?—They might, and I am not sure that that would be a disadvantage in the first place.

89176. Would you not have to set up practically all the machinery that is now in the hands of the Poor Law for discriminating between one class and another and to find out this ne'er-do-weel, this temporarily unemployed and this aged or defective person? All that machinery which is now in the hands of the parish council would have to be also in the hands of the town council, would it not?—No. I would not duplicate the machinery. As I have already stated I think that that can be met by co-operation between the two bodies as it is met just now. Take Glasgow; the whole investigation on behalf of the distress committee is done by the parish officials, and the Local Government Board in their regulations

recommend that the parish councils should place their officials at the disposal of the distress committees.

89177. But it is not imperative that they should do so, is it?—It is not imperative.

89178. Would you give the liberty to the town council to set up all the necessary machinery for this discrimination?—No.

89179. You would not?—No, I would not.

89180. Would you debar them from doing that?—I would not debar them entirely. I would allow them to have, as the distress committees have just now, their own investigating officers, but still to co-operate with the parish council.

89181. That may mean a duplicate set of investigating officers, would it not?—It would in certain instances.

89182. It would mean further than that, would it not? If you were to deal with those different classes there would have to be a little more discrimination, and you would want to make an examination of the men, would you not?—Not by the authority under the Unemployed Workmen Act, I think.

89183. If you are dealing with those who are not physically fit how would you know in which category a man should be put unless you got a medical certificate?—In the same way as they examine them now for relief work. I think that the fitness of a man for work can be usually seen *ex facie*.

89184. It can be seen by the officials who are taking the application?—Yes, and by the committee who investigate the case. They see if the man is really fit to undertake the relief work offered.

89185. Let us suppose that a man is tried on that superficial examination and is found to be unfit for work, then he would be relegated to the other class, I suppose?—Yes.

89186. And dealt with in another way?—Yes.

89187. That means machinery for the purpose, does it not, and similar machinery to what there is now under the parish council?—Yes, it might mean similar machinery which I quite agree it would be desirable to avoid if possible, and I think it might be avoided by proper co-operation between the two bodies. It works well in the instance I have mentioned in Glasgow.

89188. Would not the real proper co-operation be to merge the one into the other? Would not the matter then be considerably simplified?—I do not think so. I am still opposed to having the relief work made part of the Poor Law. If you merge the one into the other, I think you give it almost the stigma of pauperism.

89189. If all the other classes which are not to be dealt with by the town council were handed over to them, that is to say, if all the duties of the parish council were merged into those of the town council, then you would get rid of the whole thing. If there is a class that deserves to be stigmatised as paupers, is it not the class of the ne'er-do-weel and the loafer?—Yes.

89190. And you would remove that by placing the ne'er-do-weel and the loafer under the town council; so there seems little remaining under the Poor Law to earn the stigma, or to deserve the stigma. Therefore why not transfer the whole of the duties to the town council?—I do not think you should. I think it would be a mistake to place all the present duties performed by the Poor Law authorities under the town council.

89191. Then you would rather see the machinery duplicated?—No, I do not think it needs to be duplicated.

89192. Do you not think there would be a greater inducement for people, particularly the able-bodied or the semi-abled-bodied people, not to provide for themselves either by insurance or by their savings for a period of unemployment, if they know the town council has set up all this machinery for finding them employment when they need it? Have they not a less inducement to thrift and frugality when they know there is a sure organisation always ready for them?—I am afraid that is the effect of the present legislation.

89193. Do you not think it is advisable there should be some slight deterrent in some form or other which would deter these people from relying absolutely on these resources in time of need?—Yes but I, I do, do not quite see how that is to be carried out.

89194. You are sweeping most of the deterrents away, are you not, in your suggestions?—Yes. There is a difficulty I see, but then you have the really *bona fide* working man, who has nothing against his character, but who is temporarily out of employment, and you want to let him off as easily as possible without subjecting him to the same treatment and investigation that the ordinary ne'er-do-weel would be subjected to.

89195. I can understand some provision being made for that class under certain conditions which would safeguard, at any rate, the same case recurring year after year, and period after period; but you do not suggest any such thing, do you?—No, I do not.

89196. But that does occur even on some of these distress committees. You may notice that in Dundee, for instance, 65 per cent. of those dealt with in the second year had been provided with work in the previous year by the distress committee. That is rather a serious proportion, is it not?—It is.

89197. That might become a very serious danger, might it not?—Yes; that is a danger.

89198. Would you place no limit upon the number of times they may come?—It seems to me very difficult to place a limit in a case like that, because you might get quite a deserving case year after year of a man who is temporarily out of work. It is difficult to meet the one case without doing injustice to the other.

89199. Would you say that the wages of the working people, upon the whole, are not sufficient to provide for their being temporarily out of work?—No; I think in the majority of cases they are sufficient, and that the wages in trades where they have slack times are proportionately higher during the time they are employed.

89200. If you provide for these periods of unemployment, would not the tendency be to reduce their wages during the period of employment, simply because the period of unemployment was being provided for by the town?—I have always thought that that was a danger.

89201. A man who is honestly unemployed, you would say, should be provided with work under no unpleasant conditions, but a man who may be needing relief because he happens to be sick and has made no provision for a medical man, should be put under the Poor Law and stigmatised; therefore, the man who had been at work all the time and better able to provide for this temporary contingency than the sick man would not be stigmatised, but would be provided with honourable labour?—The person who is sick need not necessarily go to the Poor Law; he might be provided for by a Charity Organisation Society or other Charitable Institution.

89202. A man who is out of employ might not necessarily go to the town council, and he might be provided for by the societies that are already in Scotland. In Scotland you have these societies for improving the condition of the poor, and they have sprung up in Scotland because there is no provision for the able-bodied, I believe?—Yes, that is so.

89203. Those societies may all die out, if you recognise these claims, although they are quite as strong and as powerful, and have done quite as good work as other charitable societies; is that not so?—That may be the result.

89204. Therefore the unemployed man has no more need to go to the town council than the sick man has to go to the poor law, yet you would stigmatise the man who is in need because he is sick, and you would not stigmatise, and do not want to stigmatise the able-bodied man who needs less sympathy than any, if sympathy enters into it at all. Are you not getting on to rather a slippery slope in this?—As I said before, you should certainly keep every person off the Poor Law if you possibly can.

89205. Why? If it is relief in another form, why should it not be under the Poor Law? It is relief that you do not want, and you say you want to keep the man away from relief; but it does not matter what you may call it, whether it is Poor Law or anything else, it is really relief in the end, and though you are keeping him off one form of relief, you are only doing that by providing another which might be more dangerous and which you admit is more dangerous?—I see there is something in that, but I still think that there are reasons for

distinguishing between employment relief in the sense of the Unemployed Act and Poor Law Relief. *Mr. Charles Cleveland Ellis.*

89206. (Professor Smart.) Relative to these labour colonies, in whom does the title of the farm colony, for example, vest?—The distress committee. 14 Jan. 1908.

89207. In the person of the chairman and the clerk?—Yes. Vested ownership of farm colonies.

89208. What will happen in October of this year when the distress committee comes to an end presumably?—It would remain for the Local Government Board under the Act to make provision. They have full power to make provision for the transfer.

89209. It would not go back to the Local Government Board?—Not necessarily; the Act makes provision for that. They have power for dissolving central bodies and distress committees established under the Act and transferring their property and liabilities; and then certain sections of the Local Government (Scotland) Act, 1894, are applied by which they could transfer the property to the town council if they thought fit. Power of Local Government Board to transfer property and liabilities of Distress Committees.

89210. If the town council refused to take it, what would happen?—Then we have power, I suppose, to sell it or do anything we think fit.

89211. That is the Local Government Board for Scotland have?—Yes.

89212. Has Edinburgh got a colony yet?—Yes. They have purchased an estate quite recently of about 201 acres. It is a very suitable place indeed. Farm colony of Edinburgh Distress Committee.

89213. Have you seen the Glasgow colony?—I have.

89214. How does it compare with the Edinburgh colony?—I prefer the Edinburgh colony to the Glasgow colony. It is about half the size, but it is more complete and possesses certain natural advantages.

89215. Have the Govan people got a colony?—They have it under consideration, but they are inclined to let the matter drop until they see what is to happen to the Act, I think.

89216. The cost, I think, has to be defrayed in ten years, has it not?—That is so. Loans for purchase of farm colony land; period of repayment, sinking fund, etc.

89217. What provision is made for the repayment?—The repayment is to be by annual instalments of principal and interest. There is also a sinking fund for the purpose of paying off the bonds on the property.

89218. And the sinking fund would come out of what?—Out of the rates; the whole thing is being defrayed from the rates.

89219. In Paragraph 36 you speak of those suffering from slight physical defects; would you not include those suffering from a slight want of intelligence?—I had not thought of that. I hardly think so.

89220. I do not mean enough to put a man into a lunatic asylum, but enough to prevent him having any initiative in making his own living—a man who would work if he was told what to do and where to go, but who would never find work for himself. Do you not think that class is naturally quite as unfortunate as the physically defective?—I think they are.

89221. I see you propose in this paragraph what is practically a working home for the aged poor and physically unfit?—It comes very much to that. Farm colonies for aged and physically defective poor.

89222. That is a very large order, of course?—It is, and I feel that; but that is the difficulty, I think, of the problem.

89223. Your argument would be that if the tendency of modern conditions, by which the State benefits, has been to take work from men, then the State must provide work for them?—I think so.

89224. Now with reference to these unfortunate men who went to Ballachulish; was any inquiry ever made as to why these men returned?—I made inquiry only last week, and the reasons given to me are that the accommodation was anything but satisfactory, that the men would not live in the tents that were provided, and that the food was too dear. Reason for non-success in sending men from labour exchange to Ballachulish.

89225. The food was too dear, how was that?—Of course, it is a very inaccessible part, and I suppose canteens and all that would have to be provided. They complained that they had to pay too much for the food.

Mr. Charles
Cleveland
Ellis.

14 Jan. 1908.

Cost of
sending men
from Dundee
to Ballachulish.
Amount
repaid by
men.

89226. It is a very wild district, is it not?—Very.

89227. How did these people get back to the towns, do you know—did they tramp?—I am not sure that I can answer that question, but in some cases I believe they worked sufficient to pay their fares. For instance, in Dundee, I think the cost of sending the men out was something like £10, and the distress committee have been repaid by the men, £8 17s. 11d., I think.

89228. Have you any reason to believe that the work was harder than ordinary?—I do not think so.

89229. (Mr. Patten-MacDougall.) A number of them applied for relief afterwards in the neighbourhood; is that within your knowledge?—I believe that was so.

89230. (Professor Smart.) This refusal to work was not due to Highland characteristics at all, because these were townsmen, were they not?—Yes, they were townsmen.

89231. In the distress committees, where, as you say, everyone practically got relief, that was in frank disregard of the law?—That is so.

89232. You find some clerks, for example, who connive at the breaking of the law as well as distress committee members, do you not?—I have had one experience of that kind.

89233. But generally the clerk tries to keep his people on the rails?—Yes.

89234. You speak of the labour exchange in Glasgow being on good and proper lines; are you aware that it is to be brought under the distress committee?—That is so.

89235. You would not call that the proper lines according to the ideas you have put forward?—Yes.

89236. It is to become a branch of the distress committee and nothing else?—That is so, but it is to be kept quite apart from any provision of relief work.

89237. Still it will have all the stigma—whatever stigma is going it will have?—I do not think so, because to the public it will simply be continued as the municipal labour exchange, and I think it is doubtful if any stigma will attach to it.

89238. What salary was attached to the superintendent, do you know?—I am not prepared to say.

89239. Was it £125?—I do not know; I have never heard the salary.

89240. Do you think you would get a man capable of managing a labour exchange for £125?—I should say that that would be a minimum wage.

89241. Has not the head of a labour exchange, as part of his duties, to interest employers in the scheme?—Yes.

89242. So he must be a man of education to be able to go to employers and command their attention?—He must.

89243. Then with regard to the small number of applicants who were granted relief in Glasgow, is that not very much due to the fact that their investigator was a principal official of the Poor Law?—That is so.

89244. One of the best Poor Law officials we have, in fact?—That is so.

89245. It is not always an official of the Poor Law who is the investigator, is it?—No; that is the only case in Scotland in which the investigator is an official of the Poor Law.

89246. In all cases are the resources of the Poor Law put at the disposal of the distress committees?—No, they are not. That is where I think there is a mistake.

89247. This is the only case then where advantage has been taken of the Poor Law?—I will not say it is the only case where advantage has been taken. I am pressing now that there should be more co-operation between the Poor Law and the distress committee. In several cases there is slight co-operation.

89248. Did you ever hear anything alleged against the Poor Law investigator on the ground that he was a Poor Law investigator?—No, I have heard no complaint of that kind.

89249. In regard to the case where the distress committee assessed the value of the work at a very different figure from the town council, should we not remember that the distress committee which says that the work was almost equal is not quite an impartial authority?—That is so, but I have had evidence of town officials who have stated that the work was quite equal to that done under ordinary conditions.

89250. Then with regard to this twelve months' residential qualification which you deal with in Paragraph 58, is that not in itself rather a drawback to mobility—that mobility which we think so necessary? Does it not re-enact the old Law of Settlement in fact?—It may have a tendency in that direction, but the object, of course, is to prevent dumping.

89251. In any city, for example, very often the best thing to do is to remove these unemployed men at once, and then they become disqualified for distress committee work?—Yes.

89252. That is very serious, is it not?—It is; but that is just the class of case that I think should be treated as exceptional.

89253. To make an exception—that is how you would put it?—That is how I would put it.

89254. (Mr. Phelps.) In reference to Paragraph 6, where you refer to the constitution of the distress committees, I see the Act provides as to their constitution that they should consist partly "of persons experience in the relief of distress"; is it your experience that that has been carried out?—Yes.

89255. Could you give me an idea of the kind of persons who come in under that head?—In several instances members of Charity Organisation and other similar Societies have served on distress committees.

89256. Any ministers of religion?—We have had a minister of religion.

89257. Was he co-opted under this head?—He was co-opted.

89258. One member has to be a woman; that has been strictly carried out, I suppose?—Yes, in every case.

89259. Have you experience of more than one woman being elected?—Yes.

89260. Have you any experience of committees dealing with unemployed women?—Not to any extent. Very little has been done for unemployed women in Scotland.

89261. It is difficult to speak as to the motives of the persons who frame an Act, but do you imagine it was in their minds that the unemployed women would be taken into consideration?—I think so. It never occurred to me that women were excluded.

89262. Take, for instance, Dundee, there is a great deal of women's work there, is there not?—Yes.

89263. Is the question of unemployed women a pressing one there?—No, because the unemployment there is with the men; the women are very seldom unemployed.

89264. As I say, the question has not been a burning one?—No.

89265. Will you refer now to Paragraph 36, about which a good deal has been said. You say there that the class of people you have in your mind whom modern conditions of employment have thrown out of employment, is a large and increasing one. I do not think the figures quite bear that out, do they. Take your own Table III., which shows the residence, condition, and age of applicants. According to that table, the number of persons sixty years of age and over is only 6.55 of the whole of the applicants?—That is, of course, dealing with the question of age alone.

89266. But a good deal of what you say would apply to aged people very much?—Yes.

89267. I quite admit that there is that impression abroad, but I should like to know what you base your statement upon?—Not only on age; I am also thinking of those who are not just up to the standard.

89268. To take an instance we have had quoted to us, a one-eyed man finds a difficulty in getting employment?—Yes, exactly.

reluctance to employ people over sixty?—Yes, and I have heard that stated in a number of cases.

89270. What do you think those people do if they do not go to the distress committee?—I do not know how they possibly get a living.

89271. Do they go to the Poor Law?—I am afraid they drift there sooner or later.

89272. But you do not know whether the applications to the Poor Law of that class are largely on the increase?—I am not prepared to answer that.

89273. You refer to the liability of employers under the Compensation Acts; have you had direct knowledge of the effect of that?—Only from what I have gathered in conversation with employers of labour, which is to the effect that they are more careful now as to the class of men they employ.

89274. Do the employers of labour with you insure, as a rule, against the Compensation Acts?—Yes.

89275. Do you know whether the insurance companies insist on any conditions?—I am not aware of it.

89276. Now take the case of the colonies which you describe, and first of all the penal colony; that you say would be managed by the distress committee?—Yes.

89277. Do you think that such a committee is able really to enforce the kind of discipline that would be wanted in a colony of that sort?—I think so.

89278. You do not think it would be necessary to put it under the police, or under convict management?—I do not think so.

89279. There has been no complaint under that head that the conditions were not strenuous enough then?—No.

89280. An immense deal would depend on the manager?—Yes, it would.

89281. Now with regard to the farm colony, the people who went there would be almost there for life, would they not?—Yes, they would in many cases.

89282. That is to say you practically would have to build villages in which people would live and cultivate the ground in the neighbourhood?—Yes. That is just the difficulty that I feel, that we are setting up an institution to practically keep these people for the rest of their lives.

89283. And you do not think that that provision under the Poor Law of cottage homes which you find in some parishes in Scotland is adequate for that?—I do not think it is adequate, but something on that line might be done.

89284. Take, for instance, a city like Glasgow; do you think it is at all possible to deal with the over sixty population by migrating them out into the country in that way?—I think it might be possible.

89285. But you would be met with great objections would you not, on the part of people habituated to a city to their being planted out into the country like that?—From the people themselves?

89286. Yes?—You probably would, but I think that that could be overcome.

89287. In the carrying out of the Act and in the work of the distress committees, have the committees found that there is a large class of persons within the meaning of the Act who are temporarily unemployed and require to be tidied over?—I would not say that they are a large percentage.

89288. Does much of their work really lie in that class?—In a number of distress committees the investigators led me to think that the number who are temporarily out of employment are not really the men whom the Act was intended to assist.

89289. That is to say the Act was passed for one purpose and has been used almost for another?—That is so.

89290. (Mr. Gardiner.) As regards the constitution of distress committees, how are the persons of experience in questions of relief appointed? Are they appointed by the parish council or by the town council?—The town council appoint their quota of members, and the parish council appoint their quota; these representatives meet, and they appoint the persons experienced in the relief of distress.

89291. Then neither the parish council nor the town council itself appoints the people of experience?—No, it is the representatives of these bodies.

89292. In reference to Paragraph 30, could you tell us what the distress committee of Glasgow are going to do with the 228 acres, the balance of the 591 acres, after the 363 have been set aside to be reclaimed?—I am not sure what they have in contemplation. At the present time they have started an ordinary farm with stock and sheep and so forth.

89293. Is the soil suitable for farming?—It is fairly suitable. It is rather of high altitude, but they hope to improve the soil.

89294. Is it a cold soil?—It is a cold soil.

89295. Is that good for cultivation?—I am not prepared to say.

89296. You have not gone into that?—No, I have not gone into that.

89297. As regards the investigation officers, to whom you refer in Paragraph 39, what qualifications have they?—In some cases there is very little qualification indeed.

89298. Have they not had any training?—No. There are exceptions, and in one or two cases the men have had special training.

89299. As inspectors of poor?—No. In one case the investigator was the investigator for the Society for the Prevention of Cruelty to Children, and he had a good deal of experience in that way.

89300. Would that qualify him for this particular work?—I think it would. My experience is that his reports are very satisfactory.

89301. What about the other investigating officers; have they had any training?—None whatever.

89302. Were they clerks, and that kind of men?—No. In some cases I think they were men out of employment who were simply put there by the distress committee.

89303. In order to find a job for them really?—That is so.

89304. Were other men who were unemployed employed as clerks?—Yes.

89305. If they happened to be clerks, they were put on as clerks to the distress committee?—Yes; to assist in the clerical work of the office.

89306. Does that system work well?—Where clerks have been so employed, I cannot say that it has been disadvantageous.

89307. On the whole, has the work been well done?—On the whole, yes, the work has been well done.

89308. And compares not unfavourably with the work of an ordinary parish council?—Not unfavourably. Of course the clerks who have been put on from the unemployed are mostly in junior positions; the head man is, as a rule, of a better stamp.

89309. They put on as these clerks men who cannot get work as clerks because of their grey hairs, and so on?—Yes, that has been done.

89310. (Mrs. Bosanquet.) Were these men who went to Ballachulish and came back again Glasgow men?—No; they came from Edinburgh, Glasgow, Dundee and Leith.

89311. Then some of them were Glasgow men?—I am not sure as to that, but I rather think that the Glasgow men were never sent.

89312. (Mr. Patten-MacDougall.) You say "not" in Paragraph 37?—At the time that statement was written the Glasgow Distress Committee had not sent men.

89313. (Mrs. Bosanquet.) It was circulated from Glasgow Distress Committee to the others, so I suppose that Glasgow had had first innings?—No, that was not so.

89314. Then the men who went to Ballachulish had not been subjected to the strenuous investigation of Glasgow?—They were supposed to be picked men.

89315. What was the investigation directed towards—discovering their want or their character or their capacity for work?—Both their character and their necessity.

Mr. Charles Cleveland Ellis.

14 Jan. 1938.

Glasgow farm colony situation, nature of soil, etc.

Qualifications of investigation officers.

Extent of investigation as to men sent to Ballachulish.

Mr. Charles 89316. Have you emigrated any people from Scotland ?
 Cleveland —Yes. Particulars of that will be found in the Report
 Ellis. of the Local Government Board for 1907. Particulars
 14 Jan. 1908. are given on p. 6 of the Report.

Emigration 89317. Do you always emigrate the whole family ?
 by Scottish —No; in a number of cases the dependants have been
 Distress left behind.

Committees; 89318. What happened to them ?—In every case in
 support of which a distress committee has emigrated people from
 dependents Scotland reasonable precautions have been taken to
 of emigrants. satisfy the committee that adequate arrangements were
 made for the support of the dependants, and that there
 was no prospect of their becoming chargeable to their
 respective parishes.

89319. Has not there been a good deal of emigration
 from Scotland where the dependants have become charge-
 able ?—I have heard that there has, but not through
 the agency of distress committees.

89320. Have they not contributed towards it ?—No.

89321. Have you known many cases where the distress
 committees have been terrorised by the unemployed ?
 —No, not to that extent.

89322. Have they been subjected to pressure ?—I do
 not think so. Pressure has been brought to bear in
 some places, but I would not go so far as to say that it
 has influenced the committees in their action.

Reasons for 89323. (Miss Hill.) When you recommend that the
 suggested transfer of administration of Un-
 employed Act to Town Councils. I base
 Present that solely on the ground that the distress committees up
 functions of to the present time are doing nothing more than simply
 Distress applying to the town councils to provide work. If this
 Committees. new body is merely to make an investigation and ask
 the town to provide work, it seems to me that the town
 could quite well do the whole thing.

Difficulty in 89324. Do you think it was the intention of the Act
 providing that they should limit themselves to that particular
 work for form of action ?—No; I do not think it was; but the
 unemployed. difficulty is to provide work for the unemployed.

89325. Then there is the question of emigration and
 migration ?—Yes; and I think migration has not been
 possible to any large extent.

89326. It would be possible, but of course it would
 soon come to an end if the investigation is to be such
 that where you have an opening for 1,000 or 1,500 men,
 as at Ballachulish, those who are sent all return within a
 day or two; that would stop migration pretty effec-
 tually, would it not ?—Yes.

89327. But that is not quite one's ideal of the work,
 is it ?—No.

Co-operation 89328. Then you say you think co-operation with
 desirable between the parish council is advisable; is not the mixed character
 of officers of the distress committees based on the necessity of that
 Distress co-operation ?—Yes; but I mean co-operation rather
 Committees and Parish with the officials.

89329. What about the people who are specially
 conversant with questions of relief? Ought they not
 to find a place if the distress committees have to go on
 at all with their work ?—Yes; their services are
 valuable on the investigation committee.

89330. But if you transfer it all to the town council
 what do you mean by the investigation committee—a
 committee of the town council itself ?—I think that it
 would be quite possible to have advisory committees of
 persons experienced in the relief of distress to act along
 with the town council just as they act along with the
 distress committee.

Constitution 89331. Then would you not come back very much to
 of Distress the formation of a distress committee as contemplated
 Committees. by the Act ?—To a certain extent you would, but I
 think you could appoint the representatives who were
 to act with the town council under certain conditions
 that would leave the responsibility more to the corpora-
 tion itself.

89332. And the corporation itself would be more
 likely, would it not, simply to treat the Act as a means

of giving recurrent labour, rather than looking any
 further? They are not specially qualified or trained,
 are they, in dealing with distress? Their work is different,
 is it not?—They have always had to deal with the un-
 employed.

89333. Do you think you should have three Authorit
 organisations—the parish council for the Poor Law dealing w
 work, the town council for the provision of employment, unemploy
 and then the distress committee ?—No, I would not prior to
 suggest that. What I said was that prior to the passing passing
 of the Unemployed Workmen Act the town have always Unemplo
 dealt with the unemployed. Act.

89334. But then the passing of the Act transferred
 that branch of their work to the distress committee ?—
 That is so.

89335. I fail quite to see, unless you are giving up all
 hope of certain branches of work under the Act, why
 you recommend the town council as the body to administer
 it ?—Because the distress committees find such difficulty
 in providing work, and as I have already pointed out
 they have to go to the town council and ask them to
 provide work.

89336. Why should they not do that? It seems
 a very natural and very clear division of labour that
 the distress committee would be taking up the other
 side of the work, and that when they were wanting
 a supply of work and could not supply it themselves
 they should go to the town council, who would have
 experienced surveyors and other people capable of
 judging of that branch of their labours ?—Then you
 see you have the further difficulty that the town say
 "Here is another body constituted, and we will do
 nothing more for the unemployed."

89337. (Mr. Patten-MacDougall.) As regards the finding Town im-
 of work for the unemployed, I think you are of opinion provement
 that a great deal of work has been in relief of rates, are carried out
 you not ?—That is true. at expense
 of Distress
 Committee

89338. That is the result of it ?—Yes.

89339. Can you illustrate that by a case that occurred ?
 —In one case to my knowledge the distress committee
 applied to the town to provide work, and the town said:
 "Very well; we will provide the work, but we are under
 no obligation to pay for it. This is work we would not
 have undertaken except to oblige you, and you must
 pay for it." In that way town improvements have been
 carried out at the expense of the distress committee, and
 as a result, of course, out of the Parliamentary grant,
 seeing that the distress committees are financed by the
 Parliamentary grant.

89340. That is a difficulty that occurs in almost every
 case, does it not, where the work is provided by the town
 council ?—That is liable to occur.

89341. Then another trouble which has arisen in Objection t
 connection with the working of the provisions of the making
 Act is as regards the voluntary contributions, is it not, Parliament
 which it has been laid down are essential before any ary grant
 portion of the grant is distributed ?—Yes. That was dependent
 an extremely difficult thing to negotiate. The principle on voluntar
 of distributing the grant on voluntary contributions, y contributions.
 I think, should be abolished altogether. Extreme diffi-
 culty was experienced in working out the conditions
 in the Circular issued by the Local Government Board
 for Scotland, in which in the first place they told distress
 committees that they would not give assistance unless
 it was genuinely required, and then further on they said
 that in the administration of the grant they would have
 regard to the efforts made to obtain voluntary contribu-
 tions. It was really impossible to carry out the two.

89342. The ratepayers' answer being, the appeal being
 made in this way: "We shall not give anything here
 where you have a Government grant available for the
 purpose" ?—Yes.

89343. That difficulty has occurred in almost every
 case, has it not ?—Yes.

89344. Although it has been met very substantially,
 at least fairly substantially, in most ?—Yes. Distress
 committees in Scotland have done fairly well to obtain
 voluntary contributions; but the difficulty has been
 to administer the grant with anything like fairness,
 because it was obviously unfair to a distress committee
 that had taken every possible means to obtain voluntary
 contributions to penalise them by withholding the grant.

89345. Last year I think that in the case of Glasgow it was found that it was really of no use appealing to the charitable community there, but the Corporation came forward with a contribution of a couple of thousand pounds from their own common good?—They did.

89346. In that way it was thought that they had quite become entitled to claim the grant, having contributed a voluntary contribution such as was asked under the conditions; is that not so?—Yes.

89347. Have you any experience of the working of the colony at Midlocharwoods?—I have experience of it.

89348. That is a farm colony in the neighbourhood of Dumfries, is it not?—That is so, and under the control of the Scottish Labour Colony Association, the object being the improvement of the social condition of the poor in Glasgow.

89349. Having in view what you said a little while ago, that you think the establishment of these farm colonies involves that those who are sent there shall remain there for a long period—possibly for life—what is the experience at Midlocharwoods of the people who are sent there, do you know?—They do not keep them there for any very long period; but of course the colony carried on at Midlocharwoods is somewhat different to any colony that would be established by a distress committee, because there they have in view solely the reclamation of men—it is carried on more from the religious standpoint than from the legal standpoint.

89350. Is it within your knowledge that one in four of those that are sent there goes back to a useful life?—I have heard that stated.

89351. It has been reported, but I do not think you would know that very well?—I have heard that.

89352. (*Mr. Phelps.*) Are they largely people suffering from alcohol?—To a large extent.

89353. (*Mr. Patten-MacDougall.*) But that is not an essential, is it?—No.

89354. I mean they are not the only people who are sent there?—No, but it is a licensed house for inebriates also.

89355. (*Mr. Phelps.*) Do you know what proportion are inebriates?—I cannot just recollect.

89356. (*Mr. MacDougall.*) Has anything been done in Scotland relative to the matter of Paragraph 12 of your Statement, where you deal with the provision in the Act for appointing special committees whose duties are to collect information respecting the condition of labour within their area?—Only at Hamilton and Motherwell, and in the county of Lanark.

89357. Has it been done there or have the committees merely been set up?—They have been set up, and in the cases of Hamilton and Motherwell they have received a few applications and have investigated and started what they call a labour exchange.

89358. Has it done any useful work?—None; it is not organised in a way to be of any use.

89359. (*Sir Samuel Provis.*) I think that the regulations in Scotland do not contain any provision prohibiting the giving of assistance to people who have been already in receipt of relief?—That is so.

89360. Or who have been assisted previously during two years by the distress committee?—That is so.

89361. Is it at all your experience that the same persons come year after year for assistance?—No, with the exception of Dundee. Of course, we have only had two years to guide us, but in Dundee there is something like 65 per cent.—I think it is brought out in the Report at that—who were recurrent.

89362. Was it the same before the passing of the Unemployed Workmen Act, when the town councils looked after unemployment?—I believe it was.

89363. Does that not a little tend to show that there is a certain class of people who would rather rely upon assistance year by year from the local authority?—Yes, it does.

89364. Would you think that that was one of the objections to the Act, that it tends to encourage that sort of thing?—Yes, I certainly think that.

89365. It was, of course, for the purpose of checking that as far as possible that the regulation was inserted in the English rules that the assistance should not be given in circumstances such as that we are speaking of?—Yes; I can quite follow the reason for that. At the same time the Scottish Board thought that it was desirable to leave that rather to the distress committee than to the central authority.

89366. It is difficult rather for the distress committee to resist the applications under circumstances of that sort, is it not?—It need not be.

89367. But in practice, would it not be so? Does not your own experience rather show that there is a difficulty, because you find that recurrent cases are relieved?—It depends entirely on the constitution of the committee, as affecting recurrent applications.

89368. That is to say, on the *personnel* of the Committee?—Yes, on the *personnel*.

89369. Is it within your experience that some committees are strong enough to resist the pressure that is put upon them, and some are not?—It is.

89370. Would it be in the larger places, or in the smaller places that there was the greater power of resistance?—You can hardly distinguish in that way; it applies all over.

89371. Then really it is the personal equation on the particular committees?—That is so.

89372. Then as to the wages that are paid to the people who are assisted by means of the distress committees, are they the current rate of wages?—They vary; in some cases they pay the standard rate, in others they pay below the standard rate.

89373. What determines that? Is that again the view of the distress committee?—Yes, the Local Government Board for Scotland leave that entirely to their discretion.

89374. Do you give any advice on the subject?—Yes. In our circular we state that: "The Board have not deemed it necessary in the meantime to frame regulations prescribing the rate of wages to be paid to unemployed persons in respect of whom the distress committee provide or contribute towards the provision of temporary work. In thus leaving the question of wages to be decided by the distress committee, the Board have every confidence that the committee will give the subject their careful consideration and that, in the exercise of their discretion, they will fix such rate of wages as will deter a workman from leaving his employment in order to apply for assistance from the distress committee."

89375. The object, evidently, of that circular is rather to check any tendency on the part of men to leave their employment for the purpose of getting work under the distress committee, and simply to enable the local authority to give assistance, when otherwise these men would not be able to get work?—Exactly.

89376. I am not quite sure whether I rightly gathered from your statement that it is the case that the distress committees in Scotland keep open all the year round for applications?—We have advised that course.

89377. Do they, in fact, act upon that advice?—In a number of cases they do. In fact, I might say that in all the cases I think they are prepared to receive applications at any time of the year.

89378. You have not considered that the provision in the Act which says that the distress committee, when required by the central body "shall receive, inquire into, and discriminate between any applications made to them from persons unemployed," contemplates that it will only be under special circumstances that they will receive applications?—With the exception of Dalbeattie we have no central body in Scotland, but the distress committees have the full powers of a central body. We rather read it that the distress committee there means the committee with full powers, and that they are to make themselves acquainted with the conditions of labour within their area. The Board have taken the view that it is not possible for them to keep themselves or to make themselves acquainted with the conditions of labour, unless they are prepared to receive applications at any time.

Mr. Charles Cleveland Ellis.
14 Jan. 1908.

in Scotland.

89379. Does not the Act contemplate the opposite, because it enables the special committee to be sent into a county who have no power to receive applications for assistance, yet they are to obtain information as to the want of employment in their district?—There are only three such special committees established in Scotland.

89380. I know; but I am now speaking of the intention of the Act. Does not the Act show that that is not the sense which is to be attributed to those words, seeing that it contemplates that a special committee who cannot receive applications for assistance are to make inquiries as to the want of employment?—I do not think so. I understand that in England special committees are compulsory.

89381. Yes, they are.—They are not in Scotland.

89382. The point I was rather putting is, what is contemplated by the Act as the duty of distress committee? You say the distress committee should receive applications, and on the strength of that provision, that they should collect information?—Yes.

89383. I am suggesting to you whether that is quite what the Act means, because the Act itself contemplates that a special committee should collect information, although it cannot receive applications for assistance. Do you see the point?—Yes, but there are no special committees where there are distress committees.

89384. True, but how are the distress committees to obtain information, when the special committee is the same? The exercise of that power cannot depend upon their receiving applications, because the special committee could not receive applications?—The special committee would be entitled, would they not, to receive applications at any time?

89385. No; the special committee only collects information—Quite so; but they do so by establishing labour exchanges and employment registers through which exchanges, of course, they receive applications from persons unemployed.

89386. Therefore, receiving applications for assistance is not a necessary reason for collecting information as to the want of employment?—One of the duties of the special committee is to keep themselves acquainted with the conditions of labour, I think.

89387. Certainly.—That they do by receiving applications.

89388. But the special committee does not receive any applications, does it, in Scotland?—Yes.

89389. It does not in England.—We have only, as I said just now, three special committees—for the burghs of Hamilton and Motherwell and the county of Lanark.

89390. And they do receive applications?—They receive applications from persons unemployed.

89391. What do they do with the applications?—They merely endeavour to provide the men with work through the medium of the labour exchanges which they have established.

89392. And they do not themselves do anything in the way of assisting the men?—No, except, as already explained, through the ordinary channels of labour. They have no power, of course, to provide relief work.

89393. Then I think I understood you to say that the town councils, before the passing of the Act, did themselves do what was necessary in the way of dealing with the unemployed?—That is so.

89394. Had they got any special powers in that connection?—No, they had none.

89395. Was it legal what they did?—I have heard it said that it was illegal to apply the rates to the payment of wages to the unemployed, or at least I should rather put it this way, that the payment out of the rates for the loss resulting from unemployed labour was illegal. In many cases, of course, that is overcome by what we call in Scotland the common good—the burghs have common good, and the loss in that case is met out of the common good and not out of the rates.

89396. (Mr. Patten-MacDougall.) The common good is a corporation fund which has been created hundreds of years ago, over which there is practically no control?—That is so.

89397. It is not subject to audit, and there is no control, and they can use it for purposes which are not provided for by statute?—That is so.

89398. (Sir Samuel Provis.) I suppose that in the Special larger burghs the town councils manage the unemployed committee business by means of a committee?—Yes, by a special Glasgow committee. Indeed, in Glasgow, the work that is being done there is merely a repetition of what has been done for many years.

89399. They appointed a special committee of the town council?—That is so.

89400. Could they add members to that committee under their general powers—outsiders, I mean?—No.

89401. Therefore, if you want to bring persons of acknowledged experience on to that special committee, you must have some legislation?—Yes; if you want to give them full powers, that is so. Of course, you could have advisory committees.

89402. Without any powers?—Without any powers.

89403. But that would not quite answer the purpose, I suppose, in a large burgh, because you want the executive power?—Yes, I think that would be better.

89404. They would have to hold more frequent meetings, and would deal with the settlement of details which you do not want to refer to the larger body, and so forth?—Exactly.

89405. It may be said, may it not, that this Act contemplates that the distress committee shall be a committee of the corporation?—They are expressly termed that.

89406. Therefore what you come to is some modification in the constitution of that committee?—It comes very much to that.

89407. Do you think there is advantage in representing the parish council on that committee?—I think if there is to be a separate body the present constitution is satisfactory.

89408. Although a separate body, it is treated as a committee of the corporation?—Yes.

89409. Therefore you would not object to the special committee of the corporation containing a representation of the parish council, if I rightly understand you?—No, I would not object to that.

89410. And also you think it desirable to co-opt some persons of knowledge and experience?—Yes, I think so.

89411. Has any objection been taken in Scotland within your knowledge to the questions which are put under the Regulations?—Not to any great extent. We especially asked that question, and twelve out of fourteen distress committees stated that they have received no complaints at all, and that the visits of the investigating officers were not looked upon as inquisitorial.

89412. (Chairman.) Is that in the burghs where the great mass of the applicants were passed, because, judging by the figures, the inquiry was of a very perfunctory character there?—In Edinburgh the answer to that question was that the dependants frequently refused to give information, and a large number of employers, particularly the large employers of unskilled labour, absolutely declined to give any information with regard to the applicants. Glasgow said that they had met with no opposition, except that a number of circulars were not returned from employers.

89413. (Sir Samuel Provis.) Do you think that in the cases in which the great bulk of the people were passed, the questions were somewhat perfunctorily put?—I would rather put it upon the investigating officers. I am afraid their system of investigation varies very considerably.

89414. Even in those cases questions were put to the applicant, were they not, and he filled up a form?—Yes, the form is filled up for him in every case. In some cases we find that references to employers are not followed up, nor enquiries made whether the applicants had been in receipt of relief from the parish council, or anything of that kind.

89415. (Mr. Patten-MacDougall.) In Glasgow, where the investigation was most strict, the parish council were in complete touch, and, in fact, the investigating officer was one of the inspectors of poor—the assistant inspector of poor?—That is so.

Absence of power to co-opt members by Glasgow Special Committee.

Executive powers desirable for special committees.

Representation of parish councils on special committees.

Attitude of applicants towards investigation.

Result of investigations in Edinburgh and Glasgow.

Varied methods of investigation.

Co-operation in Glasgow between officers of Distress Committee and parish council.

89416. In other cases that is not so?—Yes.

89417. In Glasgow you find that a great many applications were refused?—Yes.

89418. (*Sir Samuel Provis.*) Just take for a moment the cases in which they did provide work and in which grants were made to them; was that work always work which it was in the power of the town council to undertake, or was it something outside that power—I am speaking of their ordinary powers, of course?—I think it was always within their power to undertake the work.

89419. Did you pay the whole cost of the work or did you only make a grant in respect to the cost of the work?—We make a grant in respect to the cost of the work. That really is a difficulty that I foresee. Take the case of a town council who simply say: “We have nothing to do with the unemployed, but it is a question for the distress committee; we are not bound to provide work, but we will do it to oblige the distress committee; we will form this street, but we ask the distress committee to pay the wages.”

89420. You limited their application to the distress committee to wages, did you?—So far we have done so.

89421. Did they not ask for the cost of the materials?—That question is very likely to arise.

89422. But it has not arisen yet?—No, it has not.

89423. Nor even the cost of supervision?—The cost of supervision has already arisen.

89424. There has been an unwillingness on the part of the town council to pay the cost of supervision?—That is so.

89425. Have you ever had this point—as to whether the distress committee should do more than pay the difference between the ordinary cost of the work and that involved in the employment of assistants?—We have had that frequently under consideration and the view that we take is that it is not unreasonable for the distress committee to pay the difference between the contract value and the actual cost. We are inclined to favourably look upon an application of that kind and to give a grant accordingly to meet that loss. But the difficulty is where a town council take up the position that they will not provide work unless the distress committee pay for it; if we refuse the grant then the unemployed suffer.

89426. Although you might express willingness to pay the difference to which you have just referred?—That is so.

89427. In England refusals have been given on that ground, as perhaps you are aware?—Yes.

89428. The ground being that the grant was not intended to relieve the rates if the cost of the work would ordinarily fall upon the rates?—Quite so.

89429. You have not had, I think you said, any case in which the local authority proposed to carry out work which was outside their powers?—I am not sure that I follow quite what you mean by “work outside their powers.”

BAILIE ALEXANDER WILKIE; called, and Examined.

89442. (*Chairman.*) You are a member of the Town Council of Aberdeen?—Yes.

89443. You have been kind enough to send us in a Statement which we will treat as your Evidence-in-chief if you will hand it in?—Certainly.

1. I have been a member of the Town Council for sixteen years, and during that time have held the office of City Treasurer, and been Convener of several of the Council's Committees. I have been a Magistrate since November, 1906.

I have been a member of the Local Distress Committee since its formation, and have taken considerable interest in the work of the Committee, acting in the capacity of Convener of the Finance Committee. I have been Chairman of Distress Committee for the last twelve months.

I am also Managing Director of the Aberdeen Suburban Tramways.

My connection with the Town Council and otherwise has been such that I have had ample opportunities of

89430. There have been cases in England where work has been carried out which was not within the powers of the local authority, consequently the local authority could not pay any cost, and the whole cost has then fallen upon the distress committee?—I am not aware of any case of that kind having arisen.

89431. There is a case just now—you may see it in the papers—which will show you the sort of case I mean, where it was proposed that some work should be done to the Alexandra Palace; that is the sort of case?—I am not aware of any case of that kind.

89432. (*Mr. Patten-MacDougall.*) Have there not been cases in Scotland where the municipality have said: “Here is a road or a street which we shall probably be called upon to make some ten years hence; we will provide work there now and make the road in anticipation.” There was a case of that kind the other day, was there not?—Yes, I recollect that. That is a case where we had a distress committee going outside their own boundaries to make a road. I had forgotten that.

89433. (*Sir Samuel Provis.*) There you are obliged to allow the distress committee to pay the whole cost?—I cannot see how we could possibly refuse it.

89434. Because otherwise there would be no legal motive for paying the cost of the work; that is the short reason, is it not?—Just so.

89435. I have only two other points to put to you. First of all, with regard to the residential qualification; you are rather opposed to it, but without it would there not be this danger that where there is a distress committee persons would be attracted and would come into that place?—Undoubtedly. I am not opposed to the restriction, but I think that power should be given to relax it in certain cases.

89436. Would you allow the distress committee, probably with the sanction of the Local Government Board, to relax it?—Yes.

89437. It is a little difficult to investigate particular cases, is it not?—We have had several cases brought under our notice where I think it would have been quite reasonable, on the statement that the distress committee furnished, to have allowed them to relax the residential qualification.

89438. Just one point on the labour exchange. Have you had any difficulties suggested to you by reason of the want of any linking up of these labour exchanges. By linking up I mean having some central organisation, with which they were all connected and through which the information was circulated to the different exchanges?—No, we have not arrived at that stage, but I am in entire sympathy with the idea that there should be a central exchange linking up all others.

89439. Something of the kind is done in London, as you know, of course?—I am aware of that.

89440. But not as regards the rest of England?—I understand so. I think that Scotland could quite well be linked up under some central exchange.

89441. Is anything of the sort done in Glasgow?—No.

making myself fairly well acquainted with the labour and economic conditions of the city and district.

2. Prior to the establishment of the Distress Committee, the Town Council, out of the funds of their Common Good, started relief works under the charge of the Finance Committee, of which I was then convener. The following sums were spent by the Corporation:—

Year 1904-5.			
New road at Girdleness	-	£3,634	14 1
Pitching at sea-beach	-	1,665	9 7
		£5,330	3 8
Year 1905-6.			
New road at Girdleness	-	£1,629	7 0
Pitching at sea-beach	-	303	16 11
		1,933	3 11
		£7,233	7 7

Other work has likewise been provided from time to time by the Town Council and the Harbour Commissioners.

Mr. Charles Cleveland Ellis.
14 Jan. 1908.

Anticipating work for unemployed.

Need for power to relax residential qualification.

Linking up of labour exchanges by means of central exchange proposed.

Bailie Alexander Wilkie.

14 Jan. 1908.

Relief works provided by Aberdeen Town Council prior to passing of Unemployed Act.

Amounts expended on relief works out of Aberdeen Common Good in 1904-5 and 1905-6.

Baillie
Alexander
Wilkie.

14 Jan. 1908.

Donations from Aberdeen Common Good in aid of unemployed. Infrequency of applications to Distress Committees by Trade Unionists. Number and occupations of persons registered at Aberdeen Labour Exchange.

Besides providing work, the Council has, during the past four years, given donations from the Common Good of £20, £200, £100, and during the current financial year, £500.

3. The unions of all organised trades have facilities for registering their unemployed members, with the view mainly of the men being paid "out-of-work" benefit, and the men in these unions, with proper contributions and benefits, are seldom or never under the necessity of applying for distress relief outside their union. Consequently, although the number of unemployed organised workers during certain periods is considerable, those registering for relief work are, you may say, wholly confined to the unorganised, *i.e.*, unskilled workers.

4. Coming now to the experience of the Labour Bureau—since the Unemployed Workmen Act came into operation—the number registered from December 11th, 1905, to May 31st, 1906, was 1,312 persons. From June 1st, 1906, to March 31st, 1907, the number was 1,250. Of the latter (1,250), there were:—

General labourers	-	-	-	-	636
Dock labourers	-	-	-	-	22
Shipyards labourers	-	-	-	-	14
Engineers' labourers	-	-	-	-	9
Woodyard labourers	-	-	-	-	5
Masons' labourers	-	-	-	-	17
Plasterers' labourers	-	-	-	-	10
Carters	-	-	-	-	32
Stone polishers	-	-	-	-	27
Masons, dressers or finishers	-	-	-	-	55
Masons, building	-	-	-	-	72
Painters	-	-	-	-	24
Joiners	-	-	-	-	19
Plasterers	-	-	-	-	9
Slaters	-	-	-	-	6
Plumbers	-	-	-	-	2
Millworkers (men)	-	-	-	-	27
Tinsmiths	-	-	-	-	22
Blacksmiths	-	-	-	-	7
Engineers	-	-	-	-	4
Clerks	-	-	-	-	19
Bakers	-	-	-	-	8
Butchers	-	-	-	-	7
Tailors	-	-	-	-	5
Upholsterers	-	-	-	-	3
Cabinetmakers	-	-	-	-	2
Sundry trades	-	-	-	-	123
Charwomen	-	-	-	-	54
Millworkers (women)	-	-	-	-	10

1,250

It thus appears that about 70 per cent. are of the labouring (unskilled) class, the others (*i.e.* tradesmen) being the least skilled of their class.

Extent of unemployment in Aberdeen as regards period and class affected.

5. With 50 per cent., unemployment is chronic; with 50 per cent., periodic, mostly during the winter months, when the weather tends to stop outdoor work. In Aberdeen, during the last three years, the building trade has been unusually depressed, which would account for the considerable number of tradesmen, *viz.*, masons, joiners, painters, etc., being out of work. This depression has been caused in great measure by over-building, and by the completion of large works such as the university buildings, theatre, post office, etc.

Causes of unemployment.

6. Opinions may vary as to the causes of unemployment, but primarily it would point to the labour market being over-stocked at certain periods, with the result that the least skilled are crowded out.

7. In the case of individuals, intemperate habits, want of early training and discipline, physical and mental deficiency, old age and improvidence, all contribute to their displacement.

Effects of unemployment.

8. The effect of unemployment is the demoralisation of the individual, with the result that it destroys his independence, his initiative, and his usefulness, while it also inflicts hardship on himself and his dependents, and afterwards spoils the chances of his family getting a good start in life.

9. As to the question of remedies, it is rather difficult to venture an opinion, and above all to speak with authority; but in my opinion the following suggestions would go far towards remedies, *viz.*:—

(a) A training or apprenticeship during youth and early manhood; a raising of the ideals of the lower classes; teaching the parents self-sacrifice for the sake of their families; and teaching both parents and families habits of thrift and providence. In this connection, I think a man's early association with his fellows through the friendly and trade societies has a splendid effect, creating emulation and self-respect, and a proper conception of moral and social virtues. Employers should be compelled to give a lad a proper chance of learning his business.

(b) There should also be proper agencies for supplying information as to the state of trade in different localities, and a workman properly trained would have no diffidence in going into any workshop, warehouse, or squad. At present, in the skilled trades, labour is mobile, with the result that there is less unemployment.

(c) I think technical training should be given to both sexes in dairying, the rearing of poultry, fruit culture, market gardening, bee-keeping, and the feeding and rearing of pigs.

(d) That power be given to local authorities to purchase land at its agricultural value or prairie value for the establishment of farm colonies and the starting of factories.

(e) Recognising that unemployment is not local but imperial, that there should be a complete system of registration, with relief stations established over the country, to assist men travelling in search of work. That workmen be bound to carry papers of identification when they are travelling in search of work, so that the authorities might know what sort of character they bore. We must differentiate between the genuine unemployed man who is in search of work, and the vicious vagrant who is in search of opportunities for plunder, and who has not the slightest intention of working.

10. Referring to the working of the Unemployed Workmen Act, it is difficult to speak with authority as to the results; but I believe so far it has lessened the need for relief or charity of a kind different from that given under the Act, especially in the cases of the older men. With the younger men, I believe relief work is a mistake to a certain extent, sapping their self-reliance.

11. To have a greater influence for good, I believe the liberty of the individual being relieved should be to an extent curtailed, such as it would be if he were put under proper supervision on a labour colony away from his present haunts and associates.

If the younger men could be trained on a farm colony, I believe the effect on the individual and on society would be most beneficial.

89444. (Chairman.) You have had, independent of your public appointment, considerable experience, because you are Managing Director of the Aberdeen Suburban Tramways?—Yes.

89445. Prior to the Act of 1905 the town council had, in preceding years, spent money to find employment for persons out of work?—Yes; they spent a considerable sum, about £7,233, in relief works before this Act came into operation.

89446. Was there, as far as you know, any expenditure previous to that which you allude to?—No, not any large sums. There were some small sums from time to time every winter, but not until that year 1904-5 was there such a large undertaking.

89447. Did the town council, in doing this, have regard for their own permanent employees; they did not dispossess them in giving this work?—In this case they did not. They have had regard, and always have had regard, to the displacement of their own employees. This was a road as to which there was no immediate necessity for its being made. It was merely gone into for the purpose of providing work for the unemployed.

Remedies for unemployment.
Apprenticeship.
Membership of friendly Societies or trade unions.
Adequate instruction during apprenticeship.
Agencies supplying information as to state of local trade.
Technical training in agricultural pursuits.
Power for local authorities to acquire land for farm colonies and factories at prairie value.
Registration of workmen.
Relief stations to give travelling aid to searchers for work.
Workmen to carry properly authenticated identification papers.
Differentiation between *bona fide* workmen and habitual tramps.
Effect of Unemployed Act on applications for charitable or Poor Law relief.
Effect of relief works on self-reliance of young men.
Restriction of liberty of those receiving relief.
Farm colony training for young male unemployed.
Relief works provided by Aberdeen Town Council prior to passing of Unemployed Act.
Displacement of regular corporation employees avoided by Aberdeen Town Council in providing relief work.

89448. The Act really only regularised and legalised what you had been in the habit of doing before?—That is so. Of course, we also, to meet the requirements of the Act, gave £500, I think it was, to the distress committee.

89449. Your experience is that there are few skilled workers who have availed themselves of this Act?—Yes, very few skilled workers, the large proportion are unskilled labourers.

89450. You speak of these persons as being persons with whom employment is chronic, 50 per cent. of them?—Yes, 50 per cent. of these people are chronic; they are always out of work every winter, and are always very willing to take advantage of anything that is going.

89451. And 50 per cent. are periodically out of employment?—Yes.

89452. There has been an expression used by a previous witness which I daresay I could fit into your view, which is that it is under-employment; 50 per cent. would be under-employed, perhaps get one or two days' work a week?—Yes.

89453. The others would be those who would be regularly employed, but would lose their employment at regular seasons?—That is so.

89454. The intention of the Act was that it should apply to persons who were ordinarily in continuous employment and who were temporarily out of employment. That class did not come up very much, did it?—Not to a large extent. It did to some extent, but not to a large extent. Of course, as to those who are in trades unions, their unions provide for unemployment, or at least, some of the trades unions do, and they would not come up.

89455. That would account for a certain portion of the skilled who are not employed?—Yes; there is a certain amount of dread by the really skilled workman of taking advantage of this Unemployment Act.

89456. Your impression is, I think, that there is always a certain number of unemployed people in Aberdeen?—Yes, that is so.

89457. Even in summer?—Even in summer there are a few. We have kept the labour exchange open during the summer, and we have had applicants, not many, but some.

89458. Going into causes, we have had a great deal of evidence here, particularly in connection with London, that one of the causes that tend to unemployment is that the boys when they leave school, instead of going into a skilled occupation, are very apt to take up casual work, selling newspapers, becoming messenger boys, and things of that kind. Is that evil at all prevalent with you in Aberdeen?—I think to some extent; but it would not be so much prevalent at Aberdeen as it would be in large cities such as Glasgow, London, and those places. I think that one thing that has caused unemployment is the great influx of the country people to the towns.

89459. Do many come in?—An enormous amount. For instance, since the trams have started in large cities that has been a great attraction for farm labourers; they see these cars run along the street, and they think it a very desirable job. That has attracted a large number of people to the towns.

89460. Do you work your own tramways?—We carry on our own tramways and the Corporation carry on their own tramways. Ours are in the suburbs.

89461. These are not municipal tramways?—No.

89462. I suppose they are attracted by the higher wages they can get whilst on the tramways?—Yes, and they are taken away from the country. In fact, a farmer told me the other day there is very great difficulty in getting farm labourers at certain seasons of the year.

89463. I suppose these men coming into Aberdeen would not themselves get out of employment, but being strong people themselves they would push the town-people out?—They would displace others.

89464. Is there much quay or dock labour?—There is a fair amount of dock labour, but these same men are generally employed on that kind of work; they just hang about till the work comes on; they are casual labourers.

89465. Do you think that it is worth while continuing this Unemployed Workmen Act? Would you continue it, or would you take any measures for associating them with the parish council?—I cannot say that I am very much impressed with association with the parish council, although I think, what I heard Mr. Ellis say, there should be a strict understanding between the two bodies. If there are any genuinely unemployed people they are very unwilling to go to the parish council to apply; they practically refuse.

89466. If they are able-bodied they cannot apply?—No; that I think is one of the drawbacks with regard to the parish council in Scotland. They cannot under any conditions give relief. No relief can be given in Scotland, as far as I am aware, except from some charitable organisation, to an able-bodied man, although he may be of the very best character.

89467. You would say that although the great majority of these are persons who are casually employed, still there is amongst them a number of respectable persons?—There is no doubt about that.

89468. Who would not, if they could help it, go to the Poor Law?—They would not apply unless they were in really necessitous circumstances.

89469. You would say the unemployed who were registered under this Act were of a different social class to those who go to the Poor Law, for instance?—Yes; a proportion of them were of a different stamp.

89470. Supposing you had to renew the Act, in what shape would you put the Act? Would you renew it as it is?—There are certain alterations which would have to be made. I think that question of having to collect subscriptions before we get any grant from the Local Government Board is very objectionable, because I find the people realise that they are already rated for administrative purposes; and it is difficult to get them to differentiate between what is for administrative purposes and what is going to be paid in wages. I think that condition would have to be taken out of the new Act if it is going to be renewed, because it is very difficult to get people to subscribe, and particularly so, I think, when part of it is rated for.

89471. I suppose the person who is appealed to says: You have got the rates to help you, why should I do no in?—That is it; they do not differentiate between what the rates are going to be applied to. We cannot apply the rates to wages. We have a great difficulty on that point, although I must say the Local Government Board are very considerate with regard to its grants.

89472. Would you like to have greater powers of expenditure given to these committees as regards local rates. What would the local ratepayers say in Aberdeen?—The ratepayers always object to an increase of rates, that is my experience.

89473. You would keep the control of this work in the hands of the town council?—It is very difficult to say who should control it, whether it should be the parish council or the town council. Speaking as a member of the town council with some experience of it, I am of opinion that the town council has quite sufficient work to do already, without taking in hand this. I must say I do not see any serious objection to the present arrangement; a certain number of members being sent from the town council, a certain number sent from the parish council, and a certain number of people co-opted who are supposed to have a special qualification for taking part in this work. I do not think there is any serious objection to that arrangement at present. There is no doubt as far as Aberdeen is concerned that the officials of the parish council and the officials of the distress committee and also the officials of some of our charities, in fact, most of our charities, work hand in hand together.

89474. You have a fairly efficient system of charity organisation I think outside the parish council, have you not?—We have a fairly efficient system. Of course I find that all these charities year by year have greater difficulty in getting a sufficient amount of funds to carry them on, but I think there should be a common understanding between all these things.

89475. Is the enquiry satisfactory?—Yes, I think as far as we are concerned we have a very satisfactory officer for doing that sort of work. He has had experience of a similar nature.

attendance.

Dissociation
of labour
exchanges
from Distress
Committees.

89476. Passing on to remedies, you think first as regards the condition of things that the labour market is over-stocked at certain periods. You would say that the skilled labour market was over-stocked?—Yes, I think so.

89477. The unskilled, particularly in its lowest grades is also over-stocked?—Yes, I think so.

89478. The pinch would be most felt in the lowest grades of unskilled labour?—There is no doubt about that; it is the unskilled labour that feels it.

89479. We agree, I think, as regards the demoralisation which unemployment effects. Now we come to remedies: apprenticeship; do you think there is much room now for young fellows to learn trades by apprenticeship?—I do not know that there is a large field for that, but when they are to learn their trade by apprenticeship I think there should be some obligation rest upon the employer to give them a fairly good training in their particular trades. I think they are left with insufficient training.

89480. You go into a number of questions rather of a moral character. You want to raise the ideal. Should you say that the ideal had fallen, that there was a lower standard now than before?—It is very risky to go into a question of that kind; I do not know whether it is intended to go higher, but it is a question which is rather a difficult one to express an opinion upon; in fact, I think myself, with all deference to our young men, that far too much time is given up to sport. I do not know that that is demoralising, but it certainly takes away a lot of valuable time, and it must take away a certain amount of brain power.

89481. I suppose you would go on to say also amusement?—Yes, amusement generally, particularly football. I think that is getting to be a serious consideration.

89482. You think that the association of a young man with his fellows in an insurance society or a friendly or trade society has a good effect?—Yes, I think that is so; it gives them a fairly good business training, and teaches them, or rather they are taught, accuracy in figures, and various business principles, which I think is of considerable advantage to a young man.

89483. Do you think the schooling they get is sufficiently useful and utilitarian?—I am not sure if it is, particularly with regard to the education that would be necessary with regard to country schools, and with regard to agricultural training. We have quite recently had an agricultural college established at Aberdeen, but I think agricultural teaching should be given in every school in the country, and in the towns as well. I have been strongly impressed with what has been accomplished in Denmark in the way of raising food stuffs, and I do not see why a great deal more of that kind should not be carried on in connection with this country.

89484. Would you be in favour rather of increasing the period during which boys and girls had to attend school?—No, I do not think it would come to that at the present time, because I think the parents have a great difficulty in many cases in allowing them to remain so long as fourteen. I think if you increase it it will become more serious, unless there is some provision made by the State.

89485. You might have a system of half time?—That might be adopted.

89486. Or continuation schools which might be made compulsory?—That might be adopted.

89487. I did not ask you any questions about the labour exchange. Did you establish a labour exchange in Aberdeen?—We have a labour exchange in connection with the bureau.

89488. Did it answer?—Yes, there have been a fair number of applications from employers and labourers, but it has been felt by our officers that the labour exchange would be better to be rather away from the bureau where the unemployed people are coming; they think it would be more likely to be successful. I do not know whether there is anything in that much.

89489. Are you linked up with others, or is it carried on isolated?—It was linked up; of course they were carried on together. I suppose that the difficulty which is raised is that good working men do not like the idea

of going into these other offices where the unemployed are coming in, but would rather go to an office apart from that.

89490. If they are to be of real utility and become generally established all over the country, linked up, they must not be too much associated with the unemployed, who are of course the most inferior class of labour as a rule?—To some extent; there is a very large mixture; there is no doubt about that.

89491. Do you think it would be useful in supplying information as to the state of trade?—I think so. I think it would be a very good thing to have information regarding the various works that might be going on in various parts of the country. Labour exchanges as trade information bureaux.

89492. It is suggested to us they might have a negative effect in the agricultural districts, that they might warn people there that although there are high wages obtainable by a few, yet if they come on the chance of getting it they may find their position worse in the town than in the country. Do you think there is anything in that argument?—Do you mean if they go out to the country it will reduce the wages of the agricultural labourer?

89493. No, but that they hear now of some exceptional wages which an individual gets in town; these exchanges might, if they were established at certain agricultural centres, be used rather as a warning and a caution?—I do not think so. Of course, it would be necessary to have one central authority that would be in touch with all these labour exchanges. The information would be fairly accurate, and everyone would know what the other one was doing. Linking up of labour exchanges under a central authority desirable.

89494. You would like a system of registration to be established with relief stations by which persons *bona fide* travelling to get work should be helped temporarily?—Yes. Relief stations needed for giving travelling assistance to *bona fide* seekers for work.

89495. To dissociate them, I suppose, from the vagrant class?—Exactly. Of course, there is a difficulty in this country with the vagrant class. Advantage of identification papers for workmen.

89496. What do you think about a paper of identification? That requires a certain amount of registration. Do you think it would be difficult to enforce?—I do not think so. We cannot have labour exchanges in every little village, but it might be associated with some other office, such as the parish council office; that part might be taken up by them. I think it would be a very good thing if we were able to identify people when they were going over the country to seek work, because there would be some knowledge of them, because everybody is imposed upon by them sometimes, because you do not know with whom you are dealing.

89497. If you had a well-established system of labour exchanges or labour bureaux, they could be utilised for that purpose?—Yes, they could be utilised for that purpose by all means.

89498. It has been pointed out to us that the great mass of the so-called unemployed belong, as you have pointed out, to the lowest stratum of unskilled labour, that they as a rule are ignorant of what is going on outside the immediate locality where they live, and that they have no power of mobility, that they are at the end of their resources, and that labour exchanges would, by encouraging this mobility, enable them to move about and thus diminish in certain places the aggregate amount of this low-grade labour which at present we have to deal with. Do you think they would have that effect at all?—I do not think so. Of course, I am very much in favour of classification in all the various kinds of people that we have to deal with, both in our poor-houses and in our penal settlements, I think you should have classification very much more than there is. Labour exchanges in relation to mobility of labour.

89499. I suppose Aberdeen is rather self-contained as a big town; there is not much exchange of individuals between Aberdeen and other big centres?—No, not a great deal. Of course, there are a good many different kinds of industry in Aberdeen, and it does not suffer so early generally as a town such as Dundee, which is practically dependent on one industry. We have various kinds of industry, and we are generally not affected early. Effect of trade depression in Aberdeen.

89500. Your influx is mainly from the agricultural districts?—There is no doubt about that.

89501. Should you say the condition of Aberdeen, as regards unemployment, has improved or deteriorated of recent years?—There has been very much more unemployment during the past two years than there was the years previous to that. I attribute that largely to the building trade. I think Aberdeen, like some other places, has been very much over-built, and there are very few buildings going up now, and that has put out of employment a very large number of tradespeople, and we also have had several large public buildings going on for the last few years, and that has also tended to affect the unemployed, and the granite trade, which is one of the staple industries of Aberdeen, is not by any means in a good way, nor has it been for some time.

89502. It is a trade, I suppose, which though it supplies the same article, supplies it for a great many different purposes?—Yes.

89503. For street paving?—Yes.

89504. I suppose all these modern new pavements, and so on, compete with it?—Yes, they compete with it, and with regard to the quarries themselves, the quarry people find it does not pay unless they can get a market for all the various kinds of material, some portion to be sold to the builders, some to the monumental masons, and some to people who are going to put it into the pavement. They say it does not pay if you are going to take a certain class of stone for a specific purpose unless you get the others; thus a good many owners have shut their quarries.

89505. The distress of the last few years you attribute largely to the contraction of the building trade, and of the granite trade?—To a very large extent. That has, no doubt, been the source it has come from.

89506. (Mr. Patten-MacDougall.) There has been in existence I think in Aberdeen for a good many years an association for improving the condition of the poor, has there not?—That is so.

89507. Does it still continue its operations, notwithstanding the existence of the Unemployed Act?—It still continues its operations.

89508. Are those extensive?—Yes, I believe pretty extensive. It deals with a class which we would not be able to deal with under the Unemployed Act.

89509. Is it dependent on voluntary contributions from year to year?—To a large extent. Of course, there are some permanent funds in connection with it.

89510. And at times prior to 1905 when there was depression in trade, or business was unusually slack, its funds were distributed towards relieving distress?—That is so.

89511. Would you know what those sums amounted to?—No, I could not give you what sums were expended.

89512. I understand you to say they did to a certain extent do the work which is now done by the distress committees?—That is the only institution we have in Aberdeen that we can get any relief from for an able-bodied person who may be of good character because, as you know, the parish council cannot give any assistance. They are the only body who can. They have a system of giving relief by various of the members having books throughout the town, who can give them a certain amount of groceries, and something to keep them going, if they are in real distress. I say that is the only source we have.

89513. Was any relief given by the corporation out of the rates on these occasions?—We have never given out of rates, but directly sometimes.

89514. That has been done in other places, but not in Aberdeen?—No, it has not been done in Aberdeen. It has been done by common good, which is not raised by the rates.

89515. It has been done by common good?—Yes, but common good is not raised by the rates.

89516. I see it stated, I do not know whether it consists with your knowledge, that a great many of those who get relief from the Association for Improving the Condition of the Poor were more or less chronic applicants. Do you know that?—I think that is very likely. I am not a member of the committee, and I do not know what is going on. I am a member of the distress committee,

and I know what is going on there, but I think that is very likely; they carry on one of these firewood factories for breaking sticks, and they employ a certain number at that.

89517. In the working of the distress committee have you found the record paper has worked well?—Yes, I think it has worked very well. I think the whole machinery, considering it is a new experiment, has worked fairly satisfactorily.

89518. Have you any suggestions to make?—I make that one suggestion about having to raise that subscription before getting a grant from the Local Government Department.

89519. The distress committees have not been in actual co-operation with the Poor Law authorities in Aberdeen, have they—with the inspector of the poor?—Yes, we have; our officials have kept in strict touch with them.

89520. Is your investigating officer one of the staff of the inspector of the poor?—No, but he had experience in connection with children as an investigating officer and had a very good training in the work which he is engaged in. I think he has been very satisfactory, and his reports have been very well received by the Local Government Board. He is the kind of man, I think, who would not be imposed upon and would give very fair reports.

89521. Do you know whether any of those who applied to the distress committee for relief were connected with trade unions, or were members of trade unions or friendly societies?—Yes, there were some of them, a certain proportion, there is no doubt about that.

89522. (Miss Hill.) I see you say that you would recommend that workmen should be bound to carry papers of identification when they are in search of work, and so that the authorities might know what sort of character they bore. Do you think there would be any difficulty felt on the part of the workmen if they were asked to do so?—I do not think so.

89523. And you propose that those papers be kept from year to year, and became somewhat like the *dossiers* which one knows of on the Continent?—They would be required to be renewed, or at least they would be required to be marked; that is to say, the paper which had been issued a considerable time ago would not be of much value when shown now.

89524. Would you think that those statements required any verification? If so, in whose hands would you put that?—I think if we are going to extend this Act and these labour exchanges, that could very well be put into their hands. Where there were no labour exchanges, in smaller places, I think it might be put into the hands of, perhaps the parish officer.

89525. The inspector of the poor?—Yes, the parish council officer.

89526. You think there would be no difficulty found in asking independent working men to provide such papers and showing them to the inspector of the poor if they required help?—I do not say there would not be a certain objection, but there would not be the same objection if a man was travelling for work to go to a parish officer away from the town where he was known as there would be in a town where he was known. I think there is an objection for a genuine unemployed man to go to the parish officer of his town.

89527. (Mr. Gardiner.) I do not understand the bearing of the last sentence in Paragraph 10: "With the younger men, I believe, relief work is a mistake to a certain extent, sapping their self-reliance." By "younger men" what do you mean? I notice in the figures about the Aberdeen Association for the Improvement of the Condition of the Poor, nearly 50 per cent. of the applicants are under forty?—I would not say exactly that they were the younger men, I mean lads about twenty or twenty-two, or thereabouts. I think it is a mistake for them to be sent to relief work, because they are likely to come into contact with a certain class which I do not think it is in the interest of these lads that they should meet. It is a time of life when they are very susceptible to influences.

89528. Would you say that no one under twenty should be considered?—That is one of the difficulties we have had in connection with the distress committee,

young men
by Distress
Committee.

- Bailie Alexander Wilkie.* whether we should deal with these lads under twenty or not.
- 14 Jan. 1908. 89529. What line did the committee decide to take ? —I cannot say we have taken any definite line yet. We just have the question before us. We did not do it last year, but we have had a great number more this year. I think some advice is going to be asked from the Local Government Board before we deal with the matter. There is another difficulty that is now arising, if you are going to deal with young lads of seventeen or eighteen, of course it might induce those lads to come away from places where they were only getting 6s. or 7s. a week and come to us, because we were giving what might be perhaps 4d. an hour. There is a difficulty about that, apart from other questions.
- Attractive-ness of relief works to lads earning low wages.
89530. With regard to Paragraph 9 (d) you advocate, you say, power being given to the local authorities to purchase land at its agricultural value. What local authorities do you refer to ? Do you mean the parish council or the town council ?—It might be the town council or the distress committee. The distress committee under the present Act, I think, has certain powers under the Local Government to purchase or rent land.
- Power of Distress Committees to purchase land. Extension of power proposed.
89531. They can purchase, cannot they ?—Yes, they can purchase.
89532. So they have powers now ?—I think so.
89533. So you do not want fresh powers ?—I think the powers might be extended a little. The distress committees are a fairly representative body, or ought to be ; they contain members from each of the principal boards in a large city : the parish council and the town council, and also they have the power, as I say, to co-opt those who may have special qualifications.
- Reason for delay in purchasing land by Aberdeen Distress Committee.
89534. What you mean is you want the local authority to have the power without appeal to the Local Government Board ?—No, I do not object to the appeal to the Local Government Board by any means ; there is no difficulty as to that. There has been a feeling in the distress committee which I have to deal with, that we did not know exactly whether this Act was going to be continued or a new one introduced, and we were a little diffident in going forward and making a purchase. Of course one serious difficulty that we have had in connection with finding work is that the only kind of work that we could send the unemployed people to was to break stones, and that is a class of work that very few people can do to make anything like a decent living. It is a class of work that requires a special training. I, along with others, think that there should be some sort of spade work, which is work which people will be more readily able to do, and you would be likely to get better results from it than we have been able to from the stone-breaking business, which certainly has not been very satisfactory from a financial point of view.
- Difficulty in providing suitable work for unemployed. Technical training for stone-breaking. Financial aspect of stone-breaking.
89535. (Dr. Downes.) Do you consider the lads you have just been referring to come properly under the Unemployed Act ?—They might in some cases, they might be the support, perhaps, of a widowed mother.
89536. How would the widowed mother come under the Unemployed Act ?—I am inclined to think if they were in a difficulty she would. I do not know that she would get relief from the parish.
- Objects of Unemployed Act.
89537. Is not the object of the Statute to assist persons who are honestly desirous of obtaining work, but are temporarily unable to do so from exceptional circumstances ?—I suppose it is ; but I suppose it is very difficult always to keep within the lines of any Statute. As a matter of fact local authorities have sometimes to stretch points where there is any real necessity.
89538. Has there been any great departure from the intention of the Statute ?—I do not think there has as far as Aberdeen is concerned.
89539. I understand you to say that the labour exchanges should be kept apart from the labour bureaux ? —That view has been expressed by some of our members, and particularly, I think, by our officers, that they are more likely to be successful if kept apart.
- Dissociation of labour exchanges from Distress Committees proposed.
89540. Does that mean that some sort of taint has grown up round the labour bureau ?—There is always a certain number of unemployed who are always unemployed who are always hanging round, and people of that kind.
89541. It lowers the prestige of the place ?—Yes, I think so.
89542. That is, it is a taint ?—The genuine working men perhaps do not like to go through a crowd of these people hanging about, they would be more likely to go to a place which was a little bit apart, although it might be under the same management.
89543. With regard to the papers of identification, have you thought how they might be framed so as to prevent any improper use being made of them ?—I cannot say I have, but I have found from enquiries that I have made that they have been very successful in Germany ; that system has been carried on there very successfully.
89544. (Professor Smart.) I do not think you mention in your statement what kind of work you gave the unemployed to do under the distress committee ?—The kind of work we have been giving them to do has been breaking stones, apart from the road-making that the corporation gave us to do ; any difference in cost with regard to the contract price we paid, and they looked after the management.
89545. Did you do the stone breaking entirely off your own resources ?—Entirely off our own resources.
89546. Do you know anything about the financial results ?—We had a loss of about from 50 to 60 per cent.
89547. What was the experience of the town council before that ?—The experience of the town council with regard to the road-making do you mean ?
89548. Yes ?—They had not such a loss as we had with regard to the stone breaking, although they had a loss, but not anything like what it was with regard to the stone breaking.
89549. And the new road ?—There was a loss there, I think it would be somewhere about 15 or 16 per cent., perhaps, but not nearly such a large loss, because you can get a great many people who can work a shovel and spade who cannot break stones.
89550. You had no other means of getting employment than by working in co-operation with the town council ? —That is the only means we had ; that is one of our great difficulties.
89551. So that the town council might have been working the Act all along ?—They might, but I do not know that they would have worked it any better. There is this difficulty, the town council object that they cannot give us work because there is a possibility of their displacing their own permanent workmen. Nearly all these roads that the corporation made were roads that might have been left over, but just to provide the work they were gone on with.
89552. Were they main roads ?—There is one road way round by the sea which is entirely devoted to people in the summer time taking a walk by the side of the sea. That could quite easily have been left. It was in fact the one that cost the most money. They are not roads in the centre of the city.
89553. Not roads that require to be made very scientifically perhaps ?—No, they are not roads upon which there is going to be a large city traffic done.
89554. With regard to what you say about employers being compelled to give a proper chance to apprentices, are not employers as a rule only too anxious to give that ? —That may be in some cases, but not always. There is a tendency to take on more apprentices perhaps than would be well for them to get a good training. I do not think they are under any obligation now. I do not think there are any indentures to compel them to give proper training as there used to be in old times.
89555. Have you no experience of trade union limitation of apprenticeship in Aberdeen ?—There is a little, but not very much.
89556. As regards what you said as to technical training being given to both sexes, do you mean instruction in schools ?—I think so.
89557. In the elementary schools ?—Yes, I do not see why the people in Scotland should not make butter as well as the Danes, and be taught to make it ; unfortunately they are not doing it.
- Reluctance of genuine unemployed to apply to distress committee.
- Successful use of identification papers in Germany.
- Nature of work provided for unemployed in Aberdeen.
- Financial aspect of stone-breaking.
- Financial loss on relief works.
- Difficulty in providing work for unemployed.
- Question of displacement of corporation's permanent staff by relief works.
- Anticipated work for unemployed.
- Proposal to make adequate instruction of apprentices compulsory.
- Trade union limitation of apprenticeship.
- Technical training in agricultural pursuits in elementary schools proposed.

89558. Then, with regard to power being given to the local authority to purchase land at its agricultural value; have you any difficulty in obtaining land on those terms?—We have very great difficulty near the town.

89559. Near the town but not otherwise?—We have never extended our operations beyond near the town, because we thought there would be a difficulty in conveying them to a distance.

89560. You have not thought of a farm colony at all?—We have just been speaking about it and getting information, but we have not gone beyond that point.

89561. You do not think there would be difficulty in getting land for that, do you?—I am not sure but what there would be some difficulty.

89562. (*Mr. Benthams.*) Do you suggest that the distress committees should be abolished?—No, I would not go that length. I think they have been of a considerable amount of service.

89563. You do not suggest their duties should be handed over to the town council?—No, I think it is better the way it is. It is practically recognised in the Act, I think, as a committee of the town council, and it is more satisfactory as it is, because, as I have already stated, I think town councils have quite a sufficient amount of work to do already. Their work has very much increased the last few years.

89564. Do you consider the result of the working of the Act so far would justify its continuance?—Yes, but I think, of course, that the question of having to raise a certain sum of money before we get a grant is certainly objectionable, because you have very great difficulty in getting people to subscribe, because they are already rated for a certain portion of it.

89565. Do you suggest that you would abolish that appeal for voluntary contributions?—I think so.

89566. You would?—I think so.

89567. And provide work through the grants only?—And provide work through grants only, or some such arrangement; I think it all tends to this that there must be a central authority in close touch with all the labour exchanges or labour bureaux all over the country. Of course, a great deal depends in the working of an Act of this kind on the people who have the administration; there is no doubt about it that it is always dangerous to go to the extreme one way.

89568. How would the question be received of paying the whole of the costs out of local rates, and receiving no grants at all from the Imperial Exchequer?—I do not approve of that at all. I think this unemployed question must be dealt with as an Imperial question.

89569. That means it must be managed imperially?—I do not say it is entirely Imperial, but I think there should be cohesion between the local authority and the imperial authority.

89570. If there are Imperial funds, should there not be some safeguard of the expenditure of those funds by some control of the Government, either in the form of representatives on the distress committees or in some other form?—You mean a control from the Government side?

89571. Yes?—There would be that under the present Local Government Board. I find them very careful in regard to matters of that kind.

89572. You would agree that the restrictions that are imposed by the Local Government Board should continue?—I think so; I think they are very satisfactory.

89573. If you were allowed to pay wages out of the grants, and were relying on grants only, it would mean that you would have more restrictions than you have at present to prevent abuse, would you not?—I think it is very possible. I think really there is more need for that in Scotland than there is in England, because you have power, as I understand, under the English parish council system to give relief to able-bodied men.

89574. Yes?—We have no such power in Scotland, of course.

89575. Therefore you feel that you need some power for dealing with the unemployed, apart from the Poor Law, because the Poor Law does not deal with them; is that the point?—Yes, I think so; apart from the Poor Law.

89576. Then, as the Unemployed Workmen Act was intended to provide for an honest working man who was temporarily out of employment, you acknowledge that that has not been entirely adhered to?—No, but in the main it has.

89577. It is rather a high percentage of the total Number of applicants in Aberdeen that has been considered eligible for work. It is about 80 per cent., is it not, to Distress Committee qualified for work under the Act—I think you will see it is 81·09?—I suppose you are speaking from a Local Government Report? found eligible for assistance

89578. Yes?—Very likely that is so.

89579. Does not that point rather to a lax discrimination?—From practical experience, I do not think there has been much. I quite admit that in some cases there may be a little stretching of the point, but there is very careful supervision by the Local Government Board from Edinburgh over the matter. I am quite satisfied if anything were very far out we should soon hear of it.

89580. Do you agree that you should deal with people under the Act who are at certain periods of the year receiving Poor Law relief from the parish council, or would you disqualify that class altogether?—It is very difficult to say on a point of that kind. Question as to making Poor Law relief a bar to assistance by Distress Committee.

89581. The object is to deal with those cases which are not ordinary Poor Law cases. If they first come to the distress committee and then to the parish council and get relief alternatively, it would be relieving a class not intended by the Act, would it not?—Yes, that is so, but you always come back to this; what are you going to do with these people; you cannot allow them to starve in the streets. If you cannot get a charity to take them up, what are you going to do with them.

89582. Those who are oscillating between the one and the other could be left to the other, could they not?—Left to the charities?

89583. No, left to the Poor Law; if the Poor Law recognises it is a class they can deal with, why should the distress committee do it?—If the Poor Law recognises they can deal with them, you do not deal with them.

89584. I thought you hesitated about giving a direct answer as to whether the distress committee should deal with such cases?—I do not exactly understand that; if it is a case that comes under the powers of the parish council, I would have no difficulty in saying that they should go there.

89585. What would be the evidence you would require for that?—The evidence that the person could go to the parish council.

89586. You would let the parish council decide, would you?—Certainly, if it was a case applicable to them the parish council would decide that it was a suitable one to be dealt with by them.

89587. If they made application to the distress committee first would you refer them to the parish council to see whether they would be dealt with there?—You mean to say they might get the advantage of the distress committee before going to the parish council?

89588. Yes?—I say our experience in Aberdeen, and Co-operation I am pretty emphatic upon that, is that we are in each in Aberdeen case in such close touch with the officials of the parish council that we have no difficulty upon that point. Of officers of course Aberdeen is not a city like Glasgow, and it is more easily managed than a large city. Distress Committee and Parish Council.

89589. I take it you have a very careful enquiry made into the condition of these people?—Very careful Strictness of enquiry, if they are being enquired into by the distress committee. If there is any doubt in their mind that these people are trying to impose on them, communication is opened between the parish council and the poor association, which has been referred to. Distress Committee.

89590. The officer does not go as a matter of course for information to the parish council?—If there is any doubt about the applicant.

89591. I meant taking all the cases as they arise?—Method of If our officer is not perfectly satisfied with what is stated in the schedule, he opens up communications with the parish council, and also with the local charities. investigating cases by Aberdeen Distress Committee.

89592. With that method a good many people might slip through which your officer had no doubt about.

Objection of
genuine un-
employed
workmen to
apply to
parish officer.

while it might be found the parish council knew a great deal about them?—It might; but I suppose no system is absolutely right.

89593. Do you think a little closer co-operation would be of great advantage?—I have no objection to close co-operation, only this: that I say the genuine unemployed workman objects to go to the parish council to make application. There is no doubt about that. I remember when we started working under this Act first in Aberdeen the question was discussed whether the office should not be in connection with the parish council office; and the consensus of opinion was very largely against it.

Class of
persons in-
tended to be
dealt with by
Distress
Committees.
Approxima-
tion of
powers, etc.
of Scottish
parish
councils to
English pro-
posed.
Assistance to
able-bodied
by parish
councils pro-
posed.

89594. I take it that the genuine unemployed workman is the only class of man you want to deal with under the Distress Committee?—That is the only class of man we want to deal with.

89595. Then you would have no objection to subjecting all the cases to a very rigorous investigation by the parish council in order that you do not deal with any other than that class?—Provided you extend the powers of parish councils, and make them the same as they are in England.

89596. That would not be needed, would it, if you went to the parish council to make enquiry, or submit all your particulars to the parish council to see what they know about the case?—I think the parish council (leaving the distress committee for a moment) should have power to assist able-bodied persons on some occasions, because they sometimes arise, I have known them arise, when they have no power to give them anything.

89597. If that is so do you think you could abolish distress committees?—With the present number of unemployed men I do not think you can. I am afraid, except some general improvement takes place in trade, and in getting people back from the towns on to the land, a distress committee becomes an absolute necessity.

89598. If your suggestion is acted upon both bodies would be dealing with the able-bodied, would that be right?—To a limited extent they might.

89599. How can it be limited?—I say there are some cases of men who come under the cognisance of the parish council who perhaps are away from home; they are able-bodied, they are away from the particular place where they are located, and their wives and families are left. What are you to do with them? The parish council can do nothing. I think in some way or other that class, whether good or bad, has to be dealt with in some way. You are not going to allow them to starve, however bad they may be.

89600. You can get over the difficulty by allowing the parish council to deal with all classes and abolish the

distress committee altogether?—We have had that experiment before the distress committee came into operation.

89601. Not quite, because the parish council could not deal with the able-bodied?—But you could in England.

89602. Yes.—Have not you distress committees in England.

89603. Yes, we have.—But you found it necessary to bring distress committees into operation.

89604. I wondered how far it would have been possible to dispense with them in Scotland if that power were given to the parish council?—I do not think it would be.

89605. (*Mrs. Webb.*) Have you any difficulty in Aberdeen in finding work for the unemployed?—We find great difficulty.

89606. Do you foresee any work before you?—I cannot say we do.

89607. You have finished your roads, have you not?—We have, and we have found great difficulty in finding work for them. We have been driven back to sending them to the quarries to break stones, and we do not know whether we can get a market for them.

89608. Would there not be something to be said for the whole question of unemployment being dealt with by a Scotch National Committee?—But I think you would have to have local committees, as well.

89609. I mean to deal with finances?—I have no objection to that. I think it is an Imperial question to some extent.

89610. Practically the distress committees in Scotland has become the authority to deal with able-bodied destitution?—That is so; there is no other way it can be dealt with.

89611. You have quite a different problem to what we have?—It is a different problem to what there is in England.

89612. You found that the old strict Poor Law, which had no provision for able-bodied destitution, was a hardship?—I think so; it has been in the same position now for sixty-two years and there has been no change.

89613. I gather that in Aberdeen the parish council had a gravel pit to which they sent able-bodied adult persons?—Yes, the parish council have a sand-pit; they sell the sand and that employs a certain number, but it is a very limited number.

89614. Those were able-bodied men, were they not?—I do not know, I am sure. I do not know how they work that sand-pit. It does not employ a large number. I know they have such a thing, but I do not know how they work it.

dock labour.
Employment
of stevedores.

89615. (*Chairman.*) You have been kind enough to prepare a statement which we will treat as your evidence-in-chief, if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. I am a shipowner and underwriter at Lloyd's; have been connected with the "Allan" Line of steamers for thirty-six and a half years, and have also been manager of the Park Steamship Co., Ltd., for fourteen years. During my connection with the "Allan" Line, besides having charge of the commercial department, I have had to be thoroughly in touch with the quay department of its business, and the following *précis* is based on personal experience, supplemented naturally by that of the working heads of our quay staff. During a year our dock labour bill, i.e., exclusive of tradesmen, etc., at the port of Glasgow will amount to about £45,000. During a year we may occasionally have as many as 600 to 700 individual dock labourers at work in a period of twenty-four hours, and again may have as few as 125 in the same time.

2. The principal steamship lines sailing from Glasgow engage direct the dock labourers required for the discharging and loading of their cargoes. The other lines and steamers coming to the port employ stevedores, who contract for the work at a rate per ton and themselves engage the necessary labour.

These principal steamship lines and the stevedores retain continuously on weekly wages as many foremen distinct as they consider necessary to carry on their work under classes of normal conditions, and each foreman has a following of dock labourers.

3. The dock labourers may be divided into three classes:—

(a) First class or *bonâ-fide* dock labourer, who is thoroughly experienced and is included in one of the regular foremen squads above referred to. These men seldom leave their foreman, and are in attendance to take whatever employment offers, by day or night.

(b) Second class.—The men of this class are as experienced as the first, but are not attached to a regular squad. They find employment when extra squads are required, which occurs almost daily, and they seek and find their employment all over the harbour.

(c) Third class.—This class is only occasionally employed at the dock. They are not experienced in discharging or loading. They find employment when work is in excess of what the first and second class can overtake, and the foremen are consequently

obliged to employ them. They are a mixed lot, representing all professions and trades, and their numbers are greatly augmented when there is a slackness of work in any other class of trade.

4. It may be broadly stated that there are no unemployed dock labourers of the first and second classes, but there are always a large number of men of the third class out of work.

They are to be found at all hours, day and night, seeking employment.

They seem only anxious for work when necessity compels, and are, as a rule, of little use. A short spell of a few hours satisfies them, and when they receive their wages they disappear for a time. They have no intention of continuing seriously at work or of qualifying themselves for regular and better employment.

5. Labour at a port, where arrivals of steamers are intermittent, necessarily involves irregular hours of working, but it is not quite correct to call the work done at night as "overtime" in the ordinary sense of the word, although a higher rate of wages is paid between 6 p.m. and 6 a.m. When the principal lines find it necessary to work at night, they regulate the employment of their men by working a number of their foremen and their squads during the day and relieving them by others at night.

This arrangement is carried out as far as possible, and at the "Allan" Line the record of the total number of hours a foreman has been directing his squads, day and night, shows a weekly average of fifty-one hours for the year 1906. This number of hours would represent an average weekly wage to a first class dock labourer of about 31s. 6d.

The stevedores' practice conforms to the foregoing where they have the same class of work, but with many stevedores there is little night work save on the eve of sailing.

6. The first and second class dock labourers cannot be said to be unemployed at any season. Their hours are regulated by the amount of work there is to do, and taking the year through they will earn a fair wage, probably about 26s. to 30s. a week.

7. Many causes account for those of the third class not being fully employed. A principal reason is that they are unfitted for the general all-round work of a dock labourer, partly because of their physique, but mainly on account of their unsettled habits.

They never seem willing to undertake any other than the lightest kind of work, and they certainly never exert themselves as they might to secure regular employment.

When they earn sufficient for their present needs, they knock off work, and consequently cannot be depended on.

They rarely qualify to fill vacancies in the first and second classes, which classes are usually recruited from able-bodied men attracted from other places by the good wages; such men soon adapt themselves to the work.

8. The effects of any depression in trade throughout the country, or of a protracted strike in any of the shipbuilding centres, are very noticeable at the docks. Both labourers and tradesmen thrown out of work find their way to the docks and swell the ranks of the third class of labourers referred to. Those men naturally don't intend to remain dock labourers, but there are always a number of these who get employment, who adapt themselves to the work, and eventually secure places in the first and second classes.

Such an influx of men to the docks does not materially affect employment of men in the first and second classes, but the men of the third class suffer, as there is a better selection of steady able-bodied men among the strangers.

9. The operation of the Workmen's Compensation Acts more and more tends to prevent weaker and older men being employed.

10. As indicated, the genuine well-conducted able-bodied dock labourer can have practically constant employment at wages above that of the average labourer, and he is quite contented.

11. The finding of a remedy to improve the condition of the men in the third class can only be considered when dealing with the unemployed question as a whole.

12. It would be manifestly unfair to the shipowner or stevedore to be burdened with any responsibility in regard to them, and they could not reasonably be expected to alter their methods of engaging men, and to arrange their work so as to give an equal share of employment to a class of men who are in themselves unsuitable, and whose numbers are constantly fluctuating according to circumstances.

13. The proportion of men in the third class, however, who are permanent frequenters of the docks is not regarded as great, and if they could be separated from the others who come to the docks periodically owing to slackness of work, strikes, etc., it would probably be found that their remedy lies only in their own hands. The Minutes of the Govan Distress Committee of February 25th, 1907, show that out of the 138 applications for relief from men belonging to the labouring classes only five were from quay labourers, and that prior to the meeting at which the Minutes were submitted three had secured work, leaving only two to be assisted.

14. So far as my observation goes, the work of the unemployed committees has not been a great success, is costly, and is subject to much abuse.

15. My own view is that want of employment is very largely the result either of idle or vicious habits, or absence of sound physique and well-trained habits, and of men not being properly educated in some kind of handiwork.

16. As already explained, the principal employers of dock labour organise their work so as to, as far as possible, give a constant employment to the men who form their regular squads.

There are many difficulties to contend with. The uncertainty of arrivals of vessels, the necessity for adhering to fixed sailing dates, especially with passenger steamers, and the variation in the amount of work to be overtaken, make it quite impossible to decasualise labour at the docks.

17. The men fully realise the necessity of the conditions under which they work, and when work is plentiful it is very noticeable that numbers of them prefer the somewhat higher pay of night work, taking a day off when it suits them, and returning when they feel inclined to work.

Many men who have accepted permanent weekly employment at other places, having had experience of the dock work, returned to the latter with its greater freedom.

18. Beyond the obvious ones of inculcating the practising of the virtues of thrift, sobriety and independence, I have no special remedies to suggest. I often think, however, that there is a great field for improving the physique and habits of the rising generation by universal physical and military training, and that some of the money presently spent on ordinary education might with greater advantage be used in teaching lads between fourteen and seventeen some useful handicraft, as far too many lads are growing up simply as errand boys, etc., learning no useful trade, and not even having their physical powers properly developed. I believe a sound physique is more often than people think a great safeguard against one becoming the victim of drink, etc.

89616. (Chairman.) I only propose to put to you questions where your paper deals with matters special to Glasgow which have not been before us. You have a very special knowledge of the Allan Line of steamers? —Yes; I have been connected with it for thirty-six and a half years.

89617. In Glasgow what is the distinction between a stevedore and a docker? Is the stevedore a skilled man? —The stevedore is a skilled stower of cargo, whereas a mere docker is engaged both in discharging and loading and is a man who does not require to have any very great skill for the mere discharging.

89618. Would the foreman be a stevedore? —He would be a foreman stevedore, and, of course, there are master stevedores, too.

89619. Taking your system of dealing with dock labourers, you have three classes. Have you them on your books? —No.

89620. You have not a certain number of men, as is the practice on certain lines, who remain on the first list from 1 to 500, the next from 500 to 1,000, and so on? —No; but these classes which I have divided the dockers into is rather an arbitrary division that I have

Colonel J. Smith Park, M.V.O.
14 Jan. 1908.
Chances of employment among various classes of dock labourers.

made myself in order to distinguish clearly between the different classes of labourers. But what happens is this, that the permanent hands are all in the first class. They always get the first chance of employment, and naturally we take the second class next, and the third class we only take when, from pressure of work, we cannot get either of the other two classes. The men are known by head-mark by the various foremen.

89621. Then the foremen select?—Yes; a foreman keeps, as much as he can, a steady gang working with him. He always gives them the preference of work. The result is that they come to the ships regularly looking for work; and the men of the first class pretty well confine themselves, in the case of our service, to our own boats, unless we happen to be specially slack.

Systems of dock labour in Glasgow and Liverpool.

89622. Is the system you have been describing in force in Glasgow alone, so far as the Allan Line is concerned, or does the same system prevail in Liverpool?—I think the system is somewhat different in Liverpool; but there are other lines in Glasgow which practically follow very much the same lines as ours. In fact most of the large liners employ their labour just as we do.

Irregularity of dock labour unavoidable.

89623. Then you would say that classes 1 and 2 are in receipt of regular employment?—It works out regular employment; but both classes are employed by the hour; and necessarily where they are employed by the hour the employment is more or less irregular; but it works out in practice that the men of these two classes get steady employment.

89624. I understand all employment is casual, that is to say, it is for a short period, and the short period is an hour, and not for half a day?—No, we do not work by the day or half day at all, we work by the hour.

First class dock labourers remain so during working life.

89625. Taking these classes, would it not be the fact that a man who was a first class labourer up to a certain time of life would, as he got older and his strength became less, drift down into the second class, and then find himself in the third class?—I think the first class dock labourer is a pretty stuffy individual; and his experience and skill enable him to keep in the first class almost to the end. We have had men working in our gangs for over thirty years.

89626. Men of, say, fifty or sixty working?—Yes, we have men of fifty and sixty years, and even over, but of course the tendency of recent legislation will be to make it more difficult to keep the old men in employment.

Casual nature of dock labour appreciated by men.

89627. We have had certain evidence from those engaged in this work, and it appears that certainly in Liverpool strong men, and the men whom you put as first class, like the system of short employment, because they can break their employment without losing it, that is, they can take a day or two without losing the employment?—I think you will find I have made a statement to a similar effect in my own evidence. I have pointed out that my own men who have accepted permanent weekly employment at other places, having had experience of the dock work, returned to the latter with its greater freedom. They like to take a day off when it suits them and return to work when they feel inclined to.

Surplus labour at docks inevitable.

89628. Still the result is that there is always a surplus of labour at the docks?—That I think is inevitable, because the nature of the work is such that men who are unemployed in other work drift down to the docks in the hope of getting work. It is a class of work in which casual work is more easily obtained than any other; for example, when the shipyards are idle we have a great influx of men coming down to the docks seeking work.

89629. The labourers come down?—Yes, the labourers from the ship yards, and then the moment the shipyards begin to be busy again these men, or the greater portion of them, withdraw from the dock work and go back to the yard.

89630. I suppose those men are fairly efficient?—Fairly efficient for discharging work, where it is a matter of physique principally, but there are in this third class which I referred to, a great many men who are very indifferent workers and who are only taken on because of the pressure of work which leaves us no alternative.

89631. The third class would be rather the receptacle for those who failed in other businesses?—Yes.

89632. What sort of proportion would you say the third class was numerically to the first and second classes?—It is a varying percentage, but a comparatively small one, I think. I really cannot tell the numbers.

89633. Less than in Liverpool would you say?—Of course, Liverpool must be very much larger in every way in its numbers.

89634. In Glasgow are the vessels loaded and unloaded in basins?—Glasgow is a tidal port, and the vessels simply lie in the river, or docks off the river, which are all tidal docks; that is, the water in them rises and falls with the tide.

89635. Do the large vessels come up to Glasgow?—Ports of Yes. The largest vessels go up to Glasgow. We have vessels going up drawing 29 feet, but we cannot have the largest vessels for size because we are limited for length. Liverpool is an incomparably larger port than Glasgow. as to size.

89636. You do not think that the life the docker has to lead, which necessitates his dawdling about a great deal, tends to deterioration?—I do not think so if he is a well-behaved man, as I think the bulk of our regular hands are. Moral effect of dock life.

89637. Take the first class; in an ordinary year how many days' work a week would the men get? I suppose I must take hours rather than days?—I caused the time of our foreman to be worked out for the past year, and I found he worked a weekly average of fifty-one hours all the year round. Average weekly working hours of "Allan" Line foremen and 1st class dock labourers.

89638. That is the foreman?—Yes, and the chances are that this would fairly represent the number of hours that the men in the first class would also get.

89639. You think that the men in the first class would be as continuously engaged as the foreman?—Pretty much so.

89640. Taking Classes 1 and 2, how do they stand one to the other, say as regards the Allan Line?—What will happen more with the second class is that they will probably not be so fully employed with the Allan Line, but as far as their weekly employment is concerned, they will probably have as much as the other men because of the employment they get with other lines. For instance, to take the dock at which our vessels load and discharge principally, the Princes' Dock, Glasgow, the Donaldson Line also load and discharge in that dock, and what regularly happens is if we are specially busy and Donaldson's happen to be slack in that particular week, which quite often happens, men who work at Donaldson's when employment is offering there will come to our berth and get work, and in the same way, when the position is reversed, our men will go to the Donaldson boat and get work. I think both the men of the first class and the second class get pretty regular employment all the year round, and we calculate a good dock labourer will earn from 26s. to 30s. a week all the year round. Condition of employment among 2nd class dock labourers.

89641. Do they all come on the stands at the same time. You have stands, have you not, to which they come for employment?—They come for employment to our berths at hours depending on our requirements.

89642. Are the hours always the same every day?—No. Ours being a regular service, we must dispatch our boats on a given date, and the result is that if by reason of weather, or any other cause, they arrive at a time that gives them a short period to discharge and load, we would work continuously night and day after they came in, and the men would be told to turn out accordingly. We usually get them reported off the coast. Supposing a steamer that was in a hurry was notified as coming up the Firth on Sunday, a note would be put up that work would start at midnight Sunday and the men would turn out then. Methods of engaging dock labour at Glasgow.

89643. Is not the practice for the people to come every day to a certain place in order to see if they can get employment on your line?—They will come to a certain place more or less, but not to a common place for all the lines.

89644. There are different what I call stands for the different lines?—They will go to the berth at which a particular steamer has work.

89645. They are not all taken on at the same hour?—No.

89646. For instance, if a vessel comes in late, say in the afternoon at four or five, a lot of men might get taken on then?—Yes, they might.

89647. How do they know a vessel is coming?—They get to know pretty well by their experience in the work. They, for instance, will get to know whether that boat is in a hurry. For instance, if a boat came in about five in the afternoon and that boat was not in any hurry we would not start until the following morning, but these men would know when the steamer arrived at the berth whether that steamer was in a hurry and whether they would start that particular afternoon.

89648. It seems to me that if there is no particular hour at which the men are engaged, they must be hanging about in order to get engaged?—The men get to know very well whether a vessel will start or not, and if they know the vessel is going to start the limit of time within which they require to appear is pretty clearly defined by the tide. The vessel must come up on the tide; she may vary half an hour or so, but not more than that.

89649. Take this case, supposing your foreman takes on the number of men that is wanted in the morning, and no vessel comes in, I suppose the number of hands he takes on in the morning would be the number of hands that would probably be employed for the day?—Yes, the chances are that would be so unless we were finishing discharging or loading.

89650. If a vessel came in the men would hear of it and come?—If another vessel came in and the one vessel were finishing, the chances are the permanent hands would be transferred to the new one.

89651. Supposing a new vessel came in, would not a number of new hands come in on the chance of being taken on?—Yes, if she was going to be started that day.

89652. It seems to me that under that system the men must spend a considerable amount of time waiting about on the chance of getting employment?—It looks like it in theory, but in practice it is not so. I may say I examined our heads of department very specially on that point before I came up here, and the reply I got was practically to the effect that these men get to judge wonderfully well how much work there would be going and when it would be starting, and they do not have to hang about very much.

89653. Then as regards the other point; you are pretty confident with regard to your own men that the men of the first class stop on there for a long time in that class?—Yes, there is no question about it whatever. We have them for years and years.

89654. As regards the unemployment, in Paragraph 13 you state that out of 138 applications to the Govan Distress Committee only five were quay labourers?—Yes, and prior to the meeting at which the minutes were submitted three had secured work, leaving only two to be assisted. I do not profess to be up in the work of the distress committee, but at the time I was preparing this statement I was consulting some of our quay people about it, and our time-keeper, who is a very intelligent man, brought up the minutes of the Govan Distress Committee to show me as a proof of what he had stated himself, that the dock labourers in Glasgow were not a class who were out of employment; that is dock labourers proper, not the hangers-on. I may say that they receive very good pay; we pay our dock labourers 7d. an hour during the day.

89655. I think we have it in evidence that, taking the customary rate of wages, those who get employment get well paid?—Yes. Of course, they have to be of fairly good physique.

89656. Our evidence rather was as to this distribution of money that the wages that were earned were distributed amongst a good many people, but that there was not continuous employment. —We have to settle a good many claims under the Workmen's Compensation Act, and we never are able to settle any dock labourer's claim on a less basis than an average wage of 26s. per week.

89657. Your experience is that this work is popular with the men of certain physique?—Yes, it is certainly popular amongst the regular men, and it is not by any means such hard work as it used to be. I can recall the

time when there is no doubt that dock labour was very severe. For example, it used to be a regular practice that these men had to carry ashore on a plank bags of flour weighing 280 lbs. Practically all that sort of thing is done away with by the introduction of cranes.

89658. Did you ever consider at all, as connected with this great line, whether it would be possible to convert a certain number of your dock labourers into weekly wage earners?—Yes, we have worked our men on weekly wages for a good while. I may say we started it during the time of a big strike, which is very often the cause of these changes being tried. At that time we were paying 6d. an hour as wages, and we offered a guarantee of fifty-four hours work a week, that is a wage of 27s. a week, for men to come, and we got an immense number of good able-bodied men just come from the country to take this form of employment. In the long run we found that it did not work satisfactorily, the men preferred to take the chance of getting night work and not being tied down to so many hours of day work.

89659. When you say not satisfactory, do you mean not satisfactorily financially? What was the effect, was there much difference?—I think the men preferred to be free.

89660. That is another point rather; as an employer of labour was it more expensive?—I do not know that we cared for it very much either, because it sometimes left us with a good many men that we could not find employment for, because, as I have explained in my statement, our work varies considerably in extent. Sometimes we will have 600 or 700 men employed in the twenty-four hours, and in another twenty-four hours we may have as few as 125; and that had another result, that the number of men that we could afford to take on for weekly wages was comparatively limited, and there was apt to be jealousy and difficulties between the two classes of men.

89661. Supposing you had regular labourers, I suppose it would not affect the amount of wages you paid, would it, as against the present system?—I do not think it would affect the amount of wages, because we would naturally take care that the number of weekly wages men we took on would be pretty well confined to the number that we could employ constantly.

89662. Supposing you were able to regularise employment, and take on a certain number, I suppose those whom you took on at odd times would not get as many hours a week as those that you had in your regular employ?—Naturally those we had in our regular employment would get the first call.

89663. It has been urged on us from many sources that this irregularity of employment exercises a detrimental effect both morally and physically on the men?—No doubt it may have some effect in that way, but I do not see how in the circumstances of the business you can very well avoid it, unless you have one great employer to do the whole work of the harbour, which would be a remedy ten times worse than the disease.

89664. There is the objection of the men. The men prefer the freedom of the present system, I understand?—Some of them; I do not think it applies to a very large number.

89665. Supposing you could get over the objection of the employers to having a considerable number of men regularly employed weekly, do you think the men would like it?—I think a weekly wage has an attraction for men, but then there is this great difficulty about weekly employment with us, that we have to have frequently so much night work. As I have explained already we will sometimes go on continuously working from the hour the ship arrives until she sails, and it is very difficult to work weekly wages men into that.

89666. I suppose the man who was working all night would be off next day?—Of course, that is what we try to do, but the physique of these dock labourers is such that I have seen many working practically for thirty-six hours without a stop except for their meals. So much did we dislike that sort of thing, because we know that you do not get the full value from the men, that we used to try to put the men off in the day—refuse them during the day and keep them fresh for the night, but we found we had to abandon that as a fixed rule because what very often happened was that they went and worked with someone else during the day and worked with us

Colonel J. Smith Park,
M.V.O.
14 Jan. 1908.

Permanent wages for a good while. I may say we started it during the time of a big strike, which is very often the cause of these changes being tried. At that time we were paying 6d. an hour as wages, and we offered a guarantee of fifty-four hours work a week, that is a wage of 27s. a week, for men to come, and we got an immense number of good able-bodied men just come from the country to take this form of employment. In the long run we found that it did not work satisfactorily, the men preferred to take the chance of getting night work and not being tied down to so many hours of day work.

Preference of dock labourers for casual employment.

Financial aspect of permanent engagement of dock labourers by "Allan" Line.

Moral and physical effect of irregular dock labour.

Preference of dock labourers for casual employment.

Difficulty of weekly employment of dock labourers.

Colonel J. Smith Park, M.V.O. for the night, so we felt we were better off to get the freshness during the day rather than let someone else have it.

14 Jan. 1908. 89667. What is the attraction of working twenty-four hours on end?—Then they can lie off for a day or two.

89668. (*Mrs. Webb.*) The work to be done is there?—Yes, and they might not get it next time. It has an advantage with some of them that they can then take a day or two off. I do not think they are quite so hard worked during the night, that is another thing; you never get the work so well supervised at night.

Tendency of boys to casual work. 89669. (*Chairman.*) Now coming to your last paragraph, do you think there is a tendency amongst the boys leaving school to take up casual work, doing errand jobs, and things of that kind?—I think there is an undoubted tendency with all boys of the working class to take the biggest price they can get at first. I think neither they nor their parents, speaking generally, seem to realise the benefit of sacrificing a little in their earlier years for the benefit of the better pay arising from knowing a trade. I had a very striking example of that brought to my notice a short time ago in connection with one of the largest shipbuilders on the Clyde. He was over in Ireland on one of the famous golf links, and he was rather taken with the lad who caddied for him. He asked him: Did he never think of learning a trade, and he said: Well, he might. He said, If you come over to Glasgow and come to my yard, I will see that you get employment. The lad came over; he was a lad of about sixteen, and he started him to train as a joiner. Within a month of his being started at that he came to him to get rid of the agreement to learn the trade of a joiner, because he found he could earn so much more as a labourer, and all the persuasion of my friend could not induce that young lad to stick to his apprenticeship to learn to be a joiner and give up the temptation of the extra pay.

Technical training needed for boys.

89670. That is a tendency which has been described to us by a great many other witnesses. How can you deal with it?—I cannot say that I have studied this question in detail. I am satisfied in my own mind that there is a great evil in the youth of the country not being trained to handicrafts, but I cannot say that I have studied the matter. As I say in my evidence, I think that some of the money that is spent in teaching a lot of these boys a, to my mind, somewhat useless class of education, might with advantage be employed in training them in handicraft, but I do not profess to have gone into the question fully.

89371. Though you have no remedy, you know that the evil is there?—I am quite satisfied the evil is there.

Desirability of universal military and physical training for boys.

89372. You also suggest that you think the physique and habits of the rising generation would be improved by some physical training?—Yes. As a volunteer officer, I am in favour of universal physical training and universal military training.

89673. At an early period, when they are boys?—Yes, I think it should be carried out in the schools most thoroughly, and I think when they leave school, when they come up to be lads, they should be compelled to train themselves to take their share in the defence of their country.

89674. Do you attach importance to that training from a physical point of view or a moral point of view?—I think from both a physical and moral point of view.

89375. In the moral sense that they get habits of self-restraint and discipline?—I think they get into better habits when they are under discipline. I think that a great many of these hooligans get into mischief because they have no proper outlet for their energies. I may say I am a great believer in the degradation that arises from cigarette smoking. That is not a matter of theory, but a matter of experience in my own office. I traced so frequently pilfering of cash, stamps, &c., to boys who smoked cigarettes, that a few years ago I made a rule that during their apprenticeship they were liable to be dismissed for smoking, either within or out of office hours.

Evils of cigarette smoking.

Half-time employment for boys.

89376. (*Mrs. Webb.*) About these boys, would it be possible to have a half-time arrangement, so to speak, an extension of the Factory Act from fourteen to eighteen or nineteen?—I may say that I cannot speak for apprenticeship for the class of labour that we have, because we do not take boys at all; they do not get employment with us.

89377. I was rather thinking of whether it would be possible to organise some system of half-time education or training, whereby you take the boy for half his working hours and his leisure and give him some sort of technical education in classes or military training?—You mean after he has entered on his apprenticeship?

89378. Yes. I was not thinking of the boy who was properly apprenticed, but the boys you spoke of, who were errand boys and went to highly paid labour?—I cannot speak from the point of view of an employer of that kind of labour and how it would work. An employer might say: It does not suit me to have lads on for half a day.

89379. That would not necessarily be a complete reply to the community, would it? It might not suit the employer, but it might suit the community?—I am afraid you will have to have some regard to the employers' interests, although they are not much considered now-a-days.

89380. Really your position is that it would be desirable from the point of view of the community?—I have no doubt whatever it is desirable something should be done to prevent these lads growing up without any sort of training. In fact, they do not even get their physique properly trained. I may be wrong, but I have a very strong opinion that there is no man of proper physique, proper intelligence, and proper character who need go without work in this country. The men who cannot get work, generally speaking, are wastrels, either physically, mentally, or morally.

89381. And you say that is caused largely in your opinion by these boys when between fourteen and twenty getting high wages and no training?—Fourteen and twenty; I dare say that is so, because from fourteen to sixteen, I do not know if it is so objectionable, because they are free to leave school at fourteen and, with workmen's children, I do not think they can do much good by remaining after fourteen, and they cannot get apprenticed as a rule before sixteen, so I do not know that there is any harm in their getting employment between fourteen and sixteen, but the evil is that they continue doing that class of work even after they are sixteen, instead of learning a trade.

Evils of casual employment for boys after 16.

89682. Assuming we could not establish the old-fashioned apprenticeship, which I suppose you would assume?—Of course, trade unions are a great barrier to apprentices being taken.

89683. Quite apart from that, we are told in London that the employers do not find it worth their while to take on apprentices of that sort?—I suppose that is partly due to the fact of the difficulty in getting lads to complete their apprenticeship.

Reason for desuetude of apprenticeship.

89684. They find it does not pay them to have the bother of teaching?—I can quite understand that.

89685. Assuming that, would you be in favour of some sort of compulsory military training or military drill?—I am in favour of compulsory training or physical drill, apart from the question of apprenticeship.

Desirability of compulsory military and physical training for boys.

89686. Supposing that employers of labour objected to your military training, would you sympathise with them?—Speaking from an experience of a pretty large number of employers, I do not believe they would object to military training.

89687. Supposing they did very violently, what would you say, would you still want it?—You mean supposing the Legislature said there was to be military training and the employer objected?

89688. Supposing we miserable folk who propose things proposed military training which representatives of employers of labour declared against, and said it was very inconvenient to have it because it took the men away?—That is where the benefit of a compulsory military training would come in. At the present time I know some employers do object to those of their employees who go in for military training. I have had experience of men losing their employment because they had gone to camp, but if it was the law of the country that every youth had to undergo a certain amount of military training no employer could have any interest in objecting.

Advantage of compulsory military training.

89689. That is a great advantage, it would end the matter?—It would not work out as an injury to the employer because every man would have a small number

possibly in his employ each year; but seeing you talk about military training, I want you to understand I am not one of those who are in favour of anything like conscription. I do not think there is any necessity to take men away from their homes at all. I think we can give a military training quite well without interfering with the normal employment.

89690. I am very glad to hear that. You would not think that the employers' objection against military training of this reasonable sort ought to hold good against the proposal for military training in the interests of the community?—In the first place, I do not think there would be any serious objection on the part of the employers to it.

89691. But if there was?—As I say, if it was made the law of the land, it would not matter a straw supposing they objected. It would not matter one whit, because they could not help themselves.

89692. Quite so, that is a great advantage. To come to this question of casual labour, do you think it is a good thing for these various characters to be able to get work casually at the docks?—I think it is; it very often tides over a period of difficulty. For instance, supposing a man is out of a job from, as I have indicated, slackness in the shipyard, it is better for him to be able to get some work at the docks than have to go about entirely idle or to be taken on and practically get pauper relief.

89693. Do you think it is good for a whole body of men to know that they can get work easily without reference to past character? Do you think that has a good effect on their conduct? Would you subject your own son to those conditions?—The class of work that they get, except a little tendency to steal whisky, is such that it does not offer much temptation, and does not require references very much.

89694. Is it good for a large body of men to feel that they can get employment without having a good character?—I do not know that you are entitled to say that that is the position even with the dock labourers. As I have said, the foremen know their men.

89695. But these hangers-on that you talk of?—There is a certain number who will get work without much enquiry; I think that applies to all classes of labour throughout the country, apart from skilled labour.

89696. Surely it applies more at the docks, where you have this sudden rush of work?—I daresay it does.

89697. Do you think that is a good thing for the character?—I do not know in theory it has any special benefit; it is certainly not a benefit.

89698. Is it a harm?—I do not know that you can establish it as a distinct harm.

89699. You said it is impossible to decasualise dock labour, but I notice you made one exception. You said, if there was one great employer to do all the work. Supposing there was one great employer to do all the work, could you decasualise labour?—I told you the remedy would be ten times worse than the disease.

89700. Assuming it was Messrs. Allan who were the one great employer?—We would certainly not face the duty, unless you gave us a monopoly of the shipping.

89701. Assuming for the moment you had a monopoly of the shipping, could you decasualise labour, supposing you were the sole employer?—I think it would almost necessarily imply that if we had the whole labour of the port and the whole business of the port to do, we unquestionably would be in a very much better position to dovetail the work. Mind you, we would have enormous other difficulties that would arise. I am simply talking of that broad question. Naturally the labour that does the work of the port just now, and which tends to divide itself over the work, so that dock labourers, whether they are working continuously with us or not, get a pretty steady average, could naturally be arranged so as to have pretty much a steady wage, if all the employment were in one hand.

89702. But you think that the other disadvantages of that would be so great that they would outweigh the advantages to labour?—Absolutely. I think the scheme is absolutely Utopian.

89703. Supposing you could do the same thing without having this great monopoly of trade, supposing you had some system like they have in Germany of labour exchanges at which all employers employ their casual labour, that is to say, you would go on with your permanent or semi-permanent hands, but when you wanted casual labour you would send to the central labour exchange, and all other employers would do the same, and although John Smith would only have half a day from you or two days in a fortnight from you, he would get other work dovetailed in from other employers. Supposing you could do that amongst yourselves, supposing it was administratively possible, would that not get over the difficulty of casual labour?—I do not think so. I think it is better to let the individual who wants to get the work look after the decasualisation of his labour himself.

89704. As you say, although you can decasualise some of your labour, there are always some of these hangers-on whom you could not decasualise?—If these men wanted they could go about from employer to employer, just as the regular hands do, but they do not want it.

89705. Do you not think the fact that they can pick up a livelihood in one or two days is rather a temptation not to want it?—I think those men who only get one or two days' employment during the week are usually the class of men who only want to work that time.

89706. Do you not think it would be better for them not to be able to do that?—I do not see that the labour exchanges would help you to do that, unless you were going to compel the men to work. Supposing you had some system by which you were going to compel all the wastrels of the country to work, locking up them if necessary to do it, I would go a good length with you.

89707. Supposing your labour exchange was in a position to say to John Smith: You come to us and we will give you regular work (through dovetailing your work with all these other employers), but if you do not come to us you will have to walk the streets without any work at all, in which case we shall be prosecuting you for not maintaining your wife and family, and then we may send you to a penal colony or something like that, do you not think that is a possible way of getting rid of this great stagnant pool?—It is very difficult to see. We want the men to be waiting for our work. We have very often spurts of work come on, and it would very often be awkward to go to a labour exchange for the men.

89708. That could be managed by telephone if you have a certain number of men always there waiting. It has actually been done in Germany in order to put down vagrancy.—You have a great many things in Germany which you have not got here.

89709. You would not like the restriction on your personal freedom?—It depends on what the restriction is. I have said I am strongly in favour of putting a restriction on the personal freedom by compelling the men to share in the defence of their country. You compel a man to do almost everything in this country, but that is the one thing that must not be touched.

89710. Supposing we thought it was very important to decasualise labour, we might restrict personal freedom?—I am quite prepared to consider your scheme when I see it in full detail. I will not commit myself in favour of it until then.

89711. (Professor Smart.) Is it correct to say that apprenticeship only begins at the age of sixteen?—I think in most trades it does, but really I am not well up on that. I think as a general rule it begins at sixteen.

89712. That is your impression on the Clyde?—I think the engineers require boys to be sixteen before they start apprenticeship.

89713. So there would be the less objection to raising the school age from fourteen to sixteen?—I do not know that, because the parents' needs come in. It is a very serious thing for the parents to have to keep their children up to sixteen without their earning some money. I went to business myself when I was fifteen, and could just as well have gone at fourteen.

89714. If you had not been able to get a job at fourteen you might as well have been at school?—As far as I can recollect I consider I wasted at least the last year at school.

Colonel J. Smith Park, M.V.O.
14 Jan. 1908.

Preference of certain class of men for casual labour.

Advantage of surplus dock labour.

Desirability of compulsory military training.

Objection to increasing age for school attendance.

Colonel J. Smith Park, M.V.O. 89715. The men who are regular men with you, the men you speak of as regular men, are men doing their fair share of overtime?—Yes, they do a fair share. Unquestionably the regular squad tends to get a fair share.

14 Jan. 1908. We do not regard the work at the quay as overtime in the ordinary sense; it is more night work.

Preference of dock labourers for night work. 89716. But the men like it?—They like it because they get a penny an hour more in our case, and, as I say, I do not think they have to work quite so hard.

89717. Then I understand these men, as a rule, are selected by the foremen?—Yes.

Conditions of dock labour. 89718. They do not work except for that foreman?—Not as a rule. If we are very slack, as sometimes happens, even our most regular men would go to another line and get employment. If they knew as an absolute fact that they were not going to get employment for two or three days, they might go to another line.

89719. That makes a sort of compromise in the matter of decasualisation?—I think so. I think it is a decasualisation which works out in practice.

89720. You spoke of joining the Donaldson Line?—No, not a bit.

89921. Not joining the line, but having your labour in common?—No, we never dreamt of such a thing.

89722. The men who are regularly engaged with you sometimes go to the Donaldson Line?—Yes, they sometimes do that, but they do that of their own volition. We take no part in it.

Suggested association of Glasgow shipowners for employment of dock labour. 89723. Would it not be possible for all the shipowners in Glasgow to join together into some association to enlarge the unit and so decrease casualisation?—I think there would be apt to be jealousies, because there would be times when you wanted a big lot of men.

89724. If you were forced by legislation to do something, is that not a possibility?—If forced by legislation, we have to do the best we can to comply with legislative requirements, but I for one would do my best to resist any such legislation being carried.

89725. Do you think it could be done?—There are very few things in this world which are impossible. I do not think it would be expedient, nor would it be profitable.

Experimental shift work by "Allan" line. 89726. You practically work by shifts. You say: "They regulate the employment of their men by working a number of their foremen and their squads during the day and relieving them by others at night"?—Yes, we relieve them as much as we can at night but, as I explained, we had to depart from that to a certain extent because we found if we were too rigid in knocking the men off their day work in order to keep them fresh for the night there was a tendency for them to go to other people during the day.

Nature of stevedores' work. 89727. You speak of the stevedores; they have little night work. How do they manage that; ships are always coming in at night?—Stevedores do a different class of work from the liners. As I explained, the liners are boats which must sail on a fixed date, and we come in and we are late, and we must work at whatever cost in order to overtake our date. A stevedore is more usually loading sailing ships and outside tramp steamers which are not so pushed for time and, as their work at night is very costly, I may say stevedores instead of paying their men a penny an hour extra during the night, as we do, have to pay three pence an hour extra, so their night work is tremendously costly and they, as a rule, do not work night work at all, unless perhaps on the eve of sailing when, by working a few hours, they can get a vessel away a day earlier.

Extra night pay by stevedores and "Allan" line compared.

89728. Then the plan you follow is practically followed by all the liners?—Yes.

Character of 1st class dock labourers. 89729. The vacancies which arise in the first and second classes are scarcely ever recruited from the third class, they come rather from other trades, I gather?—The first class are really men of good physique and good character who have adopted dock labour as their regular trade.

89730. You say the first class is usually recruited from able-bodied men attracted from other places by the good wages?—I thought you said other trades.

89731. I suppose you mean other trades as well?—There may be an occasional man; but I do not think a tradesman of good character and physique will become a dock labourer. Of course sailors who give up the sea very often become dock labourers.

89732. Do you know anything about the Dundee system of dock labour?—No.

89733. They have a sort of co-operation between them?—But then Dundee is a very one-horse place as compared with Glasgow. Dundee system of dock labour.

89734. You do not work on Sunday at all, do you?—No, never in this country. Like most Scotsmen when abroad we are a little more broad-minded. Absence of Sunday labour in Scotland.

89735. Your men get six days' work a week on the whole, but still there is a good deal of waiting about?—There is bound to be a good deal of waiting about; but as I explained the men get very smart in not requiring to wait about very much. They know pretty well when the work will commence.

89736. Waiting about you acknowledged is not a good thing for the men?—It is not a nice thing for any man having to seek employment.

89737. If all the sober men at the docks were employed would there be any work at all for the third class men, for the wastrels?—Unquestionably there would be at times, because the work comes in spurts. It is not as if we could distribute all our work over the whole year evenly. We cannot do that ourselves. A great deal of our trade is seasonal. Irregularity of dock labour inevitable.

89738. You do not think there is any large surplus of labour?—I do not think so.

89739. Nothing corresponding to Liverpool, for example?—No, nothing like it.

89740. And the general character of the docker is supposed to be superior to that of Liverpool?—I think he is quite a respectable man on the average—these first and second class men. Of course, there are a lot of wastrels unquestionably amongst those in the third class. Character of Glasgow dock labourers as compared with Liverpool.

89741. (*Mr. Phelps.*) In answer to the chairman you spoke of the tendency of recent legislation. Will you enlarge that a little? You spoke of the operation of the Workmen's Compensation Act. In what way does that affect you?—I will give you one illustration. The insurance company with whom we insure our labourers specially advised us, about a year ago, to dismiss every man from our employment who was over sixty years of age, and they explained it in this way. They said: Take a man of thirty years of age. Supposing he breaks his thigh, the chances are that man will be out and about at his work again in three or four weeks. If a man of sixty breaks his thigh there is a very considerable chance that that man will be permanently disabled for life. Then the men themselves will not allow any cheaper wage to be provided for older men in cases where the trades unions control the wages; so that employers who would like, perhaps, to keep on an old man, although not quite so fit as a young one, are deterred from doing it by the fact that the trade unions say: No, we will rather let this man starve than allow you to pay him a lower wage than a man half his age. Effect on shipowners of operation of Workmen's Compensation Acts. Attitude of insurance companies as to employment of old men. Elderly workmen affected by trade union "minimum wage" rule.

89742. Do the insurance companies charge different rates for different ages?—No; what the insurance companies do is they charge a rate proportionate to their experience of your risk; and if you have a lot of old men in your employment, and in consequence of that have heavy claims on the insurance company, the premium will go up. Insurance premiums in the stevedoring business.

89743. That is to say they do not charge the same premiums to all firms?—No, they may do in some trades, but they certainly do not in the stevedoring business.

89744. (*Chairman.*) In this particular case you were advised by the insurance company to get rid of the men above a certain age for the reason you give, I assume you did not agree to that?—I cannot speak, of course, to what insurance companies may do. But I do know, so far as we are concerned, we have no definite rate according to the ages of the men.

89745. What I wanted to get at was that they put a certain proposal to you to get rid of the old men because it might put on them an additional risk. If you did not accept that proposal they put their rate up. Did you get rid of the old men?—No, we did not. Attitude of insurance companies as to employment of old men.

attitude of insurance companies as to the employment of old men. 89746. Did they put your rate up?—No; they did not say to us: We will charge you a higher rate if you do not do it. They simply gave us that warning as the result of their experience, because, as I say, we have higher rates in the long run. Insurance rates, like everything else, have to bear a profit for the men accepting them. They gave us that as a warning: It is not in your interests to keep on old men in your employment because of the chances of claims which in fact will effect the premiums in years to come.

89747. Do you insure yourself?—No, not for the Workmen's Compensation Act on shore. We do for a considerable portion of it at sea.

89748. We rather want to get to the bottom of this about the insurance. Let me put this case. Supposing you had had a considerable number of cases of people between fifty-five and over sixty and the insurance company had had to pay, would they not in subsequent years have put your rate up?—I do not think they would do it because of the men being fifty-five or sixty; but what they do do is they keep a very careful note of all the claims they have had to pay for our line during the past year; and next year when we come to discuss the question of rates it is brought out against us: Looking at the claims we have had to pay, our rate must be so much higher.

Effect of Workmen's Compensation Act in reducing length of working life. 89749. It has been brought strongly to our notice that this Workmen's Compensation Act has reduced the age at which people previously could get work. We are rather anxious to know why it has in the case where the people do not insure themselves. The only conclusion I can come to is that the insurance companies do raise the rates?—As I say, it inevitably happens that they do raise the rates. For aught I know it may be the practice of some insurance companies to stipulate that men shall not be above a certain age, or they will charge an extra premium; but they do not do that with us.

89750. But in practice you get your insurance rate raised by having old men in because of the greater liability to claims from these older men; and the claims become in the long run the basis of the premiums you have to pay in that sense?—Yes, it is a deterrent. We did not dismiss any of our men; but we certainly gave instructions that our people should be careful not to engage new men over sixty years of age.

89751. The main reason alleged is that they are so long in recovering; not only that they are liable to accidents, but they are longer in recovering?—I think in some respects there is an increased liability to accident; but the main reason given at that time was the greater risk of the accident being a permanent disablement; because it is one of the anomalies of the Act that really it is better to kill a man than permanently disable him.

89752. (Mr. Phelps.) When you effect the insurance does the company enquire the ages of the men?—No.

attitude of insurance companies as to the employment of old men. 89753. Do they make any stipulation or give you any advice with regard to other physical defects than that of age?—No; age was the only point they ever mentioned to us. Of course, it is not the insurance company's business. It was simply friendly advice by the insurance company. It does not matter a straw to the insurance company what the risks are, they want a premium adequate to the risk. That is all that concerns them.

89754. Still, did they enquire, for instance, with regard to one-eyed men?—No.

89755. You have not heard that question raised?—No.

Effect of machinery on severity of dock labour. 89756. Take another point, that is with regard to the use of machinery. You say the use of machinery has very much reduced the physical strain of work in the docks?—Yes.

89757. Do you find the use of machinery has affected very much the amount you pay in wages?—We pay higher wages than when we had less machinery.

89758. It has increased your wages bill, not decreased it?—I did not know whether you meant the aggregate. Colonel J. Smith Park, M.V.O.

89759. Did you pay more wages after the introduction?—We pay a higher rate of wages to the men now. I do not think the actual cost of the work done is greater, in fact, it could not possibly be, because everything now is in favour of working economically on your loading and discharging, hatches are larger and there are cranes working; they all tend to make it cheaper. 14 Jan. 1908. Increased rate of dock wages.

89760. Wages may be much higher, and yet the cost of labour may be lower?—Yes; as a matter of fact, our cost of labour is higher. We pay 7d. an hour where we used only to pay 6d. an hour.

89761. Do you find you have reduced the number of people you employ much?—There is no fair comparison, because the business has enormously increased during my time. There is no comparison between the amount of business we do now and when I started. We were running, when I started, a fortnightly steamer for about six months of the year from Glasgow, now we are running on the average about two to three steamers a week all the year round. Progress of "Allan" Line.

89762. Taking a steamer of a definite size, is there a great reduction in the number of men that would be employed in unloading it now, do you think?—You have a certain amount; I do not know that it is a great reduction. There is a great reduction in this way, that we do not get the export cargoes we used to do. We used to have ships fully laden in my younger days, but now the boats are so big and so many trades have been crushed out by the tariffs of foreign countries, that sometimes the steamers will go away nearly empty. Decrease in freights.

89763. Do you find that the speed with which you work now necessitates an enormous number of hands?—I do not think there is much difference in that respect. I think they have kept very much the same.

89764. You would not allow the argument that machinery had thrown people out of work?—I do not think so; I think it is the contrary. Effect of introduction of machinery on unemployment.

89765. That is not the experience in your work?—No.

89766. (Dr. Downes.) You make an interesting suggestion in your last sentence, that you believe a sound physique is a safeguard against a man becoming a habitual drunkard?—Yes.

89767. Is that based on your experience?—Yes, I think I have a certain amount of experience which shows that. I think a man often takes to drink to a certain extent from weariness arising out of physical weakness. Sound physique a safeguard against habitual alcoholism.

89768. It is easier for a man in good health to resist the temptation of drink?—Yes, I do not think he feels the same necessity for taking it to excess that a weaker man does.

89769. (Miss Hill.) Have you any knowledge of cadet corps. You spoke about the influence of military training?—Unfortunately I have no cadet corps attached to my corps, and I have no experience of them, except I know of them by repute. I know all those officers who have them very highly value them.

89770. You speak of the physical development caused by the physical exercises and the drill as bearing very greatly on the physique of the lads composing them?—I have not heard it discussed in detail, but both the officers and the schoolmasters are in favour of the cadet system. If its effects on them can be judged, as I think they certainly can, from the cadet corps boys I have seen going about the streets in Glasgow, they are a very smart well set up lot of lads. Value of military and physical training in cadet corps.

89771. You would anticipate not only that the habits of obedience but the respect for obedience would make them more valuable men as workmen?—I have no doubt of it whatever. I know from what I have heard from Germans that they are quite satisfied that their physical training improves their countrymen as workmen.

Mr. W. H. RAEBURN, called ; and Examined.

Mr. W. H. Raeburn. 8972. (Chairman.) You have been good enough to prepare a Statement, which, if you will kindly hand it in, we will treat as your Evidence-in-chief?—Certainly.
14 Jan. 1908. *The Witness handed in the following Statement.*

1. With regard to the questions upon which you have asked my opinion in connection with the very difficult problem of unemployment, I shall endeavour in this statement to answer these questions to the best of my knowledge and experience. I may say, however, that the subject is one surrounded with difficulty on every side, and one for which there is no single panacea. I shall now take the questions in the order you state them.

(1) THE EXTENT OF UNEMPLOYMENT, INCLUDING (a) NUMBERS AND CLASS OF MEN OUT OF WORK ; (b) EXTENT OF OVERTIME, e.g. WHETHER CHRONIC OR PERIODIC.

2. I cannot of course give statistics, but there is always a very large number of unemployed in every community. The number varies, to some extent, according as trade is good or bad, and of course there is seasonal employment, and in Scotland especially, frost and rain are accountable for a great deal of idle time in the out-of-door class of work. Through bad weather, masons, joiners, builders, men engaged in ship-building yards, gardeners, and other very respectable classes of men, are often compelled to be idle, especially in winter. That of course is inevitable, but the vast majority of the men out of work at all seasons is composed of idlers, loafers, unsteady men, and, to some extent, of persons of weak intellect and delicate physical condition. In my own experience of dealing with the unemployed, I have not come across many respectable, steady working men who are out of work for any length of time. If they lose one job, I have noticed they generally manage to get something else, sometimes by going from a district where work is slack to another where trade is busier. In Glasgow and in Helensburgh, where I do some social work, I have no hesitation whatever in saying that the ranks of the unemployed chiefly consist of men who do not, and evidently cannot, behave themselves. When I find situations for this class of men, I find that in a few days they have got their discharge through absenting themselves from work, or turning up the worse of drink. I do not believe that there is much unemployment—in this district at any rate—in the case of steady, well-behaved men, especially of men who have been brought up to a trade.

3. As an employer of labour, I unhesitatingly assert that it does not pay to work systematic overtime. It is only done when there is a push, and very often is necessitated by workmen having fallen behind in their work. Sometimes it is caused by bad weather having thrown the operations in arrears, but I cannot conceive any employer resorting to overtime unless in case of necessity. In repair work of ships, for instance, overtime is often absolutely necessary, as the vessel has dates to keep, engagements to fulfil, and it is sometimes cheaper to pay overtime than to incur penalties. I have compared notes with some of the best authorities here whose work is connected with the poor and unemployed, and they are in substantial agreement with the opinion I am now expressing.

(2) CAUSES OF UNEMPLOYMENT.

4. First and foremost, I would put down drink ; second, laziness ; third, physical incapacity, and no doubt at times severity of weather and dulness of trade. I should like to say that I find some of the actions of trade unions contribute to unemployment. According to their rules, every man must receive the standard rate of wages. If an employer desires, out of kindness and consideration, to retain workmen who are passed their prime, and are not able to do a day's work equal to what a strong man could do, at a lower rate of wage rather than dismiss them, the union, of which the men are members, insist that they shall either be paid the full standard wage or the other men in the workshop will be called out. The consequence is that the master, having fierce competition to contend against, is not going to continue an inefficient or weak workman at full wages if he can get a better man in his place, therefore the old and somewhat infirm have

prematurely to be turned adrift. I know numberless cases of this character.

5. Then the Workmen's Compensation Act of 1906 is tending towards swelling the ranks of the unemployed. Many employers, like my own firm, now subject their men to a medical examination. In a recent case the rejections amounted to about 4 per cent. These men of course may find some other employment through time, but meantime they are idle. It is natural that the master, having such responsibilities as this Act imposes upon him, should be careful to select men who have no physical weakness about them, which, in the event of an accident, might aggravate the damages. This same Act is having another hurtful effect on the question of employment. Many small tradesmen and employers of labour have been dispensing with some of their employees because of the risks they run of having to pay compensation beyond their means, and against which they find it difficult to insure at a moderate premium. Further, the more restrictions some of these trade unions put upon trade, and the more the present socialistic crusade is preached, the greater will be the tendency towards unemployment. A great many of the trades of this country are only paying their way, and if the burdens that are laid upon them increase, it simply means that employers have either to curtail or give up. The more encouragement that can be given to capital to enter upon new enterprises, and to expand the trade of the country, the greater the benefit to the working classes.

(3) THE EFFECTS OF UNEMPLOYMENT.

6. These are far-reaching, and it would be difficult to name them all. The effect, especially upon women and children, is distressing beyond words. The want of employment seems to lead to more drunkenness, though it is difficult to know often where the money to get the drink comes from. It is noticeable that after men have been unemployed for any length of time, they seem to fall into the ranks of the professional loafer, and then no power seems capable of effecting any permanent reform.

(4) REMEDIES.

7. I am a strong advocate for the German system of dealing with men who will not work, but prefer to beg or to loaf, men who desert their families and leave them to be provided for by the parish. I think if the mentally weak were segregated in colonies under proper supervision throughout the country, and the professional loafer were dealt with by law as in Germany, we would see a very great diminution in the ranks of the permanently unemployed, or, I should rather call it, the permanent unemployable. A great deal is being done by philanthropic effort to find employment for deserving cases. I myself have been the means of sending a great many men to sea in the capacity of firemen, men who have been drifting towards the loafer class. Some of these have turned out, under the discipline on board of ship, very well, but I am sorry to say the great bulk of them, as soon as they receive their wages at the end of a voyage, prefer to come ashore, spend the money in drink and debauchery, and fall into their old state. Distress committees have been at work, but the published statistics which I have seen all go to prove that the class of men that generally apply to these committees is not the decent, respectable workman out of employment, but the class that least deserves consideration. You have no doubt the statistics of the Glasgow Distress Committee before you, but if I am not mistaken, the result of one year's working was that for twenty shillings' worth of work given out, the average return was 6s. 8d., which goes to prove that in commercial employment these men were worse than useless.

8. I do not think that farm or labour colonies in Scotland are likely to be of much effect in reducing unemployment. The climate is unpropitious, and the class labour of men that are chronically out of employment will not stick to hard work, and without hard work the soil can never yield an adequate return—a return sufficient to yield a living. Of course, something no doubt can be done on these lines which might be the means of making some little reduction in the number of the unemployed, played.

but the scheme would have to be well managed, and in thoroughly good hands, and it would need financial assistance either from the county or borough or the State. Something might also be done by the reclamation of waste lands, and some authorities are working in this direction, as, for instance, Helensburgh, the burgh in which I reside—they are taking in a considerable portion of the foreshore, which will give employment to a large squad of labourers throughout the coming winter.

9. Emigration is also a remedy which I think might be made very effective if it is conducted on proper lines. I thoroughly approve of the work of the Salvation Army in this respect. I think many of the better class of loafers might be made into new men by being removed from their old haunts and associates, and getting a fresh start in a new country; at the same time, the greatest possible care would have to be used in the selection of the men to be sent, and I think they should be subjected to some sort of training, if it were possible, before being despatched. For instance, I would take the best of the men out of farm or labour colonies and send them off, and there would be less chance of their returning to their old habits, I think, if they were got away from their past surroundings.

10. Some authorities advocate afforestation by the State. Something might profitably be done in that way, but I come back to this, that, as far as my experience goes, a very large proportion of the unemployed will never work unless they are absolutely compelled, and a very large number cannot work because they are infirm both mentally and physically. My earnest hope is, that before long the Government will give powers to local authorities to deal with the vagrant and loafer as they do in Germany.

11. I might just add that I understand the army authorities have taken up the question of teaching men a trade while they are in the service, so that when they come to leave it, they will not be thrown on the streets to swell the ranks of the unemployed.

89773. (Chairman.) May I ask what is the particular industry with which you are connected as an employer of labour?—I am a shipowner.

89774. Have you been on the distress committee at all?—I have not.

89775. In Glasgow, I gather from your statement, you would say there is always a certain number of people who are not employed, or what I will call under-employed?—There is always a large number.

89776. Do you think that number is increasing?—I think it is.

89777. And do you agree with what the previous witness said with regard to the boys, that there is a tendency for boys to go into casual occupations and not qualify themselves?—Yes, I agree with that.

89778. They do not qualify themselves for any particular industry, and very often get turned off when they are about twenty or twenty-one?—Yes, in some of the country places, for instance, in the town I reside in, Helensburgh, a place of about 9,000 or 10,000 inhabitants, the boys have a great difficulty, there being no trade in the town, in getting employment of any kind. These boys are apt to become corner boys and then become criminals and swell the ranks of the unemployed. I have tried to get these boys away to sea. I have sent away a great many of them. Some of them turned out well, but I am sorry to say the experiment has not been on the whole very successful.

89779. Is there not any iron or coal trade at Helensburgh?—No, there is really no industry in the place at all. It is only twenty miles from Glasgow, but then, of course, a poor parent cannot let his child go to Glasgow because it costs so much money to board in the town. I do not see any help for these boys unless employers such as myself can get them away to sea or can do something for them to help them while they are not earning much of a wage.

89780. It is an agricultural neighbourhood there; could they get employment in that?—It is an agricultural neighbourhood, but the agricultural part only gives employment to a very comparative few. My experience of boys when I have given many of them jobs in my own garden (I have a good bit of ground to attend to) is that I find the boys did not like the work, there is not enough excitement about it. They would rather be in the city.

They always ask if I cannot either send them to sea or give them something to do in Glasgow.

Mr. W. H. Raeburn.

89781. I suppose it is the variety of employment and the distractions of the town?—Yes, there is a great cry about this back to the land, but I am no believer at all in the attraction of the land for the persons who are migrating to towns at present.

89782. It is the other way, is it not?—It is the other way there is no doubt.

89783. About overtime, you say it is a necessity but it is not remunerative?—I know of no master or employer who finds overtime remunerative, but he finds very often it is absolutely necessary.

89784. We have had a great deal of evidence as to available casual employment and overtime. I suppose you have often considered as to whether or not it is possible to reduce the casual mode of work in connection with loading and unloading ships?—I have, and I must say it is a problem that does not seem to me possible of solution. I cannot see any way out of it. It will always be so; there may be more or less, according as times are busy or slack, but it will always exist.

89785. Do you engage your own labour for loading and unloading?—We employ a stevedore, a man who really is the middle man. We pay him a certain rate per ton, and he employs the men. It is quite different from the system of the Allan Line and the regular lines, for the simple reason that no one tramp owner could give sufficient continuous work to have men of his own.

89986. The stevedore brings his own men. Is he bound to unload at any time of the day or night?—The conditions vary according to the contract, that is to say according to the charter; sometimes it is so many hundred tons a day, sometimes it is as fast as they can put the steamer out. I may say the general principle at the bottom of it all is to get the steamer discharged or loaded as quickly as you possibly can. Sometimes it is to keep her cancelling date; you know what a cancelling date is; that is, unless the ship is ready for her next cargo by a certain date the charterer may throw her up. In order to save that occurring you may have to work continuously right on from the ship's arrival until she finishes.

89787. What sort of number of men would the stevedore bring if he was working under great pressure?—It depends on the size of the steamer or the number of the squad. It may be a smallish boat and then it would be twenty or thirty men, or it might go up to, with a large steamer, 100 men.

89788. He would bring a hundred, would he?—He might have a hundred to put on. Sometimes it is a double operation, taking the goods from the vessel and stacking or putting back in the shed.

89789. Loading is more scientific than unloading?—Yes. There are two different kinds of loading. One of the most lucrative, I understand, in the dockers trade is, for instance, that which we have on the Clyde, or at Cardiff, namely, loading coal, where it is not a question of really loading but trimming, simply shovelling the coal into corners. They make good wages at that. With regard to overtime, my general experience is that most of the workmen require some overtime to give them a higher wage, that is to say they make more money, and as night work is paid at a much higher rate than day work, a good many of them are very fond of night work.

89790. Take the stevedore who employs the men; would he bring much the same men?—No, there are different kinds of stevedores. If I am going to discharge iron ore and load coals, I employ a stevedore who works with that class of men, and has that class of men. If I am going to deal with a general cargo of flour, grain, esparto grass, fruit or anything of that sort, and I am going to load a general cargo, I would employ a stevedore who had a different class of men altogether; more the men that Mr. Smith Park referred to as his first or second class men.

89791. You make your contract with the stevedore who is connected with that particular business?—Yes. The trouble about casual labour is this, sometimes a lot of iron ore steamers may have come in at the same time. For instance, a great deal of iron ore comes from Bilbao in Spain, which has to some extent a bar harbour. If there is a gale of wind in the Bay of Biscay the whole

14 Jan. 1908.

Overtime inevitable but unremunerative.

Impossibility of changing casual nature of dock labour.

Owners of "tramp" boats employ stevedores.

Contracts with stevedores.

Different kinds of loading.

Overtime necessary for workmen. Attitude of workmen as to night work.

Various kinds of stevedores.

Reason for casual nature of dock labour in Glasgow.

Mr. W. H.
Raeburn.

Casual
labour in
relation to
unemploy-
ment.

of the tonnage of that port may be prevented from getting out. The first fine day they rush it out and there may arrive at Glasgow, perhaps six or seven steamers on the same tide. Then there is a great rush of labour, stevedores scouring every place to get men. When the six or seven steamers are discharged, then there may be a total blank. Thus you see what happens with regard to some of the casual labour is that there is a great number of men suddenly out of employment, and they have to drift back to other things or be idle. No doubt that is one of the greatest difficulties and troubles in this question of unemployment.

89792. Taking that case, I suppose there is a loss every day the ship remains unloaded?—Yes, or to put it the other way, your profits, if there are any, are likely to be higher or your losses less if you despatch the vessel quickly. Turning a vessel round quickly is certainly a more economical way than the other, therefore as a rule speed in loading and discharging is a desideratum, but there are charters, many of them, where the discharge is limited by contract between the shipowner and the merchant to so many hundred tons a day, therefore, in those cases fewer labourers would be wanted.

89793. It depends a bit on the charter?—In our trade we are not regular liners. We are what are called tramps.

89994. In the case of certain charters there would not be so much haste?—Not for us. That is the difficulty with my class of steamer rather than the regular liners. They can regulate better than we can—I will not use the word regulate—their employment of itself is not so intermittent and irregular as ours.

89795. In the case which you described of a certain number of vessels laden with ore from Spain coming in, would the area from which those men were drawn be a large area?—All over the harbour.

89796. What is your harbour?—We have several.

89797. Is it Govan?—There is Clydebank now, which is several miles down from Glasgow, that is the new mineral port. Some of it goes out in the Princes Dock on the South side, Queen's Dock on the north side and the general terminus of the railway company on the south side. These are some on one side of the river and some on the other, but the men who work this sort of business, the dockers, congregate at particular spots, or if they are not to be found there, the foreman goes up and has a look through the model lodging-houses where, during the day, I am sorry to say, a good many of these men rest themselves.

89798. I was thinking rather that these vessels might put in somewhere, say at Greenock, and remain there and the local labour would not be enough, and they would have to get it.—No, I do not think there is much come and go between Glasgow and Greenock. Greenock is a comparatively small port, and I think its dock labour pretty much keeps to itself. I was going to say with regard to this main question of unemployment I speak for both Glasgow and Helenburgh, and my belief is much the same as that of one of the witnesses here to-day, that the skilled or the better class of workman is a man who is not often found coming to distress committees or parochial boards, or anything of that kind. The set that are always in evidence and to whom these subscriptions that we get up from time to time, very often go, I am sorry to say, is the large floating population of unemployable people who do not want consecutive work, and the only cure and remedy for that, as far as I can see, is the German remedy, the remedy that if a man will not work, immediately let him be sent to a labour colony, do not let him be a loafer on the rates or on private charity.

89799. The ideas that I believe underlie the Unemployment Act, and certain circulars which were issued a good many years ago by the Local Government Board of England, were that there were a certain number of persons in permanent employ who were accidentally out of employment. To your idea that class does not avail itself of these Acts or come forward to be registered?—My experience is that very little of that comes forward. As a member of the Christian Social Union working amongst these particular classes, I find that where there are cases of absolute honest necessity, men from no fault of their own out of work (there is no lack of funds for these); the difficulty is to find the honest decent deserving cases, You can find plenty of the others.

89800. Do you think there is a lack of employment?—There is at the present moment. I am bound to say shipbuilding and engineering and the iron and steel trades and housebuilding trades in the whole of Scotland are all in a very depressed condition.

89801. Though those industries have a certain proportion of skilled men, they have more unskilled men attached to them?—A great number of unskilled men who are always, I think, the sufferers.

89802. The skilled men are more or less taken care of by their unions?—I hear that stated, but I have had applications from a great many men who are in unions. They tell me they do not get any help from their union. I do not know the truth of it, but it seems a doubtful point. In Glasgow we have had now two years of great prosperity. No sooner has the slackness come on than we are told there is an appalling amount of poverty amongst the working classes. One wonders whether there has been any thrift or not. The moment a strike takes place, or a lock-out or a depression takes place, these working classes are immediately in the condition to require help.

89803. During these two years of exceptional prosperity there were distress committees in Glasgow?—Yes, the distress committee is two years old.

89804. It came into existence during this time of prosperity?—Yes.

89805. Have you considered the question of labour exchanges as to which we have had a great deal of evidence?—Yes, I have.

89806. The theory was that they would tend to give mobility to this particular form of unskilled labour which is apt to congest so?—I think a good deal could be done by these labour exchanges in showing what parts were really requiring more labour and what were already congested, but it would have to be worked with a great deal of loyalty, and a great deal of helpfulness on the part of all concerned, both the employers and trade unions. It really could not possibly be a success, unless all these different bodies went into it with a determination that it was going to be a real helpful institution.

89807. The employees on the one hand would want it dissociated from this class who register themselves?—Yes.

89808. And you would have a certain difficulty with trade unions who might be afraid it would be utilised against them in the case of labour disputes?—I think you would find that there are jealousies that it would be difficult to get over.

89809. You do not think they are insuperable?—I think a good deal could be done with it.

89810. Assume it is adopted, it must be a system that is more or less universal in the big towns?—I do not see how it could work otherwise. We have in the Shipowners' Federation in London a labour bureau. It has been used more as a defensive association than anything else. We have found by proper working it has been very helpful. For instance, trouble arises in Glasgow, Belfast or anywhere else, a body of men have gone out, because they have disagreed with their employers; this bureau has a large number of men on its books from all parts of Great Britain, and in twenty-four hours we have been able to put into Antwerp, for instance, lately, about 2,000 men in three days, so that it shows what even one organisation can do with regard to that. That has only one bureau in London.

89811. That is providing the men, the other thing is providing the work?—Yes, which is much more difficult.

89812. As regards remedies, so far as Scotland is concerned, you do not believe in back to the land?—No, I do not think with our climate in Scotland the land is likely to support any more than it is doing now.

89813. The tendency in Scotland is all the other way?—Yes.

89814. You would like to have something adopted on the German lines as regards dealing with people who will not work, but you would have to alter the existing law in Scotland by which you cannot give relief to able-bodied men?—I think that is a very great hardship. I have had so many cases under my personal observation, that I speak feelingly. A man may be in the direst

Trade depression in Scotland causes unemployment.

Unskilled men most affected by trade depression. Alleged absence of assistance from trade unions to unemployed members.

Apparent absence of thrift in Glasgow.

Co-operation of employers and trade unions with labour exchanges necessary to enable latter to afford reliable data as to state of employment in different localities. Dissociation of labour exchanges from Distress Committees essential. Jealousy probable between labour exchanges and trade unions. Shipowners' Federation labour bureau, value of in distributing labour.

Success of farm colonies in Scotland improbable. Desirability of introducing German system of dealing with habitual loafers. Hardship of absence of able-bodied relief in Scotland.

Irregularity of employment in connection with tramp steamers inevitable.

Area from which dock labour is drawn in Glasgow.

Port for Glasgow mineral trade.

Mode of collecting dock labourers

Skilled workmen rarely applicants to Distress Committees or parish councils. "Unemployable" to be treated on German system of labour colonies.

Class for whom Unemployed Act was framed, are the last to take advantage of its provisions.

necessity, quite willing to work, no one able to get him work, yet because he is an able-bodied man, our Poor Law will give him nothing, unless he goes into the house.

89815. You have come across hard cases of that kind yourself?—Yes, I have come across very hard cases indeed. I know that the Poor Law in Glasgow, and also in Helensburgh, is very humanely administered; but both Mr. Motion of Glasgow and Mr. Ballingall of Helensburgh have told me that it works very harshly and puts them sometimes in a most unenviable position not to be able to give.

89816. In fact, to put it mildly, the law has sometimes been dodged?—Yes, sometimes it has. Another thing I would like to say on the Poor Law is that I rather admire the German system there, too. I have two or three cases before me now where the Poor Law are giving an allowance to a widow in one case, and in another to children. The allowance is such, this widow being an outdoor relief case, that she is simply able to keep body and soul together, and nothing else. In the case of the children it is the same thing. In Germany where a deserving case arises they do not help to starve their paupers, or those that are dependent, but they keep up the stamina of the race; they do the thing properly. Here a puny infant is brought up on a mere pittance of milk. There they give about twice what we allow.

89817. (*Mrs. Bosanquet.*) In what part of Germany is that?—In Berlin, Elberfeld and Dusseldorf.

89818. (*Mr. Patten-MacDougall.*) Were those two cases in Scotland, that you speak of, appealed?—The appeal consisted in one case in my wife speaking to the inspector, and he saying: "I have brought the case up, I cannot do better; it is not much of an allowance, but, I am debarred from doing more."

89819. (*Chairman.*) Whilst dealing drastically with the loafer you would be disposed to help the man who is really in need of work, although he was able-bodied?—Yes, I would help him over the stile.

89820. With regard to afforestation schemes, I see you put them in the same category as the others?—I do not think they are going to make any great appreciable difference. I think if you get, as I say at the beginning of my paper, all the epileptics and the mentally weak taken away from that constant body of poor who are always wanting relief, and also remove the professional loafer and make him work, you will have taken away, I think, about 70 per cent. of all your unemployed, if not more.

89821. With regard to boys you are not very sanguine?—My difficulty is with country districts. In city districts where the boys' parents are living, I think a great deal more could be done.

89822. Do you think you could keep them longer at school?—Parents in a poor way of life tell me they cannot afford to let their children be longer at school than their present age of fourteen. The great trouble is to get them apprenticed. My experience is that there is no sort of discipline either at home or anywhere else for the boys; and they grow up to be what we are very much troubled with in Glasgow, a set of young hooligans. I agree with Mr. Smith Park, if there were some compulsory military training it would make a great improvement in these boys.

89823. The period at school has interfered with the authority of the parent, and has substituted nothing in its place?—No.

89824. That is your general observation about the boys; that there is a lack of discipline?—Yes; and there has been also a trouble, I know, in getting boys apprenticed because of the restrictions of so many of the unions not allowing for more than a certain number of apprentices in the trades they control. The parents of the unions have told me: "We might put our boy to be a rivet boy; but the union will not let any more in just now."

89825. It has always struck me in Scotland that the average Scottish parent is ambitious for his child, and wants him to rise perhaps even to a higher position than the parent has attained. Do you think that ambition is dying out?—I am afraid the parental control is dying out, and very possibly the other with it. But on the opposite side I will give you the last instance I have had.

This is about the boy being brought up to the land. His mother said to the clergyman in a school in the north of Scotland: "To think that Johnnie is growing up to be a farm labourer!" She did not envy an agricultural life for her boy. No doubt her intention was the city.

89826. (*Mr. Patten-MacDougall.*) About those able-bodied cases to which you referred, where you say that Mr. Motion sympathised with your views. Were those cases where, the applicant himself being able-bodied, there was illness in the family?—This particular case I have in my mind was where there were several children in a delicate state of health, and the mother was a delicate woman unfit to go out charing, so there was a whole family in the most helpless position.

89827. And the father was not able to pay?—He was not able to pay for anything.

89 28. Was he in work himself?—Not in work; he could not get it. There was no work in that particular place that a man could get. I have given these men a day or two's casual work helping my gardener or cutting trees, almost making work for them, otherwise I do not know what they would have done at all.

89829. Were the wife and family having medical attendance at the time; were they in the hands of the doctor at the time?—I do not think the parish doctor. A friend of mine, a doctor, was visiting them. The entire help these people were getting was from a few charitably disposed families. But we thought it was a very great hardship indeed when we saw in other cases a dissolute wretch of a fellow deserting his wife, and the wife being on the parish. A woman is better off very often to have no husband at all than to have one who simply prevents her getting help.

89830. How many cases of hardship of the able-bodied of that kind have you come across?—In Helensburgh a great many more than one would believe in a place that is supposed to be a flourishing suburb, a sort of garden city, as it is called; and in Glasgow the cases are very many.

89831. Are these not cases where the husband being able-bodied, the wife or other members of the family are in bad health, suffering, say, from consumption?—No; in most of the cases I have known, apart from the ones I have given you, the family is kept going by a little boy before school in the morning going and carrying milk, and delivering papers after the school is done, or else the woman going out charing.

89832. The husband and father not being able to get work?—Yes.

89833. Being able-bodied?—Yes.

89834. Are these skilled labourers or casual labourers?—Nearly all just what we would call labourers (a great many of them are Irish), the worst class of all to get work for.

89835. (*Mrs. Bosanquet.*) You would not wish to see these men become permanently maintained by the parish?—I would not.

89836. It would be rather difficult if they once got into the way of getting relief?—That is one of the difficulties we know and foresee.

89837. Would not the remedy lie rather in the way of emigration?—That has been tried, too; but then, of course, there are so many of these men know nothing. They do not know any particular work. If they were more skilled, or knew a little more, it would be better, but I am afraid, with the laws of other countries to which we send them, the shipowners would have to bring them back; they would not be allowed to land.

89838. There is still a flow of unskilled labour to Canada?—Yes; but we are told by the Labour Party that it is the pith and marrow of Scotland. It is not any use sending unskilled labourers, unless they are first sent to a labour colony and taught something.

89839. That would be preferable to allowing them to become pensioners of the Poor Law?—That is so. That is why I am so much against a number of these *pro re nata* commissions and committees, because I think our efforts should be to make these men rely more on themselves than on Distress Committees.

Mr. W. H. Raeburn.

Object and
result of
clerical
register in
Bridgetown

89840. Should you welcome any system of registration that would help to decasualise the labour? Do you think that is a possible solution?—I do not think on that subject we have been speaking of to-day, the dock labour, you are going to do anything different to what you do now. The men when they find one employer does not want them try another, because there are so many different lines of ships that if they do not get it at one they may at another. So long as it is a trade so unequal, coming in in fits and starts, there is bound to be in that fluctuating state of labour that takes place now. As to registration, I agree with one witness here to-day who is greatly in favour of having a card or register in the hands of the tramps, because in Scotland we have a great deal of that, people tramping from one part of the country to another; they are ins-and-outs of a poor-house, or they come to a farm and get charity; and they find it more profitable to move about the country living on the people than to work. I think, as in Germany if a tramp cannot show a card accounting for his movements and shewing where he has been for the last few nights, he should be immediately passed on to a labour colony. In Germany they hustle them on so that I understand in two years they have come down from 120,000 to 20,000.

89841. Have you been in Germany?—No; but I have studied the question directly from those who have been there and seen the operation of it. I have also friends in Germany, correspondents.

89842. (Mr. Gardiner.) Have you made any detailed examination of the work of the Salvation Army with regard to the work of emigration?—Yes, I have heard a good deal of the work of the Church Army.

89843. You have had no opportunity of going into it personally first hand?—No.

89844. Neither their training colonies nor their work in Canada?—No, I have not seen it; but the Captain of the Church Army in Glasgow and I have often gone into this subject. I know, of course, what they are doing.

89845. You have not seen it with your own eyes?—No.

89846. (Dr. Downes.) You tell us that there is depression in the building trade and shipbuilding trade now in Glasgow?—Yes.

89847. You also tell us you do not think there is much unemployment in this district, at any rate, in the case of steady, well-behaved men?—I may just explain in a word that when this *précis* was written several months ago this acute depression that is now in the shipbuilding trade had not developed. It has come very suddenly.

89848. Does that modify your statement?—Yes, it does. I say there is a good deal of unemployment now.

89849. Even amongst the steady men?—Yes; but in the midst of all this distress, which is getting very acute, 1,000 men have come out on strike because the masters propose to reduce their wages 5 per cent. My impression is that they should be very thankful to be kept on at any wage at all.

89850. How is that being tided over?—The register taken in several streets in the very depressed neighbourhood was very creditable. A great many of the families there, although out of work, had saved up so much that they said they thought they could tide over. But you might find next door, where the bread-winner was doing the same work and earning the same wage, they were absolutely in poverty a week after they were dismissed; so you see there is thrift and the opposite alongside each other.

89851. What register was this?—It was a clerical investigation in Bridgetown, one of the poor working-class districts of Glasgow, where most of the workers from a firm called Beardmores, a large armour forge works, live.

89852. Was this investigation connected with the kirk?—Congregationally.

89853. Do these men receive any support from their church?—The object of this investigation was to prevent overlapping chiefly. It was conducted by this church in conjunction with the Charity Organisation Society.

89854. When was it made?—Quite recently, about a fortnight ago.

89855. A little further on you tell us that many employers now subject the men to medical examination?—Yes.

89856. I take it before the Compensation Act became Medical effective such examination was not usual?—I am speaking of what I know personally about shipping. I do not know of any shipowner who formerly had his crew medically examined; but nearly all of us have our crews medically examined now. That, I think, I say accounts for 4 per cent. of the rejects; and those men find it very difficult to get employment.

89857. Do you know on what number that 4 per cent. was?—It was over a great many thousands. I could not give you the exact figures.

89858. From what classes of employment?—Seamen and firemen.

89859. (Professor Smart.) Has there been any depression yet in shipping?—Yes, it is very bad just now. There is quite a number of laid-up vessels, not on the trade. Clyde so much as in Newcastle and Bristol Channel ports.

89860. When it extends to shipping, of course where you have such a large proportion of casual labour, I am afraid the distress will become very acute?—I fear it will. I fear we are on the eve of some very acute distress from want of work.

89861. Can you give any explanation of this sudden change from high prosperity?—I think it is fair to say that shipbuilding was very much overdone. There was a very unjustifiable boom; and you will find when these booms take place they always have a depression following. But at the same time I think there has been a contributory cause this time, which has not been so much in evidence, at any rate, in past times, I think, from interferences of the State, and the alarm that exists, and I think rightly exists, in the capitalists' and employers' heads over the present Government. It has a great deal to do with it. I do not think people care to launch out when they fear that there may be measures brought into Parliament which may very much cripple their business.

89862. Is it not only the other day that shipyards were full of ships being built?—It seems to be comparatively only the other day, certainly, about the middle of summer they were all well employed; but they build at such a terrific pace now that when orders cease it does not take long to empty a yard.

89863. Is it not comparatively a few weeks ago that the price of steel came down?—Yes.

89864. And up to that time we congratulated ourselves we were in the best possible state?—I think those who saw a little deeper than the mere surface expected we were going to have a time of depression, but not so rapid and acute, I must say, as it has turned out.

89865. The possibility of £6 a week wages coming into one family was not unusual at all?—It was not at all in relation to the higher wages the less the time the men work and the more they drink; therefore when depression does come there is very little provision made for it.

89866. Do you share Mr. Smith Park's views about the impossibility of decasualisation?—I think it is impossible.

89867. You are very much against the loafer, I see?—Yes, I am very much down on a loafer. I think he accounts for more than we think.

89868. In Mr. Smith Park's third class of docker have you not got some who are half the week loafers?—There are different classes of loafer. The loafer I am most down on is the man who almost never does work, and if you give him a job goes to it for an hour or two and then throws it up. These poor chaps that Mr. Smith Park speaks of really do a fair amount of work. They are not the class of loafer I am down on.

89869. Still they do seem to be content with two days of work a week?—The loafer is content with less.

89870. If you are going to send all your loafers to a colony you will have a good many dockers to support?—If these loafers that I refer to, the cornermen, were sent away the casual jobs they get might go to a better man who would appreciate them.

89371. Is that not the whole argument for discasualisation, to give the jobs to a person who wishes for them?—I agree with those who say it would be a great benefit to make labour regular; but you might as well think you could control the action of the planets. You never could do it.

89372. It was done in one case in London, in the London and East India Docks?—They control it—in what way?

89373. There is that celebrated system of theirs?—I go to the London docks and I see plenty of casual labour there.

89374. This is the London and India Docks, where they have a complete system of organisation. There is no such thing as casual labour there, practically. I grant it has not extended to other docks at all?—I am interested to hear you say that, I will try and find out personally how that could work.

89375. It has lasted a good many years now?—I cannot conceive how at a dock, where at one time it may be busy and at another comparatively empty, you can keep your labour on an equal footing.

89376. It is only to be done by extending your unit of organisation, as I suggested to Mr. Smith Park,—that two or three firms should combine with regard to labour to get it regularised. The London and East India Dock Company have a very large business; and the men are sent from one ship to another as soon as the ships come in?—I will make myself acquainted with their system. I must say I am rather inclined to think, if they have come to this state of perfection, some place else is getting their casuals.

89377. Do you agree with Mr. Smith Park that the state of labour as regards the labour employed by the liners is more satisfactory than that employed by the stevedores?—I think it is certain to be more regular.

89378. Can you give me any idea how the labour is divided between the two classes, the liners and those which are not liners?—It depends on the ports. There are ports such as Glasgow, London and Live pool, which are very large liner ports. Then Cardiff, Newcastle, and other ports are what you might call the tramp ports, where there is no possibility of gauging what the amount required may be one week or another. It depends very much, as I have said, upon weather, for one thing.

89379. I am speaking of Glasgow just now?—Glasgow is a very cosmopolitan sort of place. I think there are more different kinds of trade, and more different lines of ships, and more different classes of vessels discharging and loading there than at any port I know of anywhere.

89380. The liners play a very large part there?—Yes, I should say distinctly the larger part.

89381. (Mr. Bentham.) If I understood you rightly, in answer to a previous question you suggested some alteration in the Poor Law of Scotland?—Yes.

89382. By extending its provisions to able-bodied persons?—Yes.

89383. Had you in mind then the institution of distress committees for the able-bodied persons?—I would not like to pronounce what might be in me a rash opinion about distress committees, but from what I have seen and heard of them I must say that I am not much of an approver of them. I do not approve of them very much.

89384. Not of any distress committee?—No, I think we would accomplish all we want without them.

89385. You think you would achieve your object by extending your provisions for dealing with the able-bodied by the Poor Law?—I think with that and charity organisation we would overtake all such cases.

89386. Was it not possible to deal with the hard case you mentioned just now by charity?—It was dealt with by charity; that was the only way it could have been dealt with.

89387. It might be no hardship then?—We all complain of the very high poor rate we pay; yet when we come to a case like that we find that the rates can do nothing for it.

89388. Does that not involve rather another serious question: that those who know that such cases as those

ought to be dealt with by charity, and it might be the lesser of two evils, ought to be quite willing to organise charity in order to meet cases of that kind, the poor rate would be still higher if it embraced cases of that character?—I cannot see why the Poor Law in England is allowed to give an able-bodied man help, and not in Scotland. Why do you do it in England?

89389. We think we might get up to Scotland in course of time. Scotland is ahead of England in that respect. The Scottish people thought that an able-bodied person could make his way in the world?—I have always thought this: That if you could give relief to the persons I am referring to the money would be easily found if there was a different organisation of the Poor Law altogether; these ins-and-outs ought not to be there at all; they are costing a lot of money, and it is the very worst form of help.

89390. You think that the loafer class might be dealt with in a less costly way, which would release the funds for dealing with other cases?—Yes. These men do no work. Why do they not? They should be made to work.

89391. There is another point with regard to that. Have you considered the effect it would have upon the working-classes of Scotland if they found at all times when they might be in need that they could fall back upon the Poor Law, or some other organisation, to provide them with work or money?—That might be an argument for doing nothing at all; because I quite grant you that there seems to be an innate want of independence in a great many of our people; as long as they can get somebody to help them they will not help themselves. I do not think because people have that feeling you ought not to do anything for them. You ought to try and organise your help.

89392. You admit the few hard cases of that kind could be met by charity; if they could, there is no necessity for the law to be extended in order to meet those cases?—What I mean about that is this: The chief trouble is you may help a man by giving him money but it is the very worst possible form of help. What can private charity do to provide a man with work? Very little comparatively.

89393. You think that the provision of work would be good for the men and less costly than it is to-day?—I think if work was the test, and the problem was carried out properly, you would find there was a great deal less of this unemployment and a great deal less of the loafer.

89394. That happens to be the system in England; that work is the test of the Poor Law. An able-bodied man can get relief; but he must come under the Poor Law and do a task of work; and there is the test as to the amount of willingness to work. He gets the relief if he works, and not unless; yet we have the same difficulty with regard to the unemployed in England that you have in Scotland, and the same outcry for dealing with the person which you say you find somewhere, the respectable person who is out of work. You rarely come across him?—It is a very beautiful ideal to suppose a state in which every man who wants to work could get employment found for him. In this age in which we live it is an absolute impossibility to prevent times of unemployment and depression, and there must be a certain amount of misery and unemployment throughout certain periods. The problem you have to deal with is a very difficult problem. There is no single panacea for it that I see, least of all that which is advocated so much: That the Government is to find employment for every man that is born into the world.

89395. Do you suggest that?—No; I say it is the greatest evil that could be introduced.

89396. Is it not the tendency of the times that work should be found for the able-bodied?—I do not go further than this. If you give help to a woman and her children when in difficulty, if a man is as helplessly in difficulty I do not see why the family should be let literally to starve because of the principle that because the man is able-bodied and ought to work the family is not to get help.

89397. We can understand a relaxation of the restriction as to able-bodied applicants in Scotland on the lines you suggest, namely, where there are destitute

Mr. W. H. Raeburn.

14 Jan. 1908.

Able-bodied relief in England.

Compulsory work for loafer class.

Possibility of increase in Poor Law relief injuriously affecting independence and self-reliance.

Charitable does the worst form of relief.

Probable effect of strict labour test for loafers.

Periods of unemployment and depression inevitable.

Imperial provision of work for unemployed a great evil.

Mr. W. H. Raeburn.

14 Jan. 1908.

Discretionary power for Poor Law officer in Scotland as to giving or withholding able-bodied relief proposed. Objection to rate for relief works. Reluctance of respectable Scottish poor to apply for parish relief or to Distress Committee.

dependants?—I think it might be left to the good sense and the good administration of the Poor Law officer to see that the cases he did help were deserving cases; and that as soon as work could be got the man was no longer given any allowance. If he turned out to be a mere loafing person then it would be withdrawn. Of course it has to be administered with common-sense and reasonableness.

89898. If I understand you aright, you have no sympathy with the idea of having a rate for the provision of work in times of emergency, when they cannot get it from private employers?—I do not think it is possible. With regard to that question you put to me: "Did I approve of distress committees?" what I said with regard to distress is what I felt with regard to the Poor Law. Any man or woman (I am speaking of Scotland now) who has very much self-respect left has very great diffidence and dislike to applying for parish relief. They look upon the distress committee as being very much akin. In other words there is a certain amount of shamefacedness in well-conducted men coming to distress committees; therefore, you find they are approached by that class of men which approaches

every institution, charitable or otherwise, which they think they can get something out of.

89899. Do you think that is a very healthy trait?—I do, certainly; I am glad it exists.

89900. And one that ought to be fostered?—Certainly.

89901. With regard to medical inspection, is it resented at all by the workmen?—It was not resented by the seamen at all till their leaders put them up to resenting it.

89902. Does it apply in your firm to others than seamen?—I am not very sure whether it includes the officers, I rather think it does.

89903. Does it apply to those on the dock?—No, not those on the dock, except this, that I gave you this instance: I referred to sending men to Antwerp when the strike was on there. Every man was medically examined, and the men had no objection whatever. In fact, I think it was a great benefit to some of them; because if they were found suffering from anything that could be cured they were told where they might get help and get cured.

Class of person applying to distress committees. Independence of poor to be fostered. Attitude of seamen towards medical examination. Medical examination of men sent to Antwerp by Ship-owners' Federation.

ONE HUNDRED AND FORTY-FIRST DAY.

Monday, 20th January, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.
etc., etc., etc. (Chairman).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. J. PATTEN-MACDOUGALL, C.B.

Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
Mrs. SIDNEY WEBB
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
Mr. R. H. A. G. DUFF (Secretary).
Mr. J. JEFFREY (Assistant Secretary).

Mr. William Fleming Anderson.

20 Jan. 1908.

Qualifications of witness.

Anomaly of Unemployed Workmen Act, which permits rates to be charged with expen-

Mr. WILLIAM FLEMING ANDERSON, called; and Examined.

89904. (Chairman.) You are a member of the Corporation of the City of Glasgow, and Deputy-Chairman of the Distress Committee in Glasgow, I believe?—Yes.

89905. You have been good enough to prepare for us a Statement which, if you will hand it in, we will take as your evidence-in-chief?—Yes. (The Witness handed in the following Statement.)

1. I have been a member of the Corporation of the City of Glasgow for fifteen years. I am also one of the town council's representatives on the distress committee, of which I have been deputy-chairman for eight months, prior thereto being Convener of the Sub-Committee on Applications for Relief and Employment. I have also had considerable experience of various relief schemes undertaken by the corporation prior to the constitution of distress committees, in the autumn of 1905, having for many years served as a member of the corporation Special Committee on Relief Employment.

THE UNEMPLOYED WORKMEN ACT, 1905.

2. I should like, at the outset, to make reference to a striking anomaly in the Unemployed Workmen Act, 1905, which is made most manifest in endeavouring to carry out the provisions of the Act. I refer to the fact that, while distress committees are empowered, in aiding emigration, to charge their expenditure in that matter to the rate account, there is no similar provision in regard to the

payment of wages to men afforded relief work. The committee may, or may not, in its discretion, aid emigration. There is, on the other hand, a statutory obligation on it to provide work of actual and substantial utility for eligible, suitable, and deserving persons who are temporarily unemployed; but when it comes to the question of paying wages, the distress committee is asked to hopefully rely on the beneficence of public-spirited citizens, very many of whom, being large employers of labour, do not respond to appeals for subscriptions for this purpose, although they usually lead in contributing to funds for other objects. Moreover, the restricted rating power of distress committees is but little understood, and the imperfect knowledge of its existence has a tendency to dry up the spring of voluntary contributions. If it is thought necessary or desirable that there should be any restriction of the rating power, then I think the circumstances of the case would be adequately met by a simple reversal of incidence—in other words, the removal of the restriction in the payment of wages, and its application on emigration.

Effect of imperfect comprehension of restricted rating power of Distress Committees on voluntary contributions.

CAUSES OF UNEMPLOYMENT.

3. A long experience of interviewing applicants for relief employment has convinced me that many of these are out of work mainly on account of physical weakness. A good proportion of the applicants obviously are those cause of un-who, while scarcely qualifying for parochial relief, being employment.

Physical weakness a cause of unemployment.

in a sense able-bodied, are quite unfit for continuous and arduous labour. That condition too, is, I think, in many cases traceable to treatment from birth—want of attention, and inadequate or improper nourishment in the tender years of infancy, having had the scarcely surprising result of stunting the physical and mental growth. Such men, in periods of depression, are of course the first to be thrown out of employment.

4. Then I think it will be generally conceded that men are being continually forced to give up skilled work solely for the reason that, having reached a certain age, they are not so proficient at their trade as younger men. If unable to get employment as labourers at light work, they are compelled to apply for such work as distress committees have at their disposal.

5. Other causes of unemployment will be found connected with the Employers' Liability and Workmen's Compensation Acts, and the steady advance of the introduction of machinery and consequent displacement of labour; but perhaps the most prolific source of all is the abuse of alcohol and its attendant effect on time-keeping.

SUGGESTED REMEDIES.

6. I have referred to the case of skilled men thrown idle at a certain age on account of their inability to keep up with younger men. I am strongly of opinion that tradesmen on reaching that age should be allowed to take less than the recognised standard rate of wages, and so remain at their trade.

7. I understand that some very interesting and valuable data on the subject of boy employment is to be submitted to the Commission, with the object of showing that a great deal of unemployment can be associated with the fact that boys are not apprenticed to a trade very soon after leaving school. With the main principles to be suggested on this aspect I am thoroughly in agreement, as it seems to me that it offers one of the very best permanent remedies for the continued growth of unemployment.

89906. (*Chairman.*) I see you have been impressed by the fact that the larger proportion of applicants to the distress committee under the Unemployed Workmen Act were physically defective, or scarcely fully able-bodied?—That is so.

89907. You have lived a great many years in Glasgow, have not you?—Yes, all my life.

89908. Do you think this physical deterioration is a growth of recent years, or has it been going on steadily for some long time?—I would not exactly like to say what has been the speed at which it has occurred, but I am satisfied that the stature of our men to-day is much smaller than it was about twenty-five years ago.

89909. If you had had an Unemployed Workmen Act of the nature of the present one some twenty-five years back, do you think the physique of the people who would have come for relief under that Act would have been better than the physique of the people who apply to-day?—I think so. I can speak from practical knowledge in a sense, because in the course of my business I find that people's heads are a great deal smaller to-day than they were twenty-five years ago.

89910. How do you know that?—Because it is my business to take the size of people's heads.

89911. I presume that this class of whom you are speaking, on account of their physical defects, would naturally be the first to go if there were any cessation of employment?—That is so.

89912. That is a very serious evil, because if they reproduce the same class, we shall always have this defective class with us?—That is so; they reproduce a class even a shade worse than themselves.

89913. Would you say that the deterioration was only physical, or would you say that morally they were not as enterprising and had not as much grit in them as the generation before?—A good number of those who have come before us are what we may call "thowless" people. I do not know whether you understand that expression, but I mean they want grit and push and gumption; they are a kind of people who are not overstrong, mentally as well as physically.

89914. To use an expression, they would like to loaf through life with as little trouble to themselves as possible?—A good number of them are that way. There

is a lack of push about them altogether. I should say that if a man has been unemployed for a considerable time it does knock the soul out of him altogether. That is to say, when he has been snubbed—and they very often are when they apply for work—time and again, actually when he goes to a place where there is a chance of getting work he is almost afraid to put his case as he should put it. The tendency of unemployment is to knock the heart out of a man.

89915. And I suppose you would say the same of intermittent casual employment?—Yes; but I do not think it affects the man who has a good deal of variety of occupation the same as it does the *bona fide* working man who gets thrown out and tries for two or three months to get employment but is met by refusal. That man gets his heart broken.

89916. You name various things as the causes of this unemployment; and I see you think that the Employers' Liability and Workmen's Compensation Acts have rather curtailed the age at which people can get employment?—I think they have knocked ten years off the life of the working man.

89917. Do you go so far as that?—Yes, I do.

89918. You think also that the rules which are supposed to emanate from the trade unions, by which men are not allowed to work at a lower rate than the standard rate, also prevent men at a certain period of life from getting employment?—Yes. I notice that more especially through being a town councillor. The respectable citizens of perhaps fifty to fifty-six years of age, who have lost their employment, come to me and ask if there is no opening in the corporation for an occupation such as caretaker or keeper of the children's playground or of a lavatory—men who would be quite good enough at their own occupation, but who, because they cannot work up to the young man's standard, are out of it altogether. My notion is that if the trade unions would be good enough to say that when a man reaches a particular age there may be some alteration made in the pay of those who are not quite so physically fit as the younger men, I think that would relieve these old industrial soldiers very materially.

89919. You would suggest some sort of sliding scale, I suppose?—Yes. I think if a man is not able to earn his 38s. he might be able to earn his 30s. or 28s. a week, and that man should not be thrown out of employment in his trade altogether to get any occupation elsewhere that he can.

89920. Amongst other causes that are alleged to lead to unemployment at a certain time of life, evidence has been strongly put before the Commission that many boys on leaving school go into some casual trade?—I thoroughly agree with that. The temptation of the big wage, of earning 8s. or 9s. a week when they leave school, is too much temptation, and so instead of learning a trade when they would be getting only from 4s. to 5s. per week, they grow up practically labourers.

89921. Is there much demand for boy and girl labour in Glasgow?—I think there is a big demand for boy and girl labour.

89922. So there is not much difficulty on leaving school in their getting the wage which you alluded to?—No. I think that apprentices are not plentiful; I know that shopgirls and shopboys are not plentiful.

89923. Therefore, I take it you would like some system of training to be introduced similar to the old system of apprenticeship and having much the same object?—If the last year or so of the school period was devoted to teaching lads things that were useful in the way of trade, or girls things that were useful in the way of domestic science, instead of telling them about rivers in India and those other things that are never going to be of any service to them, I think a great deal of good would be done.

89924. Have you ever considered whether any rules or regulations could be made by which parents should be asked to indicate, while a boy is at school, the occupation to which he is eventually to be put, so that his education might then in some degree be shaped accordingly?—I think that the disposition of the boy himself should be consulted by the parents.

89925. Of course, I meant that; but what I am putting to you is whether his education should, if possible, be

Mr. William Fleming Anderson.

20 Jan. 1908.

Disheartening effect of unemployment.

Working life curtailed by operation of Workmen's Compensation Act.

Effect of trade union "minimum wage" rule on employment of elderly men.

Elderly workmen should be allowed to accept reduced scale of wages.

Unemployment affected by tendency of boys to go into casual employment in lieu of learning technical trade.

Demand for boy and girl labour in Glasgow.

Technical training for boys and girls during last year of school life proposed.

Mr. William Fleming Anderson.
20 Jan. 1908.

varied according to what is to be the future occupation of the boy?—I think so, during his last year at school; and I would say the same very strongly about the last year of the girl at school.

Supply of girl typists in Glasgow.

89926. Is there a large supply of boys or young men who can typewrite and do that class of work in Glasgow?—I do not know so much about the boys, but there is a large number of young ladies who go in for that work. I do not know that the boys take to it quite so readily.

Reduced scale of pay for typists.

89927. Should you say that the market was much over-supplied in that respect with typewriters or those that do clerical work?—I do not know that it is over-supplied, but I know that they do not command the same wage now that they did five years ago, as lady typists. The good wage attracted a great number then, and now the supply, I think, is fully equal to the demand.

Reluctance of respectable poor to apply to Distress Committees.

89928. Mr. Ferguson, I think, will give us a number of details in the statement which he has prepared for us, but I should like to ask you this general question about the Unemployed Workmen Act: This Act was passed in the belief that it would be of assistance to persons of respectable character who were usually in permanent employ but who, through temporary causes, have slipped out of employ; did many of that class come up before you at the distress committee?—No, I am sorry to say they have not. The class that our committee would like specially to help are not ready to make application to us. The right class of people did make application to us in connection with emigration, but not for home work.

Applications transferred by Distress Committee to parish board.

89929. Then really you have had to deal with a class of persons casually or intermittently employed who were rather above the level of those who applied to the Poor Law or who belonged to the same class?—A great many of them were the same, and a great many of them we had to discard and say: "Go over to the parochial board."

89930. Then the Unemployed Workmen Act has not attained its purpose of assisting the respectable persons ordinarily in permanent employ, except in the way of aiding them to emigrate?—That, I think, is the most I can say about it. Of course, I do not say that the Act is of no use, because I think it has done a good enough work so far.

Reluctance of artisans to apply to Distress Committee.

89931. But the great majority of those who are registered are not of the class I have indicated?—They are a class that must be helped; they belong to the class of the thrifty, careful artisan who has been thrown out of employment and who wants to get a little help. He will not apply to us.

Glasgow Municipal Labour Exchange unsuccessful now under charge of Distress Committee.

89932. Have you any labour exchange in Glasgow?—Yes. We have had a labour exchange for some years under the corporation, but it has not been a success, and now the distress committee has charge of it, the corporation having handed it over. We are just appointing a superintendent for the labour exchange to be worked under the distress committee, and in fact we are interviewing candidates to-day.

Value of Labour exchanges.

89933. Do you think that those labour exchanges, if established generally in centres of population, would be of much use?—I think so.

Register of unemployed desirable.

89934. Do you think they would help that class of labour which is the most ignorant and the least mobile?—Whatever might be the outcome of it, I certainly think that every municipality ought to register and have a careful record of their people who are not employed. We register everything else in Glasgow—births, deaths, marriages, lost dogs, lost property—and I certainly think we ought to have a register of the people who are unemployed.

89935. It would be useful, would it not, for helping the deserving and detecting cases of fraud and imposture?—Yes; besides, I think the municipality ought to know what is the state of the labour market amongst their own people.

Dissociation of Glasgow Labour Exchange from Distress Committee.

89936. It has been suggested to us that the labour exchanges might extend their operations beyond that class who come under the cognisance of the distress committee; has that ever occurred to you?—We are proposing to run our labour exchange apart altogether from the distress committee, while it is practically under the distress committee; that is to say, we do not want the same

classes to come together, because we are afraid that the artisan class will not go to a labour exchange if this very poor class go to it.

89937. And, in the same way, I assume an employer of labour would not care to come to the exchange for men if he knew they were entirely recruited from the lower class?—Our suggestion is that we should have a consultative committee composed of seven members of the trades council and an equal number of the biggest employers, so that we might bring the two classes together as an advisory committee.

Constitution of consultative committee for labour exchange.

89938. Has that suggestion been well received?—The trades council have appointed their seven, and we are waiting now upon the employers to give us their help.

89939. Of course, if you could get an advisory committee of that kind to work in harmony, you might be able usefully to extend the functions of the exchange?—Yes. It is no good for our work unless we have got the sympathy of the big employers of labour—it is more important that we should have that than anything else.

Co-operation of employers with labour exchange essential.

89940. As regards the working of the Act itself, you think it has been useful, but you think there ought to be power given to raise money on the rates for the payment of wages?—Yes, I do.

Rating for wages desirable.

89941. That would subject you to heavy pressure locally, would it not?—It might, and it might not; one penny per £ in Glasgow raises £20,000.

Value of 1d. rate in Glasgow.

89942. You would be prepared to stand that, I suppose?—I would rather be prepared to stand that than to be put in the anomalous position that we are in now of appearing to assist unemployed labour and then, when the men come to us to put them on works of utility, of having no money to pay them. Because of the very fact that there is a rate for the purpose of the distress committee, you cannot ask the philanthropic to pay rates and at the same time to give a voluntary contribution towards payment of wages.

Anomalous position of Distress Committee.

89943. Business is bad just now in Glasgow, I think?—It is very bad.

Trade depression in Glasgow.

89944. There has been a sudden collapse, has there not?—It has been pretty gradual the last two years, but it is very bad just now, especially in the building trade, and also in the ship-building.

89945. Should you say the same of the textile manufactures?—I cannot speak so well of those, but in Parkhead, where we have the big forges, Beardmore's and the rest, there is very acute distress.

89946. Would you say the distress is on the increase?—Just now it is very bad.

89947. Is there anything else you would like to say?—There is another point which I am very keen upon. In dealing with the unemployed of course you are dealing with the effect. I hold, from a very close study of the question, that our infant mortality has got a great deal to do with it. The death rate amongst the infants is very great, and there are many wiped out every year out of every thousand; but over and above that, many of those who survive simply grow up stunted, and they become practically a very considerable proportion of our unemployed.

Defective infant rearing in relation to unemployment.

89948. That would be the class, would it not, about which I have already examined you, the people who are physically defective?—Yes; these people have not got a chance from the time they are infants, practically.

89949. To what do you attribute that? It is, I suppose, due a good deal to the carelessness of the mothers?—There are two causes—ignorance and vice. It is deplorable that in Great Britain, in spite of all our sanitary laws, babies are dying as quick, especially in England, to-day as they did fifty years ago in some of your Lancashire towns that is particularly the case.

89950. What remedy would you suggest?—Parliament last year gave us a very good Act, the Notification of Births Act, which enables us to get at the babies when they are born and to assist in giving every advice and help that is required to mothers when they are having babies.

Advantage of Notification of Births Act.

89951. Does it enable you to do more than give advice?—In Glasgow we have also established a municipal milk depot only for babies. I am satisfied that the feeding forms a great portion of the cause of trouble.

Municipal milk depot for babies in Glasgow.

89952. Then the milk is given to the babies and the mothers?—Yes. We modify the milk, and give it to them in nine feeds covering the twenty-four hours, charging 2d., 2½d., and 3d. On another point, and as showing that the Unemployed Workmen Act is really not doing all that it was intended to do in Glasgow, I had to head a deputation to the corporation to ask them to appoint a relief committee of the corporation, apart from the distress committee. So at the present moment we have two committees—one a relief committee to deal with those that we cannot deal with, and the other the distress committee.

89953. One, the relief committee, being entirely nominated by the city council, and the other, the distress committee, being a joint body under the Act?—Yes.

89954. Did the corporation, previous to the Act of 1905, provide works or give relief to the unemployed?—No. We had relief committee work, but it was taken up so suddenly that we really had not had any time to organise. The people said, "We are starving," and the consequence of that was that a great deal of the help given was misplaced altogether. But by having this committee in operation constantly, we are able to prevent the imposter getting the same grip that he did at the time of the spasmodic efforts of the relief committee.

89955. Which committee are you speaking of as a constant committee?—The distress committee is a constant committee.

89956. How does the distress committee work with this other committee; do they work together?—We are working absolutely together, that is to say, we pass the cases that are suitable for work, but if we have no work to give them, then the relief committee take up these people and give them food.

89957. Is the object of appointing a relief committee to enable them to spend money out of the rates?—No; the monies entirely come by voluntary gift.

89958. What is the object of having two relief committees, practically?—Because the distress committee cannot feed people, and the relief committee can.

89959. The relief committee has nothing to do with the guardians, I take it, because it is a committee of the council?—It has absolutely nothing to do with the guardians. It is a committee entirely representative of the corporation, but at a public meeting of the citizens we co-opted so many public men to assist. Their work practically consists in giving tickets for food to the people who are starving and to the people that we have passed for work, but have no work for. They take our passing as being sufficient to enable them to give these people temporary help.

89960. Then it is rather a charity organisation working with the distress committee; is that it?—Yes, it is really charity.

89961. And it is not able to draw upon the rates, I suppose, except for administrative purposes?—Not even for administrative purposes. They are not probably so strict as we are; we will help nobody unless we think he is a worthy man, but if they find that a blackguard father has a wife and children who are starving, they will help the mother and the children.

89962. Has this committee been long in existence?—No, it has just started. It is about a fortnight since its appointment, and it started last Friday. We have already raised about £6,000 or £7,000.

89963. There have been various committees started in England, called City Guild of Health Committees; have you ever heard of those?—I suppose it is a different name for the same thing.

89964. It seems to me to be not quite the same; those committees work in connection with the guardians, but I think the idea is the same?—Apparently.

89965. (*Mr. Benthams*.) It is an organisation which spreads its helpers all over the locality, and its object is more to help people morally, and to give them advice, to find them a friend and helper, to direct them to suitable charities and to prevent overlapping than to give them pecuniary assistance. Your committee is a committee of the city council, is it not?—Yes.

89966. (*Chairman*.) But supplemented by others?—By seven or ten gentlemen appointed at the public meeting where the subscriptions were raised.

89967. (*Mr. Gardiner*.) This relief committee gives financial assistance first?—Yes. We have a great many institutions for the moral relief of the people. But a lot of us believe that if you fill a man's empty stomach first, then you can teach him morality and anything else. The first is the pressing thing just now.

89968. (*Sir Samuel Provis*.) Do you give money to these people?—No.

89969. Do you never give them money?—No. We give them a ticket, and they do not even know the value of the ticket. We select particular provision places, and we do not allow them to select the stuff they have got to buy. It represents plain diet. We have found from previous experience that if you let a woman have a ticket for half-a-crown, she would probably buy a quarter of a pound of seed-cake, or a pound of ham or something of that kind among her purchases. Therefore, now it is not stipulated on the ticket what they are to get, but the ticket indicates to the grocer the amount. When the value of the ticket was upon its face, we found they actually sold the ticket for less money to other people. Now, when they get the ticket, all they know is where to go with it, and they do not know what they are going to get or the value.

89970. (*Chairman*.) Is there anything else that you would like to supplement?—Of course, the point is that the Unemployed Workmen Act is to be continued, it ought to be amended so that we can have power to rate for the payment of wages.

89971. Would you put a limit on the rate?—Yes, I think you should put a limit. Then, again, with all due respect to our friends, I would not object if it was entirely a representative body, that is to say, composed of parish councillors and town councillors only; but make us responsible to some body—the ratepayers in some capacity—and then I think we might have a little more liberty than we have.

89972. You would not co-opt from outside then?—I am not strong upon that. I think I am responsible to the electors of my ward, and I do not think another man sitting at the same board should have as much authority as myself when he is responsible to nobody. The co-opted members have not the same responsibility as those that are elected by public bodies. That, at least, is a point for consideration. Then, I think, in a great community, bodies like the town council of Glasgow and the parish council of Glasgow should not be required to go and ask permission to do every little thing. I do not want to reflect upon the Local Government Board at all, because they have been very kind and very helpful; but there has been a good deal of time spent upon getting permission to do some things. I am a very busy man, and it is sometimes very provoking to have, over comparatively small things, to consult with the Local Government Board. For instance, I wanted some photographs of our parish colony, and the clerk said he could not get them as we should be surcharged. That to me, as a business man, is foolishness altogether. I did not want the pictures for my own edification, but with the view of educating the public. I had been up at Palacerigg, and I wanted these photographs to show what we were doing, and I could not get them.

89973. You have established a labour farm, I think?—Yes, at Palacerigg.

89974. Is that a success?—It is only newly started, and we are only erecting the shelters for the men. We are taking 230 men every morning just now and bringing them back. We have 600 acres there, 300 acres of which is moorland. I am perfectly convinced that one of the solutions of the unemployed problem is to make your land conditions such that people will remain upon the land and not flock into our big cities, and then you have to ask them to find their way back again. In Scotland we have any amount of unemployed land, and surely it is the most natural thing that unemployed men should be put upon unemployed land, but there are so many difficulties to be encountered before we can get it.

89975. The labour colony that you have established, I assume, is for the purpose of testing whether the applicant is *bona fide* desirous of employment?—No; colony, we are satisfied that he is a *bona fide* applicant before we send him there. After he has been there some time,

Mr. William Fleming Anderson.

20 Jan. 1908.

Allotments in Isle of Shuna proposed for satisfactory members of farm colony.

Mode of admission to farm colony.

Objection to limitation of period of residence on farm colony.

Palacerigg farm colony run by officials of corporation without extra salaries.

Qualifications of witness.

Average age of applicants to Distress Committee.

Provision needed for able-bodied unemployed.

and if he has taken to the land and proved that he likes the thing, we have the Isle of Shuna in the West Islands, and it is the opinion of some of us that we might grant allotments there to those who are willing to take them up after they have proved themselves capable at Palacerigg.

89976. You say that you are satisfied before you send them that the people you send to Palacerigg are *bona fide* applicants, but I assume that if they did not comply with the test of work imposed upon them they would not be retained there?—No, certainly not.

89977. But the men who go there are selected men who, you think, are qualified?—Yes. They have, first of all, to make their application; they are then visited by an inspector, their last employers are communicated with, and after all that is done they come before the committee who, upon being satisfied, send them to Palacerigg, and they are only there as long as they satisfy the superintendent of the colony. But I do not think there should be any limit, as I believe there is under this Act, whereby a man is only to be there for a matter of two months. When they come to us they have no boots—we bought ever so many hundred pairs of clogs the other day—and they are physically weak; and after being refreshed with good food it is about six weeks before they are really fit to do a day's work; and it is a pity, after having got them into this condition, that they are to be practically taken off at the end of two months. I plead that a community that is able to run Glasgow and to take care of the 800,000 good people that are there, running their own lines of trams by electricity, and everything else, ought surely to have a little discretion in dealing with this other portion of the community. I certainly think there ought to be some control, but I do not think we should be compelled to be afraid of always having ourselves brought into court. Might I say by way of illustration that we have been so economical that we have not appointed any officials, and that, instead, we have been getting our own officials to do the work, giving them merely an honorarium? To our treasurer, who had all the work to do, we gave ten guineas—the auditor's fee for auditing, and the treasurer's work was £28. That, of course, is not an overcharge. When we are so economical as that, I think we might quite well be left with a little freedom.

89978. (Mr. Bentham.) Have you ever been a member of the parish council of Glasgow?—No, I have not.

89979. Have you been a member of the committee which selected the cases to be dealt with under the Unemployed Workmen Act?—Every person who desires a schedule gets a schedule.

89980. I rather want to know whether you have been a member of the sub-committee which selects the cases for work after the investigation has been made?—Yes, I was. I have not been able to attend so much this year, but I think at first I was the convener of the committee.

89981. In answer to a question put by the Chairman you said, I think, that there were very few applicants who were suitable, and you gave as a reason that many of them were past the working age or else had infirmity. You also give, in Paragraph 4, as another reason, that men having reached a certain age are not so proficient at their trade as younger men. You are there describing the class of people who come to the distress committee; but is that quite correct? Have you noticed at all the average age of the men who have made application to the distress committee?—The class that I refer to are a very decent class, probably over fifty-five, some of them over sixty-five, but who are able-bodied.

89982. More than half of the applicants in 1906–7 were under the age of forty, which points to rather a large class of young able-bodied men amongst the unemployed, does it not?—Yes, that is so.

89983. Do you believe in either the Poor Law or some other system being established in Scotland for the purpose of finding work for the able-bodied unemployed?—I think that some provision ought to be made for the able-bodied unemployed.

89984. Until recently, of course, the right of the able-bodied person to any kind of relief had not been conceded at all?—That is so.

89985. On the ground, I suppose, that an able-bodied man ought to be able to make his way in the world without any assistance from public funds, and that charity ought to be sufficient to meet the hard cases?—Yes.

89986. You do not believe in that now, do you?—In the present circumstances I do not believe in it. There are lots of men who are wanting work and cannot get it; they get no help, and it is the case that their wives and children are starving.

89987. Was that not always so in Scotland?—I suppose so, but the competition now is so much keener for everything.

89988. You mean that the lot of the workman is harder to-day than ever it was?—I think so.

89989. And the change in the conditions warrants a change in the methods of treatment; is that your position?—I think so. I do not think that a law which was passed forty years ago is suitable for to-day, and I know that in every business competition is much keener, and it has now got the length of the workman.

89990. Should you think an able-bodied person has less chance of maintaining himself to-day by work than he had forty years ago?—I have no doubt about it. I do not suppose there is any week that I have not had half-a-dozen respectable people come to me privately to see if there is no possibility of getting work. I had one on Saturday who came to me crying because he had got a situation at a builder's. He was a respectable man with seven of a family, his wife having died recently, and he had been idle for seven weeks. He is a teetotaler and in every way an exemplary man, and for seven weeks he had been knocking about until his heart was crushed. Fortunately I was able to give him a card to a big firm of builders, and the man came back crying, to my place of business, he was so grateful. There is any number of these; my heart is broken every day. And it is not only confined to these men, for there are the men between forty and fifty years of age who have been knocked out of business—clerks and people of that class who are not recognised at all. I do not know why it is that there is no provision made for them.

89991. Have you considered at all what effect the recognition of the right of able-bodied people to relief would have upon the habits of the people of Scotland? Would it induce them to provide for unemployment, or, having given them the idea that they could be supported in this way, would it lead to their not seeking work?—I think there ought to be some safeguard. If a man is earning £4 a week and immediately upon losing his situation he demands help, I do not think that man should be considered in the very least. Where a man has been thrifty and is out of work entirely from no fault of his own, that man ought to get help in my opinion.

89992. Would you discriminate as to the way in which they had spent their money previous to making the application?—I certainly would.

89993. You would not admit a drunkard, then?—Certainly a man who gets drunk I would not help at all; I would let him go for help to the publican who had got his money.

89994. Has the line been drawn very strictly in the Glasgow Distress Committee?—We are tied down. The Act stipulates that they shall have been in employment and have been well-conducted and so on—I forget the exact words of the Act. We have tried to go upon that plan, but where we have found a man that was not very good but who had a respectable wife and children, out of respect for them we have given him sometimes stone-breaking in order to see whether he wanted work.

89995. Even a man of bad character has been recognised for the sake of his wife and children then?—Yes, we have done that; we have given such a man work.

89996. Then really your system of discrimination on those lines would break down in operation, would it not?—I do not know; it might break down. If the man is prepared to work for 2s. a day breaking stones and continues at that for a little while, I think that is a pretty good indication that he is wanting work. Of course we require to exercise a good deal of discretion on this problem, and I am not prepared to lay down any hard and fast rule.

Reason for absence of able-bodied relief in Scotland.

Hardship of absence of able-bodied relief.

Changed conditions demand change in treatment of poor.

Difficulty to day in obtaining work as compared with 40 years ago.

Effect of granting relief to able-bodied in Scotland.

Safeguards needed against imposture.

Refusal of relief to drunkards.

Methods of Glasgow Distress Committee.

89997. Does that not mean that you, as a city council, are really making yourselves into a relief organisation? Is that not work more for a parish council than for a city council?—It might be, if the general opinion of Scotland with regard to the present state of the law were followed, and if you were to alter the parish law. Then I daresay it would be more their duty than ours. But at the present moment I know that I have had people at me who would rather starve, and I am not sure that they would not rather steal, than apply to the parish. Why it should be I do not know.

89998. Whatever system you set up, an objection of that kind might be raised if the conditions were not what they wanted. If you allow the people to settle their own conditions, that would mean the abolition of all conditions, would it not?—I am afraid we are getting into an argument. My principle is that if a person has been a respectable citizen, and through no fault of his own has lost his employment, it is not the duty of the municipality simply to make roads and make rates, but it is their duty also to help that man to get something to do without losing his independence.

89999. That is rather a difficult thing to do; it is an extension of the idea of public duty towards the able-bodied in Scotland, is it not, which is of recent growth?—I do not know; it was always my opinion.

90000. (*Professor Smart.*) It is a committee of three, I think, that reviews the applicants after the cases have been investigated?—It should be three, but sometimes there are not quite so many as that turn up.

90001. And that committee meets as often as there are cases to be reviewed?—Yes, that is so.

90002. The *personnel* of that committee of three will vary from meeting to meeting, I think?—Every meeting it is changed.

90003. I think the clerk makes inquiry as to what members he can get to attend and makes up the quorum in that way?—That is so.

90004. How is the chairman of the day of this small committee settled?—If I am there they always ask me to take the chair, but if I am not there it is usually the senior person who is there.

90005. Then you have a committee and you have a chairman who vary from meeting to meeting?—Yes, that is so.

90006. I want to know how in these circumstances you arrange for a continuity of policy?—I think the clerk and Mr. Ferguson are generally there, and the committee are to a certain extent guided by them.

90007. Do you think the committee always obey the clerk and Mr. Ferguson?—Not always.

90008. Is it not the fact that you have some chairmen and some committees who would pass everybody, while others are very strict?—Nearly everybody. I quite admit that there is sometimes a case that I would have refused probably myself that might be passed by some other body.

90009. You have known your policy, for instance, very often completely contradicted by another chairman?—I have known them pass cases I would not have passed.

90010. Glasgow has a very good name for the strictness of the administration of its distress committee, has it not?—I think so.

90011. You have a lower proportion, I think, than most other distress committees?—I know if a person passes the inspection we put them through, he deserves to be helped to some extent.

90012. (*Chairman.*) Glasgow is much lower than the average. I think it is 38 per cent., while Edinburgh is about 97 or 98 per cent.?—But Edinburgh, you see, does differently. I think they give a fortnight's work at paper-sorting, and thing of that kind, to everybody who goes to them, but we give nobody work at all until we have inquired into them.

90013. (*Professor Smart.*) I suppose it is safe to say that the vast majority of applicants who come before you, are men such as no private employer would willingly employ?—No, I would not say that. There are a good number of them who are quite worthy of help, and a good number of them have done so well that we have taken

them into the service of the corporation in other ways. Several men have got into the parks, or they have got on to the tram permanent way staff for laying rails, and things of that kind.

90014. I said the vast majority?—There is a very big proportion of them that are not physically strong. I do not know whether it is due to the fact that they have been buffeted about and the heart has been knocked out of them or whether it is really a natural sort of desire to do as little work as they can, but there is no doubt there is a good proportion that are people that the average employer would not readily take on.

90015. That is to say, the men are not worth their wage—they may be worthy of help, but they are not worth their wage?—That is evidently what some employers of labour think. We have thought that they were worthy of help, but unfortunately they have sometimes not proved in the time when they were in a situation that they were worthy in the opinion of their governors.

90016. I think you will agree with me that the defect from which they suffer is as much want of intelligence as want of physique?—I would not like to say that.

90017. You spoke of their being "thowless" and of their want of gumption, and so on; does that not mean want of intelligence rather than want of physique?—Yes; but I have a good deal of sympathy with a man who has been buffeted about. I know from personal experience of the effect. I have a brother, the cleverest in our family, who happened to get thrown out, and I know that in two months' time he was entirely changed, and that experience has always made me very charitable with other people who have been knocked about. He is earning £1,000 a year now, but I know for those two months he would hardly come into the house for his food, he was so crushed.

90018. Do you consider something could be done with some of these men by means of education?—Not with the men, but you might prevent it if you got at them early enough.

90019. You do not think anything could be done with the men themselves?—I am afraid not. Their habits are formed, and I do not think you can do anything with them.

90020. What do you think of a proposal for shutting up these men, not in a penal institution or anything of that kind, but in some institutions where the treatment would be practically educative?—I think these men, if they cannot get work, ought to be allowed to go to a voluntary colony. I am quite in favour of that. The colonies for others who will not work, and who are a bane to our unemployed existence, I would shut up in a penal colony. I think it is necessary to have the two distinct classes. If you could eliminate the loafer who does not want to work at all, but is always pretending that he is wanting work, that would, I think, do a great deal towards letting us see daylight in this problem.

90021. Has the distress committee been able to get very many of these men situations in private employment?—As a distress committee we have not, but we intend to do that through the labour exchange.

90022. Have you tried at all to get private employment for these men?—Not many of them, but a few taken on by have been taken into the cleansing department of the Corporation of Glasgow.

90023. That is municipal employment?—Yes. I do not know that many of them have gone into private employment.

90024. I think you yourself have given some of them a job?—Yes, but it was not a success.

90025. Would you mind stating the result?—I was impressed with a man who said he was an old soldier, private employed and I took him to my house to do some gardening work. He started on the Tuesday, although he should have started on the Monday, and he worked away for four or five days, and I never saw him afterwards.

90026. A good many of the councillors have done that sort of thing, have they not?—I suppose some of them have.

90027. Did you ever hear of success?—Yes. I got another man who was a splendid fellow. He clad his children, and he did so well with me that I gave him a

note to the tram permanent-way, and he was with them one or two years, I think, after that.

20 Jan. 1908.

Results of private employment of unemployed.

90028. (*Chairman.*) Then he did not come up before the distress committee, did he?—Yes, he came before the distress committee. His story so impressed me that I said, "Well, instead of sending you out amongst these people, if you come to my house I will give you a week or two, and see how you do it, at gardening and painting." He did so well that I gave him my card to the tram permanent-way, and he was given a job there for eighteen months, or something like that.

90029. What made me ask the question was that you said "one or two years," and the Act only came into operation two years ago?—It may be eighteen months, then.

Much unemployment in Glasgow.

90030. (*Professor Smart.*) You say that Glasgow is very hard hit with unemployment just now?—Yes, it is very hard hit.

Discharges by Singer Machine Company.

90031. Do you know the circumstances of the Singer Machine Company?—No, but I have heard through the Press that they have just dismissed about three thousand people.

90032. Out of about six or ten thousand?—About ten thousand.

90033. Is this not the first time they ever did such a thing?—I think so.

90034. Did you ever hear of Singer's being on short time even before?—Of course I cannot say.

90035. I think your impression is the same as mine, that they usually have steady employment year after year?—Yes, that is so.

90036. Is that not more significant than anything else could be of the general decline in employment all over the kingdom, because sewing machines are of course an international kind of commodity?—Yes, I know that it is very bad in Glasgow.

90037. Then as regards the farm colony at Palacerigg; what was exactly your idea in going in for a farm colony?—Our idea was that we should find a desert and make it blossom as the rose.

Financial aspect of Palacerigg Farm Colony.

90038. What do you say to it financially?—Financially, I thought it was a good enough purchase. We intend to put a railway upon it, and we have arranged to get the refuse of the City of Glasgow.

Nature of land, minerals, etc.

90039. (*Mr. Patten-MacDougall.*) But the refuse has not gone out yet, has it?—No, because we have not the railway yet. There is fire-clay on it, and there is ordinary clay, and altogether I think it is possible there may be minerals on it. Then there are 300 acres of land that practically have never grown a blade of grass, and we are turning that over now. We bought it at about £10 per acre. Then we mean to do a little afforestation also; there is a great lump we can apply to afforestation.

90040. There is a lot of it sheep pasture ground, is there not?—Yes, there is a very high sheep run on it. I am not a judge of it, but we bought over the sheep, and I think we can utilise it for wintering hogs from the Argyll estates.

90041. (*Professor Smart.*) Do I understand that you expect the unemployed will cost you less by this mode of treatment than by any other?—Yes, I think so, very much.

90042. Is that your fundamental idea?—We first of all had to find work. I thought this was a most desirable thing, and I have an idea that in the future we may take and turn it into a garden city perhaps for anything we know. It is only 15 miles from the centre of Glasgow, and Glasgow would provide a very splendid market for vegetables and fruit if you can get them to grow there.

90043. Have you seen Hollesley Bay?—I have.

Hollesley Bay Farm Colony as compared with Palacerigg.

90044. How does that colony compare with it?—Of course, Hollesley Bay has a very much milder climate and they have got very fine buildings. It is an ideal place altogether. Ours is 500 feet above sea-level, and a little bit colder, but we expect to turn it into a Hollesley Bay by-and-by.

90045. I should like to ask you what you have done as regards wages in this new colony?—We had to get specifications drawn for the dormitories and the kitchen

and things of that kind; then we asked our manager, Arrangement who is a practical man, to see what he could do, including for buildings the builder's profit, and it so happened that he sent in a sealed offer in each case, and he came out cheaper than the ordinary man; so that he is building just now with the unemployed labour in Glasgow, but being skilled labour we are paying them the standard rate.

90046. The standard rate of Glasgow?—Yes, less the railway fare, of course; we are not paying the railway fare.

90047. (*Chairman.*) Do you deduct that?—They have got to take themselves there and back.

90048. (*Professor Smart.*) Will that bring your standard rate under the standard rate of the locality?—No, the rate of wages standard rate of the locality is 8d. and Glasgow is 9½d. in Glasgow.

90049. You are paying 9½d. per hour less 5s. per week?—Yes, it is about 5s. per week.

90050. And is all that done under contract?—What is done under contract—the building, or the railway journey, or what?

90051. No, the labour that is being employed on this colony?—The superintendent of the labour colony, Mr. of unem. Nichol, has given us a specification, or an undertaking ployed on to erect those buildings at a particular price, and we leave him an absolutely free hand, except that the labour Palacerigg. which he has to employ is to be the unemployed labour of Glasgow.

90052. Meaning by that the people who have passed you?—No. He is permitted to have an absolutely free hand to get his labour where he likes, so long as it is Glasgow labour.

90053. But that is not unemployed labour, is it?—Extent of un- These men are all unemployed. There are, I am told, employment in 1,800 joiners idle in Glasgow just now.

90054. But they have never come before you?—No, they have not, and by giving them this job we hope to keep them from coming before us.

90055. (*Mr. Bentham.*) Of course he has got the choice of the men of Glasgow?—Well, he has the choice of the unemployed; that is to say, he is not permitted to engage anybody who is in another situation.

90056. So that if a man who says he is out of work makes application your superintendent is at liberty to set him on?—Provided he is satisfied with the man. —Of course, if the man is not suitable, as one or two have proved themselves, he is sent off at once.

90057. (*Professor Smart.*) What is the salary you offer for the superintendent of the labour exchange?—I really forget, but it can easily enough be got. I think it is £150. We originally had a man fixed for the job and this Mr. Nichol was second, but the moment he was fixed with us his present governors raised his screw to £300. So we have some discrimination.

90058. Then you think you can get a man for £150 who is capable of filling that very responsible situation?—For a beginning. It will enable us to see what the man is worth, and if he is a good man we will increase it; and that is encouragement to him.

90059. What is the superintendent of your farm colony to get?—I beg your pardon, I thought you were referring to the farm colony, Superintendent of Palacerigg farm colony.

90060. No, to the labour exchange?—It is practically the same.

90061. Then you say the trades council have practically approved of the labour exchange?—Yes.

90062. Practically approved?—Yes.

90063. Did they make any stipulation?—No, not that I am aware of. I think this is rather important—they have agreed, I understand, with regard to the unemployed labour that we may take out to Palacerigg, that those colonists may be put to the work which they are best adapted for, and may be paid the same wages as any other body. Last year when we tried that they said: "No; you may put a joiner to painting, or a painter to joinery, but we will not allow a joiner to do joinery work, or a painter to do painting work, unless they get the standard rate." Now they have waived that, and have said that every person who goes out there the super-

Palace-
Farm
colony on
physique of
nemployed.

intendent shall be at liberty to put him to the business that he is best fitted for, because any profit that may come from that man's labours goes to a public purpose and not to private employers.

90064. (*Dr. Downes.*) You have spoken of the physical weakness of the applicants; is that past remedy, or have you any idea what can be done to improve the condition of these men's physique?—Some of them could be very much improved physically. As a matter of fact, if they are going out to this Palacerigg estate, I am sure they will be improved by getting the food and the fresh air there.

90065. Do they get soft through not using their muscles?—Yes, a man's heart has a great deal to do with his physical fitness, and when a man's heart is broken you cannot get a very good day's work out of him.

90066. Have you found them improve under your treatment?—Yes, they are able to work from daylight to dusk and in awful weather sometimes.

lderly skil-
ed workmen
ould be
llowed to
ceive re-
duced scale
f wages.

90067. A little further on you expressed the opinion that skilled men who have been thrown out of work owing to their age should be allowed to take work at less than a standard rate of wages, and so remain at their trade?—Yes, I think so.

90068. Have you any idea how that could be brought about?—I think if I were a trade union leader I could easily enough evolve a scheme by which it could be done.

90069. What is the difficulty at the present time?—If a man is a joiner he has to get the joiner's standard rate, and when he is old the man he goes to is not going to employ him because he cannot do as much as a man at thirty years of age can. The older man may perfectly well earn 30s. a week at his business, but because he is not able to earn 38s. he has to go away and take any other job he possibly can get.

90070. Is that an affair that rests with the trade union?—I think it entirely rests with them. I think it would be economically a good thing for themselves if they were to allow it, because that man must be chargeable on their funds for a period anyway.

90071. That is to say, he is a loss to the trade union?—I think so.

Nature of
oil, result of
harvest, and
crops on
Palacerigg
arm colony.

90072. (*Mr. Gardiner.*) As regards the farm colony which you have started, is the soil suitable, in your opinion, for the growth of vegetables, fruit, and so on?—I think so.

90073. It is not too cold, is it? I thought you spoke about its being on a clay soil?—Yes, there is clay there. We have had a very bad harvest this year, in fact I do not know that some of the crops are in yet; but last year, I think, the oats were 44 lbs. to the bushel. I believe that they can grow potatoes very well there, and I am quite sure they can grow rhubarb, cabbages, and things of that kind, for which there is a ready market.

90074. Then you are hopeful on that side as well as on the other?—Yes. I think that it is quite a hopeful thing.

90075. (*Mr. Chandler.*) On that question of the wages, do you find employers less willing to take on aged men now than in former years?—I have no experience at all of how the employers do. All I can speak of is that most respectable men in various branches come to me. I have had compositors; on Friday I had a plumber, and on Saturday a mason—men that really want helping—and they have simply got shoved out because, they said, they were considered to be too old.

Difficulty
experienced
by elderly or
lightly de-
fective men
in obtaining
employment.
Employers'
Liability Act
cause of
unemploy-
ment.

90076. You have given a number of causes which, in your opinion, contribute to that; amongst them you mentioned the Employers' Liability Act, and the steady advance of the introduction of machinery: does that displace men, do you think?—Yes; a man with slight defects is displaced nowadays. For instance, I do not suppose I would get a situation at all, because of being bald-headed and wearing glasses.

90077. Does that arise from competition?—Yes. Then I notice also that a man if he has had a little accident—if one has had an accident to his finger, say, or if another is perhaps a very little lame, or if a man has anything wrong with his eyesight, one eye perhaps being deficient—these men all get shunted.

90078. Do you think any sliding scale or reduced wage would get over that objection?—I think that probably a sliding scale would enable these men to get employment; but, over and above that, there should be some remedy made whereby these men could be protected against the Employers' Liability Act. Insurance agents come in and say, "If you are going to have that man we will not out of Em-take the risk." It would be far better if that man could be contracted out of the Employers' Liability Act. An insurance company, for instance, will not insure my plate-glass if there is a crack in it, and so if there is a slight crack in a man they say, "We will not accept that man."

Mr. William
Fleming
Anderson.

20 Jan. 1908.

Contracting
employers'
Liability
Act by elder-
ly or defect-
ive men
proposed.

90079. In regard to your answer to Dr. Downes as to the action of trade unions, are there not many men in Glasgow outside the trade unions altogether?—I suppose so.

90080. There is nothing to prevent those men accepting the lower wages if the employers are willing to engage them, is there?—In some trades they will not allow the non-union men to work alongside the union men, and consequently governors are not going to run the risk of a strike by employing these men.

90081. (*Mr. Patten-MacDougall.*) With regard to the operation of the Workmen's Compensation Act, it has risks among been represented to us from some quarters that where machinery is used it frequently happens that the younger men who are just learning their job are more apt to meet with accidents than the older men; but I rather gather that that is not your experience?—I am inclined to believe in the old adage, that familiarity breeds contempt. I think the man who has become familiar with a machine is more apt to meet with an accident than a new man, who is usually pretty careful; but I have no experience. I know that it is always swimmers that are drowned, and a man when he becomes a slater does not meet with accidents for a while—it is after he thinks he can go over a roof like a cat that he meets with an accident.

Machinery
operation of the Workmen's Compensation Act, it has risks among
been represented to us from some quarters that where
machinery is used it frequently happens that the younger
men who are just learning their job are more apt to meet
with accidents than the older men; but I rather gather
that that is not your experience?—I am inclined to
believe in the old adage, that familiarity breeds con-
tempt. I think the man who has become familiar with
a machine is more apt to meet with an accident than
a new man, who is usually pretty careful; but I have
no experience. I know that it is always swimmers that
are drowned, and a man when he becomes a slater does
not meet with accidents for a while—it is after he thinks
he can go over a roof like a cat that he meets with an
accident.

90082. When he gets a little careless?—Yes.

90083. It has also been brought before us that there are many fewer seafaring men coming both to distress committees, to the Poor Law, and to other funds of the community for relief, than other classes; is that your experience?—Yes, that is my experience.

Absence of
seamen
among appli-
cants to Dis-
tress Com-
mittees.

90084. Of course you have considerable experience in that direction in Glasgow?—Yes.

90085. To what do you attribute that?—I do not know why it is, but now you ask the question I must say I do not remember ever seeing a man that said he was a seaman. We have had firemen from some of those ships, but I do not think any of the ordinary seamen; at least I do not think I ever heard of one.

90086. It has been suggested to the Commission, I think by more than one witness, that that may be due to the fact that they are more able to put their hand to other things?—That may be so.

90087. Would you agree with that?—It is a fact that we have had no seamen before us as far as I remember.

90088. Regarding Palacerigg, I think you were asked by Mr. Gardiner as to the coldness of the soil there; I believe you mean to do something to improve the soil and to make it less cold by importing from Glasgow the city refuse, do you not?—Yes. Then we mean to put a belt of trees around the border to keep it warm that way.

Improve-
ments pro-
posed at
Palacerigg
Farm Colony.

90089. That arrangement with the corporation involves this, does it not, that they pay you for relieving them of the refuse?—No, not yet.

90090. Is there not an arrangement of that kind?—No. The arrangement is that the corporation are going to give us the stuff for nothing. They agreed that we should only pay the difference between the twelve miles, which they have got to pay for, and the fifteen miles where our colony is. We were able to make a good arrangement, so that we are practically getting our road mud scrapings and so on for nothing, and they wanted to go back upon it when they found I had made that arrangement, but we compromised it by paying so much for wagon hire, or something like that.

Arrangement
No. The arrangement is that the corporation are going
to give us the stuff for nothing. They agreed that we
should only pay the difference between the twelve miles,
which they have got to pay for, and the fifteen miles
where our colony is. We were able to make a good
arrangement, so that we are practically getting our
road mud scrapings and so on for nothing, and they
wanted to go back upon it when they found I had made
that arrangement, but we compromised it by paying
so much for wagon hire, or something like that.

Mr. William Fleming Anderson.

20 Jan. 1908.

Nature of food obtainable by tickets of Distress Committee.

Refreshment and kind of food given to men at Palacerigg Farm.

Complaints as to refreshments at Palacerigg Farm.

Objection to grants to Distress Committee being made dependent on raising voluntary contributions.

Transactions of Distress Committee with Scottish Local Government Board.

Abolition of condition as to voluntary contributions proposed.

Difficulty in obtaining voluntary contributions since passing of Unemployed Act.

90091. In regard to these food tickets which you distribute, what kind of food do they get from the places to which your tickets enable them to go?—I absolutely declined to go on to that relief committee, but Mr. Ferguson will be able to tell you exactly about that. I had to do with the last one, and I know that the people did not get necessities, but that there was a good part of the ticket went for luxuries, so we are preventing that this time.

90092. There has been some discussion, has there not, lately, as to the refreshment that is given and the kind of food that is given to those who are going up to Palacerigg?—Yes. We took 200 men from Westerhill, where they were working for 12s. a week and getting nothing, and we undertook to give them a basin of hot soup, and a piece of bread for dinner. The soup is good soup 70 lbs. of meat being put into it. They started at seven from Buchanan Street Station, and we said, "We will give them a cup of coffee and a slice of bread"—a loaf being cut into five. Immediately we had complaints that it was too bad to ask them to eat dry bread.

90093. Whom had you the complaints from?—The letter came from what is known as the Unemployed Workers' Committee. Against my will they agreed to give them jelly on their bread.

90094. Has that satisfied them?—Probably they will have some other request. One of the men suggested that next it would be ham and eggs—I don't know what. They have such a difficulty to satisfy them, especially when they are in a company of 200.

90095. In regard to the provisions of the Unemployed Workmen Act, I think you have found in Glasgow that it is rather hard upon you to be obliged to give voluntary contributions in order to qualify for the grant?—Yes; I think that was a very great hardship. I went to the Common Good and I asked them for a loan of £1,000 and then for the loan of another £1,000, and as I could not pay them back the Government accepted them as contributions and gave us, I think, £3,800. Then after that I found that in London they got £58,000 without contributing so much as £10. We immediately applied to the Scottish Local Government Board to refund this £2,000, which we thought they had got from us by false pretences. But we learnt that Mr. John Burns had handed the money back to the Treasury, and so we could not get it. We feel that we have been done; and as we are Scotsmen, to be done out of £2,000 is rather provoking.

90096. (Mr. Gardiner.) And by England, too?—Yes.

90097. (Mr. Patten-MacDougall.) I gather that that leads you to think that the condition of voluntary contributions is one that should not be repeated if the Act is re-enacted?—I do not think you should ask us to provide a voluntary contribution which must pay wages, and have a rate contribution which can pay permanent officials, emigration, and services of that kind. The big employers of labour, who were generous contributors to our unemployed relief fund, say, "We are really being rated twice over; why should we both pay rates and at the same time be expected to give voluntarily?" I think it ought to be either the one thing or the other.

90098. (Sir Samuel Provis.) Did you get a certain amount of voluntary contributions before the Act passed?—Yes.

90099. Would you think it desirable that those should cease?—Of course I am speaking of a good few years ago. We once applied for contributions during a period of distress, and we had almost to restrain the people. We got over £10,000, and we did not use it all. But about eighteen months ago the Lord Provost was good enough to call a preliminary meeting in the library of those gentlemen who usually head the subscription list, because we thought at that time that to comply with the requirements of the Local Government Board for voluntary contributions they would require to do something; but they absolutely refused to give us anything, so we did not call a public meeting.

90100. Was that because there was a Government grant?—No; it was, I think, thought at the time that there was no need.

90101. Was there any special distress that year?—They thought there was no special distress, and we thought there was. The consequence was that we, not getting any money from them, had to go to the Common Good and they gave us £2,000 and the Government gave us £3,800.

90102. The Act rather contemplates special distress, does it not, or would you read it so as to apply to chronic distress?—I do not think it should be made easy for us to have a rate for distress, because our experience is that a great many of the men that are with us this year were with us last year and were with us the year before.

90103. You find, do you, that some of the men turn up each year?—Quite so. My difficulty is to get some of our men that call themselves the advanced portion of the committee to agree that these are not our people at all.

90104. In England there is a provision that assistance shall not be given to a man who has had assistance within two years previously; but you have not got that provision in Glasgow, have you?—No, we have not.

90105. Would you think it desirable to have it?—I would not like to have a hard and fast line put down.

90106. You think there must be some elasticity?—Yes, I think so.

90107. Would you like to have that restriction as a general rule, with some power to deal with exceptional cases?—Yes, I think that a body of men, such as the parish council and the town council elect as the distress committee, ought to have some discretion, and that what might be good enough for London, or for Leicester, or for Sheffield, might not be suitable for Glasgow; and what might be good for Glasgow might not be suitable for those other places. I really think we ought to have discretion.

90108. (Chairman.) I gather from your evidence that you think the supply of labour in Scotland now is in excess of the demand?—Yes, I think so.

90109. Do you think that the proportions have changed of recent years, or was it always so?—I think it is more acute now, both as to the number of people wanting work and as to the difficulty of getting it.

90110. Independently of this immediate distress?—Yes. The very fact that the number of people employed on the land has gone down so enormously, I think is a pretty good indication that they must be coming somewhere.

90111. I suppose you would say that the condition of the skilled workman has improved in the last twenty years?—Yes, I think so, very much. I think that the conditions that they require now are very much better.

90112. Then as to the unskilled labour, I suppose you would say that the upper stratum of unskilled labour has improved in the last twenty years?—Yes. People now get food and comforts that they did not have and would never have thought of having. I am sorry to say that there is a feeling amongst a lot of these workers that porridge and scups and broth—plain fare—although it is both cheap and nourishing, is not good enough for them. I am also sorry to say that I think there is a very big proportion of these people who spend their money foolishly on the Saturday, not only in drink but on sport. They do not care how much money they spend in going to a football match, and in taking a cab there, and in paying for a grand stand, and having a fish tea after it is all over. We could do better if we could inculcate a little thrift in them.

90113. Then it is the condition only of the lowest stratum of employment that you think has deteriorated in the last twenty years?—There is no doubt that that is a very big problem, but from my observation I think that the respectable artisan of over fifty years of age has a harder struggle now than he ever had, and that is the class that I think ought to be helped first and foremost.

Result of failure of voluntary contributions to Distress Committee.

Recurrent applications to Distress Committee.

Provision in England preventing recurrent assistance by Distress Committee.

Need for discretionary powers for Distress Committees.

Surplus supply of labour in Scotland.

Improved condition of skilled workmen compared with 20 years ago.

Improved condition of upper stratum of unskilled labour.

Workers' objection to plain fare. Extravagant expenditure on pleasure.

Position of elderly artisans.

Mr. JAMES FERGUSON, called; and Examined.

Mr. James
Ferguson.

20 Jan. 1908.

90114. (*Chairman.*) You are Indoor Assistant Inspector of Poor under the Glasgow Parish Council, and Chief Investigator under the Glasgow Distress Committee?—I am.

90115. You have been good enough to prepare a Statement giving us a good deal of information, which we will treat as your evidence-in-chief if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. I have been in the service of the Barony Parish, now the Glasgow Parish Council, since July, 1880. In 1882 I was appointed Assistant Inspector of Poor. The duties of an assistant inspector are to visit the houses of applicants and report once a week to a relief committee all the cases visited by him during the preceding week. His reports must contain such information as will enable the committee to dispose of the applications. In 1892 I was appointed to my present position, viz., Indoor Assistant Inspector of Poor. I am responsible for the general supervision of the Relief Department, of which there are eighteen assistant inspectors, two application clerks, two criminal officers, two relations liable officers, three removal officers, and a staff of clerks. The most important part of my duties is in connection with the relief committees and the revising of time-expired cases in hospitals and poorhouse. On each committee I represent the inspector of poor.

The Distress Committee for the City of Glasgow requested me to undertake the investigation of schedules of applications under the Unemployed Workmen Act, and they appointed me chief investigator.

POOR LAW.

2. *Improvident.*—Views as to the respective merits of indoor and outdoor relief. From experience I consider that outdoor relief is too easily obtained by a certain class, principally the improvident. That class is composed of men who, while in work and earning good wages, say from 30s. to 40s. per week, live in cheap-rented houses and make no provision for sickness. That class is on the increase—no doubt due to the splendid accommodation provided in our hospitals and the large aliment allowed their dependants after admission. In some cases aliment to the extent of 16s. per week is given, and such liberal treatment is bound to lead to improvidence. No use paying into friendly or sick benefit societies when better terms can be obtained through the parish council. It costs them nothing, they do not even pay their share of the poor-rate. On the other hand, it has a most damaging effect on friendly societies. The trend nowadays is to try and get as much as possible for nothing, and, what was some years ago considered the last resort, is now the first, viz., the parish council. I would suggest that in all cases of improvidence, or where it can be proved that a man had sufficient wages to enable him to make provision for sickness, that no outdoor relief be granted. I am certain, if this form of relief was stringently adhered to, men would waken up to their responsibility rather than have the poorhouse staring them in the face.

3. *Model Lodgers.*—The model lodger is also on the increase, but in every instance indoor relief is offered. They live from hand to mouth, but hundreds have the means to enable them to reside in private lodgings and provide themselves with the necessary medical attendance, but no matter what they earn, one day's sickness sends them to our institutions.

4. *Husbands in Prison, and Desertion.*—The wives and dependants of men in desertion or in prison cause a considerable amount of discussion as to what relief should be allowed. The Local Government Board strongly recommend that no outdoor relief should be given in such cases. Still there is a strong feeling amongst parish councillors that wives of such men should not be punished by sending them to the poorhouse simply because

their husbands misconduct themselves. I am of opinion that no outdoor relief should be given in such cases in respect that it is hardly fair to the unemployed tradesman who tramps the boots off his feet but sticks to his family; he cannot claim indoor or outdoor relief for his children, while the man who deserts or misconducts himself is considered deserving by granting his dependants outdoor relief.

5. *Widows and Expensive Funerals.*—Considerable difficulty is often experienced in disposing of widows burdened with young children, who apply immediately after the husband's death. In many cases the sum received from insurance societies is from £20 to £30, and in a few days nothing is left, the funeral expenses ranging from £6 to £8; and, in a case which came before me recently, the coffin cost six guineas. The difficulty arises as to whether such cases should not be offered indoor relief. I do not in all cases blame the widow—she generally hands the arrangements over to a male friend, who believes he is doing the right thing by making a grand show. Walking funerals should be encouraged; if coaches are required, then let the mourners provide them (just as persons provide their own coach when attending marriages); the mourners may be fewer, but the widow and orphan would benefit.

6. *Aliment.*—In 1882 the aliment allowed per child was 1s. to 1s. 6d. per week, with perhaps the same allowance to the mother if nursing a young child, but in recent years the alimENTS have been increased. In June, 1902, the Local Government Board issued a circular recommending parish councils to place widows with young children on the same scale as private guardians of boarded-out children, with the result that alimENTS from 6s. to 18s. per week, according to dependants, are now being paid, with clothing for the children, free medical attendance, and school books, while the only responsibility placed upon them is that they remain at home and devote all their time to the supervision of their homes and children. I have some doubt as to whether this will have the desired results; the indolence of the mother very often leads to the indolence of the child. No doubt the amended Education Act, prohibiting children under fourteen years of age from being employed before or after school hours, may prevent many anxious mothers from sending their children to earn a little. This I very much regret; from experience a mother who toils herself and teaches her children to do likewise, I find, turns out the most solid and provident. It may be without the scope of this Poor Law Commission, but I consider it is not right that children ranging from twelve to fourteen years of age should be debarred from earning a little to supplement the meagre income of a household, rather than have them confined in a close atmosphere till nine o'clock a.m. I am in favour of the education system in some parts of Germany, where in summer the schools open at 7 o'clock, and 8 eight a.m. in winter; and if the feeding of the children is necessary a glass of milk and a bun at a certain hour should be quite sufficient for their needs. The school is over at 1 p.m., and after that hour the children are free to work and have plenty of time to play and do their home lessons if necessary.

7. *Classes applying for Relief.*—The classes of person applying for relief are—

- (a) Widows with young children.
- (b) Widows with family partially able to support.
- (c) Persons neglected by their families.
- (d) Dependants of persons in hospitals and infirmaries.
- (e) Dependants of persons in prison.
- (f) Deserted wives and children.
- (g) All persons certified unfit for work—except dependants of able-bodied men.
- (h) Illegitimacy.
- (i) Insanity.
- (j) Orphan children.

Extravagant funeral expenses.
Provision of mourning coaches by mourners instead of widow proposed.

Scale of relief in Glasgow to widows with children.

Hardship of provisions of Amended Education Act, preventing earning by children under 14.

German school hours advantageous

Classes applying for relief to Parish Officer in Glasgow.

Mr. James Ferguson. 8. *Causes of Pauperism.*—The total number of persons who applied for the first time during the year ended November 15th, 1906, was 5,739—and the causes were as follows :—

Causes of Pauperism. Statistical Analysis of applications for relief.	From accident - - - - -	105
	„ criminality - - - - -	114
	„ desertion by parents and husbands - - - - -	491
	„ drink - - - - -	547
	„ illegitimacy - - - - -	101
	„ illness - - - - -	1,923
	„ immorality - - - - -	337
	„ improvidence - - - - -	833
	„ indolence and slovenliness - - - - -	66
	„ insanity - - - - -	450
	„ old age with relatives able to assist - - - - -	166
	„ old age without relatives able to assist - - - - -	248
	„ widows - - - - -	326
	„ orphan children - - - - -	32
	Total - - - - -	5,739

Inexpediency of relief to whole class of able-bodied indisciplinately. 9. As to the expediency and probable cause of giving all able-bodied persons a claim to parochial relief, there are so many classes of the able-bodied poor, viz., the men who allow their wives to work while they loaf about, men and women who hang about street corners and never look for work, men and women who squander every penny they earn in drink, men who wander all over the country neglecting their families. To give these classes a right to parochial relief would mean a more extreme test than what is available at present. It would mean a large addition to our poorhouses—in other words, parish councils would take the place of the present unemployed distress committees. Parish councils would then be in position to provide labour colonies, where the chronic unemployed or the able-bodied indolent could be sent, while part of what they earn would be available for their dependants.

Suitability of existing Poor Law areas. 10. *Existing Areas.*—I consider the present areas quite suitable for administering relief.

Abolition of Law of Settlement desirable. 11. *Poor Law Reform.*—My own feeling is that the Law of Settlement should be abolished and a National Poor Rate for Scotland be enacted.

National poor rate for Scotland proposed. Attractive-ness of institutions in Glasgow. 12. In a large city like Glasgow, with so many public institutions, such as lock hospital, maternity hospital, infirmaries, and parish hospitals, also the large number of model lodging-houses, the poor and a large class of very doubtful persons from all over the country are inclined to come to Glasgow to derive benefits from our palatial institutions, and in not a few cases become permanently chargeable to the rates, which means that in a city like Glasgow the burden of the upkeep of these people reverts upon the respectable and industrious ratepayer.

UNEMPLOYMENT.

Its Extent.

Numbers and class of unemployed. 13. For number and class of men out of work, see return of applications to burgh distress committee for year ending March 26th, 1907, copy of which is enclosed (Appendix No. II. (A)).

Extent of unemployment; chronic and periodic. 14. With regard to its extent over time, e.g. whether chronic or periodic, it is partially both. No doubt we have a chronic class of unemployed; still, from circulars received from employers, a large class are casual workers, only taken on during busy periods, and discharged immediately after.

Its Causes.

Causes of unemployment. Introduction of machinery. Immigration of aliens. Absence of applications for relief from Russian Poles in Glasgow. 15. It is rather difficult to say what is the actual cause of unemployment. Tradesmen and handy labourers say that one man with improved machinery can do the work of several men. In trades such as tailoring, slipper-making, and cabinetmaking a large number of Jews are now employed, and in the mines and ironworks throughout Lanarkshire, Renfrewshire, and Ayrshire a very large number of Russian Poles are now employed—to what extent no one has any idea. Some time ago it was suggested that the Local Government Board should cause a return to be made of all foreigners employed in the three shires mentioned, but it was thought impossible, owing to foreigners adopting Scotch surnames; it, however, seems strange that since 1903 no application for work has been received from a Russian Pole, and only two Jews have applied.

16. The introduction of electric lighting in our large retail warehouses and offices has been a serious blow to our painting trade; prior to that large gas jets blackened the roof and walls, with the result that they had to be cleaned and painted once or twice a year, but now it is only necessary to do so every other year, or perhaps longer.

17. At our harbour and docks modern machinery for the loading and discharging of cargo has been the means of displacing a large number of men. Work which formerly took several days to do can now be done in one; for instance, some years ago I have seen half a dozen men employed turning a loaded wagon on a turntable; this can now be done by one man, with the aid of an hydraulic windlass.

Its Effects.

18. The use of machinery, as stated in the preceding paragraph, is bound to cause a certain amount of unemployment. Still, I cannot understand why so many foreigners can always find work while the Scotchmen cannot. I have often remarked this to applicants for work, and the general reply is, that the foreigner can live cheaper, and therefore accepts less wages. I tested this, by making inquiry of labourers employed in a large foundry where a number of Poles are engaged, and was informed that they were all paid alike; the only difference was that the Pole worked harder, and was more steady at his work.

Its Remedies.

19. Labour exchanges or colonies for the respectable out-of-work tradesmen and labourers, where they could be employed at their own trade, or something better than stone-breaking, might be instituted. Employers of labour in want of men could be supplied through this channel. Some difficulty may be experienced in employing men at their own trade, as their trade union may object to their working at less than the standard rate. A few years ago it was suggested to employ a number of unemployed painters to paint the railings at our public parks and pay them a little more than the other unemployed men, but they could not accept unless they were paid the standard rate of pay for painters, with the result that they had to work as labourers at 12s. to 15s. per week. The same difficulty may arise here.

20. The chronic unemployed, and the men who have lost their work through carelessness or misconduct, should be sent to a colony and kept there, and what they earn should be handed over to their wives and families. Sometimes, however, the wife is worse than the man. In that case the children should be taken charge of, and what the man earns should be handed over to whatever institution the child or children may become chargeable to. In the event of the man leaving the colony or refusing to work, he should be criminally dealt with and sent to prison. The distress committee has had several cases of this class before them, and have granted them work through sympathy for the young children, but it is doubtful whether the children got the benefit. In other cases work was granted only on condition that the wives uplifted the pay.

21. Applicants for work under the distress committee make personal application at the Corporation District Baths, district police offices, the Charity Organisation branches, and Corporation Labour Bureau. The application forms were then forwarded to me and handed to the assistant inspectors of Govan and Glasgow Parish Councils, who visited the houses and filled in the necessary particulars in the statutory record paper. Circulars were then sent to the last employer requesting particulars as to the cause of discharge, the average rate of pay earned, and how long in their employment. On receipt of the reply, the applicants were summoned to a committee of three members, who either granted or refused work. Those granted were advised by postcard when and where to commence work. The men were all started at 12s. per week, which was afterwards increased to 2s. 3d. and 2s. 6d. per day, or 13s. 6d. and 15s. per week, according to the ability and willingness to work, while the average hours worked are forty-four per week, so that the men earning 15s. per week are higher paid than the foundry labourer with 16s. 10d. per week, and who has to work fifty-four hours per week. The men are employed at digging, draining, and stone-breaking, and all this is provided by the Glasgow Corporation.

Painting trade affected by introduction of electric light.

Dock labour displaced by the introduction of machinery.

Reason for infrequency of unemployment among Russian Poles.

Difficulty of employing "unemployed" at their own trades.

Detention of chronic unemployed on labour colonies, earnings being handed over to wives.

Procedure of Distress Committee.

Wages and working hours of men on Glasgow Corporation relief works.

number of men on relief works. 22. Last year the men were all discharged on April 1st, and no applications were received till November 13th. This year the work is still going on, and at 30th ultimo we had 391 men working, and I am afraid they will remain with us throughout the year, or as long as the work lasts.

number of migrants per week from Clyde ports. 23. My own opinion is that the Unemployed Act has brought to the surface a certain class who manage somehow to live either through their wives working or by casual labour of a few hours per week. During the last five or six weeks over 3,000 people per week have alone left the Clyde for foreign parts. Allowing for foreigners, say, 500 or 600 per week, who are they that are leaving this country? Are they English, Irish, or Scotch, tradesmen or labourers; and what surprises me most, who are filling their places? I would suggest that the Government should be asked to prepare a return giving the nationality and occupations of the persons who have sailed from the various ports this season.

Government return as to nationality and occupations of migrants proposed. 24. The following is a brief account of what was done by the Town Council of Glasgow towards relieving distress prior to the passing of the Unemployed Workmen's Act. Prior to the passing of that Act the corporation provided work through their own departments, viz., the Parks Department, where the men were sent to work at road-making and levelling the ground; under the Cleansing Department, in draining bog land; and the Statute Labour Department, in stone-breaking and the making of new streets. In 1903, I was asked to undertake the investigation of schedules, and have been engaged in that work each year since.

Vages of men on relief works. 25. A man was then paid 1s. for himself, 9d. for his wife, and 3d. per child, with tea and bread before starting at 8 o'clock a.m., with soup and bread for dinner. This rate of pay placed a considerable number of the men with large families in a better position than what they earned at their usual occupation. It was also unfair to the man with a wife only, who was paid 10s. per week, and who was more able and willing to work than the useless man with a large family. The maximum was afterwards fixed at 12s. 6d. per week. In after years the food was discontinued, and the present rate of pay fixed as is presently being paid. The expenses for each year were defrayed out of the common good fund of the corporation.

Co-operation between Distress Committee and parish council. 90116. (Chairman.) The Distress Committee of Glasgow has worked in co-operation with the Glasgow Parish Council, I understand?—Yes, very much.

Duties of witness. Date of witness's statement. 90117. You are responsible for the general supervision of the relief department of the Glasgow Parish Council?—That is so.

90118. Practically you are the head of the officials who attend that relief committee?—Yes.

90119. At what date did you prepare your statement?—About nine months ago.

90120. If the nine months which have elapsed between then and now have altered the information contained in that statement you will kindly make use of your experience during that time?—Certainly.

90121. How many years have you been connected with the inspectorate of the parish council?—For twenty-seven years past.

90122. Do you see much change in the class of people who come up for relief to what they were twenty-six years ago?—Yes.

90123. Should you say the change is for the worse or the better?—For the worse.

90124. In the sense that there is less disposition to help themselves?—That is the case.

90125. Should you say that in physique they have deteriorated?—Yes.

90126. You have no doubt in your mind as to that?—Not the least doubt.

90127. So there is, in the class that comes to the Poor Law, a moral and physical deterioration?—There really is from my experience for a time past.

90128. Should you say that is confined to certain portions of Glasgow, or is it general?—To the congested portions of Glasgow.

90129. They drift there, I suppose?—Yes, to the cheapest rented houses, of course.

90130. The more liberal treatment which has been the policy of the parish council to give has increased the applications, I understand?—There is not the least doubt about it. They do not require to make other provision, the alimient is so good now-a-days.

90131. That is notably the case, you think, as regards sick relief?—Yes.

90132. This evidence has been corroborated by other witnesses; but as regards alimient you have, of recent years, adopted the policy of giving a larger amount of alimient for boarded-out children. You are not quite satisfied with the results of that policy, are you?—The boarding-out of children with strange families is very satisfactory.

90133. As regards policy it is satisfactory as regards boarded-out children, but in certain cases it has not been so satisfactory as regards the children living with their mothers?—The widows on the Roll.

90134. Still, on the whole I suppose the increase of alimient has worked satisfactorily as regards these children?—Yes, in the majority of cases.

90135. Have you any industrial school in Glasgow?—We have.

90136. Has it ever occurred to you (the suggestion has been made to us) that in the case of these children of widows it might be possible to have something like a day industrial school where the children would be sent in the day and properly fed?—We have so many of them it would require to be a very large school; we have already children in the industrial school, and we pay 1s. per week for each child. That is where widows, perhaps, have been taken off the Roll through misconducting themselves or illegitimacy; they will not part with the children; they would rather we paid the board of this industrial school, which we do, because we are sure that the money is well spent there.

90137. (Mrs. Webb.) Is it a day industrial school?—Yes.

90138. The widows do not object to your sending the children there?—Not at all; they are rather pleased. The children leave their home at eight o'clock in the morning, and return home at six in the evening.

90139. (Chairman.) Has that system answered?—Yes, very well.

90140. Might not that system be extended a little in dealing with these children?—The Scottish idea is to live a family life; they do not care about institutional life at all.

90141. But sending your children to schools of the stamp of the day industrial school?—It would certainly be a great improvement on a good many of the homes.

90142. If practicable it would get over that difficulty?—Yes, it would.

90143. Of course, the characteristic difference between the English Poor Law and the Scottish Poor Law is that the able-bodied are not legally entitled to relief, or their dependents. Do you think the existence of that prohibition has increased the difficulty of the distress committee?—Certainly. I think if the parish council had the power to deal with the able-bodied poor the whole work of the able-bodied would revolve back on the parish council, and they would demand more relief as a right.

90144. Are there not all sorts of devices for getting over that prohibition just now, for instance, doctors' certificates?—Yes. Every applicant for relief is certified by a medical man.

90145. A doctor's certificate sometimes gives an able-bodied man relief who otherwise does not get it, does it not?—Yes.

90146. Are you in favour of maintaining the prohibition?—No, I am not exactly, because in my daily work with them I find cases really deserving of relief; and I consider it very hard to refuse such cases. There is a good deal of discretion left now with parish councils, such as where there is a man working at 25s. a week who has a wife suffering from consumption, they are living in a single apartment, and perhaps have a few children. We consider it very dangerous to the health of the children to allow the wife to remain in the house; and we do take her in to prevent further damage being done to the family.

Mr. James Ferguson. 20 Jan. 1908.

Improvidence encouraged by lavish relief.

Success of boarding-out of children.

Effect of increased scale of relief to widows with children.

Children of widows placed in day industrial school.

Scottish preference for family life.

Work of Distress Committee affected by absence of able-bodied relief.

Able-bodied receive relief on medical certificate.

Phthisical wives of able-bodied men received into Poor House.

Mr. William Ferguson. 90147. As regards the men themselves, would you give relief to them?—No. That is done even where they are in receipt of a wage, and not out of work or anything else; when they are earning a wage we take the wife in.

20 Jan. 1908. Hardship of absence of able-bodied relief—Discretionary power as to able-bodied relief needed. 90148. You would be disposed to modify the law as regards dependants of the able-bodied?—Certainly. There are a great many hard cases in Glasgow where we do give relief that we are entitled under the Scottish Act to refuse. I am of opinion still that we should have a little discretion in dealing with cases of that nature.

90149. Would that bring many cases upon you?—I think it would. We are sorry to say our consumptive ward in the large hospital which has been built is overcrowded already with purely consumptive cases.

90150. Notwithstanding the fact that this would bring a certain number more claims upon you, you would be in favour of that alteration of the law?—I am in favour of that.

Abolition of settlement. National poor rate for Scotland. 90151. As regards settlement, you would abolish it and have a national rate for the whole of Scotland?—I am in favour of that.

90152. Would that be for all purposes?—Yes.

90153. Outdoor and indoor?—Everything in connection with the administration of the Poor Law.

Glasgow burdened with poor from all parts, coming in the first place as patients to hospitals and remaining. 90154. That might be pleasant for Glasgow, but what would the rest of Scotland say?—It is for the sake of Glasgow I am speaking. I think it is very hard with all our hospitals, maternity hospitals and other such hospitals, that we should be taxed to keep up patients from the small country places where they have not facilities; not that these are chargeable to the rate, but once they do get inside a hospital they generally become unfit and left on the parish, and we have, perhaps, to keep them for all time coming.

90155. (*Mr. Patten-MacDougall.*) Not where they have a settlement?—Not Scottish people; but English or Irish we cannot return.

Unemployment in Glasgow, chronic and periodic. 90156. (*Chairman.*) Coming on now to unemployment, unemployment in Glasgow is for certain classes both chronic and periodical?—Yes.

90157. Has there always been a certain amount of unemployment in Glasgow?—Yes, for the last twenty years there always has been.

Relief works in 1882. 90158. Since you have been connected with the Poor Law?—The first experience I had was in 1882; we had a large number, thousands, working at stone-breaking and digging, but all and sundry were allowed to work there; all who applied for work got it at that time. We were not so particular and did not make any enquiries as to how long they had been in the city and how long they had been out of work; there was such a crowd of them they must have relief work.

90159. How long ago is that?—About twenty-five years.

90160. Giving employment outside the Poor Law has been common in Glasgow?—Yes, that is the reason the corporation had to provide it. The Scottish Boards were entirely tied; they could not give relief to able-bodied men, so the corporation had to provide work for them; as parish councils we could not give relief.

Distress Committees necessitated by absence of able-bodied relief. 90161. You trace a direct connection between the law prohibiting relief being given to able-bodied and these bodies which did relieve the unemployed?—Yes.

Immigration of Jews a cause of unemployment in Glasgow. 90162. Going on to its causes, amongst other thing you say there are a considerable number of foreigners who are employed in Glasgow or its neighbourhood?—Yes, it is a common thing at tailors' shops. In fact, most of the tailors' shops in our principal street, Argyle Street, are owned by Jews, and in most of the cases that come before our distress committee, if they are tailors and we ask them why they are unemployed, they say: "Oh, it is the Jews, we cannot get work for them."

90163. Not only the owners of the shops, but the employees, too, are Jews?—Yes.

Polish Jews in iron works and mines. 90164. In addition to that you say there is a considerable number of foreigners—Polish Jews engaged in iron works and mines?—That is the case. I was making enquiries of the superintendent of police at a place called Wishaw, the centre of Lanarkshire, and he told me only last week that he had some two or three thousand Poles employed in that shire alone.

90165. Is that a new system?—Entirely new. I was surprised to hear it myself. I did not know there were so many.

90166. These people you understand are working practically at the same wage as the Scottish men?—I have made enquiries of labourers employed in the same works who are applying for work through the distress committee, and the question was asked, "Why do the Poles always get kept on; do they get less wages?" and they have said, "No, they all get the same, the only reason is that they work harder than we and they are kept on when dullness takes place."

90167. Do these foreigners come up for relief?—No. It is very peculiar; I have not had an application from a Russian or a Pole, and we have several local iron foundries which employ them.

90168. (*Mr. Lansbury.*) Is there any Jewish Board of Guardians there?—None.

90169. (*Chairman.*) They have a branch, have they?—They have a branch, but it is small. In fact it was a strange thing to get an application for parish relief even from a Jew until recently. During my experience it is only some ten or twelve years ago since we had an application from a Jew at all; they find relief themselves.

90170. Do they now apply?—Yes, there are so many of them.

90171. What do they apply for generally; medical relief?—Outdoor relief and medical relief.

90172. Do they make use of the order they get to go to their own board of guardians to get help through that?—They must do so. They do not remain long with us, I do not think there is one chargeable in the workhouse now.

90173. They make use of the board of guardians' order to get relief from their own people?—Yes, I think so.

90174. Enumerating some other causes of unemployment, you think the introduction of electric lighting has really made a serious difference in the painting trade?—That is so. That is seen on the surface. I remember not many years ago great rows of gas burners blazing in a draper's window, but now that is all done away with. In those times the walls were black in a month or two. That is my own general experience, and it is the statement made by painters.

90175. And machinery has lessened the employment at the docks?—That is what I have noticed myself. As a lad I was brought up in Glasgow and one of my favourite walks was down by the harbour, and I find a great difference in the loading and discharging of the ships now. Then it was all done by hand or most of it, but now it is machinery.

90176. You have set up a labour exchange that has done fairly well?—We do not know the effect of that yet, It is only recently the distress Committee took over that labour exchange.

90177. Do you come in contact with that at all?—No, I was only appointed chief investigator in connection with the distress committee, not the other part.

90178. What do you think; do you think a system of labour exchanges properly managed, linked up one with the other, would make any substantial difference in the amount of unemployment?—I should say that labour exchanges should, if the employers would only use them. They do not use them, because they simply say: "I can find as many men outside my gate as I want; I do not require to go to a labour exchange." But if the employers and labourers would use them it would be a splendid idea to have a record of all unemployed tradesmen.

90179. To make them efficient they must be associated with classes of labour, other than those connected with distress committees?—That is the case. The Lord Provost of Glasgow, when we first started working the distress committee under the Unemployed Workmen Act issued circulars to all the large employers of labour in Glasgow, asking them to make application to us for workmen, and we only got replies from two, I think, who said they would take notice of it; the others ignored the letter altogether.

90180. The Trades Council, on the other hand, have nominated some persons to it?—I understand so.

Reason for infrequency of unemployment among Polish Jews

Absence of applications for relief from Russian or Polish immigrants. Branch of Jewish Board of Guardians in Glasgow.

Applications for relief from Jews.

Painting trade affected by introduction of electric light

Dock labour displaced by machinery.

Transfer of labour exchange to Distress Committee

Conditions essential to success of labour exchanges.

Employers' neglect to use Labour Exchange. Attitude of Trades Council towards labour exchange.

90181. You have a labour farm?—Yes; it is not in proper working order yet, but by the end of this month they expect to be able to send out ninety men to be housed there.

90182. Do you approve of a farm of that kind?—Yes, I think I put in my statement that if we had a labour colony divided into two, one for the decent unemployed tradesmen, and the other for the men who will not work, or who work for a day or two and loose off, and then come to us, and send them there as I state, and make them work for a wage, and give it over to the families—keep them there altogether.

90183. You would have two classes of colony or farm, one for the more respectable people, and the other for the chronic class of unemployed?—Yes, the in-and-out workers.

90184. Would you, in the first instance, send them all to the same farm?—No, I would allocate them before they got that length, through enquiries.

90185. One farm would be stiffer and less comfortable than the other?—I would be in favour of sending respectable people to one farm altogether and keeping them all separate; but if they lost their work through drinking, or what not, they should be sent to a different farm altogether.

90186. What is your idea of testing a person's *bona fides*? Do you think that work is a sound and reliable test?—Yes.

90187. Do you think there is any other test?—Give them a trial of it; send them to a colony. If they do not work then I would certainly get them sent to prison.

90188. To a more penal colony?—Yes.

90189. In dealing with the class which you have mentioned before, their response to a test of work is the only reliable test?—Yes.

90190. That means that your labour must be on a very considerable scale?—Yes; for one thing there are plenty of acres in connection with it; I do not know whether it could be cut up in two.

90191. You would have a good many hundreds of thousands, would you not?—Yes, you would have to make big provision for it.

90192. What was your idea for the people you would send there, would you simply keep them till they got restored to health, or would you keep them there permanently till they got a place?—I would keep them there as long as they like to remain, so long as they were working for their living.

90193. You would have a very large number of persons for a long time on your hands?—I am not so sure; I think they would drop off from us.

90194. The object of the Unemployed Workmen Act was to give help to a special class of respectable persons who were usually permanently employed, but were temporarily out of employment. Did men of that class register themselves?—Very few of the respectable tradesmen, that is the out of work householders. Personally, I know a good many men who did not apply to us, who depended on their friends. For instance, I have had clerks call on me, four or five a day, expecting I would require some clerical work in connection with this new committee, most respectable looking men, but I had no need for such a class; and decent engineers, well dressed have asked for work, and we cannot give it to them.

90195. Would you be able to send those people to a labour farm?—If they liked to go; it is a matter of finding board out of it, if not a wage.

90196. You express very clearly your opinion that this Unemployed Workmen Act has brought to the surface a certain class who manage somehow to live either through their wives working, or by casual labour of a few hours per week. In fact, that is a class I suppose not very distinct from those who ordinarily come for relief to the parish council?—Just something similar.

90197. Just the same class only they are able-bodied and disqualified by law?—That is the case.

90198. If you altered the law you would have these persons coming I suppose periodically for relief to the parish councils?—Certainly. If you altered the law to give an able-bodied man a right to parish relief he would come to us certainly.

90199. You have had to do both with Poor Law and with the distress committee. Would you be prepared to recommend that the Poor Law should do all the work that you now are doing?—I think so. It should be all under one head in a case like this.

90200. The respectable class of tradesmen then would not apply to you?—I do not know, they might not. That is the only objection to my suggestion. They might not care about coming to the Poor Law. There is a feeling in that respect, that unless you are dividing up the class of applicants who come to the distress committee, some of them would not care about coming to us at all.

90201. A certain number of these persons would come to a distress committee who would not come to the parish?—Yes.

90202. Is charity well organised in Glasgow?—There are a great many different sources.

90203. Do they work at all with the Poor Law?—No, the only thing now is that they search our indices. We give the Charity Organisation officials full power to search our indices.

90204. It has been suggested to us that it would be advisable in future that there should be a statutory committee connected with all the charities and persons interested in them, who should work side by side with the Poor Law, as there are a certain number of cases requiring relief which the Poor Law under present restrictions cannot give. Supposing there was a committee of that kind associated with the Poor Law would that get over the difficulty of dealing with these more respectable tradesmen?—I think I am in favour of having all such things under one head. I do not know whether it would prevent the decent unemployed coming to this particular board.

90205. Would a charity committee be able to deal with them?—I should think so.

90206. Practically your evidence is really to this effect that there is not, as regards the great majority who come to the Glasgow Distress Committee, a sufficient difference between them and those who come to the Poor Law to justify this separate organisation?—As I have stated already, there are a great many; for instance, the class I referred to would not come to us. I should like to see that class applying to a distress committee to give them the opportunity of doing something for them, but while there is the class that is applying just now they hold off, and they certainly will not apply to the parish, because we cannot deal with them.

90207. Passing on to your Appendices, what strikes one in Table 5 is how very large a proportion of those applying were under forty. It is not the old people who apply so much as the young?—That is so, but my experience this year and last year is that a great many of these applicants when they make an application understate their age. There are many who state they are fifty-four years of age and I am sure they are sixty-four. They think if they say they are so old they will not get work with us. They even admit at the committee that their age is more than what they state. The ages from twenty to thirty you can distinguish more; you can see for yourself they are no more than that.

90208. But from thirty to forty?—They say they are forty, but they look fifty, but they say it is the hardship that makes them look older than they really are.

90209. That feature of so many young persons applying and registering is common to almost all the distress committees. Is that a modern phenomenon, or were there always this number of young persons out of employ in Glasgow?—During the last two years, both as regards the distress and the unemployment. There is an awful amount of carelessness by parents with children when reaching the age of fourteen or fifteen years. When applicants come before the distress committee you will often find a boy or girl of fourteen and a half years

20 Jan. 1908.

Demand for
boy and girl
labour in
Glasgow.

of age idle. When the parents are asked why they are idle, you are told they have been looking for work. "Do you ever take the boy out to look for work?" "No." "Does the mother never do it?" "No." "You allow the boy to run the streets day after day looking for work?" "Oh, but they come home and say they cannot get it." The parents do not take them out to put them in situations. It is grievous to see the number of young girls and boys on the streets of Glasgow, the boys round the railway stations at that age smoking cigarettes, asking people to let them carry their luggage, playing pitch and toss, and selling papers. They seem to have no guardians whatever. They drift into corner men.

90210. There is a considerable demand for boy labour in Glasgow, is there not?—There is not the least doubt of that. At the beginning of January for curiosity sake in one of the principal evening newspapers in Glasgow I counted forty-one boys and sixty-one girls wanted for messengers for shops: all sorts of shops.

90211. Those boys and girls, if they were wanted as messengers, would probably be got rid of when they became adults?—Perhaps, but I think there is no harm in their being messengers for the first year and then let them go and learn a trade afterwards. There are very few boys in engineers' works at fourteen or fourteen and-a-half years, they are generally fifteen when they take them on in Glasgow.

Casual work
among boys
leads to
future un-
employment.

90212. There is a considerable proportion of boys who have no fixed occupation, or take this casual work of selling these papers and so on, who swell the list of unemployed when they become adult?—No doubt about it; they run about the streets. Mr. Motion and I (he is the inspector) have taken a turn at half-past one in the morning or two o'clock in the morning in the main thoroughfares, and it is surprising to see how many children, even from ten years upwards, are running about the streets at that time.

90213. What do they do?—I do not know what they do at all. It is sad to see them, from West to East, running in and out of the closes and cross-streets. It is getting very common to see a lad coming before the committee, apparently of seventeen years of age, married, with perhaps two in the family. Upon making inquiries into those cases you sometimes find they have no homes at all; they either go and stay with her people or his people, or get their furniture on the hire system, and the furniture is taken away if they cannot pay the instalments. They simply get broken-hearted before they are twenty-five years of age.

Frequent
applications
to Distress
Committee
by boys of 17,
married,
with two
children.

Large num-
ber of young
applicants.

90214. Having regard to the children?—Yes, and the early age of the marriage. A considerable number of the applicants are from twenty to thirty.

Increasing
number of
unemployed
lads running
in Glasgow
streets.

90215. Are these evils you have mentioned on the increase, do you think?—Certainly they are. I never saw so many young lads running the streets of Glasgow through the day, even when trade is good.

90216. Educating them has not given them an aptitude or a qualification for an organised skilled trade?—Evidently not.

Proposed
administra-
tion of
Distress
Committee
by parish
council and
objections as
to.

90217. (*Sir Samuel Provis.*) Your proposal, if I rightly understand it, would be this, that the powers which are now exercised by the distress committee should be exercised by the parish council. Is that your view?—Yes.

90218. Would you not have this objection made, that that would mean that the people who are now assisted by the distress committee would be brought into contact with the Poor Law and get the taint of pauperism?—That is the argument against it all along, that they do not want anything to do with the parish. In fact, some of our people object to the officials connected with the parish council, making the inquiries on behalf of the distress committee.

Investiga-
tion for
Distress
Committee
by assistant
inspector of
poor.

90219. How do they get over that difficulty?—They have not got the machinery. The distress committee asked for the assistance of the inspector of the Glasgow parish to give them some help, with the result that I was appointed to do it.

90220. Supposing the law was altered, and the whole thing was put under the parish council, that difficulty would arise, would it not?—Certainly it would.

90221. What would be your answer to the objection; the objection that the people would be brought into contact with the Poor Law and that, therefore, you ought to have a separate organisation?—I could hardly say. There is always the objection to the Poor Law. I think these things should be all under one head. We have parties in the workhouse who have applied to the distress committee and through our inquiries in connection with that we have found out that this man has simply left the workhouse to get the work. Then there is the decent unemployed who would not care to come on to the parish; I see the objection perfectly well, and it has been made in Glasgow against the parish council having anything to do with it.

Objection
administra-
tion of
Distress
Committee
by parish
council.

90222. If I rightly understand you, you think the objection must be admitted, but you ignore it on other grounds?—Yes.

90223. Before the Unemployed Workmen's Act was passed, the town council of Glasgow gave a good deal of work, did they not?—They did it all with the assistance of the same machinery. They provided the work.

Relief work
for unem-
ployed
provided by
Glasgow
corporation
prior to
passing of
the Unem-
ployed Act

90224. Would there not be a likelihood that they would be asked to do it again, if the only body that could deal with the matter was the Poor Law authority?—I do not think so, if I understand your question rightly.

90225. I will put it in another way. One reason why a man might like to go to the town council would be that he was not brought into contact with the Poor Law; if the Poor Law authority was the only authority which under direct Statutory provision dealt with the unemployed, would there not be a tendency to put pressure on the town council to revive their old procedure and provide work themselves?—I think if the law was altered and that the parish was really content to provide work of relief for the able-bodied men, and it was the duty of the parish council to do so, that would relieve the town council entirely of responsibility, but if the Scottish Poor Law Act had been so that it was compulsory to give relief to the able-bodied, then the town council would have simply thrown it aside altogether and had nothing to do with it. They would have said: "the parish council have power to deal with it, therefore we will have nothing to do with it."

Effect of
instituting
able-bodied
relief.

90226. Take the analogy of England where an able-bodied man may be relieved out of the workhouse in populous places, still there was the desire that work should be provided by some authority other than the Poor Law authority?—I was not aware of it. I know that the English law gives them power to relieve the dependants of able-bodied men.

Distress
Committee
in England

90227. You would have the same in Scotland, would you not?—Parishes could not deal with that.

90228. But you would have the same feeling in Scotland?—Yes.

90229. (*Mr. Patten-MacDougall.*) I understood you to say that the better class of workmen who are out of employ do not apply even to the distress committee?—They do not.

Infrequent
of applica-
tions to
Distress
Committee
by better
class
workmen

90230. In your analysis, on page 4, of the occupations of the tradespeople who apply, I see you have: Engine-fitters, 12; iron-drillers, 13; joiners, 23; and certain others whom one would ordinarily put into the class of the skilled workmen. Are these not skilled workmen?—They are skilled workmen, but in proportion to the number idle they were small in each trade. For instance, take bricklayers, there are hundreds of bricklayers idle.

90231. Take the engine-fitters and the iron-drillers, there are unions connected with both those employments, are there not?—Yes.

90232. Do many trade unionists apply to the distress committee?—Very few. In fact, the question of application is asked on the paper if they are members of any trade society or friendly society, and the answer is generally: No.

Infrequent
of applica-
tions to
Distress
Committee
by trade
unionists

90233. You have very few of them?—Yes, I am sorry to say.

90234. You are sorry to say?—Yes.

Advanta-
of membe-
ship of
friendly
society or
trade uni

90235. Why?—Because I think they should be members of some society. They would have someone to help them in difficulties if they were members of a society of some description.

90236. I thought you were expressing regret that those people who are trade unionists and out of employment do not come to the distress committee?—No.

90237. You say also that these Poles, of whom there are a great many employed in Lanarkshire, as we know, in the steel and ironworks, do not apply for relief. You have had no instance of such applications either in the Poor Law or the distress committee?—In the distress committee and Poor Law, we have had a couple of lunatics, but they have been landed from other places, perhaps from a steamer in transit.

90238. Is that due to any extent to this, that the Pole is more thrifty when he comes over?—I do not know; it might be.

90239. It has been represented, I forget whether here or elsewhere, that the Pole comes over here by himself and, when he has saved enough, he sends for his wife and children?—Yes.

90240. Is that in accordance with your information?—That is the report I got. I should also state that my information from the same source, that is the superintendent of police at Wishaw, tells me that a great many of these men are about to be taken away to Canada this year, because the Canadian Government wanted some Poles out there acquainted with the Scottish coal-mining, but he says there will be as many come over to fill their places. I thought that would be an outlet for some of our unemployed, but it appears from his experience that as two leave three come over. I saw in the public prints that such a thing was being done.

90241. Have you ever considered whether when boys and girls leave school it might be as well that there should be a labour exchange to provide them with work?—I am entirely in favour of that. I think even the school-master should take a note of all boys and girls who reach the age of fourteen and endeavour to get them a situation, outside of the parents altogether.

90242. I suppose the labour exchange you would suggest would be one confined to them; it would not be the usual labour exchange, but you would have one specially to themselves, for the purpose of promoting apprenticeship or work for the boys and girls?—Undoubtedly I would.

90243. In connection with the school board?—Yes, I am certainly in favour of that.

90244. In answer to the Chairman, I think you stated that the deterioration, both in physique and in morals, of the lower classes of the community in Glasgow, was to be found where the cheaply-rented houses are, is that so?—Yes.

90245. Of course, one knows that about twenty-five or thirty years ago the corporation erected model lodging-houses in Glasgow, did they not, in order to meet the congestion which then prevailed?—Yes.

90246. What effect have those model houses had?—They have had a very bad effect in Glasgow, a demoralising effect; in every main street they are springing up now; I do not know where they get the lodgers from.

90247. They are increasing?—Yes, there are three even in our main street, Argyle Street, opened in the last eighteen months, and you will find in those models at night, boys from fifteen to sixteen years of age, and some less than that.

90248. Are those boys employed?—We do not know what they do.

90249. Are those the boys you told us you find in the streets of Glasgow at two o'clock in the morning?—Very likely, if they have not made enough off their papers.

90250. Can they get out of the models at that time?—No; they can get in late enough, but they cannot get out.

90251. There are not only corporation models, but models in the hands of private owners, are there not?—The corporation models are well conducted, but the other ones are very badly conducted.

90252. Are they not superintended at all?—They are all licensed under the sanitary authority.

90253. Are there bye-laws in operation?—There are bye-laws.

90254. In regard to both?—In the larger ones they have rules laid down for them, and are under sanitary inspection.

90255. I thought you said those that were in the hands of private owners were badly managed?—They are on a smaller scale, and they are not so stringent with them as the corporation models. A better class go to the corporation models than the others. The Salvation Army have a large model that is well conducted; there seems to be a better class go there.

90256. In your opinion these models have a very detrimental effect?—They have so. It is quite a common thing for a man to quarrel with his wife and get away to the models; most of our deserters are apprehended in models.

90257. Is it not the practice also that they change their names in the models, so that they cannot be identified?—Very often. You can hardly find half-a-dozen men with their own names in the models. In fact, many of them forget the name they have given you the last time.

90258. Have the wives and children come on the Poor Law?—Yes.

90259. You have a difficulty in getting hold of the husbands?—We have. Our officers have to take the wives out at night, to see if they can recognise their husbands at the models, when they have particulars that he is lodging at a certain model.

90260. You also told us that the law of Scotland applicable to the able-bodied man, that the able-bodied man shall not be relieved, has been to some extent relaxed?—Yes, greatly.

90261. In a case such as this, where the wife or family are suffering from consumption or tuberculosis?—Yes.

90262. Where the husband, in spite of a wage of, say, under 30s., is not able to provide the medical attendance necessary for the sick wife; in those cases the law has been relaxed, within your knowledge and experience?—That is so; during my experience it has.

90263. Do you think by following out the circular which was issued by the Local Government Board some eighteen months ago, that phthisis should be treated as an infectious disease, and provided for by the local authority, that that would relieve you of that class of case?—Certainly it would.

90264. Do you think it would be a good thing to take it out of the Poor Law altogether?—I really think I should. A man with an income of over £1 a week you cannot call a pauper, and you could not deal with the dependants of that man.

90265. At the same time it is very hard on him that he should be pauperised in that way?—If it is taken up by the sanitary department of the local authority, then he will be quite clear of it.

90266. And he would not be pauperised?—He would not be pauperised then.

90267. Has the local authority in Glasgow taken any steps in that direction yet?—They have not. I have heard that there will be some action take place.

90268. You are aware that some action has been taken by other local authorities?—I understand so.

90269. You are of opinion that any action taking such cases as phthisis out of the Poor Law altogether, would be a very remedial and sound measure?—Yes.

90270. In Paragraph 10 you say you consider the suitability of present area quite suitable for administering relief. Are you speaking there of the burghal area of Glasgow, or the rural areas as well?—I am talking about the present parish of Glasgow.

90271. You confine that to the present parish of Glasgow?—Yes.

90272. With regard to the fact that the present parish of Glasgow consists of the two parishes that were within the boundaries of Glasgow and were amalgamated within the last twelve years, you are of opinion that that arrangement has worked well?—Yes.

90273. And is working well?—I have had experience of the burghal parish since the amalgamation.

90274. You do not think it too large?—I do not think so; I was rather afraid of it, but we increased our staff.

Mr. James Ferguson.

20 Jan. 1908.

Private lodging houses badly conducted. Corporation and Salvation Army lodging houses well conducted. Demoralising effect of model lodging houses. Deserters under aliases in model lodging houses, families being chargeable. Difficulty in finding deserters.

Relaxation of law prohibiting relief to able-bodied.

Provision for phthisical cases by Sanitary Authority desirable.

Mr. James
Ferguson.

Model
workmen's
dwellings in
Glasgow.

Reluctance
of better-
class work-
men to apply
to Distress
Committee if
administered
by parish
council.

Relief of all
kinds should
be under one
authority.

90275. You do not extend this statement to cover the case of small rural parishes where the pauperism is extremely small; but you would not be against the union of two or three of those small parishes, would you?—No; it works in Glasgow, I do not see what is to hinder it working in other parishes in Scotland. Some of the parishes, although they have very small pauperism, cover a big area.

90276. Would you favour a provision which would give compulsory powers to unify several of these rural parishes?—I should have no objection.

90277. Would that assist administration?—I think so. You are aware that in Scotland some of our parishes are seven miles in length, and if you were to unify two of that description, it would take a good deal of travelling about to get over the ground.

90278. If such union were to bring about this result, that one inspector of poor were able to manage the three or four or five parishes, or whatever it may be, whatever area the amalgamated parishes might cover, and give his whole time, do you think that would be an improvement upon the present administration? At present, as you are aware, in small areas where the pauperism is slight the inspector of poor does not give his whole time to the work. Do you think it would be a good thing that the inspector of poor should give his whole time, if the area were large enough to justify his being asked to do so?—I think the inspector of poor should have nothing else to do; and I suggest to amalgamate two or three parishes of that description would be quite worth while.

90279. You say also in your statement about boarding out children that you are of opinion that the aliment which has been given for boarding out is well spent when the boarding out is with strangers rather than with relations. Has your experience led you to think that it is the better course to board out children with strangers?—When the parents are respectable I never think of recommending it. I consider the mother is the best guardian. I should never think of suggesting boarding out children in the country where the mother is respectable and able to manage for a family.

90280. I am not talking so much of the mother as of other relatives, uncles and aunts?—From experience we find it is far better to board out with strangers than with relatives.

90281. (Miss Hill.) When speaking of the models just now did you refer to houses for men only, or improved dwellings for families?—Only models. I think we have only two models in Glasgow for females. All the rest are for men.

90282. Those you are speaking of are for men only?—Yes; of the females one is under the corporation and one is under a private body.

90283. Have you any particulars of the houses built for families in Glasgow; they are built for families by the corporation, are they not, or have been?—Yes; under the City Improvement Trust we have cleared out the slums and built more model houses.

90284. What you said in no way applied to them, it was simply a question of the men's houses?—It was simply the night lodgers that pay 3d. or 4d. a night that I referred to.

90285. When you were speaking of having only one body to which these people in distress should apply and that the parish council, you said that you thought there would be some hesitation on the part of the better-class workmen to apply there?—I am afraid so. That is the only objection I have to the scheme.

90286. Do you think that might have its advantages as well as its disadvantages; that perhaps the application for relief, whether in the form of work or otherwise, is rather too easy now?—My reason for suggesting that is to have the thing under one head, and bury the word pauperism altogether, or bury relief, and have it all under one head, so that you should not have so many different associations, one feeding, another clothing, another sending children to fresh air, and so on, but to have the whole of that under one head.

90287. One can see a great advantage in having only one body; but I did not gather whether you thought one advantage of it also would be that the people would not apply to it unless they were in real distress; and

perhaps they might go pretty easily to the distress committee, because they think it rather a grander thing than the parish council?—There might be that; but if I said bury the word pauperism and have it all under one head I think there would be no hesitation in coming abolished, to the Poor Law.

90288. (Mr. Chandler.) Are the answers in Table 9 the answers supplied by the employers in reference to the applicants to the distress committee for work?—These are all certified by the employers.

90289. In response to your enquiries in respect of the applicants?—Yes. There is a circular sent out. Every applicant on his application schedule states the name of his employer and foreman; and this is the reply from the employer.

90290. There were 1,885 sent out?—Yes.

90291. The replies there, I think, are exceedingly creditable, showing they were at least a very respectable class of men?—Yes.

90292. The proportion is very small who were discharged for any failings of their own in any way whatever?—Yes, that was brought out last year more than the year before.

90293. (Mr. Gardiner.) We were told that the Glasgow corporation had established a relief committee lately. Are you associated with that at all?—Yes; the distress committees had some difficulty in finding work for the unemployed, and the corporation has instituted a relief fund; and they have also asked me to undertake the enquiries into that, not but what I have already plenty of work, but they prefer to have it all under one head: Poor Law, Unemployed Workmen Act, and this distress committee. I am making the enquiries. They only started on Friday morning giving tickets for provisions on the local provision merchants.

90294. What is the relation of that new committee with the parish council?—None whatever. It is entirely private. The Lord Provost had a public meeting of the citizens; and from that they appointed a committee.

90295. Are the enquiries carried out under your supervision?—Yes, something similar to the enquiries made under the Unemployed Workmen Act.

90296. Then you have excess to the information which the parish council hold as regards the individuals?—Yes; they are the same officials.

90297. So this is really an entirely charitable relief society?—It is a charity; there is not the least doubt about it. We have collected some £6,000 for it.

90298. That has been started in consequence of the trade depression?—Exactly so.

90299. (Mr. Patten-MacDougall.) What do they get with these tickets, do you know?—We have issued cards to the local grocers; we want to spread it over as much as possible; and we have instructed the grocers to give so much for 1s., so much for 1s. 6d., so much for 2s., and so much for 2s. 6d. The tickets are all different colours, and the amount of provisions is on the back of each one. One of our committee-men who is a grocer priced the articles that they were to get for 1s., 1s. 6d., and so on. That is all printed on the back of the ticket which the grocer gets, but not on the ticket which is issued to the applicant. They do not know what they are going to get, it is principally bread and flour, barley and peas, I think; with a special request not to give tobacco or fancy breads, nothing but good solid provisions.

90300. (Dr. Downes.) In Paragraph 8 you give the causes of pauperism in the case of persons who apply for the first time. Do you know what the duration of relief was in those cases?—It is hardly possible. We have a case which goes under this head and enters the poorhouse for a week, and others go for a month; but our principle in dealing with cases like this that are urgent is to send them to the workhouse or hospital for a month; at the end of that time they are revised by a committee and renewed for another month, if necessary, but the great majority are out before that.

90301. The point is this, that some of these cases would lead to relief of long duration, such, for instance, as old age or insanity, whereas, taking the cases of illness, some of those cases may be for quite a short period?—It might be so.

90302. You have no figures which would check that?—No; we have our report, which gives the number of times each one applies. I think under the new card system which the Local Government Board has asked for we have given that.

90303. In your report do you give any further sub-classification of these classes? In the case of illness do you give the different classes of diseases which lead to pauperism?—No, we do not.

90304. Under the head of immorality what do you include—venereal diseases?—Venereal diseases principally.

90305. In Paragraph 10, as to areas, you consider the present area is quite suitable for the administration of relief. Are you in favour of combining parishes for institutional relief?—It depends on the size of the parishes. We have a large parish in Glasgow, Govan, for instance; I should think the combination of the two parishes would be too large to work.

90306. Are there many parishes in Scotland that are of such a size that the parish could provide its own institutional relief?—A great many parishes might be combined and be no larger than Glasgow.

90307. (Mr. Patten-MacDougall.) A good many are at present combined?—Yes.

90308. (Dr. Downes.) I am asking your view as to the working of these combinations?—It was thought that Glasgow and the other parish would be too large, but they find it works well from experience.

90309. How do the small parishes act with regard to special cases? Supposing they have a child with a special form of ophthalmia, how would they get that child treated?—They very often pay the fee and get it into the Glasgow Eye Hospital, or in some other large city.

90310. And with regard to special operations?—They would pay a fee to one of the infirmaries; in a great many of our poorest hospitals if it is a serious operation they would pay a fee to one of the infirmaries.

90311. You said that the foreigners can live cheaper. Have you any details of that?—I am told that they can live on almost black bread, or a form of cheap bread, and dripping.

90312. In answer to one of the Commissioners you said you would bury the word "pauperism," what do you mean exactly by that?—There is a feeling existing even in connection with using the word "paupers," and I am not greatly in favour of it. I would introduce the words "poor persons," or something of that.

90313. You think by burying the word you would get rid of the stigma?—You would get rid of a good deal of the feeling against parish relief.

90314. Would you consider that no person who receives relief should be disfranchised?—That is what I want to prevent as much as possible. I am certainly not in favour of it, because it is a pity that a man whose wife is ill, as in the case I referred to, should be pauperised because his dependants are chargeable on the rates.

90315. Should you consider it probable that in the course of time a similar stigma would attach itself to, say, a distress committee's relief?—I do not think so.

90316. Is there any restriction of the kind of man who may apply to the distress committee?—No.

90317. Then the deserving and undeserving can apply alike?—Yes.

90318. Would there not be a tendency that in course of time it would become stigmatised by reason of the undeserving who apply?—It would depend greatly on if we dealt with a decent application in a different way, and the undeserving in the proper way that they should be dealt with.

90319. Have you observed anything in your experience bearing on that point?—Outside the distress committee altogether I have advised some persons to apply to the distress committee, but they said they would not. They

have seen our men working at the outside labour work, and, from the appearance of the men working there, they said they would not work alongside of them—decent men I would have liked to help, but I have had to say, "I have nothing else but digging and stone-breaking." If it were a sheltered place, like a labour colony, where you could set them to basket-making or tailoring, or something of that sort, I would be very pleased to find them employment.

90320. (Chairman.) Do I understand a certain class of men refuse to work in public places if they are seen with the people who are already working there?—That is quite a common complaint with the respectable men in Glasgow.

90321. (Mr. Phelps.) With regard to the want of employment in Glasgow at the present time, do you think it is more than usual?—Yes, at the present time.

90322. In what particular trade does that show itself?—In the iron trade principally, and then in the building trade.

90323. With regard to the building trade, the witnesses who sent in statements rather differ in their opinion. Is there any particular reason why the building trade should be depressed now?—In Glasgow the only reason I can give is that they have over-built it.

90324. Do you think the railway facilities make a difference in that way?—They have. Our tramway in Glasgow system has taken a good many people away, but still a great many houses are unoccupied on the outskirts.

90325. There is a general slackness in the building trade?—Yes.

90326. Is it becoming the tendency for people to live more and more in flats and less in houses in Glasgow?—It is. We have some 20,000 or 30,000 empty houses in the city of Glasgow just now.

90327. The separate house system is becoming unpopular, is it?—Yes.

90328. With regard to the chemical business, that seems to be in a flourishing state, does it not?—I am not so much acquainted with that, but there are only really two chemical works in Glasgow, that is Lord Overton's and Tennants'. I think the two of them are fair just now.

90329. With regard to the collieries, does the state of business in collieries affect Glasgow much?—Yes.

90330. I gather the amount of employment in collieries, or the number of people employed, is pretty constant?—Just now it is pretty fair.

90331. You notice that a number of foreigners have come in, and been employed lately?—Yes.

90332. Have they been taken on in addition to the Scottish people who have been employed, or in substitution of them?—They have displaced them.

90333. What becomes of the Scottish people who have been displaced?—They have gone to increase the unemployed.

90334. Have any large number of them emigrated, do you think?—According to the figures last year of the number that left the Clyde, they were leaving the Clyde 3,000 a week, but whether they were really from the shires referred to, I have no idea. Really at present they are sturdy young men and women who are leaving Scotland to go to foreign parts; they are the best of the race.

90335. You would not be prepared to say there is a steady influx of foreigners, who pushed out an equal number of Scottish people to America, say?—It must have an effect.

90336. What amount of effect, you could not say?—No.

90337. With regard to the baking trade, do you have many bakers apply to you for relief?—We have a good many. I do not understand the baking trade properly, it is a principle there only to get half a day in the early

Inspection of 90338. Are the bakehouses in Glasgow inspected?—
bakehouses They are under inspection.
in Glasgow.

90339. You think that the irregularity of employment has
a detrimental effect?—It must have. In fact, as to some
of the bakers appearing before the distress committee,
no baker would take them in those clothes; they are
so dirty; in fact, you would not take them for bakers
at all.

Bakers' 90340. What do these people, who get an occasional
"call-house" half-day, live on the rest of the week?—They have a
call house, they sit there most of the week. When an
employer wants an extra hand, he sends along to the
call house.

90341. Would that be a public house?—No, it is a
sort of private hall they have; they call it a call house.

90342. A labour bureau?—Yes, of their own.

90343. A voluntary one?—Yes.

90344. There they sit and wait for employment?—
Yes, if they want to find employment. There is always
the demand there if there are any men wanted.

Barbers' 90345. Does that sort of institution obtain in other
"call-house." industries?—The barbers have a similar place, that is
casual work. Barbers are taken on for a night or Satur-
day. They perhaps do nothing all the week, but they
sit there. I do not know what they do.

90346. There is an influx of people on Saturday who
require shaving and so forth?—Yes.

90347. You think the barbers may have some such
place?—They have such a place.

90348. Therefore there is always a large surplus of
labour in those two trades?—Yes.

Surplus 90349. Which can be called upon at any time?—Yes.
labour in That is the complaint from people applying; they have
baking and been sitting in the call house so many days, and have not
barbers' got a situation.
trades.

Alcoholism 90350. Do you think that drunkenness is particularly
common among in those trades?—Quite. Not so much in the
bakers and barbers as in the bakers.

to a less 90351. Do you think that is due to the conditions under
extent among which they work or the irregularity of their employ-
barbers. ment?—I think it is entirely their own doing; I think
that a master is as pleased to get a good baker as to get
rid of a bad one, and an employer would keep a good
man on even although he has not work for him.

90352. Most of these casual people are people who have
lost their regular work?—Yes.

Emigration 90353. There has been some emigration has there not
by Glasgow by the distress committee from Glasgow?—Yes. On
Distress February 1st, 1907, the Glasgow Distress Committee
Committee unanimously resolved to emigrate unemployed persons
in conjunc- under Sec. 1 (5) of the Act, such emigration to be carried
tion with out with the assistance of the Salvation Army. The Army
Salvation undertook to find work for them, keep in touch with them,
Army. and from time to time collect repayments of moneys
advanced, which sums after a deduction of 10 per cent.
for collecting, etc., were to be remitted to the distress
committee here. Thirty-one men with families who were
sent to Canada should have been reported, but we have
received no remittances yet from the Salvation Army.

Failure of 90354. What does the Salvation Army report? Have
emigrants to you asked their agent for any report?—We asked
repay loans. them to give a report. The arrangement was, after
landing at the end of one month, 1 dollar per month was to
be remitted, and after two months, 2 dollars, and so on,
until the money was paid. We had a report from
Colonel Lamb of the Salvation Army Emigration Depart-
ment. This is a copy of the distress committee's minute :
"Colonel Lamb, of the Salvation Army Emigration
Department, writing under date, 27th ult.

Extract from Commissioner Coombs' Letter, 15th May, 1907.

"I wish to say, however, that we are having consider-
able trouble with the Glasgow Distress Committee cases;
they (the Distress Committee and Poor Law cases) are
the most ungrateful of all the people we get. The fact
of the matter is, the individuals who struggle to pay their
fare are always glad of anything that you do for them when
they get here, and the people who have their fare paid for
them and every attention given to them are the most
ungrateful, and cause us the most trouble."

90355. That is to say, they were unable practically to
give any report of the men?—In fact they did not hear.
We have several reports. For instance, Record No. 30 :
"This family was sent to Mr. Crookshanks, farmer, of
Beamsville, and on arrival discovered that Mr. Crook-
shanks had been compelled to engage help elsewhere and
unfortunately did not notify us to this effect, although we
make every provision in this respect. It appears that
Mr. Crookshanks secured another situation for this man
at 200 dollars per year, with free house and garden. This
was refused, and — brought his family to Toronto,
where we provided him with temporary accommodation
at the 'Newcomers Inn' and introduced him to the Canada
Shipbuilding Company, who promised to give him a
suitable situation. He is a boilermaker." Then Record
22 : "Reported at Halifax and booked through to
London, Ontario, on his own responsibility. He did not
ask our assistance in regard to employment. Will get
further particulars of this family." Then Record 17 :
"Reported at Halifax and booked through to Montreal
on his own responsibility. He did not ask our assistance
to find employment."

90356. Perhaps you will put those in as part of your
evidence?—I will give you a copy of the Glasgow Distress
Committee's Report. (Document handed in.) (See Appen-
dix No. II. (B).)

90357. The point I want to get at is this, the Salvation
Army lost sight of some of the people when they landed?
—They lost sight of them when they had money in their
possession to pay their fare to somewhere else.

90358. But when you examined them they presumably
had nothing?—We had to clothe them.

90359. They professed they had nothing?—Nothing
at all. The fares alone cost £928 15s., and we gave
£99 11s. 6d. for clothing, a total of over £1,000.

90360. When they were landed they were able to take
their ticket by train to the destination wherever they
wanted to go?—Yes.

90361. What is your test of eligibility for emigration :
do you expect people to find a certain amount of their
fare, or anything of that kind?—Nothing.

90362. What sort of ground does the committee demand
to show that the case is a good one for emigration?—
They come before the committee, and the report of the
inspector who investigates the case and the master's
report is reported, and it is only a question of whether
they should be emigrated or not.

90363. Do you emigrate single men?—In only two
cases we did, and they were sent with the consent of the
mothers.

90364. Were both successful?—We have not heard
from either of them.

90365. Is the committee going on emigrating people?
—We are compelled to record applications, but they are
simply brought before the committee, and they state :
"We shall refuse you, we are not carrying out emigra-
tion at this time of the year." We have had another
experience something similar to Canada. This is Balla-
chullish. There is a large contract going on there
in connection with aluminium works employing over
2,000 men. The clerk, two members of the distress
committee and myself made a visit to Kinloch
Leven, Ballachullish, where a large contract is being
carried out under the contractor, Sir John Jack-
son. Over 2,000 men are employed there. After an
interview with the manager, it was arranged to send from
twenty to thirty men there, but before this could be
carried out the contractor cancelled the arrangement,
explaining that they could not accept our men or any

Refusal of manager at Ballachullish to receive men from Glasgow Distress Committee.

men whose fares were paid to the place at which the contract was being executed, as they had found from experience that the men who had their fares paid were the most unsatisfactory class they had to deal with. If any man turned up there for work he would certainly be engaged, but it seemed that all who have arrived by train having their fares paid had no inclination for work." That is the letter sent by the manager.

Report as to Dundee men sent to Ballachulish. 90366. How do you account for that. I find in writing to the Lord Provost of Dundee they say that the Dundee men were very satisfactory and asked for another forty or fifty to be sent?—I do not understand that at all, because the manager at our interview said he had had already distress cases from Edinburgh and Leith, and had not one working the day we were there; they had all left.

90367. I am reading from his letter: "We are glad to say up to the present your men are the best unemployed we have had and if in the course of another week or ten days we find they are still going to be satisfactory, we will ask you to send us another forty or fifty." They did not send them back.

90368. (*Mr. Patten-MacDougall.*) None of your people went?—They would not take them. We had arranged with the shipping company to take them at a reduced rate, and the day before they sailed we had this letter. If they had liked to pay their own fare they would have taken them, but having regard to their experience of the men from Leith and Edinburgh they would not otherwise.

Experience of men from Distress Committee employed at standard rate of wages. 90369. I think a good many of those who came from Dundee and Edinburgh remained there and claimed relief from neighbouring parishes?—I have heard that is so, but we found them that day to a large extent, fifty or sixty, lying under trees sleeping after tramping perhaps from all parts of the country. There is another experiment I made three weeks ago. One of our Departments took fifteen men from our labour works and paid them the standard rate of pay, 24s. a week, but he has only four left now; they have all disappeared. I ascertained afterwards that the foreman had taken them back at the place where they were earning 12s., so I have sent for them to come before the committee to explain why they left 24s. a week and went back to 12s.

90370. (*Mr. Phelps.*) How do they explain that?—They are to explain it to a committee, and that committee sits to-day. It was only the other day this occurred. I am sorry I cannot give any information as to the reason they went back. They should not have been re-engaged without coming through the application class again.*

Number of members on Glasgow Distress Committee. 90371. (*Professor Smart.*) Your distress committee is a very large body?—Forty members, I think.

90372. And contains people of very different opinions, I think?—Very great.

90373. Some of very strong opinions?—Yes.

90374. Was no objection taken to you, a Poor Law official, being appointed as investigator?—Some of them did. I was not present at that meeting. Mr. Motion, the inspector, was, but I understand there was some objection.

90375. With regard to rents in Glasgow, rents are pretty cheap, are they not, compared to other towns?—Yes, compared to London, they really are.

90376. Could you give us any idea of typical rents?—From 8s. a month, or 2s. 6d. a week, to 12s.

90377. From 8s. a month?—From 2s. to 3s., and 3s. 6d. a week.

90378. A 2s. a week house would hold how many?—A single apartment that is, very often. Under the corporation a house of that description would be ticketed perhaps for two adults.

90379. What would corporation houses owned by the corporation, corresponding to these, cost?—They are much more expensive and more modern. That was in fact, one of the difficulties of erecting the houses. The City Improvement Trust pulled down a lot of cheap houses and built houses of a better class, and really the people who had been in those could not go back into them, and they had to go to localities where the rents were much cheaper.

* As to this the Witness subsequently sent the following note:—

In connection with Q. 90370 I find nothing was minuted, the subcommittee having come to an arrangement that no man was to be re-started at unemployed work until he re-applied and case submitted and passed by committee.

90380. Am I right in saying there is rather a large class of well-paid people who consider 12s. a good rent—a great many men who could afford to pay more; is it true that the difference between a good house and a slum house is about 6d. a week in Glasgow?—6d. or 1s. a week. *Mr. James Ferguson.* 20 Jan. 1908.

90381. Your investigations are very thorough in Glasgow, I think?—Yes, all applications are first recorded at the Charity Organisation Society office, and the district police office; then the schedules are all sent on to me and enquiries are made as to the ability to assist, and also the certificate of the employer. *Method of investigating applications by Distress Committee.*

90382. The assumption is you make use of your experience to investigate these cases?—Certainly; every application is compared with the parish record, the indices.

90383. Then, with regard to these Poles, did you ever consult a coal master as to the position of Poles in the mines?—No. *Position of Poles in Scottish mines.*

90384. Did you never hear of these Poles taking jobs that a Scotsman would not willingly take?—I never have.

90385. You never have heard that they are quite glad to take the most unpleasant jobs, such as lying in water half a day, and so on?—I never heard that.

90386. Did you ever hear of any jealousy between Scottish miners and Poles in the same mine?—No, because I have never been in the locality.

90387. It is quite a possible explanation that the Poles have taken jobs that a Scotsman does not like to take?—That may be, only I have never heard it before. *Willingness of Poles to take objectionable jobs.*

90388. You would not be astonished if what I said was on the authority of one of the leading employers of Poles in Scotland?—I know the trade that refers to, a very unhealthy trade; it is a pipe foundry, and the atmosphere is very thick.

90389. That is where the Poles work?—That is one of the places.

90390. Now, with regard to labour colonies, the first description of labour colony you spoke of is one for unemployed tradesmen. With what view would you take an unemployed tradesmen out to a labour colony?—I would take him out to a labour colony to work at his own trade, if possible. *Labour colony for respectable tradesmen.*

90391. You cannot give him that?—No, that is the only drawback there is, the Trade Council object. You might arrange with the Trade Council to forego that strict rule of paying the standard rate of wages. I know that is a difficulty. I know we offered painters a larger sum than they really were getting for digging, but they could not take it unless we paid them the standard rate of wages. *Attitude of council as to employment at less than standard wages.*

90392. At present all you can say for a labour colony is that it affords a healthy method of temporary work, but it provides nothing for the future of the men?—Nothing.

90393. Have you ever thought at all that these men might come to something in agriculture after they leave you?—A man would have to put his mind down to the like of that.

90394. The training you are going to give him at Palacerigg is not a thorough training?—I do not think it is. My personal opinion is that it is a cold and bleak place. *Character of Palacerigg farm colony, number of men working.*

90395. The work there is mostly digging?—We have 200 men working out there now the pressure has come upon us, and we are taking them out there for trenching and draining purposes now.

90396. Most of them will be employed in that?—Yes, just now.

90397. Was there not some strong speaking against that colony, as being very unsuitable for a labour colony?—Yes.

90398. On what ground?—It was on account of the cold nature of the climate. It was said that they had a six months' winter there, and it was not suitable at all.

Mr. James
Ferguson.

90399. Is it not rather a common statement in Glasgow that a man who comes from Cumbernauld always has a cold in his head?—That is so.

90400. You have not been to Hollesley Bay?—No.

90401. You have heard of it, of course?—That is so.

90402. Can you think of a greater contrast in farming ground than between Hollesley Bay and Palacerigg?—I have seen a Report and some photographs of different parts of the ground, and I should think it is a different place altogether from ours.

90403. On the other hand, was there not some difficulty in getting land at all in Scotland?—Yes.

90404. Why was that?—One thing was, as soon as a public body went in search of ground of that description it went up in the market. We tried to get it done privately through a large firm, but it got out who were the parties wanting it.

90405. Was there not a great objection to the nature of the work? Whenever it was found out that the land was wanted for a distress farm, the land owners refused to let you have it?—Yes.

90406. You make a comparison in your statement between 15s. a week and forty-four hours, and 16s. 10d. and fifty-four hours. That shows a balance rather in favour of the unemployed workman, does it not?—That is what I was afraid of, that our men did not start till eight o'clock in the morning, and finished at four, and twelve o'clock on Saturday, whereas the other man was working from six in the morning till half-past five at night.

90407. Do you think that had any effect in attracting men from private work?—We had one or two cases before us, where they would rather work with the unemployed than be employed.

90408. Were there two cases of men giving up employment in the Cleansing Department, who applied to you the next day?—Yes.

90409. 16s. 10d. is a very low wage?—That really is the certified wage in some of the ironworks. It is 15s. 10d. very often.

90410. In Glasgow ironworks?—Yes.

90411. Or foundries?—Foundries or ironworks 15s. 10d. After the Meeting called by the Lord Provost, some Glasgow gentlemen told him that they refused to subscribe to this public fund, because they heard that some of the likely recipients were earning over £3 or £4 a week, and they certainly would not give a subscription to help men of that description. He asked me if I could help him in the difficulty, and I did so. I had 350 circulars returned within the last four weeks, and I averaged the statement of the wages taken from the circulars, and it did not bear out what the gentlemen said to the Lord Provost. The certified wages of forty-seven were from 10s. to 15s.; of 138, from 15s. to 20s.; of thirty-eight, from 20s. to 22s.; of forty-six, from 22s. to 25s.; of forty-seven, from 25s. to 30s.; of thirty-two, from 35s. to 40s.; and two were certified over 40s. That is 185 who had from 10s. to 20s. a week.

90412. Those wages are certified by the employers?—Yes.

90413. (Mr. Lansbury.) For a full week's work, is that?—Yes.

90414. Have you any information of the number of hours?—All fifty-four.

90415. (Professor Smart.) I gather that you never tried to get any work for these men, from private employers?—Nothing, except that the Lord Provost, the first year of the distress committee, issued a circular to the large employers of labour, the principal Railway Companies, Factories, and Shipbuilding Yards, but only two replies were received to that circular, only two even took any notice of it.

90416. You do not personally make approaches to the employers to get your men taken on?—None.

90417. Is not the reason that you could not recommend them as worth the wage?—I do not say that. I am inclined to recommend them and give them a chance of failing.

90418. What is your impression of these men as a whole?—Really there are a large number appear before the committee that you could not blame a foreman for not taking them on; they do not show any life; they have their hands in their pockets, and they seem to be down in the world somehow.

90419. As regards emigration, is it not also the fact that very few of the men who presented themselves were good enough to be emigrated?—We only emigrated those who according to the circulars were certified as really good tradesmen, and were discharged through dull trade. We did not emigrate any who were dismissed.

90420. But very few of your men were good enough to conscientiously send to Canada?—Yes, it was considered so by some of the committee, and some were voted on whether they should be sent or not.

90421. Supposing you had a friend, a thoroughly good workman out of work through no fault of his own, would you send him to the distress committee?—No, because I have no work for him; if I had work for him I certainly would.

90422. The kind of work you give from a distress committee is not such as would appeal to you?—Yes.

90423. And the association is very bad?—Yes.

90424. You know some of the men personally?—I do.

90425. Some of their habits are very bad?—Yes.

90426. Some of the men are very disreputable?—Yes.

90427. Is not Singers' almost a sort of gauge of the prosperity of Glasgow?—It is so, it is one of the largest works we have.

90428. It is not connected with the iron trade?—I do not know to what extent it is; I think they make some small boilers and tubes.

90429. It is not dependent on the iron trade?—No.

90430. Or on shipbuilding?—No.

90431. Or on building?—No.

90432. It is a great industry, making a commodity of general use?—Yes.

90433. So that if orders fall off to the extent of causing the dismissal of 2,000 workmen, it shows there is something very far wrong with the employment of the country?—Absolutely, there is not the least doubt about it.

90434. (Mr. Bentham.) With regard to your Paragraph 2, I think you give one to understand that the improvident class is on the increase, that is those who earn good wages, from 20s. to 40s. a week, and live in cheap houses, who make no provision for sickness, etc. Do you think that class is on the increase?—Certainly it is.

90435. Does your experience as a Poor Law official, and as Investigator of the distress committee, lead you to that view?—Yes, sitting on relief from day to day, it is surprising the number of men who have been earning good pay, but have never joined a friendly society. I do not say a man with 15s. or 20s. a week and a young family is able to do so, but I think when a man has 35s. to 40s. a week he might spend 5d. a week for a friendly society.

90436. To what do you attribute this falling off in the habits of the people?—I think it is the parish council being too liberal; one gets to hear of the other. Take two cases on the same stair-head: I am a member of a friendly society, I pay 5d. a week, and I keep myself. The next-door neighbour has perhaps had 5s. or 6s. a week more than I have; he joins no friendly society. Both of us become sick, I get from my society 10s. a week; the man next door goes to the parish and gets 12s. and 15s. a week. I say what is the use of my joining a friendly society when this man is getting more money from relief, than I do from a friendly society?

Character of applicants to Distress Committee.

Class of men assisted to emigrate.

Position of Singers' Machine Co. in relation of Glasgow.

Increased lack of thrift among earners of good wages.

Neglect to join friendly societies.

Effect of lavish relief on membership of friendly societies.

90437. It is really the lax administration of the Poor Law which has a great deal to do with it?—Certainly it is. I think I suggest that where it is represented that a man has been earning a good wage for several years back and where he could have been a member of such a society we should withhold relief.

90438. I thought it was the policy of the Glasgow Board not to give out-door alimnt to any people who have been improvident?—But they are changing at present.

90439. (*Chairman.*) Since when has there been a change?—Since the Parish Council Act came in. As to the number of females on the weekly roll or in receipt of interim relief whose husbands are in hospital, poorhouse, or asylum, we have had 184 receive out-relief from 3s. a week up to 16s.:—One had 16s.; five, 15s.; five, 14s.; one, 12s. 6d.; thirty, 12s.; thirty-eight, 10s.; thirteen, 9s.; twenty, 8s.; two, 7s. 6d.; ten, 7s.; thirty-one, 6s.; twenty-two, 5s.; three, 4s.; and three, 3s. a week; while their husbands are being kept inside. They receive outdoor relief to that extent.

90440. (*Mr. Bentham.*) We should know really the size of the family?—The allowance is according to the size of the family. We have had people getting 3s. a week; that is just the woman alone. I have three at 3s., and five at 15s.; it is according to the number of dependent. That family with 16s. may have four or five children, perhaps six.

90441. (*Mr. Lansbury.*) How many of those would be men who when at work would be earning 30s. or 35s. a week?—A considerable number. I have a few typical cases here. There is: "G. N., 59, carpenter, earning 38s., paid a rent of £9 10s. per year." Then here is another young man, forty-two years of age, single, a fireman. He admitted earning a wage of 5s. a day, "No society and no benefit society, admitted to the parish hospital." Here is a case which came before us the other day of providence: a man, forty-four years of age, a labourer with five children aged eleven, ten, eight, five, and three: "Says he earned 24s. a week: he was a member of the Oddfellows Society and in receipt of 9s. a week, paid a rent of £9 19s. a year." There you have a man who had 24s. a week and paid into the Oddfellows Society against a man who had 38s. a week and was in no benefit society.

90442. It is one and one we have there?—I can give you some more. There are nine cases here of typical improvidence.

90443. At 35s. a week?—One man 34s., one 30s., another one 30s., one 34s., one 30s. a week, one 38s. a week, all chargeable to us, and the wives on the outdoor roll; they could have been members of a friendly society; that is what I referred to as improvidence.

90444. (*Mr. Bentham.*) If an adequate amount of outdoor relief in cases of this kind leads people to rely on it in times of want, would the same tendency obtain with the provision of employment in times when men are out of work, whether it was under the parish council or any other body; would it not be an additional inducement to men not to provide against these contingencies?—I do not think with the decent out of work man it would have any effect at all. We have a certain class of tradesmen, very respectable tradesmen, who would empty their houses of furniture before coming to a public body.

90445. In actual practice is it possible to confine the operation of the Act to that decent deserving class you were just now describing?—I do not think you can. You must take every class on its own merits, if I understand your question aright.

90446. You do not think in practice you could possibly get a committee that would so discriminate as to whom they would give the relief?—I am afraid not.

90447. For instance, take the wording of the regulation work "that the applicant is honestly desirous of obtaining but is temporarily unable to do so from exceptional causes over which he has no control, and that his case is capable of more suitable treatment under the Act than under the Poor Law." If the Glasgow Distress

Committee could act strictly to the letter of that would there have been so many people searching for work?—That is the clause I have had some difficulty in meeting when I get up a case and say this man was discharged for drunkenness; he should not get work at all, he is not qualified under the Act, but the children are starving and they must not be allowed to starve, so the work is wages to given to all and sundry. In some cases we have been instructed to pay the money over to the wives and not to the husbands at all.

90448. That becomes not really employment for wages but relief to a family?—Yes, it is really relief, as I have stated.

90449. Your opinion is there would be very few if those were taken out entirely?—Yes, there would be very few remain.

90450. A very small proportion of those would have been employed if you had stood strictly to the letter of the law?—The word "may" was brought in there. It is left optional, "may give relief to" so-and-so, and that word, of course, gives a great deal of discretionary power to grant or refuse work. The children always come in; we must look after the children.

90451. If a body such as either a distress committee or a parish council are so loose in their election of suitable cases, what sort of body do you hope to be able to carry out the Act with proper discrimination?—I do not know where you would get it of men of all one mind. Every one has his own opinion; whether you would put it under the Local Government Board to have a more uniform principle in dealing with relief. I find from year to year in our council and from day to day we have differences. We have a new council now which has a different opinion from the last with regard to granting relief. One day you have a member granting indoor relief only to a certain class, and another day giving outdoor relief to all and sundry. I have tried to persuade them you cannot make fish of one and flesh of another; it entirely depends on the class of councillor that is sitting.

90452. Even as to your own remedy which you suggest, of selecting certain cases for a labour colony, there would be a difficulty in selecting the proper cases to send, would there not, for the same reason you have mentioned?—I do not know, if a decent respectable man comes before a committee for work and there is nothing against him, I do not think there should be any doubt about giving that man work at the colony. It is rather, perhaps, where a man has made a mistake, and is discharged from his work. It may have been a mistake; but one member will say: He is not entitled to work because he has been discharged from his work. Another member will say: He has only made one mistake, we must give him a chance. If he is out of work through no fault of his own then there should be no question in giving the man work on the labour colony.

90453. The danger is in treating other cases, which should not be treated, in the same way?—I am afraid there would be some difficulty in getting a committee to see eye to eye with each other.

90454. I see you have some little hope of a labour colony for the chronic unemployed, and you suggest they might earn sufficient to hand the earnings over to the family. Do you look forward to the Glasgow colony ever being in a position to have a surplus of earnings from the men who are there?—It is not so much return from the outlay; but I have had the wives of men employed at the relief work stating that they do not get all the money from the husband at the end of the week. They come home a shilling or two short of their pay. By sending these men to the colony we could pay the money over to the wives, either at their homes or by calling; and then they would get the full benefit of that.

90455. What money?—It was suggested just now to allow the wives and families 12s. a week whilst the husband is kept and boarded at Palacerigg. The wife is to get the maximum sum of 12s. a week. I would do that with the chronic unemployed, send them out and make them work from one week's end to the other; and let us give his family their support. We cannot take him away and leave them starving.

Mr. James
Ferguson.

Mr. James
Ferguson.

20 Jan. 1908.

90456. I thought you were suggesting that they earned this money on the colony?—Indirectly they would be earning. In the meantime we send them out there though they may be only earning 10s. a week.

90457. It would be more correct to say that the relief given is relief to the family?—That is what I refer to. We cannot take a man away from his wife and place him on a labour colony and leave the children starving.

90458. The man is to be sent to the labour colony and the family relieved?—Yes.

Diminished
chances of
employment
in Scotland
than
formerly.

90459. Do you agree with the previous witness that men have less chance of employment to-day in Scotland than formerly, that is, taking a competent able-bodied man to-day against a competent man of thirty or forty years ago, that there is less chance of permanent employment to-day than then?—Yes, there is less chance.

Effect of
introduction
of machinery
on unemploy-
ment.

90460. That there are more men to fill the posts that are vacant?—There are more applying, they can do the work quicker and do it with less men. I think I refer in my statement to a large steamer coming into the Clyde, which used to take two or three days to empty, now that can be done in two or three hours by hydraulic lifts and two or three cranes working at each hold. When men are working unloading a ship they are only employed for some forty-eight hours now instead of a week.

90461. But you have more ships now?—Yes, but there is always a big crowd coming into Glasgow to meet it.

90462. (Mr. Lansbury.) There are more people?—Yes. No matter what time you get down to the docks you will find fifty men standing here and fifty standing there; they might get employment that night by one ship coming in. We had a man apprehended for wife desertion the other day at the quay, a man who could command £3 or £4 a week nearly, a moulder, but he had come down to that; he would do nothing for his wife and family. After some difficulty we discovered him working on the quay under an assumed name, and it was then stated that there were a great many working at the quay for the purpose of receiving their money every night. In constant work they only receive their pay once a week; here they work and are paid, and they are always in funds; they can get a drink every night. They only get it once a week in permanent employ.

Daily wage
at docks
a great
attraction to
certain class
of men.

90463. There is a temporary depression now, is there not?—This is really a very slack time,

Position of
workmen at
present time
compared
with 30 or 40
years ago.

90464. My question was not intended to apply to thirty or forty years ago compared with probably to-day in a time of depression. I mean, taken generally, is there less chance of a man being employed a sufficient number of weeks in the year to provide for all his wants in the year than there was thirty or forty years ago?—In certain classes there is less; they are handicapped in finding work.

90465. Is that taking the skilled classes?—I thought you meant the unskilled.

Position of
skilled labour
affected by
introduction
of machinery

90466. Take first of all the skilled labourer, how is he compared with thirty or forty years ago; has he as good a chance as he had then?—No, I do not think so. My reason for saying so is this: I know for a fact in a large engineer's shop where there was shafting direct from the foundry it would take a couple of men a week to finish it, but that can be dressed up now in a matter of a day. It is manufactured and brought into these large engineers' shops, Belgian and German iron, and one man can dress it up in a day or two, where formerly it took three or four men. There was no such thing as that thirty or forty years ago.

90467. That is scarcely a sufficient answer, because there would be other movements in other directions?—It is certainly displacing men in that respect; if there are a few places like that in Scotland, then the number will increase.

90468. Is that what leads you to believe that provision should now be made for the able-bodied by the public authorities in Scotland?—I would not say that. I would say when it is really required, it is not when trade is good.

Need of
provision for
dealing with
able-bodied
unemployed
in periods of
depressed
trade.

I do not see any occasion for it now, but it is well to have machinery, with experience. Since 1904, the idea has been that we have been tinkering with the unemployed. We are no further forward. I should like to see some scheme that would start at once, where there would be colonies like this in Glasgow.

90469. I want to know why in the past Scotland has not considered it necessary to make any provision whatever for able-bodied persons; it is only within recent time that that cry has gained ground, and what is the cause of the alteration? is it the conditions of employment, or is it the feelings of the people?—The change is somewhere; I can hardly explain how it has entirely changed, but during my experience we never thought of giving an able-bodied man relief, we had not the least compunction in giving a man a refusal right away, but now we consider all the circumstances of the case before we give such a refusal.

90470. Did it create any hardship? How did these people get on?—On the surface we did not experience anything; they got on. How, no one knows, but they managed until a few years ago.

90471. Is a good deal of it due to the softening of people towards people who are in want now?—No doubt the Unemployed Workmen Act has brought to the surface a good many cases that we, perhaps, never heard of. We advertise, and have posted bills in the streets saying where applications can be made.

90472. (Mr. Lansbury.) How many people are there getting relief outside? That is, wives of men who are getting treatment inside because they are sick, out of your whole number of people?—We have a total number of indoor poor and outdoor poor of 9,981, and the proportions are: on the outdoor roll 3,938, and indoor, 4,058. That is, of course, excluding lunatics.

90473. What I want to get at is the number of men who are getting relief inside, and their wives and families getting relief outside, that would be out of the bottom figure, 4,058. How many of those would be the wives and dependants of the able-bodied men who are sick and getting relief inside?—How many should have been in friendly societies?

90474. Not particularly that. I want to get the total. I want to see, if we take it for granted they are all people who ought to be in friendly societies, what number there are?—One hundred and eighty four.

90475. One hundred and eighty-four out of 4,058?—That is, receiving parish relief; that is the number of families chargeable whose husbands are in hospital out of the total of 4,058.

90476. Would it be very much trouble for you to put us in a return giving us the trades and wages of all those men?—I will certainly do so. (See Appendix No. II. (C).)

90477. (Chairman.) I suppose you could get accurate information?—Yes, we would get the wages certified from the employers.

90478. (Mr. Lansbury.) It would be as reliable one way as the other?—These are really good solid householders, and we can perfectly well get the employers to certify, that is to say, if they were in regular employment prior to the application.

90479. Will you put in the statement what was their condition when they came in?—Yes. (See Appendix No. II. (D).)

90480. There is a good deal of difficulty, I gathered from your answer to Mr. Bentham and other Commissioners, in getting the distress committee and the parish council committee to deal judiciously with all the cases—that is to say, treat them all alike. Would you be in favour of taking the whole business of the able-bodied relief, either by finding employment or in any other way giving relief to able-bodied when out of work, away from the local authorities altogether and giving it to a central authority to undertake?—I would be inclined to give it to some central authority. What it would be composed of, I do not know. It is not only the town council, it is the co-opted members of the parish and town councils

as well who differ as to whether a party should get work or not. I do not know where we would get a body of men perhaps who could see eye to eye with me, but if a committee like to take a different view of my report, then it is the committee's responsibility.

90481. At present we are spending a great deal of money, we are making elaborate investigations, and at the finish of those investigations, those reports may all be upset because the committee either are not willing or are too ignorant to act as they should act. What I want to ask is, do you think under present circumstances it is possible to get a committee to do the right thing?—I do not think it.

90482. Therefore you would be in favour of not merely abolishing the distress committee for this particular class, but abolishing the parish council too, so far as the able-bodied are concerned, and handing the whole business over to a central authority to administer?—That would clear up my feeling against the word pauperism; that is, to have the parish council and the distress committee under one head.

90483. I do not mean an elected central authority, but an authority set up as the Local Government Board or the Board of Trade and have a department to administer the whole thing?—I would be in favour of that.

90484. (*Chairman.*) You have a committee of one in Glasgow on the Poor Law?—Yes, we have daily sittings composed of one member.

90485. Is there as much divergence of opinion when you have a committee of one as when you had a big committee?—We have two members summoned each morning. We have two committee rooms, but the member sitting in one committee room may be giving a decision quite opposite, on the same footing, to the other next door.

90486. That not infrequently happens?—Quite.

90487. Then I suppose there is an appeal to the appeal committee to have it settled?—We have an appeal. The applicant, the inspector or a member of the council has a right to appeal against the sitting member. That comes up once a month or once in three weeks.

Mr. JOHN MALLOCH, called; and Examined.

90498. (*Chairman.*) You are the Clerk to the Harbour Trust of Dundee?—I am.

90499. You have prepared a very interesting Statement, which, if you will kindly hand it in, we will treat as your Evidence-in-Chief. (*The Witness handed in the following Statement.*)

CONDITIONS OF DOCK LABOUR AT DUNDEE HARBOUR.

1. The conditions of dock labour at Dundee harbour are peculiar to the port, but the work is carried on without the slightest friction among the different bodies of labourers. Differing from many other ports, the busiest season at Dundee harbour is the winter season, when, generally speaking, trade is not brisk throughout the country. This, to some extent, affords relief to what may be termed casual labour, and reduces the number of unemployed men in the city.

2. As may be known to the Commission, Dundee is the chief centre of the jute spinning and manufacturing industry, which employs many thousands of workers, chiefly of the female class. The raw jute is imported from Calcutta and Chittagong by steamers direct to Dundee harbour, and arrives between September and April each year. These vessels bring cargoes ranging from 4,000 to 10,000 tons. As usually the old supplies are pretty well exhausted by the time the new crop begins to arrive, merchants and shipowners put forth very special efforts to have quick discharge and transference of the jute to warehouses. The result is to bring about suddenly an increased demand for dock labour. Very soon all casual labourers about the harbour are engaged, while, as the importations go on, many men who have been thrown out of work either by reason of bad trade, or wet weather conditions, or from other causes, come to

90488. The upshot, as I understand it, is that as a rule the inspector's opinions are upheld?—He brings the appeals. He has the right to bring any case forward.

90489. Is his opinion upheld?—Not very often.

90490. It is given against him?—Yes.

90491. (*Mr. Patten-MacDougall.*) Do you agree with the witness who told us that you very seldom have sailors or seafaring men apply for relief?—I have not had a sailor applying for work. We have had sailors come to us through, perhaps, getting the worse for drink and losing their money.

90492. Have you any explanation of that?—Yes, one is surprised that we have not a sailor; a sailor seems to be taken on at once. Since the introduction of telephones, the telephone people prefer sailors for erecting the tall poles, and the fire brigades also prefer seamen.

90493. There is not the same dearth of employment for sailors?—Not the same.

90494. They are able to suit themselves to other jobs?—Yes, I am told that a sailor who wants to leave the sea, has no difficulty in getting work either with the Fire Brigade or the Telephone Company.

90495. (*Mr. Lansbury.*) I understood you said you would abolish the parish council and distress committee from having anything to do with finding the men work?—Yes.

90496. (*Miss Hill.*) Do we gather to whom you would entrust it, if you did abolish the distress committee?—I do not know whom you would entrust it to.

90497. (*Mr. Lansbury.*) I put it, to a Department similar either to the Local Government Board, or the Board of Trade?—The difficulty we have in Glasgow is one committee feeding the children, one clothing the children, one sending them away to the country, and another giving parish relief, all overlapping each other, and the medical relief and so on, overlapping. I would rather see one head, so that it is all under one department.

the harbour and get employment. These men represent practically all classes of workmen, and amongst them are artisans, although they are chiefly composed of men belonging to the labouring classes, who, but for this special demand, would probably continue among the ranks of the unemployed. Not only in the discharge of jute cargoes are large extra staffs engaged, but the importation of jute brings about a considerable increase in the number of men engaged in other branches of work, for instance, special staffs have to be got for checking and weighing the jute as it is discharged, and for the supervision of its removal from the dock sheds. Then the carting contractors, including railway contractors, make large additions to the number of their employees, and during the busy season a great many extra horse-drawn vehicles are pressed into the service. For the post of checking and weighing the jute, men of fair intelligence are required, and generally these are recruited from the ranks of unemployed clerks and tradesmen who have fallen on unfortunate times. The additions to those engaged for carting purposes are largely made up of the young casual labouring classes. All this work, it should be borne in mind, is in addition to the regular traffic at the harbour, in the conduct of which considerable permanent staffs of men are employed.

3. For a number of years there has been no branch of the Dockers' Union in Dundee. Again and again attempts have been made to form such a union, but the success which attended the efforts was very short-lived. These attempts were invariably made when some special questions were affecting unionists at other ports, and when it was desired that men at Dundee docks should, by forming a local branch of the union, support their comrades elsewhere. As there has not been for a long time any serious question between dock labourers and their

Mr. James Ferguson.

20 Jan. 1908.

Absence of applications from sailors to Distress Committee, reason suggested.

Transfer of relief to able-bodied unemployed to a statutory central authority proposed.

Administration of all forms of relief by one authority desirable.

Mr. John Malloch.

20 Jan. 1908.

Considerable employment in connection with jute industry beyond unloading cargoes.

Class supply-ing checkers and weighers of jute.

Absence of branch dockers' union in Dundee.

Mr. John Malloch.

20 Jan. 1908.

Agitation by Dundee casual dock labourers for increased pay reduction of hours, etc.

Free labour bureau at Dundee docks. Object and success of bureau.

employers at the port of Dundee, it has apparently never seemed to the men to be necessary to continue members of the union. It may be stated, however, that between three and four years ago the casual labourers, acting it was understood with the consent of the General Union of Dockers, put forward claims for increased rates of pay, reduction of hours of labour, and other conditions, which stevedores, shipowners, merchants, and others held to be unwarranted, and declined to entertain.

4. The men, while seemingly determined to force their demands, had eventually to give way, and the state of matters continued pretty much as before. Shipowners and merchants, however, regarded this as a warning that the then condition of things was anything but satisfactory, and, after meetings and consultations, they decided to establish, in conjunction with the Shipping Federation, Limited, a Free Labour Bureau for labour at the docks. This bureau was started, and has been fairly successful. Its aim is stated to be "to promote freedom of contract between employer and employee, not to interfere in the question of wages, and with no desire to come into conflict with the men's unions, so long as the unions confine themselves to their proper sphere, and do not interfere with non-unionists and freedom of employment."

THE DIFFERENT BODIES ENGAGED IN DOCK LABOUR AT DUNDEE.

The Harbour Porters.

Harbour porters' benefit society—conditions of admission. Privileges of harbour porters.

5. This is a Registered Benefit Society composed of eighty men. Admission to the society is very difficult. Applicants are required to lodge a sum of money, and must be of good character, and physically strong and active. They are generally men who have been brought up to an outdoor country life, and capable of heavy and long-continued work. These men have special privileges over and above the ordinary or casual dock labourer. They are recognised by the Dundee Harbour Trustees, who, on the application of their society, grant each man a licence to act as a porter, and also as a weigher and measurer of goods, the latter licence being certified by a Justice of the Peace. These men are constantly engaged in dealing with many of the regular trading vessels.

Reliance of merchants on harbour porters.

6. They manage their affairs themselves, make their engagements, carry out their work, collect their charges and distribute the money. Though the Harbour Trustees retain the power to supervise and regulate their work, yet these powers have never been exercised, and the Trustees do not think it prudent that they should be put in operation. So reliable are these porters considered, that merchants prefer one or more of them to be present at the loading or discharging of every jute vessel, since from their standing and reputation their word is readily accepted in any dispute.

Casual labour engaged by harbour porters.

7. Of course, this regular staff is often not sufficient to cope with all the work they are asked to undertake, and when this is so they engage and pay casual labourers, whom, however, they carefully supervise. The porters earn very good wages, and have more extra time than any other class of dock labourers. They pay their casual labourers at the rates current at the docks for the time being.

Free Labour Bureau—Stevedores—Contractors.

Number of dock labourers who have signed the "free labour pledge." Number of labourers employed at Dundee docks.

Number of engagements in 1907 at free labour bureau.

8. In connection with the Free Labour Bureau there are between 1,000 and 1,100 dock labourers who have signed the free labour pledge, which ensures their non-interference with non-unionists and freedom of employment. The total number of dock labourers employed during the busy winter season is from 700 to 800, while during the summer months the number is reduced to between 300 and 400.

9. At the office of the bureau intimations are posted of the expected arrivals of vessels, and the men on the outlook for work attend at the dock when the vessel is berthed. Here the stevedore selects his men. Last year there were 76,848 engagements, an increase of over 13,000 on the previous year.

HOURS OF LABOUR AND RATES OF WAGES.

10. The hours of labour are, from March to October, both inclusive, 6 a.m. to 6 p.m., with two hours off for labour at meals; and from November to February, both inclusive, 8 a.m. to 4 p.m., with one hour off for dinner. On regular trading vessels the hours are 6 a.m. to 6 p.m., with two hours off for meals, all the year round, but in the case of such vessels there is a good deal of extra work caused by the desire for quick despatch and late sailings. On jute steamers the hours of labour are, during the winter months, 8 a.m. to 4 p.m., from daylight to dark; after the latter hour merchants decline to warehouse jute, because of the want of artificial light in these buildings.

11. The rates of wages paid are, on regular traders, 7d. Rates of per hour, and 10½d. per hour for overtime. On jute wages at steamers and vessels from the Baltic the rates are 8d. per hour, and 1s. per hour for overtime; while on jute steamers during the winter months the rates are 9d. per hour, and 1s. 1½d. per hour for overtime. Where special work is concerned, 1d. extra per hour is paid.

12. The men are engaged alongside the vessels, the Mode of stevedores accepting whom they consider best fitted for engagement the work.

13. They are paid at the end of each day, many of them Daily pay-being in so straitened circumstances that money has to ment of be advanced to enable them to get breakfast and dinner. wages. Unfortunately, a large proportion of the wages earned are Scurcity of mis-spent, the greater part of the earnings of many being employment spent on drink. Unless, as already stated, during the for dock labourers jute import season, work for the casual labourer is irregular outside jute season.

14. Regarding extra men employed by carting contrac- Wages of tors, it may be stated that their work is much the same as the labourers' and their rates of pay vary considerably, carting men. ranging from 10s. or 17s. to 22s.

SUPERINTENDENTS OF WEIGHING.

Jute and Flax.

15. When the busy season is at its height there are Duties and forty to fifty additional men engaged in checking and wages of weighing the delivery of cargoes. These men are em- superinten- ployed and paid by the Harbour Trustees, chiefly for the dents of purpose of shore dues accounts and for granting certificates weighing. of weights to merchants and others interested. They are paid at the rate of 7s. 6d. per working day, whether for ten hours in summer or seven hours in winter.

EXTENT OF UNEMPLOYMENT AT DUNDEE HARBOUR.

16. In view of the peculiar conditions at Dundee Har- Extent of bour it is hardly possible to give exactly the extent of unemploy- unemployment. The importation of the raw material for ment at the principal trade is a seasonal one, and no returns as to Dundee employment are available, but, generally speaking, there harbour difficult to are comparatively few unemployed men at the docks. If estimate. trade in the city is not brisk during the winter months then a larger number of men seeking employment appear at the docks; but if the trade in the city is good, the number of men who come in search of work is appreciably less, though at no time is there a want of sufficient hands to meet requirements.

17. Among what may be described *bona fide* dock Little priva- labourers there is, although work may sometimes be scarce, tion among the casual labourers include some of the *bona fide* class who really do not care whether they are fully em- labourers. ployed or not. In many cases they are married men, whose wives and children find regular employment in the mills and factories, and who really provide the household necessities. Improvidence and intemperance are unfor- Improvi- tunately very prevalent amongst the casual labourers tence and and the less constantly employed dockers. Though intemper- frequently money has to be advanced to the men to get ance preva- food while they are working, they somehow manage to run lent among up accounts for liquor which are paid either at the end of casual dock labourers. the day or at the end of the week.

18. If some drastic measures could be taken to prevent Prevention the publican giving credit, much good would result, because of credit though some men have no hesitation in allowing their giving by dependants to find for themselves, they somehow regard it publicans as dishonourable not to square their "score" with the desirable. publican.

19. Stevedores have again and again expressed the opinion that the system of daily pay is a bad one, and that instead men should be paid weekly and at fixed places at the docks. At Dundee there is a labourers' shelter provided and maintained by the Harbour Trustees, very centrally situated, and it would be no hardship for dock labourers to attend there for their weekly pay.

REMEDIES FOR UNEMPLOYMENT AT DUNDEE.

20. Among the remedies which have proved successful in dealing with dock labour in Dundee is the Free Labour Bureau. This bureau is run at a very small cost, which is contributed to by the Shipping Federation, shipowners, shipbrokers, and stevedores. Since it was opened there has been no friction or labour trouble. The wages have been maintained at a fair level, and no complaints have been made by the men of preference shown in engagements. In addition to dock labour, the bureau officials have, at the request of merchants in the country, sent out workers. Altogether the Free Labour Bureau seems to meet a want at Dundee, since it brings unemployed men to a common, and fully informed, centre in search of work. It may be urged that the same end would be attained by a branch of the Dockers' or Labourers' Union at the harbour, but, as has already been stated, dock labourers at Dundee do not seem to regard the union organisation with favour. It is difficult to explain the reason for this, but it may be found in the fact that the number of dockers is comparatively small, that they are a constantly changing body with no cohesion, and do not contain amongst themselves the elements of combination.

21. At Dundee the harbour porters have a benefit society by means of which members are assisted in times of sickness or distress. There are also several other staffs specially attached to regular shipping lines who also have provided arrangements by means of which they assist each other in times of illness; but the ordinary dock labourer has nothing to fall back upon in times of unemployment or distress, and, if married, he becomes entirely dependent on his wife and children, or has to make application to charitable societies or institutions. In this way the position of married labourers is not so bad, but the lot of the unmarried man is different.

22. It has been suggested more than once that the authorities of the Free Labour Bureau would be acting wisely, and in their own interests, as well as in the interests of the men, if they could see their way to assist the men on their books when out of work through sickness or otherwise. It is believed this could be accomplished if all those who employ labour at the docks would give a small annual subscription. For the benefit of the labourers, the Dundee Harbour Trust has provided free shelter and other accommodation for the use of the men.

23. The conditions at Dundee are in some respects similar to those which prevail at Liverpool. Here also the rate of wages paid is higher than that paid to the labourers in the city proper, because of the irregular character of the work. With regard to overtime, the rates of pay are particularly good. It is often urged that overtime should be restricted, and there is good ground for believing that it is restricted as far as possible, but to restrict it altogether would entail considerable loss by detention of vessels.

24. As to remedies for distress due to unemployment, it has already been recognised by the Dundee Harbour Trust that special work provided in times of distress has had a good effect. This is, however, more a matter for municipalities than for trust corporations to undertake, although, in times of great distress, if trust corporations of a semi-public character were approached by municipalities, the chances are that they would agree to give, by the provision of special works, what relief lay in their power.

90500. (Chairman.) At Dundee there are a number of harbour porters whose position is rather exceptional; are they heads of gangs?—No, they are a special body who have a specially organised society, and they have practically the pick of the whole of the work at the harbour. During the busy season, when they are unable to overtake all the work themselves, they engage extra men, who work under their supervision, and are paid at the usual rates of pay then prevailing.

90501. It is a close corporation, the members of which are always in permanent employ?—That is so.

Mr. John Malloch.

90502. They have a benefit society?—They have.

20 Jan. 1908.

90503. How do they keep their numbers so small? Harbour—They have, to some extent, a monopoly of the work, porters and they do not want to increase the number beyond a certain total. benefit society.

90504. Who admits to this society?—The members of the society themselves, by election.

90505. Take the Harbour Trust, supposing the Harbour Trust want to increase this particular class of employment, could they do so?—Yes, the Harbour Trust could. If they found that the necessities of the work of the Trust and harbour required it, they could say to this society: You must increase your numbers; but hitherto that has been unnecessary. Relations between Harbour Trust and porters.

90506. They are, I assume, an efficient body of men?—Quite efficient.

90507. Would they retire at any particular age?—They usually retire at about sixty-five. Retiring age for harbour porters.

90508. Your free labour bureau, I understand, is to promote freedom of contract between employers and employees, and not to interfere with the question of wages. You have no desire to come into conflict with the men's unions so long as they confine themselves to their proper sphere. It is a non-union bureau?—Yes. Object of free labour bureau.

90509. Is there a union body as well?—There is no dockers' union in Dundee. Absence of dockers' union in Dundee.

90510. Is there much surplus of dock labour in Dundee?—No.

90511. When times are bad have you not a considerable number of people coming down for employment?—When times are very bad we have, but it is usually in the winter season when times are bad in Dundee, and at that time the harbour is usually busy. We have at that season large importations of jute, and in consequence of that we are able to employ a very much larger number of dock labourers. Winter the busy time in Dundee Harbour.

90512. There being a free labour bureau, are the men engaged through the free labour bureau, or do they come on to stands at the docks?—The men come to the free labour bureau where they find out what ships are expected, when they are expected, and how many hands are likely to be employed. They then go to the dockside when the steamer comes in, and the stevedore engages them. Method of engaging dock labour.

90513. That is practically a bureau for all the shipping that comes into Dundee?—That is so.

90514. Does that give a certain organisation now to the dockers?—It does.

90515. There is no limit I suppose to the number of persons whose names are on the free labour bureau?—None whatever.

90516. The men are paid at the end of the day; I suppose they are taken on for half a day, or a whole day?—Half a day or a whole day as the work requires. Mode of paying dock labourers.

90517. You say many of them are in such straitened circumstances that money has to be advanced to get them breakfast and dinner. That seems as though there were a great many people who did not get regular employ?—They may not get regular employment, but they have probably squandered their money. These are the classes of men who have squandered their money in drink. Alcoholism and absence of thrift among dock labourers.

90518. One would assume that they had not been employed, but you meant to imply that they had wasted their money the day before?—Yes.

90519. By drinking and so on?—Yes.

90520. I suppose there is a good deal of drinking?—Yes, a good deal.

90521. Are many of these persons who come down elderly persons?—No, they are not elderly; they will not employ old men there.

- Mr. John Malloch.*
20 Jan. 1908.
- Nature of employment for old men at docks.
- Distinction between *bona fide* and casual dock labourers.
- Weekly payment of dock labourers proposed by stevedores.
- Objection to daily payment of dock labourers.
- Arrangements proposed in case of weekly payment of dock labourers.
- Sick benefit in connection with free labour bureau suggested.
- Average weekly employment of *bona fide* dock labourers.
- Wages of dock labourers.
90522. Do not the old men try to get employment?—Old men do try; and many of them are engaged as watchmen, for looking after stores and shelters, and things of that kind, but they are not employed in regular docker's work.
90523. You say: "Among what may be described as *bona fide* dock labourers there is, although work may sometimes be scarce, little privation. The casual labourers include some of the class who really do not care whether they are fully employed or not." You draw a distinction there, apparently, between the casual labourer and the *bona fide* docker?—Yes.
90524. We have been rather disposed to think they are convertible terms; but the casual labourer you allude to here is the fringe of persons outside the *bona fide* docker, who only would be taken on if there was not a *bona fide* docker there?—That is so.
90525. Have many proposals been made to your board for the purpose of giving greater permanence to the dock employ?—No; the board as a board does not employ any dock labour itself, and never has done, although under their Acts of Parliament they have power to employ dock labour if they so require.
90526. You say: "Stevedores have again and again expressed the opinion that the system of daily pay is a bad one, and that instead men should be paid weekly, and at fixed places at the docks"; that would imply, if they were paid weekly they must be engaged weekly, would it not?—Not necessarily.
90527. How could it otherwise be managed?—Dockers might have a pay-day at the end of every week, whereas now they are paid every day some of the men get drunk. The fact of the matter is that they drink most of their wages at the end of every day.
90528. What would the man do in the interval? Supposing he was engaged one day in the week he would have to wait five days for his money?—In the meantime he would get advances for his food.
90529. From whom?—From his employer. He would advance money for his food, probably.
90530. Could that be done?—Yes; it is done already.
90531. If that could be done there would be at the end of each week a correct record of the number of days each man had been employed?—Yes.
90532. Do you think there would be much difficulty in doing that?—I do not think there should be.
90533. There is a suggestion made that the free labour bureau should start some form of sick benefit?—Yes.
90534. It is suggested that those who employ labour should give a small annual subscription. Do you think that is feasible?—It is feasible. The difficulty would be in getting those interested in the free labour bureau to give such a subscription as would enable the bureau to give such a sick benefit as would be worth anything.
90535. Would not the free labour bureau be able by some system of stamps or otherwise to get something from the employees?—Yes, they might. If the free labour bureau were starting an idea of this kind to give sick benefit to men who are on their books I should think that the men themselves would very willingly subscribe.
90536. The men, I suppose, are paid independent of the bureau? The money does not go through the bureau?—No, the bureau has nothing to do with the pay of the men.
90537. What should you say, taking a *bona fide* dock labourer; have you ever made any estimate of how many days a week he would be employed in the whole year, what would be the average should you say?—Do you include the harbour porters in that?
90538. No, I meant of the men you term casual labourers, the *bona fide* dock labourer, would he get three days a week?—Yes, he gets quite three days a week.
90539. What does he get a day, about 5s.; it is 7d an hour is it not?—Yes.
90540. He would work at least eight hours a day, I suppose?—In the winter his hours are less, of course. He works ten hours in the summer and seven in the winter.
90541. That is 49d. in winter and 70d. in summer?—It depends very much on the work he is engaged in. For coaling steamers he gets 8d. and 9d. an hour in summer and in winter 9d. and 10d. per hour. Then the rate of wages paid on what is called regular traders to the *bona fide* dock labourers is 7d. per hour and 10½d. per hour for overtime.
90542. Do most of the wives or the female relatives of the person working in the dock work also in factories and so on?—Of the casual dock labourer?
90543. No, of the ordinary dock labourer?—Not of the ordinary dock labourer.
90544. They maintain themselves and their families?—The harbour porters and so on maintain their families, porters not workers in factories.
90545. The casual docker is maintained by his wife and children?—Yes. Casual dock labourers maintained by wives and children.
90546. That is the distinction you draw between the two?—Yes. Absence of distress amongst the *bona fide* dock labourers of Dundee?—Not a great deal. There has not been for some years. Dundee dock labourers.
90547. You would say on the whole there is not much distress amongst the *bona fide* dock labourers of Dundee?—Not a great deal. There has not been for some years. Dundee dock labourers.
90548. Do many men come from the country to work at the docks?—A large number.
90549. I suppose they are big strong men?—Yes, big strong men are preferred; men who are capable of taking heavy loads and long sustained hours of labour.
90550. The physique of the men of Dundee is good, is it not?—As a rule it is. Physique of Dundee men.
90551. (*Mr. Bentham.*) As I understand Paragraph 4, Constitution of the free labour bureau was started by the Shipping Federation?—It is a combination of shipowners, ships' brokers, consignees, merchants, stevedores and so on, and in Dundee of the Shipping Federation together.
90552. And all the expenses connected therewith are paid by the subscribing firms?—The subscribing firms pay for the management of the free labour bureau, and the free labour bureau undertakes to register the names of men who come to do work, but the bureau has nothing to do with the rates of pay or with the conditions of labour beyond the fact that these men must not interfere with the unionist or non-unionist.
90553. Do the men who register their names pay anything?—Nothing whatever. Firms subscribing to free labour bureau.
90554. Do the firms who subscribe guarantee to get all their labour from the bureau?—As a rule they do. engage all dockers there.
90555. Do they guarantee to get all their labour from the bureau if there are sufficient men?—They get it all from the bureau if possible.
90556. Are any men refused registration?—None.
90557. If they will take the necessary pledge?—If they take the badge; such men are always preferred to men who do not come through the bureau. Preference given to men having badge of free labour bureau.
90558. Is there always a sufficient number on the register to fill the demands of the shippers?—Yes.
90559. And each firm settles its own pay with the men it employs?—No, each firm settles with what is called the stevedore, the man who says: "I will discharge your ship," or "I will load your ship," for so much; then the stevedore engages and pays his own men and pays the rate of wages that he thinks proper, the rate of wages then prevailing at the port.
90560. (*Chairman.*) Is a stevedore the same thing as a harbour porter?—No, he is an employer of labour. Meaning of term stevedore.
90561. (*Mr. Bentham.*) Do the stevedores get all their labour from the free labour bureau?—Yes.

90562. Who is the direct employer of the harbour porter?—The merchant whose goods he is discharging.

90563. (*Professor Smart.*) He both loads and unloads?—Yes, when employed on regular traders.

90564. Then he is a stevedore also?—He is a stevedore in one sense that his society really governs him, but there is no superior person above him; but in the case of a vessel that comes in, where the harbour porters are unable to overtake the work themselves the labour is got through the free labour bureau, and the free labour bureau sends for a stevedore who engages the labour, but these men coming through the free labour bureau are not in a sense harbour porters at all; they are simply docker casual labour.

90565. What I am alluding to is that in Liverpool and a good many other ports a porter does not lade a ship; he confines himself to unloading. You have not that in Dundee at all?—No, there is no such distinction in Dundee.

90566. (*Mr. Bentham.*) Is there usually a surplus of labour in the bureau?—During the winter months there is not a great surplus of labour.

90567. Taking the year round, the men get a fair amount of employment week by week, if they care to have it?—Yes. Of course, I should explain that in the summer months there is not such a demand for labour at the harbour, but at that time there is more work outside in the country districts, and the men who came in from the country districts return to the country.

90568. (*Professor Smart.*) You mention that some companies have permanent staffs of their own?—Yes.

90569. Your evidence has nothing to do with these permanent staffs?—No.

90570. They are engaged by the week?—Yes.

90571. Then I gather that the harbour porters also engage labourers?—Yes.

90572. Then it is practically a co-operative society, is it not?—Yes.

90573. With a friendly society attached?—Yes.

90574. Why is the harbour porter recognised to have special privileges?—Because under the old Harbour Acts the harbour porters are bound to come out and protect the harbour as special constables, and do certain duties at the harbour in case of necessity.

90575. There is a large miscellaneous trade at Dundee as well as the jute?—Yes.

90576. But the casual labour is mostly affected by the jute?—Mostly.

90577. Do I understand that the sphere or function of the free labour bureau is entirely the giving of information?—Entirely.

90578. It does not assure the men a job in any way?—It does not.

90579. A stevedore is not bound to take a bureau man at all?—He is not bound to, but he usually does.

90580. Was it not really started in opposition to trade unions?—It really was.

90581. About how long ago?—Between two and three years ago.

90582. And the men generally agree with that now?—The men agree with it.

90583. With regard to Paragraph 11, why are the wages paid as regards regular traders so much less than for the jute steamers?—Because the regular trading men have permanent work; and on the jute steamers the work is very much harder.

90584. These are not the permanent staffs you are speaking of. These regular traders will have a permanent staff, and besides will take on casual labour?—They do take on casual labour when necessary.

90585. These are men who are paid week in and week out?—Yes.

90586. Is there not an economic weakness with regard to Dundee, that there is so little employment for men as compared with women?—Yes, compared with women the employment for men is very much smaller.

90587. So you seem rather to look on the casual labour as a godsend to Dundee?—To some extent.

90588. Do you really say that working men regard it as dishonourable not to pay their score with the publican?—Yes.

90589. (*Mr. Patten-MacDougall.*) What sort of credit do they give them?—As soon as a casual labourer is in work he can go to any of the public-houses in the neighbourhood of the harbour, and he will get credit for the day up to almost the full extent of his day's wages, if he is to be in work during the day.

90590. Will he get the same the next day?—Yes.

90591. How long does that go on?—Till he bursts; if he pays regularly they will go on indefinitely.

90592. (*Professor Smart.*) You say in Paragraph 20 that the labour bureau has sent out labour to merchants in the country?—Yes.

90593. You mean to manufacturers, I suppose?—Yes.

90594. Really, the problem of Dundee with regard to casual labour is very much the same as it is at other ports?—Very much the same.

90595. Only by reason of that scarcity of employment it is looked upon as a desirable thing rather than otherwise?—Yes.

90596. You do not regard it as a "problem" in Dundee?—No, we never have done.

90597. Even although the class of men seems to be much the same as in other places; they are rather dissolute, are they not?—They are, some of them.

90598. (*Mr. Chandler.*) You express the opinion that this free labour bureau you mention has been a success?—Yes.

90599. Tell me in what direction it has been successful? Has it improved the positions of the labourer, or has it been successful in preventing the establishment of trade unions in the docks? Which do you mean?—It has brought the men to a common centre to learn whether labour is likely to be got in Dundee; and it has put before the men the conditions under which the labour can be had, and the terms of those conditions. The docker in Dundee has never taken kindly to trade unions; why, I do not know. Some years ago there was a very strong effort made to form a dockers' union in the city—not that there was any special reason for it in Dundee, but there was some question agitating the dockers in other parts of the country at the time, and the support of the Dundee dockers was wanted. The Dundee dockers were not very willing even to start a union; but certain officials came from, I think, the Glasgow district, and after various meetings urged the men in Dundee to help their comrades elsewhere. After a good many meetings they did agree to start a dockers' union in Dundee; and meetings were held and organisers came to Dundee; but the thing gradually died a natural death. The men found that the conditions of labour without a union were rather better than with a union, because they were employed by all and sundry, whereas if they were unionists, some of the employers would have nothing to do with them.

90600. They would have to take what you call here a labour pledge. What is the nature of the pledge they took?—I have a copy.

90601. Is one of the conditions that they must not join a trade union?—Not necessarily. The pledge signed on their accepting a free labour disc, whether union or non-union men, is this: "The undersigned hereby declares his willingness to work in harmony with any other workman who may be engaged, whether he is a member of a trade union or not"; that is all.

Mr. John Malloch.

20 Jan. 1908.

Honourable discharge of debts to publicans.

Extent of credit given by publicans.

Country factories supplied with labour by free labour bureau.

Position of casual labour in Dundee.

Advantages of free labour bureau.

Attitude of Dundee dockers towards trade unions.

Nature and advantage of free labour bureau pledge.

Mr. John Malloch.
20 Jan. 1908.

90602. Still the fact of taking that pledge and being connected with the labour bureau gives them a sort of right to employment by the stevedores?—That is so.

90603. The stevedores, of course, can by that memorandum pay them any wage they like?—Yes; but hitherto the stevedore has not taken advantage of that; he has always paid the standard rate prevailing at the time in the port.

Fixing rate of dockers' wages.

90604. (Chairman.) Does your Board fix the rate?—No.

90605. It is agreed upon between the masters and the men?—Yes.

90606. (Mr. Chandler.) It is still a matter of bargain between the stevedores and the dockers?—Yes.

90607. Without the intervention of any union, or anything to keep the wage up?—Quite so.

Alcoholism and lack of thrift among casual dock labourers.

90608. In one place here you speak of their straitened circumstances, and of money having to be advanced in order to get their breakfasts and dinners, and the money being spent on drink. They are not a very first class crowd of men?—Oh, dear, no, not what we call the casual docker.

Country factories supplied with labour by free labour bureau.

90609. In the answer you gave to Professor Smart with regard to the sending of these free labour men to the country, was that in strikes or disputes; were these men

sent to take the place of the strikers?—No, that was simply in the case of pressure of work and something brisk having turned up; the work being wanted quickly extra men were asked for.

90610. Why I asked you that is that we have a free labour agency in this country whose whole and sole mission is that kind of business. It does not do that kind of thing?—No.

90611. (Mr. Patten-MacDougall.) I understood you to say there is very little distress in Dundee this winter?—Very little.

But little distress in Dundee in winter of 1907-8.

90612. Less than there has been for some years?—Yes.

90613. Are the distress committee receiving applications?—Yes, they are.

90614. Are relief works started?—They have been.

90615. This winter?—This winter, but the distress has been very small.

90616. What is the nature of the relief works?—They have been public works, in the way of road-making and drainage, chiefly.

Nature of relief works in Dundee. Number of men employed on relief works in Dundee.

90617. I suppose you do not know how many men are employed there?—Not more than fifty to sixty.

90618. And that is all the distress in Dundee?—That is all the distress at present.

ONE HUNDRED AND FORTY-SECOND DAY.

Tuesday, 21st January, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (Chairman).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. J. PATTEN-MACDOUGALL, C.B.

Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.
Professor WILLIAM SMART.
Mrs. SIDNEY WEBB.
Mr. FRANCIS CHANDLER.

Mr. R. H. A. G. DUFF (Secretary).
Mr. J. JEFFREY (Assistant Secretary).

Mr. FRANCIS WATSON, and Mr. GEORGE M. CROWTHER, called; and Examined.

Mr. Francis Watson and Mr. George M. Crowther.

90619. (Chairman.) (To Mr. Watson.) You are the Chairman of the Bradford Distress Committee, I understand?—(Mr. Watson.) Yes.

21 Jan. 1908.

90620. (To Mr. Crowther.) You are the Clerk of the Bradford Distress Committee, and you are also Clerk to the Poor Law Guardians of Bradford?—(Mr. Crowther.) Watson and I am.

90621. How long have you been clerk to the Poor Law guardians?—About nine years.

90622. I think, Mr. Crowther, you have prepared a detailed Statement of those who have applied to the Bradford Distress Committee to have their names recorded?—Yes. (The Witness handed in the following Statement.)

Conditions of labour in the textile industry at Bradford.

1. The workers of this city are to a very large extent dependent on the textile industry for their livelihood, and by reason of the low wages paid to certain classes, particularly the labourers in wool-combing and wool-washing works, it happens that when this portion of the trade is slack a large proportion of them seek relief.

2. Appended is a table which shows in detail the employment of the applicants who applied for employment-relief to the newly-formed distress committee in the year ending September 30th, 1906. (See Appendix No. III. (A).)

Details of applications to the distress committee.

3. The number of male adult workers in the textile trades shown in the table, viz., 359, does not, however, give the correct impression as to the full extent of the depression existing at that time in the textile trades. Any such depression affects nearly every family in the lower paid trades.

4. More than most trades the textile industry provides work for women and children, and it occurs that in many cases where the head of the family is out of work there is sufficient income from the wife and children or other relatives to maintain all; thus it is absolutely necessary that strict investigation should be made into all applications, so as to insure that the really necessitous cases shall be dealt with first. The census returns, 1901, give the number of females employed in these trades in Bradford as 33,342, and of children under fifteen as 7,076.

5. The great bulk of applicants being unskilled and employed when in work at low wages, distress owing to want of employment will be immediate, as these classes cannot obtain credit at shops or with their landlord; therefore it is necessary that employment relief should be available at once if it is to do any good.

6. Out of 2,134 men who placed their names on the register during the year ending September, 1906, nearly half were men who had fallen out of the ranks of the workers owing to age or physical weakness.

7. The following table gives the ages of the applicants for the period mentioned:—

UNEMPLOYED REGISTER, NOVEMBER 1ST, 1905, TO SEPTEMBER 12TH, 1906.

Classification by Ages.

Under 20.	Under 30.	Under 40.	Under 60.	60 and above.	Total.
20	596	590	790	138	2,134

8. The corporation gangers employed to supervise the men employed on distress works give it as their opinion that 30 per cent. only were average workmen, the remainder were either too old or men of poor physique. These men would not be employed by any contractor in building operations, but might be suitable for work in wool-combing or washing sheds.

9. The following table appears to show that the periods of distress are not intermittent, but occur periodically in the winter months. Although depression in the textile trade may be more or less severe, it generally occurs in the period between November to March. The work provided should, therefore, be such as could be carried on in these months:—

REGISTRATIONS MONTHLY, NOVEMBER, 1905, TO MAY, 1907.

1905.					
November	.	.	.	.	330
December	.	.	.	.	965
1906.					
January	.	.	.	.	427
February	.	.	.	.	175
March	.	.	.	.	107
April	.	.	.	.	36
May	.	.	.	.	50
June	.	.	.	.	20
July	.	.	.	.	62
August	.	.	.	.	45
September	.	.	.	.	46
October	.	.	.	.	53
November	.	.	.	.	66
December	.	.	.	.	634
1907.					
January	.	.	.	.	166
February	.	.	.	.	155
March	.	.	.	.	108
April	.	.	.	.	60
May	.	.	.	.	82

10. It follows that the works to be provided by the distress committee should be of such a nature that they can be discontinued at any time and re-opened again months later, when necessary, without detriment to the quality of the work carried on. It must be work that any unskilled man can perform without too costly supervision. It should also be of a kind that can be resumed promptly.

11. The works first undertaken by the distress committee of this city were very costly, owing to the fact that to convert derelict land into suitable building-plots required the employment of a large number of men at the market rate of wages, as well as a considerable expenditure on team labour and stone, etc.

12. The following table shows the cost as compared with the relief given to the men:—

TOTAL EXPENDITURE ON THE LAND AT DUDLEY HILL.				£	s.	d.	21 Jan. 1903.
Wages of workmen (237)	-	-	-	1,092	2	6	Nature of works to be provided by the distress committee.
Cost of purchase	-	-	-	2,038	12	0	
Compensation to tenants for disturbance	-	-	-	36	10	3	
Legal charges and interest in connection with purchase	-	-	-	35	4	8	
Payments to corporation for skilled labour and supervision	-	-	-	362	17	10	
Materials	-	-	-	97	14	3	
Construction of sewer	-	-	-	126	3	7	
Expenses in connection with attempt to sell the land	-	-	-	52	5	10	
Miscellaneous	-	-	-		14	1	
Interest on purchase money	-	-	-	63	3	2	
				£3,905	8	2	
Less rent	-	-	-		3	12	6
Total	-	-	-	£3,901	15	8	

13. One consequence of work not being available as soon as required is that many men are quite content with having placed their name on the register. In fact, if weeks or months elapse before work can be found for the unemployed it directly encourages the shiftless man to be content with having entered his name, and so long as he can live upon the earnings of his wife and children not to look out for work. He has shifted the responsibility of seeking for work on to the municipality.

14. In the year 1906, mentioned above, the building trade had been very slack, and 1,600 out of the total on the register were employees of one branch or other of this trade. So soon as there was an improvement all the able-bodied men desirous of work of this class, on being visited by the investigators, were found to have obtained employment. It may be added that not one in fifty thought it worth while to send word to the bureau that they had found work, although each man was requested on his entering his name on the register to do so.

15. The less able-bodied men with families who did not obtain work and were not placed on the employment-relief by the distress committee, applied in despair for relief to the guardians and were generally placed on outdoor labour "test," under the Outdoor Relief Regulation Order.

16. The number of men so relieved for the months from November, 1905, to September, 1906, as shown by the guardians' returns were as follows:—

1905.					
November	.	.	.	.	92
December	.	.	.	.	103
1906.					
January	.	.	.	.	102
February	.	.	.	.	85
March	.	.	.	.	63
April	.	.	.	.	19
May	.	.	.	.	18
June	.	.	.	.	6
July	.	.	.	.	8
August	.	.	.	.	18
September	.	.	.	.	28

The distress committee's works were opened in February, 1906, and were closed in the beginning of September.

17. For three years previous to the passing of the Unemployed Workmen Act, 1905, the corporation had an unemployment committee working, and had employed men on relief works, and it may be interesting to give the numbers of men so employed, giving at the same time the number of men on "test work" granted by the guardians:—

Mr. Francis
Watson and
Mr. George
M. Crowther.

YEARS SHOWN BELOW AS COMPARED WITH THE
NUMBER GRANTED EMPLOYMENT-RELIEF BY THE
CORPORATION BEFORE THE UNEMPLOYED WORK-
MEN ACT WAS PUT INTO OPERATION.

21 Jan. 1908.

Relief given
by corpora-
tion un-
employment
committee
and the
guardians
compared.

Years.	Number of Men on Test.	Number of Men who registered their Names as Unemployed.	Number of Men granted Employment- Relief.
1899	33		
19 00	2		
1901	75		
1902	45		
1903	75	2,130	564
1904	187	4,497	970
1905	267	2,362	2,799
		6,859	3,769

18. Before any employment-relief at all was given by the corporation, the guardians had their labour yards open. From the figures now given it will be seen that the corporation employment-relief did not reduce the numbers on the guardians' relief works.

19. This we think was owing to the gradual relaxing by the corporation committee of their efforts to select the really destitute from the number of those applying.

Reasons for
Failure of
Distress
Committee
to obtain
suitable
relief work.

20. We regret that the distress committee has not succeeded in persuading private persons or firms to allow the committee to contract for any works they may have which could be carried out by unskilled labour, such as converting land covered with spoil heaps or open quarry holes into building or arable land. (Owing to disused coal pit workings and exhausted stone quarries these plots are numerous in this part of the West Riding of Yorkshire.) These works could not in the ordinary course of things be done, as the conversion would not pay the owner if let to a contractor who had to make a profit on the business.

21. We feel that the Unemployed Workmen Act is an admirable machine on the understanding that the distress committee have work on which they can employ the men, but unless further facilities than those provided by the Act are granted it is bound to be a failure; at any rate, that is the experience in this district. The land purchasing clauses are useless, because the corporation, in forming a distress committee and knowing that they can fall back upon the rates, thinks that it has done its duty towards the unemployed, and that it should not be called upon to hold land for the distress committee which cannot be sold again at a profit, and thus become the ultimate loser.

Schemes of
afforestation

22. Schemes of afforestation and of home colonisation should, we feel, be national. No proposals of that kind that have been brought before the committee seemed to be feasible by a local committee.

Suggested
amendment
in the Small
Holdings
Bill.

23. What appears to us could be done locally would be some provision, in the Small Holdings Bill, for instance, by which the corporation would be able to lease plots of land which are not used by the owners owing to their being derelict and the expense of their conversion not giving any prospect of profit. The distress committee could be employed by the corporation in converting these into arable lands and then, as required, letting for allotments or small holdings. It would not be at all necessary that the lands should be altogether, but might be in various plots in the neighbourhood of the city. It would have the advantages which we hold are necessary preliminaries to employment-relief as shown in the tenth paragraph, they could be discontinued at any time and re-opened again months later, when necessary, without detriment to the quality of the work carried on; it would be work that unskilled men could perform without too costly supervision, and it would be of a kind that could be resumed promptly.

Classes of
workmen
most affected
by unem-
ployment.

90623. (Chairman.) Bradford is, as you point out, a town which very largely depends on the textile industry, but I understand that the great mass of persons who applied for relief were not connected with that industry?—No; they were connected with the building trade.

90624. I suppose there are certain trades in Bradford which are dependent on the textile industry; for instance there will be certain engineering trades?—All the trades in Bradford are more or less dependent upon the textile industry. Classes of workmen most affected by unemployment.

90625. Out of a total of practically 2,000, half, I understand, were labourers?—Half were general labourers.

90626. Analysing the trades to which those labourers belonged, should you say that a large proportion of them were connected with the building trade?—The 1,118 that I give in the table were all outdoor workers.

90627. I see you had a large number of drivers; would they be connected with the carts employed in the building trades?—Yes, or in the textile trades; I cannot say exactly. (Mr. Watson.) I think a great many of the drivers were drivers who had been employed by the corporation. The corporation had, during the previous few years, executed large tramway works; in fact they had laid between fifty and seventy miles of tramways. That had attracted a great many men from outside the city into the city, and when the tramways were completed (which was about 1905) these men were thrown into the unemployed and did not leave the city to go and seek work elsewhere. I think a great many of those men who were drivers were drivers who had been employed by the corporation in carting material for the tramways.

90628. Was there any limit or any test as regards the period during which the applicants should have resided in the borough?—In our investigations, yes, certainly. Test of residence for applicants for relief.

90629. What was it?—Twelve months.

90630. Therefore, your belief is that the tramway works drew in people from the outside?—I do not think there is any doubt about that. It is generally conceded. Casual nature of occupations of unemployed.

90631. According to Paragraph 5 of the Statement, the great bulk of the applicants have been unskilled and employed when in work upon low wages; would their occupations as a rule be continuous; that is, would these men be in regular employ when engaged, or would the work be more of a casual and intermittent character?—(Mr. Crowther.) So far as the labourers were concerned, the work was of a casual nature.

90632. In Paragraph 6 you say that nearly half of those who applied were persons who had fallen out of the ranks owing either to age or to physical weakness?—Yes, that is so. Ages of the applicants for relief.

90633. Looking at the figures below, it is noticeable that a very large proportion are under forty years of age?—Yes.

90634. More than half, you see?—Yes, more than half.

90635. Do you think those figures are accurate?—Yes, I think so.

90636. It has been suggested to us that there is a tendency with persons when they are about forty to understate their age, because they think that enables them to get employment; should you be disposed to corroborate that allegation?—I have no reason to think that is the case. I think the men had no motive in giving any but their proper age.

90637. Then we have the fact—which is corroborated by evidence from other places—that the most of those unemployed were under forty?—Yes, half of them.

90638. Should you say there was very much difference between the class who thus registered themselves, and those who applied for relief under the Poor Law?—That is a very difficult question to answer, because the inquiries, though they were made on forms supplied by the Government, did not go sufficiently deep to enable one to answer that question—not so deeply, at any rate, as the union officers would go. The class who register themselves.

90639. You are a man of great experience, Mr. Crowther, and have been for a great many years clerk to the Poor Law guardians, so you would be able to go on your own impression from seeing them; now what is your opinion?—There are a certain number of persons who place their names on the register who, I should say, would not apply for Poor Law relief—for one reason, because the incomes of their families was so large that they would not get any relief. I have a return here of a certain number of the

men who placed their names on the register, which shows that there were 2,423 married men on the register, and that of those 441 had wives who were earning on an average 7s. 1½d. per week. Then I have also on the same table an analysis of the average earnings of the children. (*See Appendix No. III. (B).*)

90640. Do you mean to say that a number of persons were in receipt of such an income—or were associated with families that had such an income—that they would not apply to the Poor Law?—That is so.

90641. But you seem to think that that test should not prevent them from applying to the distress committee?—No; they were unemployed.

90642. Should you say that that class applied not so much for relief as actually for work?—They did apply for work.

90643. The main reason given for the passing of the Act was that it should help the respectable workmen who were ordinarily regularly employed and were temporarily out of employ; had you any considerable number of those applying?—Yes, I should say we had a good proportion of those.

90644. In your Statement you say that about 30 per cent. of those who applied were "average workmen"?—Yes, that is so.

90645. Would you go so far as to say that 30 per cent. were persons who ordinarily were in regular employment?—Yes, I would say so.

90646. That was rather the idea in your mind, was it?—That was in my mind when I made that note.

90647. Were you able to help that 30 per cent. materially?—Only to a certain extent—to a very small extent in my opinion.

90648. Were you able to place any considerable number of them in situations?—We opened a labour bureau and we offered work to a considerable number, but only a small number accepted. The work principally was with the railway companies; that is, the railway companies offered work. I am speaking now not of the work of the distress committee, but of the work offered by private employers through the labour bureau.

90649. You got a certain number employed through the labour bureau then?—Yes, or rather we offered them work.

90650. Have you got the figures with you?—Yes, we have. Only about thirty or forty accepted work.

90651. Did your labour bureau work well?—No, not at all well.

90652. Why do you think it worked so badly?—In one respect when the employer asked for workmen, the workmen wanted as a rule were young men, and they were wanted for apprentices on the railway. These men did not accept that. (*Mr. Watson.*) Mr. Crowther has a statement as to the twenty-one workmen who were offered work by employers, showing what was the result when they were sent to present themselves for employment. It is quite a short statement. (*See Appendix No. III. (C).*)

90653. There were twenty-one sent; what happened?—(*Mr. Crowther.*) We issued an advertisement inviting employers of labour to co-operate with our bureau, and in response the Lancashire and Yorkshire Railway Company informed the committee that they were requiring working men from eighteen to twenty-one years of age, with a view to their being apprenticed to the work in the locomotive sheds of the company and gradually to be absorbed in the regular staff at the standard rate of wages. The wages to be paid were to be 18s. a week. Twenty-one men on this list of unemployed were at once informed by the bureau staff of this opportunity for work; sixteen men failed to appear as requested; of the five that presented themselves at the company's office, one was not found suitable on account of his height, four accepted the work and were instructed to start on a particular day, and out of these four, one failed to appear.

90654. What was the class of work? Was it work that an unskilled handy man could do?—(*Mr. Watson.*) It was engine-cleaning, with a view to their being taught to be stokers and subsequently engine-drivers. The men were to be from eighteen to twenty-one, all of them had to be single men according to the conditions of the railway company, and they were to leave the Bradford

district and go and live where the work was—at Newton, near Manchester, I think. Those were the conditions under which the work was offered to them. *Mr. Francis Watson and Mr. George M. Crowther.*

90655. How did the sixteen men account for not turning up? What excuse did they give?—I do not think any reason was given. They simply did not present themselves, after the work was offered and they heard what it was.

90656. Various witnesses have told us that there is great tendency on the part of boys leaving school to go into some casual employment which brings in a few shillings a week, rather than to qualify for a skilled trade; have you observed that?—That is so. *Casual boy labour a cause of unemployment.*

90657. It that noticeable in Bradford?—It is.

90658. Then I suppose these sixteen would be the young fellows who had gone through that sort of work and training, and who did not wish to qualify for this regular employment?—You may take it from the figures, which show that the bulk of our unemployed are casual labourers, that they are men who have learned no trade, and that they are not craftsmen. There is very little employment in our district on the part of craftsmen.

90659. Though they may be unskilled labourers, would they be generally in regular employ, or would their employment be casual and intermittent?—It would be casual employment. A job is begun and finished, and then they have to go and find another job as out-door labourers, it might be on a building.

90660. That, of course, is incidental to a particular trade. While the job is on, would they be continuously employed?—Yes.

90661. Now turning to the labour exchanges, it has been suggested to us that if put on a proper footing, they might play a considerable part in distributing the unemployed and finding work for them; what is your view on that point?—(*Mr. Crowther.*) The leaders of the workmen object to that arrangement. *Objections of workmen's leaders to labour exchanges.*

90662. In certain places they have no objection. With you they object, I suppose, on the ground that they think the labour bureau may be used in case of disputes?—Yes, decidedly; and also especially because the railway companies might be able to get men at a lower rate of wages than they would otherwise have to pay.

90663. Was your labour exchange linked up with others, or was it working by itself?—(*Mr. Watson.*) It was working by itself.

90664. What do you think about labour bureaux; do you think you could put them on a useful footing?—If the employers of labour could be persuaded to take advantage of them, I think they might be made useful, even if only applied to their own districts. I am afraid from what I hear that employers of labour are apt to look at people who apply through a distress committee, or through a labour bureau, as people who have a kind of disinclination for work. *Attitude of employers to applicants through a distress committee.*

90665. Assuming that labour exchanges or bureaux were universally established and linked up, would it not be possible to get both the masters and the men to take an interest in them, and to serve as an advisory board, and so, to a certain extent, to dissociate them from the notion that they only supplied persons who come for assistance under the Unemployed Workmen Act?—I do not think that impossible, and if it were possible I am sure it could be made most useful. That is my opinion. (*Mr. Crowther.*) It should be made compulsory for the men to give notice to the bureau when they had found work.

90666. Of course rules would have to be framed. Was any effort made to get over the objection of the trade unions in Bradford to these bureaux?—(*Mr. Watson.*) I do not think the trade unions did object; we never had any active statement of objection, at any rate. I think the objection that Mr. Crowther was referring to was the objection of the men who attended outdoor meetings or the unemployed, and who said they were entitled to have work in the town in which they were living and dissuaded the men from taking occupation in other towns. I think that was more what Mr. Crowther referred to. (*Mr. Crowther.*) Yes, that was it. *Objection of men to taking work in other towns.*

Mr. Francis 90667. As far as you know, there is no insuperable
 local difficulty that you are aware of to prevent an attempt
 being made to get employers and employed to serve on
 a committee?—(Mr. Watson.) I think it would be very
 useful if it could be done.

21 Jan. 1908.

90368. Could it be done?—I think it could be done.

Possibility of 90369. It would supply, I assume, information and a
 employers certain mobility to the poorest class of unskilled labour,
 and employed which is the class that is most in want of knowledge and
 sitting on the committee. of locomotive power?—I think so.

Tendency of 90370. In Paragraph 13 you state that you are rather
 the shiftless afraid that there is a tendency on the part of the shiftless
 to shirk work men, when they once register their names, to think that
 and live on they have done sufficient, and that it rests with the
 the earnings of their families. municipality to find work?—That is so. We are led
 to that conclusion very largely by the fact that of the
 men who were given notice of work when we had work
 which was not very often, only a very small percentage
 turned up—I have not got the figures with me, but I
 think it was about half. (Mr. Crowther.) Of course it is
 possible that they had found work elsewhere. (Mr.
 Watson.) Some of them may have found work somewhere
 else, but in many cases that could not have been so.

90671. In the inquiries you made, did you find that
 any considerable proportion of the married men were
 living on the earnings of their wives and children?—
 (Mr. Crowther.) Yes. (Mr. Watson.) The figures which
 Mr. Crowther has handed in will show that. (Mr. Crow-
 ther.) We found that 441 of the married men had wives
 who were earning an average of 7s. 1½d. per week, and
 that there were 315 boys earning an average of about
 6s. per week, and 306 girls earning an average of a little
 more.

90672. In Bradford there is a great deal of employment
 for women and girls, I suppose?—(Mr. Watson.) A
 very great deal. (Mr. Crowther.) There are about
 33,000 females employed.

90673. Is there rather a growing tendency for the
 men to live on their wives' earnings?—(Mr. Watson.)
 I should not say that, and I do not think so; although
 you may take it that the young women can earn better
 wages than the young men.

90674. I suppose the tendency when the head of the
 family is out of employment is for the other members
 to go out to get work?—I do not think it is specially so
 when he is out of employment; I think they go whether
 or no.

Relief by
 Guardians.

90675. Then as regards the less able-bodied men who
 did not obtain work, I see by Paragraph 15, that they
 went to the Poor Law guardians?—(Mr. Crowther.) Yes.

Effect of
 fluctuations
 in number
 employed
 by the
 corporation.

90676. And that they were placed on outdoor relief?
 —On test work. (Mr. Watson.) On that point, Mr.
 Crowther has prepared a chart showing the result when
 the corporation were employing a great many men.
 There were very few men assisted by the Poor Law on
 our register, and when the corporation were employing
 no men, our numbers went up proportionately. (Mr.
 Crowther.) The chart shows the number of men em-
 ployed by the Works Department of the corporation
 in comparison with other work. In 1903, the corporation
 started an unemployment register, and employed a great
 number of men. I think the chart shows that when the
 number employed by the corporation on their regular
 staff increased, the number employed on the unemploy-
 ment register decreased in proportion. The fluctuations
 in the number employed by the corporation are very
 large. The black line shows the number employed on
 the regular works of the corporation—what we call the
 regular men; the green line shows the number on the
 corporation unemployment works; the red line shows
 the number of able-bodied test workers; and the yellow
 line shows the number employed by the distress committee
 since it began its operations. (Handing in chart.) (See
 Appendix No. III. (D).)

90677. Looking at this chart, it would appear that
 the corporation by giving work to the so-called unem-
 ployed largely diminished their own staff?—(Mr. Watson.)
 No; they diminished their own staff, and, therefore,
 they had more applications for unemployment work.

90678. Would not the diminution of their regular
 staff add those whom they dismissed to the list of un-
 employed?—That is so, it would; but I mean to say
 they did not employ fewer because more were on the
 unemployed list, but there were more on the unemployed
 list because they were employing fewer.

90679. What I rather wanted to come to is this, that
 if regularity of work be the object in Bradford, did not
 the corporation by this policy get rid of a certain number
 of persons who were in regular employ in order to give
 irregular and intermittent employ to a certain number
 of the unemployed?—That was not the object, though
 it might be the result.

90680. Do you think it is satisfactory? Is it not
 inadvisable, if a body keep a permanent staff in regular
 employ, that they should reduce their staff in order to
 give intermittent employment to others?—As I have
 said, that was not the object; if I may explain, it was
 in this way: The corporation were carrying out certain
 regular works which were required by them as the muni-
 cipal authority; when those works were concluded,
 a certain number of men were out of employment; and
 then there came the cry of the unemployed, "We want
 work." The corporation during that period of three
 years before the establishment of our distress committee,
 sought and anticipated all the work they had for years
 to come and let it to an unemployment committee. That
 was all work which was not urgent and which would
 not have been done then but for the unemployment;
 and they collected public subscriptions out of which the
 wages were paid—they were not paid out of the rates.

90681. They were special jobs or tasks which the
 corporation had undertaken?—Which they found for
 the purpose of the unemployed.

90682. I am talking of their own work; there were
 special jobs or tasks, such as the tramways, which were
 concluded, and if there had been no question of finding
 work for the unemployed there would have been a neces-
 sary contraction of the establishments, because the work
 had been completed?—Certainly.

90683. So far as you know, the men were not taken off
 the establishment who were ordinarily in regular em-
 ployment?—No, none were taken off.

90684. (Mr. Bentham.) Are you correct in saying that
 the work was paid for by voluntary subscriptions prior
 to the Unemployed Workmen Act coming into operation?
 Was it not paid for out of corporation funds?—I think
 not. (Mr. Crowther.) The mayor raised the fund. (Mr.
 Watson.) He raised the fund by public subscription. I
 will not say that some of the work was not work for which
 they had borrowed money and for which they were en-
 titled to pay out of the rates, but I think the bulk of it
 was paid by the subscriptions. As to this, the witness
 subsequently sent the following note:—

"If I may be allowed to correct my first statement, I
 believe that so far as the funds for the unemployment
 Committee were concerned, they came from the rates.
 The mayor raised a fund for the purpose of assisting the
 unemployed, most of which was paid over to the distress
 committee but not all."

90685. (Mr. Lansbury.) And some of it came from the
 Queen's Fund, I suppose?—That was subsequently, and
 that came to the distress committee. I am speaking now
 about the works carried out by the corporation alone—
 as a corporation.

90686. (Chairman.) Turning now to your table in Relief
 Paragraph 17, that, I take it, in the second column in-
 cludes those for whom the guardians found work on test?
 —(Mr. Crowther.) Yes, during those years.

90687. And the third column gives the number of
 those who registered their names as unemployed?—
 On the corporation unemployment register.

90688. That was before the Unemployed Workmen
 Act was passed?—That is so.

90689. Then the last column gives the number of men
 who were granted employment relief?—Yes; those
 figures were taken from those who registered their names.

90690. Apparently more persons were granted relief
 in 1905 than registered?—Men were employed in 1905
 who had registered their names in 1904 and 1905. (Mr.
 Watson.) You will see that the years 1904 and 1905 are
 bracketted together.

Works
 created or
 anticipated
 by the
 Bradford
 Corporation
 for the un-
 employed.

How relief
 work for the
 unemployed
 was financed

Relief
 granted by
 various
 bodies before
 the Unem-
 ployed
 Workmen
 Act.

90691. Then the last column gives you practically not the actual number engaged in consecutive years, but the number who in the aggregate were employed during that time ?—During the winter 1904-5 really.

90692. Then apparently there was a considerable rise in the number who were granted employment relief during those two years ?—(*Mr. Crowther.*) May I say that in 1903 and 1904 the corporation arranged a joint committee with the guardians, and the guardians' officers made inquiries into the *bona fides* of these men ? In 1905 they relaxed the rule, with the result that a great many men whom the guardians' officers would not have recommended for work were put on.

90693. This table refers to the period antecedent to the Unemployed Workmen Act ; could you give us the figures for 1906 and 1907 showing what has happened since the passing of that Act ?—The total number of applicants from November 1st, 1905, to September 12th, 1906, was 2,134.

90694. That is not the number of persons granted employment ?—(*Mr. Watson.*) No, that is the number who were registered. (*Mr. Crowther.*) The number who were offered and who accepted work was 237, and the number who were offered work but did not accept it was 230.

90695. So the Act was not a great attraction as regards the number of persons who were granted employment relief ?—That is so.

90696. Was that in consequence of the Act or in consequence of the conditions getting better ?—In consequence of the Act, undoubtedly.

90697. Not of the conditions getting better ?—No, I do not think the conditions were getting better. (*Mr. Watson.*) I think the figures which would be more reliable would be those of the men who, after investigation, were found eligible for work. (*Mr. Crowther.*) Perhaps I had better give you the figures from November 1st, 1905, to November 30th, 1906. We registered 2,230 names in the first year under the Unemployed Workmen Act ; 738 of those were found work, or had removed before we found work, and 160 were found not eligible. Then, from December 1st, 1906, to September 21st, 1907, the total number registered was 1,321 ; 735 of those had found work or had removed after investigation, and 133 were found not eligible, for various reasons. I have detailed those in this return. (*See Appendix, No. III. (E).*)

90698. Is it the fact that those figures rather tend to show that there was a larger amount of employment given by the corporation to the unemployed before the Act than has since been given by the distress committee ?—There were a greater number employed, certainly.

90699. Where did the funds come from by which this employment was given before the passing of the Act ?—I do not know.

90700. Do you know if it came out of the rates ?—(*Mr. Watson.*) I think the work was work for which the corporation had obtained borrowing powers, and was paid for out of the rates.

90701. Would you say that the greater bulk was from voluntary subscriptions ?—The whole, I believe, was from the rates.

90702. Coming now to the work of the distress committee, you made efforts apparently to get private persons or firms to allow you to contract for various tasks in connection with spoil-heaps and deposits ?—Yes. (*Mr. Crowther.*) We have had several offers from private owners, but the distress committee have never seen their way to accept them.

90703. What is the idea about those heaps ? What can you do with them ?—(*Mr. Watson.*) In many cases, where they are not too big if they could be taken away and the land could be levelled it would make suitable building land, or would be available for use as arable land—agricultural land. They are shale heaps from the coal-pits.

90704. Are they supposed to have any particular fertilising value ?—No ; it is merely getting them out of the way. There is an instance given in our report where we, with the sanction of the Local Government Board, purchased a piece of land at Dudley Hill of about 7½ acres

—38,000 superficial yards. The pit-hills were removed, the spoil was deposited down the pit-shafts which had not been filled up hitherto, we levelled the inequalities in the land, and then the land was offered for sale with a view of getting back the money we had expended upon it. At present we have not been able to get any offer for the land whatever ; there seems to be no market for it, the money is lying idle, and we are paying interest upon the mortgage (which had to be raised upon the land) from our rate contribution.

90705. Then your experiment so far has not been successful ?—It has not been encouraging at all.

90706. Do you think that with perseverance something might be done to utilise or get rid of these hideous great deposits ?—I do not think it could be done at a cost at which we could recoup ourselves upon the sale. It would have to be done certainly at a loss. But at a loss it could be done, and the land would be worth something certainly, and it is worth nothing now.

90707. Could the lands be converted into parks or recreation grounds ?—The difficulty is that if you have a park or a recreation ground it costs so much to keep up, and practically we have as many of those in Bradford as, I think, the corporation are likely to approve of for some time. Bradford is very well off in that respect.

90708. Your opinion of the Unemployed Workmen Act is, that though it is a good machine, you want something more so as to be able to provide work ?—That is so.

90709. That is to say, you either want money or you want the power to embark upon a certain class of work ?—We consider, if it were possible, that we might be entitled to lease if necessary lands which are at present derelict, with the object of turning them to some useful purpose.

90710. What do you mean by derelict lands ?—Pit-hills—they are derelict.

90711. Then you would want, of course, increased facilities for raising money ?—We should.

90712. Have you ever thought it possible to combine with other districts ?—That has not been contemplated at all.

90713. But it might be practicable, might it not ? Leeds, now, is close to Bradford ?—Yes, it is close to Bradford ; but that we have never contemplated, and I have never formed an opinion about it. (*Mr. Crowther.*) The great difficulty in my mind is how the men are to be got away to the work if they are taken to a distance, and how they are to get back into regular employment again.

90714. You have not a farm colony, have you ?—No.

90715. Then you must have barracks, or some other accommodation ?—Yes.

90716. Or you must pay their fares ?—Yes.

90717. (*Sir Samuel Provis.*) Do you mean that if they go a long way from their residence they would be taken away from their normal work ?—(*Mr. Watson.*) They lose touch with those from whom they might obtain employment. I may say that the men employed by our committee were only employed on four days every week—on Tuesday, Wednesday, Thursday and Friday—so that they had Saturday and Monday in which to look out for work.

90718. (*Chairman.*) Assuming you could organise your labour bureaux, they would get over that difficulty, would they not ?—Yes, they would.

90719. At least to a certain extent ?—To a certain extent they would—not by creating works but rather by finding work.

90720. Assuming there had been no Unemployed Workmen Act passed, would the condition of things have been worse in Bradford ? Could the corporation have gone on as they did ?—No. I was going to say that the reason why the Bradford Distress Committee have done so little, and have had such difficulty in finding work, is that the corporation anticipated all the work which could find employment for the casual labourer prior to our coming into existence.

90721. Then the corporation were in an indirect way doing the work which by Act of Parliament afterwards the distress committee were set up to do ?—That is so.

Mr. Francis Watson and Mr. George M. Crowther.

21 Jan. 1908.

Experiments of the distress committee in providing relief work.

The Unemployed Workmen Act. How far defective.

Difficulties against combining with other districts.

Remedy of labour bureaux by finding work not creating works.

Difficulties of the Bradford Distress Committee.

Mr. Francis Watson and Mr. George M. Crowther. 90722. And that is one of your difficulties, that you have been forestalled?—We have been forestalled, and the work anticipated.

21 Jan. 1908. 90723. Have you lived long in Bradford?—All my life.

Position of unskilled labour in Bradford.

90724. What should you say as regards the condition of the lower grade of unskilled labour; do you think there is more difficulty now for persons to find permanent employment than there was?—Only to the extent that I think we have imported more than our share of casual labour through the tramway works of the corporation. That will probably become less noticeable as years go by; they will probably be absorbed into the general class of labourers.

90725. Have they pushed out Bradford people, or have these imported labourers themselves been left out?—Both, I think. They have increased the number of casual labourers beyond the demand, and some of them may have got work, and some of those who were there before may have lost their work.

90726. But with that exception you do not think the conditions are worse?—I do not think so.

Effect of limitation of apprentices by trade unions.

90727. Do you see less disposition on the part of the rising generation now to qualify themselves for regular work and to look out for work?—I think the difficulty is that in many trades the trade unions do not allow more than a limited number of apprentices. That prevents some learning a trade who otherwise would have learnt a trade, if it had been open to one who wanted to be apprenticed to a trade to be apprenticed.

90728. Do you think that limitation has done harm?—Undoubtedly it has prevented a certain number of men learning a craft.

Effect of the Workmen's Compensation Act.

90729. Now as to the Workmen's Compensation Act, do you think it has reduced the age at which men can get employment?—Undoubtedly.

90730. You have no doubt about that?—I have no doubt about it.

90731. (*Mrs. Webb.*) You said that some of the money was raised by subscription?—Yes.

Relief works run by the Bradford Corporation. Methods adopted.

90732. Surely not to do corporation work?—No, but for the purposes of the distress committee.

90733. But the work actually done was paid for out of the rates, was it not?—It was for the unemployment committee.

90734. Surely a municipal corporation could not possibly spend money, except out of the rates, on tramways and that sort of things?—It is in this way: there was an unemployment committee consisting partly of the corporation, partly of the guardians, and partly of other people outside; and the corporation placed certain work at their disposal which was done and paid for out of the rates, but the corporation did not necessarily get the full value out of the labour employed.

90735. Then you mean the amount was made up?—The amount was made up by the rates. The total cost to the rates was, I am informed, £11,502 3s. 6d.

90736. The corporation, so to speak, paid what it otherwise would have paid to a contractor, and then any additional cost coming through employing less efficient labour was paid for by the unemployment committee; was that it?—I believe; but I would not speak confidently, because I was not on the committee, that the whole was from the rates.

The wages were paid direct to the men.

90737. With regard to the payment of the persons who did this work have you ever paid any of the wage to the wives?—No, that has always been paid direct to the men.

90738. Have you never given any part of the relief in kind?—No.

Standard rate of wages paid, but shorter hours worked. Object of this.

90739. Has it been a rule that you give the regular wage, or have you given rather less?—We have given practically the regular wage, but we have not employed them for a full week, so that they did not earn as much as a man would earn working a full week; but, differently to the casual labourer, they were paid wet or fine, whether they were working or not. If they were rained off, and had to shelter from the rain, they were still paid their wages.

90740. Were they paid by the day and not by the hour?—They were paid 5d. per hour.

90741. But for a minimum period?—For a minimum Standard period of four days of eight hours a day. (*Mr. Crowther.*) rate of wages paid, but shorter hours worked. Object of this.

90742. It strikes me, watching that sort of work done that it is rather bad for the labourer to be so much under-employed. Do you object to it? I mean to say he is not doing a full week's work?—This only being temporary work, we are not entitled to employ them beyond a certain number of weeks, and therefore it was desirable that they should have the opportunity of obtaining regular employment, so Saturday and Monday were given to them for that purpose.

90743. Do you still think that it is a desirable arrangement?—We think it a better system than that adopted by the corporation, by which the men worked alternate days. They were put on without much investigation, and many of the men much prefer to work one day, and then to have the next day to play.

90744. Is not the whole theory of under-employment relief works a bad one?—I think it is if it means permanency, that is, if the man is going to be employed permanently; but if it is merely to meet a period of temporary out-of-work, I think it may be very useful.

90745. Have you ever considered the possibility of establishing an organised system of labour exchanges for the casual labourer all over the country, and making it compulsory on the employer to take his casual labour from the labour exchange?—Not making it compulsory on the employer to take it from the exchange; I have not considered that.

Question of compulsion on employer to take casual labour from the labour exchange.

90746. How does it strike you? Supposing you said to the employer: "You can if you like give a legal minimum period of employment, that is, you can employ people by the month; but if you prefer to employ casual labour, you must take it from the national exchange," so that all such labour would be dove-tailed?—As a matter of my personal opinion, that would not commend itself to me.

90747. You would object to compulsion?—I should object to compulsion.

90748. But you would approve of the dove-tailing of the labour that would be employed, would you not?—I do not object to that.

90749. It is the compulsion you object to?—Yes.

90750. (*Mr. Bentham.*) With regard to the corporation employees, you have already stated, I think, in answer to a previous question, that the corporation employed men by fits and starts, that is, there were a large number one week and fewer the next week, and so on?—Yes.

Effect of fluctuation in corporation employment.

90751. You remember Mr. Pringle visiting Bradford for the purpose of getting information for the Commission, he got some particulars on this point?—Yes.

90752. Do you consider that it is a good thing as far as the workers in the town generally are concerned that the corporation should fluctuate in their employment?—I think it is a very bad thing if it could be avoided and I think it ought to be avoided even at some extra cost to the corporation.

90753. The corporation really are the largest employers of casual labour in the town, are they not?—That is so.

90754. Next to the corporation, I suppose, will come the wool-combers?—Yes, if you call wool-combing casual employment; it certainly is unskilled labour. But I am not sure whether the wool-combers or the building trade would come next.

The extent to which wool-combing is casual employment.

90755. Wool-combing really is not casual, is it?—Not quite. They are in regular employment, but the work is unskilled.

90756. (*Mr. Lansbury.*) Do you mean by "regular" all-the-year-round?—Yes.

90757. (*Mr. Bentham.*) At certain seasons of the year it is rather quieter than at other times is it not?—You may take it that the textile trade is always worst in the winter, from about November to February. I do not know why it should be so, but it appears year after year from the figures that any slackness in the textile trades occurs during the winter months.

Extent of winter slackness in the textile trade. Wool-combers.

90758. And it affects the wool-combing more than the other branches?—It affects them first, because they are the first people who have to deal with the wool.

90759. The spinning and the weaving is usually fully employed all the year round, is it not, except in times of depression?—Yes. There is another reason why it affects the wool-combers. It pays better to run wool-combing plant night and day for four days a week than during the day-time for the six days; but the other mills can only run during the day, so that their people are more regularly employed.

90760. Is it not the fact that wool-combing establishments are run night and day usually for the first nine months in the year, and then short of full day-time during the remaining three months?—That is so.

90761. And that throws out of work a number of men who are not highly skilled workmen, and many of them are unable to follow outdoor employment; but for wool-combing they would scarcely ever be employed; they are the siftings of all kinds of trades?—I should think they are the lowest paid of any class employed in the textile industries.

90762. They are consequently face-to-face with poverty immediately they are not at work?—That is so. The wages which they can earn are not wages which enable them to put anything by for a rainy day.

90763. So this gives us really a winter problem?—I think so.

90764. (*Chairman.*) Are they regularly employed four days a week, or how?—A man goes in and works a night, and he does not know till he leaves whether he will be at work the next night or not; and they often turn up to see whether any work has come in during the day.

90765. (*Mr. Bentham.*) It means usually in the wool-combing industry that the women are employed during the day-time and the men are employed during the night at the same work as the women do in the day?—That is so.

90766. Wool-combing is largely a night employment for men?—Yes.

90767. And when the work falls off the night-work stops first?—When the wool-combing falls short the men are out of employment before the women.

90768. Then they have to rely on the earnings of their wives and children, or they have to apply to the guardians or to the distress committee?—Yes.

90769. Would you say that it would be much better for the town generally and for the workers in particular if the corporation had to employ their workmen more regularly?—It would ultimately be much better if they could spread their work over a regular period, rather than have a rush and get something done quickly and then stop their works.

90770. You have a table, have you not, showing these fluctuations?—Yes. If you take the year 1904 you will find that in the week ending January 6th, there were 576 men employed, and that in the week ending April 13th there were 1,118. Then in three weeks in August there were over a thousand. At the end of the year, in October, November and December, it goes down to 500 or 600, so that there is practically a difference of 500 between the winter months and the summer months. The same sort of figures would apply to the year 1905. In 1906 it happens to be the other way, and there were fewer employed by the corporation during the summer; but I think that was very unusual. I hand in this table. (*See Appendix No. III. (F).*)

90771. Now with regard to the class of persons who apply to the distress committee, perhaps Mr. Crowther would be able to answer this question: Is it not often felt that the persons who apply need relief that could not possibly be given by a distress committee? A very large percentage of the men are unsuitable, I suppose, for the work which is offered by the distress committee?—(*Mr. Crowther.*) I found in the first year—and that is the only year I investigated—that about half the workers, through age or physical unfitness, were not fit for outdoor work. I got the corporation gangers who did the work for us to make an investigation and report to me each week, and they reported the number of men who would, if they had been contractors, have been engaged by them.

They said about 50 per cent. would have been engaged by an ordinary contractor to carry out the work.

90772. In dealing with those cases, do you not feel that something should be done for the men who could not possibly be employed, by referring them to somebody or another for some kind of relief? Is not great suffering entailed through these men not being dealt with when they do not go to the Poor Law?—The men are particularly sore upon the point that, when we have made full investigations into their moral character and industrial capacity, they were not put on to work at once. They feel sore that steps are not taken immediately.

90773. About the other class which is considered not suitable at all for work under the distress committee, is it not a very great hardship on those not to have anything at all? They are not told that they are not suitable for relief work, and they are simply left to hope that they might be called upon at some time for work; they do not apply to the guardians, and so they drift on to greater poverty?—(*Mr. Watson.*) If I might answer that for the moment, Mr. Crowther and I have considered whether it would be possible to divide those registering into different classes, and we have come to the conclusion that we have three distinct classes who apply. We have the loafers, viz.:—those who cease work after a few days' trial who, we think, ought to be referred to the magistrate to be dealt with in some way by finding compulsory employment for him. Then we have those who are utterly destitute and who have no income whatever—that is, taking the family as a unit, there is nothing coming into the house either from the husband or from any of his dependants; those we consider a case for the Poor Law guardians. Then we have the third class, where there is some income coming into the house but where the head of the house is out of employment; that we consider is a case which is suitable for the distress committee under the Unemployed Workmen Act. I do not know whether that answers your question?

90774. No, not quite. The men that I mean are those that are not suitable for work, yet are Bradford men who are drifting on to greater poverty; they are not dealt with by the distress committee, neither do they go to the guardians probably because they would thereby become ineligible for work under the distress committee. Should there not be some closer connection between the distress committee and the guardians in order to have their case dealt with immediately, when they are in want? It seems to be needed, and I want to know what your opinion is about that?—(*Mr. Crowther.*) I am decidedly of opinion that the distress committee and the guardians ought to work together in the matter, and that it is impossible to divide them so sharply as to say who is a man suitable for relief and who is a man suitable for employment. (*Mr. Watson.*) The difficulty in linking the two together has been that there is a strong disposition on the part of people not to apply at all if there is any connection with the Poor Law. It is a sentimental objection, if you like, but it is an objection; and I am afraid that many deserving cases would not apply if it was felt that it was being worked in connection with the Poor Law.

90775. Would you say that the work provided by the distress committee could ever do away with the labour test work which is applied under the guardians?—(*Mr. Crowther.*) No. (*Mr. Watson.*) I do not think so.

90776. Why?—(*Mr. Crowther.*) Because there are a certain class of persons who are physically unfit for ordinary outdoor work, who could be found a certain kind of work by the guardians.

90777. Of a lighter kind?—Yes, of a lighter kind. (*Mr. Watson.*) A modified test.

90778. So that it really means that there would have to be continued some method of dealing with the people out of employment who are in distress and destitute through want of employment, side by side with the work done by the distress committee?—Undoubtedly. (*Mr. Crowther.*) I am strongly in favour of a test-house or a test-workhouse for the so-called able-bodied men who could have work on the land, of which there should be so many acres in connection with each workhouse in a large urban district.

Mr. Francis Watson and Mr. George M. Crowther.

21 Jan 1908.

Suggested classification of applicants to the distress committee.

Difficulties in linking distress committee with guardians.

Continued necessity for labour test of guardians.

Mr. Francis 90779. To suit these men who are not fully capable of doing a day's work under the distress committee? They could be dealt with by that means?—Yes.

Mr. George 90780. (Chairman.) Would you not have them permanently on your hands then?—Not necessarily so. They would be in touch with their families, and when an opportunity arose they would be able to be taken out by the relatives.

Continued necessity for labour test of guardians.

90781. That is the class, I understand, who, from physical defects or a low physical standard, have a difficulty in finding any place in our present industrial system?—That is so.

90782. Surely what you are recommending means, if it is to be effective, that it must be permanent employment?—Every destitute man, I think, who applies is a proper case for the Poor Law.

90783. (Mr. Bentham.) But this is not quite a destitute person; as I understand, it is a respectable person who has a difficulty in getting employment because he is not up to the standard?—But he is destitute, of course, or he would not apply.

90784. I do not quite see the difference between that class and the feeble or inefficient who apply to the Poor Law?—Those are naturally Poor Law cases.

90785. These cases ought not to be dealt with by the distress committee?—No, by the Poor Law.

90786. What I want to show is whether there is a large number who apply to the distress committee for whom you have no hope of providing suitable work through the distress committee?—Not by outdoor labour, at any rate.

Questions what work distress committees can provide.

90787. You have no other form of labour to suggest that could be taken up by the distress committee to employ them, have you?—None whatever.

90788. (Mr. Lansbury.) Is there any reason why you should not find other work for them? If the guardians can find other work, what is to prevent you doing it?—In my opinion the guardians would find other work of a light nature in connection with work on the land.

Suggested modification of the Poor Law.

90789. My only point is, why should these particular men, who are respectable men, go to the Poor Law and become paupers?—Of course, I do not say that they should lose their civil rights.

90790. Then you would get the law altered, so that they should not become paupers?—That is so.

Extent of success for emigration.

90791. (Mr. Bentham.) With regard to emigration, some attempt has been made at emigrating a few men; has it met with any amount of success?—No, not at all. We sent out fifteen men with their wives and families in May, 1906, after searching inquiries had been made into their antecedents.

90792. In all these cases were the committee satisfied as to their being suitable people to emigrate?—They were the very best men we could find.

90793. Trustworthy people, so far as honesty was concerned?—Yes.

90794. You had expectations that they would refund the money which was the cost of their emigration?—That is so.

90795. What has been the result of that?—We have had 10 dollars returned to us.

90796. Was that all from one man?—Yes.

90797. You have particulars of all the fifteen cases here, I suppose?—I have a list here in a report from the Salvation Army, who acted as our agents in the matter, as to the condition of the men in Canada.

90798. Could we have the whole of the fifteen cases put in?—The report was made to us on February 12th, last year, and it appears in our Second Annual Report (See Appendix, No. III. (G).)

90799. (Mr. Lansbury.) Were the men doing all right?—(Mr. Watson.) That all appears in our Annual Report.

90800. (Mr. Patten-MacDougall.) Have any of them been sent back from Canada?—(Mr. Crowther.) No, they have not been sent back. (Mr. Watson.) But one or two have come back.

90801. (Mr. Bentham.) With regard to the numbers Number who registered themselves, the number who are on the register, no register at any given time is not a correct indication of the number of men who want work, is it?—(Mr. Crowther.) No, I should say not.

90802. Many of the men have already found work, but have not told the committee so?—Of course, men who have found work never do let us know, although they are requested to do so in every case.

90803. Is it not the fact that sometimes these men, not being permanently employed in their present occupation, place themselves on the register while they are still in employment, so that they might have work ready for them when they get out of employment?—I could not say that, but I know that the men we found work for through the labour bureau did not report themselves to us, and the reason given was that they thought they might not have it permanently, and therefore they had better keep their names on the register.

90804. Is it not the fact that the men register themselves more than once on the same register; that is, they have registered their names and nothing has been heard of it, then they have got work and they think they have been crossed off the register, and subsequently they re-register their names, so that you have found the names recurring on the same register?—Our register is prepared in such a way that the men could not do so on the same register, but there are recurring registrations on two registers. We open a new register in each year, and of the men who were on the first register 521 re-registered themselves on the second register.

Register, how it is prepared.

90805. On p. 7 of your Second Annual Report I find in Table B that the total number of individuals registered was 6,705, whilst the total number of registrations was 11,219?—Quite so, but those are not our registers; those are the registers of the unemployed before the passing of the Unemployed Workmen Act. (Mr. Watson.) That is the corporation register. (Mr. Crowther.) That applies to the corporation register, certainly, but not to our register.

90806. Not to the distress committee's register?—No. Our register is kept in a very different manner to that.

90807. (Professor Smart.) I see in your list of registered men seventeen miners; are these coal-miners?—Yes. Few coal-miners apply

90808. Is that a common thing?—There are some coal-miners in the neighbourhood.

90809. I believe the experience of Scotland is that a coal-miner never applies: coal-miners and sailors, I believe, are the two exceptions?—Of course, they called themselves coal-miners when they applied, but I have not investigated that.

90810. What manner of investigation do you make into the applicants?—We send a visitor to the home. Methods of investigation employed.

90811. What kind of visitor?—A man.

90812. Is he an official of the Poor Law?—No, he is an official of the distress committee.

90813. He has not been employed by the Poor Law then?—He never has been.

90814. Is he an experienced man in any way?—No, they have not any experience except they have acquired it in their work. (Mr. Watson.) We selected the best of the applicants that we had for the position of investigator. That was how it was done.

90815. Did any applicants from the Poor Law apply, do you know?—We did not appoint any. I do not recollect whether any applied.

90816. Do you not think it would have been very desirable to have had some?—(Mr. Crowther.) There were a certain number of men employed by us to aid the corporation in their inquiries under the previous régime, but these men were not appointed by the distress committee when they took office.

90817. Have you any reason to believe that the investigation was very strict?—I think they were as strict as possible under the circumstances, but the investigations are not as strict as those of the Poor Law, by any means. The investigations not so strict as those of Poor Law.

90818. And you made no use of the investigations of the Poor Law at all?—None whatever. (Mr. Watson.) There was a strong feeling amongst many members of the committee against employing an investigator who

had been employed by the Poor Law, because they wanted to dissociate the distress committee from the Poor Law on account of the sentimental objection there was to it. That was the reason it was done.

90819. They carried it against you?—Yes.

90820. Was the investigation made by the corporation formerly as strict as that now made by the distress committee?—No. (*Mr. Crowther.*) Not nearly so, and the corporation did not accept the results of the investigations either. The distress committee in every case accepts the report of the investigators, and puts no man to work whose answers to the inquiries are not satisfactory; but in respect to the corporation a great many men were put on whose answers were not satisfactory.

90821. Do you apply to former employers?—Yes, in every case.

90822. Do you find them answer quite readily?—Yes.

90823. With regard to the labour bureau, is that under the distress committee entirely?—Yes.

90824. Then inevitably it has become associated with an exceptional method?—Yes. It is the place where the men register.

90825. It is not a general labour exchange at all?—No, not at all.

90826. So that anything your experience teaches you from the present bureau is of very little importance with regard to a general labour exchange?—The only steps that were taken by the distress committee with reference to it were that we advertised in the local press inviting employers of labour to search our registers and select men; or if they applied to us, we sent them the names and addresses of any suitable men.

90827. But they naturally would presume that you had not the sort of men whom they would like?—We advertised that we had suitable men of certain classes on our registers.

90828. The inference being that the men who were being registered by the distress committee would not be men such as an employer would willingly engage?—Naturally, I think not.

90829. I see you say in Paragraph 8 that 30 per cent. of the men employed were "average workmen"?—Yes.

90830. Did you mean by that that they were worth the standard wage?—That they were men who had been employed, and who would be employed if there was the work for them, at the ordinary standard rate of wages.

90831. Men you would have taken on and paid the standard rate to?—Yes.

90832. Now with reference to these twenty-one exceptional men that you were speaking of, were they all men who had come up before the distress committee?—They were; they had all registered their names.

90833. You said a little while ago that if the labour exchange was instituted it would require to get the co-operation of employers, and you suggested that a certain number of employers must be put on the committee?—Yes.

90834. Is there not also another requisite, namely, that the superintendent of the labour exchange should be a man who is fit to talk to employers?—Decidedly.

90835. So that an ordinary working-man would not do?—For a superintendent of a labour exchange he would not do at all, I should think. He wants to have a general knowledge of the requirements of the different trades.

90836. So you must look out for a highly-paid official?—Yes.

90837. Do you think on the whole now that a permanent distress committee works better than the former intermittent corporation unemployment committee?—I should imagine it is decidedly better. (*Mr. Watson.*) The work is much more thoroughly done.

90838. And you want an organisation that is always at hand?—(*Mr. Crowther.*) Yes.

90839. With regard to emigration, what was your principle of emigration; did you emigrate whenever you could?—A list of the men who desired to emigrate was kept, and when it reached a certain proportion—a

number of about 100—investigations were made into the circumstances of the men and of their families. If a man had a wife and a family who were earning wages, they were not emigrated, and if a man was of an undesirable character, he and his family were not suggested for emigration. (*Mr. Watson.*) Although there were twenty-eight persons emigrated, there were only fifteen families—that is, fifteen men.

90840. (*Mr. Phelps.*) Were there any single men?—The fifteen men with their wives and families made up the number to twenty-eight.

90841. Then none of them were single men?—There was not one single man.

90842. (*Professor Smart.*) Was the feeling in the committee in favour of emigrating single men, or against it?—(*Mr. Crowther.*) The feeling was against it.

90843. Then you would say that those whom you emigrated were really the best of those who applied to you?—They were the best of the persons who applied to be emigrated. (*Mr. Watson.*) And the most suitable. (*Mr. Crowther.*) They were the most suitable, certainly.

90844. (*Mr. Phelps.*) The object of the Act we are discussing is, is it not, to find employment for artisans and a high type of labourer who are in temporary want of employment?—To find work, not necessarily for a high type of artisan.

90845. That was the intention as stated by the men who promoted the Act, was it not?—Yes, that was what was stated by them in debate, but that is not the wording of the Act.

90846. And you have not worked it in that spirit, I mean?—Not at all.

90847. I ask the question, because in Paragraph 19 you say that a certain situation arose from the fact that the corporation committee relaxed their efforts to select the really destitute from the number of those applying. Do you think that destitution is the real test to apply under the Act?—That paragraph applies to the employment found by the corporation before the Unemployed Workmen Act was brought into existence.

90848. Do you think the corporation would be justified in taking destitution as their test?—No, but I think they were justified in taking character into consideration.

90849. Is all that you complain of that they did not select the really destitute? My point is this—is not destitution rather a Poor Law distinction than a distinction for a distress committee?—My point in writing that sentence was that the best men, the most suitable men, had not been selected. (*Mr. Watson.*) I think the word "destitute" there should have been "suitable"; I think that would have been the better word there. (*Mr. Crowther.*) I meant really necessitous cases. When you have several thousand men, certainly the first men who ought to be dealt with are those who need it the most.

90850. (*Mr. Lansbury.*) Might they not be the least worthy?—Possibly.

90851. (*Mr. Phelps.*) I rather understood that the class was the class you describe as the people who were not entirely destitute but had something with which to go on. In Paragraph 21 there is an expression which rather puzzles me. You say: "We feel that the Unemployed Workmen Act is an admirable machine on the understanding that the distress committee have work on which they can employ the men;" what exactly is meant by the word "work" there?—(*Mr. Watson.*) It might be "work" or "works"—it means any employment offered. At present if we had any names on our list, we have no employment to which we could send the men.

90852. Does the word "work" or "employment" there mean employment arising naturally, or employment artificially created?—Either; it means work of any kind.

90853. Then it would include employment artificially created?—It would undoubtedly.

90854. In that case, is the difficulty so much in the way of finding work, as of finding the means of paying for it?—(*Mr. Crowther.*) It is the difficulty of finding work, or finding works rather. (*Mr. Watson.*) You can always find work if you are prepared to pay for it, if it is only in

Mr. Francis Watson and Mr. George M. Crowther.

21 Jan. 1908.

The objects of the Unemployed Workmen Act.

Destitution as a test to employ under the Act.

Defects of the Unemployed Workmen Act. Lack of powers in distress committees.

Mr. Francis Watson and Mr. George M. Crowther. moving all the slag heaps in England; but whether it is going to be work which would, in any sense, be remunerative or not, is another matter.

90855. Exactly?—If you say: Can we find work?
21 Jan. 1908. I say yes, but whether it would be remunerative or not, is the question.

90856. Very good; so you mean by "work" there, remunerative work?—Or work which cannot be conducted at an absolute loss of the whole of the money spent upon it, or the greater part of it. The committee, I believe, would be quite willing, and have shown themselves willing, to conduct works which could not be done at a remunerative rate, but still which did not entail practically the complete loss of the money expended.

90857. Can any Act of Parliament guarantee you a supply of that kind of work?—I do not think it could if it left it to the local committee to carry it out, but if they embark on national works they might be able to do it. (*Mr. Crowther.*) Except in so far as the reclamation of land goes.

Difficulties in the way of schemes of afforestation.

90858. I only want to call your attention to the fact that there is an ambiguity in the use of the word "work" there. Now with regard to the schemes of afforestation; have you gone into the question of afforestation at all, and the possibilities of it?—(*Mr. Watson.*) Yes, we have in this sense, that we have applied to the waterworks committee of the corporation, who have very large areas of land, most of them twenty or thirty miles away from the city, moorlands and lands upon which the farms have been allowed to go out of cultivation, so as to prevent the water being polluted. We thought that they might have lands which could be used for afforestation purposes. We applied to the Waterworks Committee, who had reports made to them by the waterworks engineer, and by a gentleman skilled in forestry; but the reports were unfavourable. They had a small area of about fifteen acres adjoining one of the reservoirs about thirty miles away, on which it was said we might plant willows, but the conditions were so stringent, in order to prevent the pollution of water, that it would have been quite impossible to have carried out the works.

90859. Taking the question of afforestation in the larger sense, have you gone into the evidence at all with regard to the possibilities which it gives of the number of people that you could employ upon it, and so forth?—The only experience we have is the experience of what they are doing in Leeds.

90860. I was going to ask about that?—We have seen their report as to what they are doing, and it does not seem that you are able to employ very many men per acre.

Question of labour colonies and small holdings.

90861. With regard to home colonisation, what was in your mind under that head?—We were thinking in that respect of labour colonies.

90862. And not of planting out families into the country?—No.

90863. Then you think that the corporation might be able to lease plots of land for the purposes of the Small Holdings Bill?—(*Mr. Crowther.*) That statement was made before the Act was passed.

90864. Do you think you have any large number of people in Bradford whom you can plant away in the country?—With their families on small holdings?

90865. Yes?—No, I should think not; it would be a new line of business entirely for them.

90866. Did you see your way to using the Unemployed Workmen Act as a means of educating the people to that end?—As a matter of fact, I am not in favour of a labour colony in connection with a distress committee at all. I do not see how it is to work.

Objects of the distress committee.

90867. What would be your idea with regard to the ultimate aim of a distress committee?—To tide over a temporary depression in trade simply.

90868. Do you think that when you have started a distress committee you could possibly restrict it to that?—I mean that the distress committee machinery should always be ready to be used in case of depression.

90869. Not more than that?—Not more than that.

90870. You do not look forward to it as a means of educating persons who are now unfit?—I do not think that is the work of a distress committee, at all. (*Mr. Watson.*) We do not contemplate it. (*Mr. Crowther.*) It might be work taken up by the Poor Law, but it is certainly not work for a distress committee.

90871. How would you guard against people such as you describe constantly making use of the distress committee?—By investigation, and by the strict carrying out of the Act.

90872. Practically the investigation would aim at establishing that the distress of the people was purely temporary?—That is so.

90873. And where it was chronic, you would send them to the Poor Law?—That is so in individual cases. If a man had absolutely no means, we should recommend him to be sent to the Poor Law.

90874. Do you think machinery of that kind might exist permanently for relieving that class?—Yes, on the lines of the present Unemployed Workmen Act.

90875. Do you think it is all possible for working men to insure themselves against out of work?—In the case of the casual labouring class, I do not.

90876. I was not thinking so much of that class. Do you think that the friendly societies could devise any scheme by which they could insure their members against out-of-work?—(*Mr. Watson.*) That is done to a certain extent by the trade unions.

90877. Is it done to any great extent in Bradford?—Yes, to a very large extent.

90878. Do you find that no trade unionist comes before the distress committee, in consequence?—Practically none, and therefore, I do not think that our table does show accurately the whole number of the unemployed.

90879. Do you think that the friendly societies could frame a scheme which would cover the people outside the trade unions?—I do not see how you could frame a scheme which would deal with those who are not members of a society, because if you did, you would have those who were willing and did work, paying for those who are not so anxious to work.

90880. This is the point I wanted to get at: Can you guarantee against malingering?—I do not think you can.

90881. How do the trade unions do that?—They do it the best way, I believe—by having a club doctor to whom the man has to apply if he alleges any illness, and then the doctor has to certify. Then they pay the contributions, I believe, by one of their own visitors who goes weekly and sees the man and reports.

90882. I can quite understand the case of a man who is out of work through illness, but I want to take the case of a man who is out of work through trade depression. (*Mr. Lansbury.*) Excuse me, but does not the trade union act as a kind of labour bureau, and has not the man to sign a book every day?—I think so.

90883. And if the trade union knows of work anywhere, the man has to go to it, or his pay is stopped?—I think there is something of that kind, but I am not conversant with the details of how it is done.

90884. (*Mr. Phelps.*) They do succeed in doing it?—I think they do. I do not think they have much malingering amongst their own people.

90885. All I ask is, do you think it is possible that that same principle could be extended?—I do not see how it can be done with casual labour; I should think there are many difficulties in the way. (*Mr. Crowther.*) There are many people who are living on the borders of pauperism.

90886. I am not thinking of the difficulties of finding the men, but I am thinking rather of the difficulties of drawing up a scheme of payment. Do you think it would be possible to arrange a scheme of payment which would guarantee the society against malingering?—By contributions from among the labourers themselves? (*Mr. Watson.*) From any source—from a fund to be formed for the purpose is what you mean, I think.

90887. If the trade unions have so arranged the contributions of their members as to guarantee them against

Difference between its work and that of the Poor Law.

Possibility of insurance of working men against out of work. By trades unions.

Guarantees used by trade unions.

Difficulties of extending the principle to casual labour.

an out-of-work period, can the friendly societies do the same thing; that is really what I want to ascertain?—The friendly societies are for those people who are able to put something by and who join and subscribe, and I think that the man that we are speaking of now, the casual labourer, is in such a state of poverty that he is not in a position to pay such subscriptions, even if he is in work.

90888. Supposing that he was, do you think that they could formulate such a scheme?—I think it would have to be on the lines of the trade unions if it were done.

90889. With regard to the emigration of these people, on the whole you say that your committee is not in favour of emigration?—Yes.

90890. Have you many foreigners at Bradford?—A great many. We have not the foreigners that you get in the poorer classes; all the foreigners in Bradford are well-to-do. We have a large number of German merchants and their clerks, and people of that description; but we have not the foreigners who come from Russia and Poland, like those in Leeds in the slipper trade and the tailoring trade. We have not got those trades in Bradford, and so we have no poor foreigners in Bradford.

90891. There is no influx of people from abroad into Bradford, is there?—No, not at all.

90892. Do you think there is any influx from the country?—I do not think so, because all round Bradford and the district, for 11 and 12 miles round at any rate, it is one series of manufacturing towns. They are called villages, but they are villages of from 8,000 and 10,000 to 15,000 and 20,000 inhabitants, and they all have their own factories and their own works. It is all semi-urban around Bradford; it is not rural.

90893. Do you find that you get a large number of people in Bradford among the labouring population whose parents are country folks?—I should not think so.

90894. Perhaps Mr. Crowther knows, as he would have more experience of that?—(Mr. Crowther.) Not in recent years. Twenty or thirty years ago it was so, because the population increased very rapidly, but of late years I should say not. All the present generation, speaking generally, are the children of townsmen. (Mr. Watson.) I think that is shown by the increase in the Census Returns. What has been the increase in the last twenty or thirty years? Mr. Bentham would probably know, but I think it is quite normal.

90895. (Mr. Bentham.) It is lower than the average of the West Riding?—I will take that.

90896. (Chairman.) Following up Mr. Phelps' question assuming you had this permanently constituted distress committee, who would decide when it should be in operation or not?—(Mr. Crowther.) The distress committee itself. It would have periodical meetings, or the clerk would call it together if the number on the register were sufficient to justify that. He would keep a permanent register, so to speak; but I am in favour of the register being started afresh on a certain day each year.

90897. There would always be a heavy local pressure on the committee, would there not?—(Mr. Watson.) Yes.

90898. Assuming there was anything of this kind, you would require to have a very stringent test, independent of the investigation, to prevent persons coming to you who were already in employment, would you not?—(Mr. Crowther.) Of course, if a man was found to be employed when his case was investigated he would be struck off, and that would be generally known.

90899. Would not something more be required? If this machinery was always in existence, would it not be necessary to impose a stringent test on the applicants in order to see whether they were *bona fide* in want of work?—(Mr. Watson.) I think that the tests fixed by the present Act are sufficient for that purpose in that they are only employed for a limited number of weeks, and that the Act gives the committee the power to fix the wages.

90900. But surely that would not meet the situation, because if the distress continued the employment would have to be continued?—We rather thought not. We looked at it from this point of view—so long as it is to be treated in the way of relief only, our relief works could be kept open for so long as it was felt they were required, and then we could stop the works. That is why we specify the class of work that would be suitable. Then

we could re-open our works when the unemployment became such as to demand that they should be re-opened.

90901. I was thinking rather more of the rate of payment, which I believe is demanded in certain quarters shall be the standard rate?—What we have been paying is slightly below the standard rate.

90902. You would probably get the most inferior workmen who would be first out of employment?—Yes.

90903. If, then, you gave them the standard rate that would practically be a premium on the less efficient?—I agree.

90904. How would you deal with that difficulty—because it would be a serious difficulty?—It would be a very serious difficulty, and I think that something rather less than the standard rate of wages would be sufficient by way of relief, seeing that this is not intended to be a trade supply requiring regular workmen, and that it is only temporary.

90905. In fact, you must have some substantial obstacle to prevent a man leaving his employment in order to come and get employment under your distress committee?—That we feel.

90906. You think that could be done by some difference in the wage?—I think there should be a difference in the earnings—it might be a difference in the wage per hour, or it might be a shortening of the number of hours per week worked, partly so as to give a man an opportunity of looking for other employment, and partly so that he should not be able to earn the same wages as a man in regular employment.

90907. But some safeguard on that point would, in your judgment, be very necessary?—I think so.

90908. (Mr. Gardiner.) We have had evidence that prior to December, 1905, the Bradford Corporation put in hand public works for the benefit of the unemployed?—(Mr. Crowther.) They did.

90909. And that in consequence of this their regular staff was out of employment and were walking about the streets?—No. That is not the inference I wish you to draw.

90910. That is not what you told us, but what we have been told in another statement that has been put in with reference to unemployment in your city?—I should not say that.

90911. You could not confirm that statement from your own knowledge?—No.

90912. (To Mr. Watson.) Could you?—(Mr. Watson.) Except to this extent. As a member of the corporation I can say this, that they have never been short of any workmen that they have wished to employ, and that they have always been able to get their casual labourers. It is only when they have ceased to require them that the number of unemployed has swelled, and they have had to find them employment by the relief works which have been mentioned.

90913. What I understand from this statement which I hold in my hand—and it is a local statement—is that the regular labourers employed by the Bradford Corporation were walking about the streets, having been displaced by people put on by the distress committee?—I should deny that statement entirely.

90914. Even if it had been made by one through whose influence I suppose the employment was given?—I do not admit it at all.

90915. Even supposing it was made by the chairman of the works committee, or the surveyor of the department?—Yes, I should not agree with that. I should be very much surprised to find that that was true.

90916. Would you think that he was labouring under a misapprehension?—I should.

90917. And also would you say that, since the Act came into operation, that is since December, 1905, there has not been any similar result consequent on the action of the distress committee, that is to say, you have had none of the regular staff displaced?—I do not think so, because we have been applying to the corporation the whole time to find work for us, and we were prepared to give them men who would have done their work, but they never applied to us.

Mr. Francis Watson and Mr. George M. Crowther.

21 Jan. 1908.

Rate of wage paid on relief works.

Disputed effect of Bradford Corporation relief works on the regular staff of the corporation.

Mr. Francis Watson and Mr. George M. Crowther. 90918. And they never, as far as you know, displaced members of their regular staff in order to find work for your hands?—I never heard of it, and I was a member of the corporation for eight years prior to November 1st last, when I resigned. (Mr. Crowther.) Might I just supplement that? It may apply in this sense—that in December, just before Christmas, the Mayor decided to have the streets swept and cleared of snow and a great number of men were employed at his request, in fact, several hundred men were employed by the corporation to clear the streets. They did displace, I have no doubt, a certain number of the ordinary workmen of the corporation. (Mr. Watson.) It was only for forty-eight hours. (Mr. Crowther.) Yes, it was only for two days.

90919. The statement on which my question was based was certainly made some time in July, 1907, but as far as you know that is a mistake?—(Mr. Watson.) Yes.

Number and class of investigators employed by the distress committee. 90920. Would you mind telling us what investigating staff you have in connection with the committee?—(Mr. Crowther.) We employ investigators when we have works, but we have no works at the present time, and so we have no investigators, but we have employed from four to six.

90921. From four to six investigators, do you mean?—Yes.

90922. What are they doing between whiles, because investigation means training, does it not?—They find other employment.

90923. Then they have to be trained every time because you do not always get the same men, do you?—Generally; we have had no difficulty up to the present. The same men are very glad to come back.

90924. What stamp of men are they?—They are really clerks.

90925. Who are casually employed?—Yes. (Mr. Watson.) I do not think the committee have any reason to be dissatisfied with the work done by the investigators as a whole.

90926. Practically a casually employed clerk—working under your supervision, I suppose?—Certainly.

90927. Is adequate for your purpose?—Yes, because he puts certain specified questions. He is not like a relieving officer who makes a general investigation, but he has to put certain questions to the men, and the information required is specified so definitely that there is not much difficulty in his knowing what he has to do.

Office expenses of the distress committee. 90928. Might I ask what the office expenses of your distress committee amount to?—(Mr. Watson.) For the year ending March 31st, 1906, out of the rate contribution, emigration expenses were £50, and the salaries of officers, £145 5s.

90929. How many officers does that include?—That includes the clerk and the registration clerk. (Mr. Crowther.) I may say that I am not paid a salary at all; I am simply given a sum to provide the office expenses in the way of book-keeping.

90930. So you practically give your time; you are practically a volunteer?—That is so.

90931. Such time as you require you take away from the board of guardians and give to the distress committee?—That is so—by the suggestion of the Local Government Board.

90932. And no one minds?—No.

90933. I suppose it means a good deal more work for you, does it not?—Yes, it is a considerable amount of work—more than I anticipated when I took the work up.

Character of unemployed. 90934. So the eight hours' day would not apply to you. Could you put in, with the additions that you are going to make to your Statement, some information about those sixteen young fellows aged between eighteen and twenty-one, who were offered work by the Lancashire and Yorkshire Railway Company, and who refused it? It is not worth while taking up the time of the Commission now, so long as it gets into the evidence ultimately. I want to know what the training had been, what had been their past career, and whether they were really wastrels by the time they were twenty-one?—(Mr. Watson.) All the cases had been investigated prior to their being offered to the railway company, and the result of those investiga-

tions would appear upon the Report with regard to each one.

90935. Could you give us the information without mentioning names?—Yes, we could give it you under initials, like we have done in other cases (See Appendix No. III. (C)).

90936. It would be very interesting if you would do so, in order to see whether those fellows really had any chance or whether they were simply newspaper boys, and so on?—I think they were corner boys.

90937. (Mr. Chandler.) Can you tell me what particular trade you had in mind when you spoke of the restriction of apprentices by trade unions?—The one that I had heard of was the joiners. I have clients of my own who are in that business, and they are not allowed to have more than a certain number of apprentices to their skilled hands.

Restriction of apprentices by the trade unions.

90938. Is that not a regulation between the Bradford master builders and the joiners?—It may be that, but the trade union are the people who enforce it.

90939. Still you had in twelve months only twenty-one joiners applying to the distress committee?—Yes, that might be so.

90940. Therefore evidently the joinery trade is not under-stocked in Bradford?—At that particular period it might not be, because, as is mentioned in the Report, the building trade was the one which was particularly under a cloud at that time. I believe the same thing applies in other trades.

90941. Do you think that unrestricted liberty to have as many apprentices as possible would reduce that number of 1,118 labourers, which you had to deal with in that year?—I did not put it in that way. I rather said that the fact that we had comparatively few skilled men upon our list, and that the bulk of them were casual labourers, showed that those who had learnt a trade were in a better position than those who had not learnt a trade.

Few skilled men apply to the distress committee.

90942. Statistics go to show that the unskilled are in the majority in every large town, and I take it it would be pretty much the same in Bradford?—No doubt.

90943. All our statistics go to prove that, so it is hardly a question of the restriction of apprentices which causes that big crowd of unskilled. With regard to unemployment, and the men providing for it themselves, I do not think you regard it possible for these 1,118 labourers to provide a scheme of unemployed benefit for themselves—you do not think that this big crowd of labourers could do that, do you?—I do not.

Impossibility of labourers providing unemployed benefit.

90944. It would be a very big expense—too big an expense for them?—They could not do it themselves; that is quite obvious.

90945. And it would hardly be possible for a friendly society to do it, because that is a mixed body of men?—The friendly society relies on the contributions of its members for its funds.

Unsuitability of friendly societies for this purpose.

90946. The very essence of a trade union providing unemployment benefit for its members, and the secret of its success, is that it is confined to one particular industry, and therefore you are always on the look-out for employment for a man, and you are watching him carefully; that supervision could not obtain in a friendly society which is composed of a mixed body of men, could it?—No.

90947. I take it that you approve of the Unemployed Workmen's Act, but you think that it fails in its purpose because the distress committees have not work for the applicants?—I think as a machine for inquiring into the character of those who are seeking employment it is excellent.

Failure of the Unemployed Workmen Act for want of work for applicants.

90948. I understand that from the Statement?—If there were works to which we could send the men, I think the Act also provides an adequate machine for carrying out those works, and so on. The difficulty is that we have not been able to find means to get back practically any part of the money which we spend upon the works.

90949. And in the most favourable cases a considerable time elapsed before you were able to find employment for your people?—That was largely because we had not the works. If we had permanent works which we could begin when unemployment became acute and discontinue when the number unemployed was too small to make it worth while running, that would be of great assistance, and we should be able to work satisfactorily.

90950. In Paragraph 14 you say that not one in fifty thought it worth while to send word to the bureau that they had found work; I assume that was due to the fact that they had waited so long that they had almost given up expecting anything from the distress committee?—It would be more than one in fifty who would get employment within quite a reasonable time. (*Mr. Crowther.*) The one in fifty that I mention in that paragraph relates to those to whom employment had been offered through the labour bureau from private employers. When one offered that work to them, not one in fifty of them took any notice of it.

90951. I thought it was a kind of reproach to the men that as soon as there was an improvement all the able-bodied men desirous of work on being visited by the investigators were found to have obtained employment, and yet not one in fifty thought it worth while to send word that they had obtained employment. Do you think, Mr. Watson, that a scheme of a national character would be most suitable for meeting this defect in the Act?—(*Mr. Watson.*) I think that would be well worth consideration.

90952. (*Mr. Patten-MacDougall.*) You did consider a proposal for afforestation, I think you said?—Yes, we did.

90953. But you found that it could not be approved because of the pollution of the watershed?—Yes.

90954. Did it involve manuring for afforestation purposes, or what was the difficulty?—We did not think so, but there were very severe restrictions put upon the work we had to do. I am sorry I have not got the reports here, but it was quite impossible to do it. That was only a small area of 15 acres of willow, I think. (*Mr. Crowther.*) Yes, it was proposed to be taken for willow planting.

90955. Were you induced at all to consider such a scheme because of the Leeds scheme, which I believe is in operation?—(*Mr. Watson.*) No, I believe, in the first instance, the suggestion was a personal one of my own, and the committee, at my request, passed a resolution asking the corporation to give us certain lands or to report upon the advisability of those for afforestation purposes, being some of the lands which they have for their waterworks purposes.

90956. Do you know whether the Leeds scheme has been a success?—I have only read the reports in the papers. It does appear to have been, I think, reasonably successful. Of course it will be many years before we can tell whether it will be commercially remunerative.

90957. Have you considered whether forestry is work to which you could put these applicants for work?—We did consider that, and we got very adverse reports.

90958. (*Sir Samuel Provis.*) Do I rightly understand that you allow applications to be made to you for assistance all the year round?—The register is always open for these people to put their names upon it, in fact our register has never been closed, but we do not investigate cases until we have some likelihood of being able to offer work. We do not investigate all the cases that are put on the register.

90959. But the decision as to whether you will investigate cases does not depend upon any period of the year, does it?—No.

90960. Only upon the question of whether you have got work?—(*Mr. Crowther.*) That is it.

90961. Would you not meet your own suggestion that you made just now, that you thought the distress committee as a machine should operate when it is really required, by closing your register at a certain time of the year?—The difficulty would be then when to open it. There would have to be outside pressure put upon the committee, and that would be very unsuitable.

90962. Take the case of London: In London a distress committee cannot receive applications except when authorised by the Central Body; and similarly outside London, the Act contemplates, I think, that you fix a period during which you will receive applications. You have not proceeded, I gather, in that way?—(*Mr. Watson.*) The idea was this, that if we closed our register, the only reason for opening it would be that pressure was put

upon the committee, or that the amount of unemployment had become so acute that we ought to open our register and endeavour to do something. We did not think it wise to put the committee in the position of having pressure put upon it from time to time to open the register when we have, as a matter of fact, no work to offer.

90963. Still, if you are going to use the committee as a means of providing work during temporary periods of distress, are you not almost driven to do something of that kind?—Certainly the argument is in favour of that, so far as I can see.

90964. Then another point that has occurred to me, from what you have said, is this: Is there not something to be said for revising the register from time to time?—I think there is.

90965. Would you not get a truer view of the real state of unemployment in your city by some process of that kind?—(*Mr. Crowther.*) That means following up the investigation.

90966. Yes, it does?—The difficulty of following up the investigation is that the applicants then have false hopes that work is going to be found for them, and it would make people much more dissatisfied than they were before. (*Mr. Watson.*) And every subsequent enquiry for the purpose of ascertaining the present position of the person whose name is on the register would give renewed hopes that he was going to have work offered to him.

90967. Could you not get over that in some such way as saying that a man need only be on the register for, say, a month and then he must renew his application if he wishes to be retained there?—I do not think a month would be long enough.

90968. Perhaps not, but say for a certain limited time?—I think something in that direction might be done—every three months, even, might meet it.

90969. (*Chairman.*) If you gave cards or anything of that sort which only ran for a month, a man would have to come back and renew his card?—(*Mr. Crowther.*) That is so, but it would be more costly than the present system—that is all.

90970. (*Sir Samuel Provis.*) It would cost something more, you think?—Yes.

90971. (*Chairman.*) But would you in that way be able to keep a more accurate register of the amount of unemployment?—Undoubtedly if a ticket that ran for a month was issued to each man, and at the end of the month, if he was still out of work, he must re-register his name or have it struck off, that would tend to reduce the number on the list of those really needing assistance.

90972. (*Sir Samuel Provis.*) Take those cases you have referred to of the people who come on to the register with a view of throwing the responsibility, as it were, of their being out of work on to you, and therefore relying upon their wives and families to provide for them; would not those be proper cases to reject altogether?—(*Mr. Watson.*) The difficulty is in ascertaining which they are, because you cannot ascertain which they are until you have work to offer them.

90973. Supposing you offer work and they refuse it, might they not be rejected on their refusal?—I think it would be wise to have a regulation that anyone being offered work and refusing it without just cause, should not be eligible to have his name on the register for a couple of years.

90974. The kind of people to whom you refer are just the kind of people who ought to be sent to the Poor Law if they are destitute?—(*Mr. Crowther.*) That is so.

90975. You have suggested that the land purchasing clauses are useless "because the corporation, in forming a distress committee and knowing that they can fall of the land back upon the rates, thinks that it has done its duty towards the unemployed" and will not purchase land for them; that is what it comes to, I think?—Yes, there is great reluctance in purchasing land.

90976. Might that not be met, if the Act was made permanent, by enabling the distress committee to buy land themselves?—At present we buy land, but the corporation have to hold it.

Mr. Francis Watson and Mr. George M. Crowther.
21 Jan. 1908.

Question of revising the register from time to time.

Difficulty of following up the investigation.

A system of registration to be received monthly suggested.

Question of how to deal with those who register with no intention of accepting work.

Suggested amendment to the land purchasing clauses of the Unemployed Workmen Act.

Mr. Francis Watson and Mr. George M. Crowther. 90977. I will put it in another way: Might the difficulty be met by allowing the distress committee themselves to hold the land?—Yes.

21 Jan. 1908. 90978. Of course, they are not a corporate body now, but they might be made a corporate body?—(*Mr. Watson.*) Quite so.

90979. That would meet that difficulty, would it not?—Yes, it would.

Mr. Pringle's report as to men on the unemployed register displacing corporation employees. 90980. (*Mr. Bentham.*) Arising out of the question put by Mr. Gardiner with regard to the corporation employees who were walking about the streets at the time that the special work was provided by the corporation committee, I may quote to you from Mr. Pringle's Report: "In the winter of 1904-5 from 300 to 750 men from the unemployed list were employed under the Street and Drainage Department and it was estimated that the same number of the department's own men were walking about idle. Some had been forced to leave Bradford altogether. In consequence, in May, 1905, a register was made dividing men into those who had worked for the department over five and less than five years. Even then it was not possible to employ all the 'five-year and over men.'" This means that they graded their men afterwards with the intention of calling upon their older hands first?—In what year was that?

90981. This was in the year 1904-5, which was the year mentioned by Mr. Gardiner. I may say that that statement is entirely borne out by the surveyor. Then I may say that the number of men employed by the corporation just prior to this being started was 1,000, and when

they commenced to employ the unemployed the corporation were only employing ordinarily 570, so that they had dropped down 500 men who had been regular employees when they started these works for the unemployed?—I will take the opportunity of investigating that. I suppose it is Mr. Dawson's Statement that Mr. Pringle is relying upon. I think either Mr. Dawson has not understood it or Mr. Pringle has not, or else I have not—I do not know which it is.

As to this the witness subsequently sent the following note:—"With regard to both this and the previous question, I think there is some misapprehension. There is no doubt that the corporation, at a time when the ranks of the unemployed were swelled by a large number of corporation workmen out of work, did, by anticipating works, as I have before mentioned, offer work to the unemployed committee through the street and drainage committee, but as this work was not sufficient to provide labour for all the unemployed, many men, who had at some time been corporation employees, were still out of work, and had not registered their names on the employed register, were not included in the number, and may have walked the streets, but to say that the corporation dismissed any of their regular employees, in order to find work for the unemployed committee, or that any of the corporation's employees who were out of work, could have been in employment but for the operations of the unemployed committee is not correct. Pressure, however, was brought to bear upon the corporation to carry out some of the works it had borrowing powers for by corporation employees on regular lines, but this proposal was not accepted."

Mr. John Richmond Cooper.

Mr. JOHN RICHMOND COOPER, called; and Examined.

21 Jan. 1908. 90982. (*Chairman.*) You have been good enough to send us a paper relating to a particular class of work which you think might advantageously be carried out by distress committees, and if you will kindly hand it in we will treat it as your evidence-in-chief?—Certainly (*The Witness handed in the following Statement.*)

Town Clerk of Walsall. 1.—I have been Town Clerk of the County Borough of Walsall for the last 23 years, and had had 23 years' experience in municipal and local government administration previous to my appointment.

Statistics as to Borough. 2.—Walsall is a county borough in Staffordshire, and had a population of 86,430 according to the census of 1901. It is now estimated at 96,000. The borough is on the green borderland of what is known as "the Black Country," being ten miles north of Birmingham, six north-east of Wolverhampton, and seven of Dudley. The towns of West Bromwich, Wednesbury, and Darlaston adjoin it on the south and south-west.

3.—It is a purely manufacturing town, its staple trades being the tanning and currying of leather, the making of harness and saddlery, and also of tubes and all kinds of light iron castings. There are also some clothing factories of considerable size in the town.

Personal experience of work of distress committees. 4.—I have taken an active personal interest in matters relating to the relief of distress in the borough during the last 30 years, and am now clerk to the Distress Committee for the borough.

5.—It has been my experience that the greatest difficulty of a Distress Committee in dealing with applications for assistance is the provision of suitable work for applicants.

Necessity for providing "Spade and Barrow" work. 6.—In my opinion—and it is the result of my experience—"spade and barrow" work is the most suitable for the general class of applicants. Stone-breaking is too laborious, and unfitted for any except those who have been accustomed to it or similar work. To others it is more of a punishment than employment.

Suitability of pit mounds and waste lands. 7.—Within or on the confines of the Borough of Walsall there are some 300 or 400 acres of pit mounds or slag heaps, which would provide suitable employment in times of need if they could be acquired on reasonable terms, but from actual experience it is found that when a Local Authority seeks to acquire them the terms asked for are prohibitory.

Negotiations for purchase of pit mounds at Bentley. 8.—In 1906 I sought to acquire an area of 144 acres at Bentley, on the confines of the borough, with a view to the Distress Committee putting the unemployed

to work upon it, but could not succeed in my negotiations. The land was practically unenclosed, let at a nominal rent, I believe, of £10 per annum for the grazing on some parts of it on which grass grew, and I offered £750 for it, but this offer was refused, and the negotiations fell through. The land would have cost £200 per acre to level, which is considerably more than it would be worth when levelled, but the great advantage of its purchase would have been that it would have furnished suitable work for hundreds of men who at that time were on the verge of starvation owing to the depressed state of trade in our town.

9.—It has been proved by experience that these waste lands can be brought into cultivation by the expenditure of a moderate amount of money upon them. About 25 years ago the Corporation acquired 46 acres of pit mounds, known as "Reedswood." This has been converted into a public park after being used as a tip for ashpit refuse for some years, and there are now plenty of trees growing upon portions of it from 20 to 50 feet high, with butts 36 inches in circumference. The bulk of the levelling and spreading of street sweepings and soil was done in times of distress by the unemployed, under the supervision of the borough surveyor.

Other towns in the vicinity have since carried out similar works and converted like lands into parks (Wolverhampton and Wednesbury).

10.—In South Staffordshire it is computed that there are about 30,000 acres of pit mounds and spoil banks, which are capable of being dealt with in the like way. I submit a plan showing these lands which are indicated thereon by black patches.

11.—The Midland Reafforesting Association, of which Sir Oliver Lodge is president, are doing an excellent work in planting spoil banks and waste lands, and they estimate that there are 14,000 acres which could be planted at once if they could only obtain possession and the necessary funds were at their disposal to defray the cost of planting, which is not great. The Association employ casual labour for the preparation of the ground, and some of it has been obtained through Distress Committees.

12.—Local Authorities have two difficulties to deal with in acquiring land for public purposes—the first is that they possess no compulsory powers to compel an owner to sell—the second is that an owner usually asks such a high price, including compensation for prospective value, as to make the purchase impossible,

Mr. Pringle's report as to men on the unemployed register displacing corporation employees.

Waste lands can be brought into cultivation at reasonable cost. Experience at Reeds Wood.

Area of pit mounds, &c., in Black Country. Plan.

Work of the Midland Re-afforesting Association.

Difficulties in the way of Local Authorities acquiring lands.

except on such terms as are prohibitory. Where the price is to be settled by arbitration the proceedings are protracted and costly, and the authority has generally to pay the costs of the arbitration in addition to an extravagant price for the land.

13.—In the case of pit mounds, spoil banks and other similar lands, which in their present condition are practically unproductive to the owners, it is submitted that a distress committee, or the Local Authority appointing it, should be empowered to apply to a Court of Summary Jurisdiction, or the judge of a county court, to require any owner thereof to show cause why the land should not be taken by a distress committee for the purposes of the Act on such terms and conditions as the court or judge should think fair or reasonable, and in case of sufficient cause not being shown by the owner, the court or judge should be empowered to make an order vesting the land in the Distress Committee (or the Local Authority) on such terms and conditions as the court or judge might think fit. By this means the Distress Committee could obtain, without unnecessary delay, possession of suitable land and be able to provide work for many years for the unemployed, while unsightly pit mounds could be levelled and planted, and in course of time land now waste could be brought into cultivation and rendered fit for small holdings or allotments.

14.—I do not think that by adopting this course any great injury would be caused to a landowner. In its present condition the land is practically valueless to him. It would not be unreasonable to contend that the annual value of it to the owner should be determined by the amount at which it is assessed for rating purposes, as this represents the value on which the owner's contribution to the local rates is based.

90983. (*Chairman.*) You are both Town Clerk and Clerk to the Distress Committee of the County Borough of Walsall?—I am.

90984. I suppose your difficulty in that double capacity is in finding suitable work?—That is so.

90985. Work which does not compete with private enterprise, and yet would not be a sheer waste of money?—Yes.

90986. You have come to the conclusion that these mounds and slag heaps give rather a favourable opportunity for work?—I think so from my experience of pit mounds and slag heaps, and suchlike places. Altogether, as I have stated in my proof, there are about 30,000 acres in the Black Country, and from 400 to 500 acres in the borough which I represent.

90987. You have given us a map?—I have. (*Map not reproduced.*)

90988. A certain amount of work of this kind has been done by your corporation?—That is so. For some years past, whenever the opportunity has occurred, the corporation have found work in times of distress upon land over which they had control; but that work has now been exhausted; and after the distress committee was appointed under the Act of 1906 an effort was made to obtain additional land, so as to continue the employment, but that was found to be impossible. As you are aware, no compulsory powers are vested in local authorities for that purpose. They can only acquire by agreement, and that has been found to be next to impracticable.

90989. Let us look at this question from two points of view. Let us see to what purpose these heaps could be put; and next let us consider, assuming we come to the conclusion that some public advantage may accrue from their being dealt with, what machinery you would want to gain possession of them. On your map there are a number of little p's. Do they represent parks?—The p's denote parks.

90990. Sir Oliver Lodge's name is mentioned. Does he believe that you can make use of these spoil banks?—He does; and not only so, but the association of which he is the president have proved it by actual demonstration. They have already planted about 100 acres with trees.

90991. Have these deposits any special fertilising qualities at all?—No, I cannot say that; but trees will grow well upon them. Since sending you my Statement

I got the park-keeper to measure some trees for me, all of which have been planted since 1886 upon these pit banks, in a park which the corporation made out of 46 acres of this kind of land; and I find that I under-estimated in my Statement both the height and the girth of the trees. There are trees which since 1886 have grown to a height of 60 feet and have a girth of 60 inches. I have prepared a list of the different kinds of trees, the different heights, and the different girths, in case you would like to have the information.

90992. What is their general character? Are they deciduous trees, most of them?—They are black Italian poplar, wych elm, Huntingdon willow, alder, birch (the poorest land the birch will grow upon), the sycamore, the Lombardy poplar, the horse-chestnut, and the ash.

90993. They have all done fairly well?—They have all done very well; but it must not be forgotten that mixed up with the spoil bank was the town refuse, and consequently that would give some nourishment to the trees when planted; but some of the land which has been undertaken by the association of which Sir Oliver Lodge is the president has not had that advantage. That is simply the pit mound without any deposit upon it.

90994. Of course, there is a limit to the number of parks that localities could want. Is there any other purpose to which you could put them. Could you make them the sites of houses, or utilise them for building purposes?—Many of these pit mounds could at very slight expense be converted into useful land. I have many instances in my own mind in our own borough where that has been done. The truth is, to make them productive they want one of two things: they must either have labour or they must have capital spent upon them. It is no uncommon thing for a poor man to be allowed to cultivate some of these waste lands, to do rough levelling; and in course of years he is able to obtain a crop from them.

90995. Is your experience, which is, of course, of the Borough of Walsall, the same as that of other towns similarly situate; have they been able to make use of these?—Yes, a number of towns in South Staffordshire; for instance, Wolverhampton.

90996. These various p's, I suppose, mark parks which have been purchased?—Some of them refer to parks constructed out of ordinary land, they are not all parks constructed out of pit mounds. The towns in the immediate neighbourhood of Walsall which have constructed parks out of pit mounds are Wolverhampton and Wednesbury; they are the only two that I know of.

90997. These pit mounds, of course, ruin the landscape and they are almost a nuisance?—That is so.

90998. I suppose there is no power of proceeding against a person who piles up these nuisances?—None whatever.

90999. You have great difficulty as a corporation in acquiring possession of these?—That is so.

91000. Is that because theoretically if you purchase these heaps you have subterranean rights?—The moment a local authority seeks to purchase, that moment the vendor applies himself to see what value it is possible to attach to these lands, and, consequently, you have a fabulous price put upon them. For instance, some of the shale in the heap they say in course of time will be available for brickmaking, it may be they consider there are still some unworked measures of minerals underneath the land, and you have to face claims of that kind the moment you come to acquire the land.

91001. The claims under the ground seem to me rather a substantial difficulty?—They are.

91002. The claims above ground, I should think, could be more easily disposed of?—Your idea was that there under should be some compulsory power for getting possession of these?—I think that is the only way really of dealing with the matter. Such powers have been given under an Act of the last session of Parliament, the Small Holdings and Allotments Act, but as to these waste lands, these pit mounds, I think you want to go a step further even than that Act. If they are to be made of any use the local authority must be able to get early possession. There should be no waste of time in applying machinery.

Mr. John Richmond Cooper.

21 Jan. 1908.

Growth of trees on the pit mounds.

Pit-heaps require capital or labour spent on them.

Use to which pit mounds have been put in South Staffordshire.

Difficulties in the way of local authorities acquiring land.

Powers should be given under the Small Holdings Act 1907. Need for extension of these.

Land wanted
for distress
committees
for relief
works.

91003. We will put the character of the machinery on one side for the moment; supposing you get this power do you think you would in future years be able to find a certain amount of work?—Undoubtedly; I have not the slightest doubt whatever about it. This year if we could acquire a sufficient area of land, the distress committee would be able to put men to work upon it, and at the same time provide much needed employment for unemployed persons who are fit for employment.

91004. It would be a great boon?—A great boon, in my opinion, and I think that opinion is shared generally throughout South Staffordshire.

91005. Does your borough council hold that view?—It does.

91006. What you want is that where these mounds exists where no use is made of them and where they are an eyesore, that the local authority should obtain, on equitable terms, possession of them?—That is so, but the machinery should be of the simplest and most expeditious character.

91007. I expect if you applied for any such power your purchase would be limited to above ground?—Yes.

91008. You feel the difficulty about having sub-ground right?—I do. On the other hand, it is hardly reasonable to expect that a local authority should incur considerable expense in levelling and planting land and then find in the course of a few years that the mineowner has disposed of any remaining minerals there might be, and in working them the surface is disturbed; and it is impossible to work some of these mines without interfering with the surface.

91009. The surface rights there does not seem to be much doubt about, but it is working underneath. Would the working underneath affect the level above?—I want to point out if there is to be no reservation of the right to work underneath the surface, the actual working is almost certain to interfere with the surface, and consequently the work upon which public money has been expended might be of little value.

91010. Would that be so if the shaft was not in the immediate neighbourhood of the ground acquired. Of course, if anybody could make a fresh shaft through the ground you acquire to get at his rights below, that would seriously interfere with and depreciate the work done?—That would be so.

91011. How would working underground interfere?—The shaft is simply for the purpose of getting to the required depth to drive a heading to get out the coal. It is getting out the coal from underneath the surface by means of these headings which would let down the surface.

91012. Is there much land, the surface of which has subsided in the neighbourhood of Walsall?—Yes.

91013. That is not fit for building purposes?—There is a good deal of land all round Walsall underneath which the mines have been worked, but which have settled down, there being no further working. We have no mines in operation at the present time in our borough, except one undertaking at the extreme northern boundary.

91014. Do you think if there was any question of this kind, of giving additional powers, that you would get the neighbouring borough councils to combine with you in making the request?—I have not the slightest doubt about it. I believe they would all hail it as a measure of relief to the community generally.

91015. What purposes other than public parks could these be put to; could they make building sites?—Some of them could—others could be planted with timber of a kind suitable to be cut early and converted into crate wood and such like things. Some of this timber, as you see from the figures I have given you, is very quick in its growth, and is available for such purposes as I have indicated.

91016. The main objects would be to beautify, or stop the disfigurement of, the neighbourhood, and I suppose to give building sites?—I put it a little higher than that; the main object is to bring into use and for the service of the community, lands which at the present time are practically useless.

91017. And do away with disfigurement?—Yes.

91018. (Sir Samuel Provis.) I suppose you could need to acquire these lands now if you really wanted them for acquire land some specific purpose, could you not?—We do require urgent. them at the present moment.

91019. For any particular purpose?—Yes, to find employment for men who are out of work. To-morrow my distress committee are meeting to consider a number of cases of able-bodied men who have applied to the guardians for relief and have been referred on to the distress committee for them to see if it is possible to find work for them; but I was going to say it is impossible in our experience for a distress committee to find work from other people. They must provide the work themselves. The men who are out of employment, if it is possible to get work, would get it very much better themselves; they know where to look for it, and they get it very much better than any distress committee could for them from a third party.

91020. Have you, as a town council, had occasion to purchase any of these lands for any other purpose?—Yes, I could give you an illustration of what I did. Some few years ago we required a site for an isolation hospital. I had tried by negotiation to obtain a site by agreement, but without any result. An old colliery estate was put up to auction. I obtained a secret commission from my council to buy that estate if possible. I bought 40 acres for £1,300 and I have since been offered £200 more than I gave for the whole for the right to get the remaining minerals under it, to get the unworked measures, because the mine had been abandoned for more than twenty years, twenty-five years, when I made the purchase. I have been offered £1,500 for the minerals, leaving the corporation the right to the surface. If I had tried to buy that land by agreement, I should have had to give three times the money for it at least.

91021. Did you build your hospital?—Yes.

91022. On part of it?—Yes, we employed men at levelling it, and put the hospital upon it, and the hospital has been used repeatedly ever since.

91023. Has there been any working of the measures under that?—No, we have reserved the mines under that portion so as to preserve our hospital. We have done a considerable amount of planting upon it by our own workmen.

91024. Is it, in your experience, possible to acquire the surface rights with a covenant to support?—No.

91025. You see what I mean?—I quite follow, but it is not, and I will tell you why. If you require a covenant to support, the mineowner has to leave pillars of sufficient thickness to maintain that support, and he finds that a very great drawback to the working of the mine. Possibly you might induce him to do it, but you would have to make such a sacrifice in the shape of allowance from the royalty that it would hardly be worth while doing it.

91026. What I was thinking was, if you had compulsory powers would it be cheaper for you to acquire the surface rights subject to a covenant of that kind, or to purchase the land outright including the minerals?—I should say it would be much better that the purchase should be of the entire fee simple, including the minerals underneath the surface.

91027. Would that enable you to sell, or would you think it wise to sell the mineral rights, subject to a covenant to support, after you had acquired the whole of the property?—It would enable us to sell the minerals.

91028. Sometimes it would be prudent to sell the minerals?—Yes.

91029. Otherwise you would have the corporations placed in the position of having to work the mines?—Yes.

91030. Which you would not think desirable, probably?—No. I may say in nearly all the cases I have mentioned you will find the mineral rights of very little value, or they would never have been abandoned. There was some reason for abandoning them.

91031. In these places to which you refer the mineral rights generally are abandoned?—Yes, the whole of them.

91032. Your suggestion is that you should go to a court of summary jurisdiction or to the county court for acquiring these powers?—Yes.

91033. Which you would not think desirable, probably?—No. I may say in nearly all the cases I have mentioned you will find the mineral rights of very little value, or they would never have been abandoned. There was some reason for abandoning them.

91034. In these places to which you refer the mineral rights generally are abandoned?—Yes, the whole of them.

91035. Your suggestion is that you should go to a court of summary jurisdiction or to the county court for acquiring these powers?—Yes.

91036. Which you would not think desirable, probably?—No. I may say in nearly all the cases I have mentioned you will find the mineral rights of very little value, or they would never have been abandoned. There was some reason for abandoning them.

Question as to the best authority to be empowered to grant rights of compulsory purchase.

Extent of
rights which
distress
committees
want to
acquire.

Views of
neighbouring
borough
councils.

Possible
growth on
the pit-heaps
of timber to
be cut.

91033. That is rather a drastic proposal, is it not?—It is, but there is a little foundation for it; under the Lands Clauses Act the Justices have power to settle compensation to a limited amount.

91034. But only after the rights to acquire have been given by Parliament?—That is so.

91035. You propose going to the Justices for the right to acquire, I understand?—Yes, I want Parliament to give that right to the local authority.

91036. What is your objection to some such plan as was adopted under the Small Holdings Act of a Government Department having power to give such a right by simple order?—That would be better than what we have now, but even that machinery must take some time to bring it into operation, and it is to get rid of that waste of time that I want summary powers to be given either to the Justices or to the Judge of the county court.

91037. Is it not likely that Parliament would require some procedure whereby there was a good deal of notice to owners and opportunities given to persons concerned for objections, and so forth, even if you went to a court of summary jurisdiction for power, and that procedure would take time?—Yes, but you see a court of summary jurisdiction would be able to proceed with greater speed than the Local Government Board can.

91038. Even a court of summary jurisdiction must have some local investigation?—No doubt.

91039. And that is what takes time?—Yes.

91040. Therefore, in any case you cannot proceed quite with the rapidity that you can in recovering a civil debt?—I know that under any circumstances there must be a certain amount of time consumed before even a court of summary jurisdiction could do it.

91041. Would you not have the advantage in going to a Government Department that they would have a staff of skilled people who could make the investigation which a court of summary jurisdiction would not have?—I have no objection to that course; I am sure the Local Government Board recognise the necessity for expedition.

91042. (*Mr. Patten-MacDougall.*) About how many men does the Midland Re-forestation Association employ?—They obtain all their casual labour, I believe, from distress committees in the district in which they require it. They have only a few trained planters whom they occasionally employ; they have no permanent staff.

91043. Do they find that casual labour does its work well in planting?—That is so, They say it has worked very well indeed for all the rough work.

91044. Has that been going on since 1886?—For the last four years.

91045. Prior to that, because I think you said they started work in 1886, did they not?—That was the corporation. You are speaking now of the Midland Re-forestation Association. The corporation began work long before that association came into existence.

91046. The planting to which you allude in Paragraph 4 is planting which has been going on for a number of years with this result, that many of the trees are now 60 feet in height?—All that planting was done by the corporation.

91047. Has it been commercially a success? Have they begun to sell any of the wood yet?—No. Of course we have not planted from the commercial standpoint at all. The intention was to convert this 46 acres of spoil bank into a park, and that has been done; but I may say that to a large extent it has been used as a nursery for supplying trees to our other public parks in the borough. I am glad to say we are not limited to one, I think we have five or six at the present time; and the small trees were planted pretty close together, and then they have been thinned out for the purpose of being used in the other parks. This park is not enclosed in the sense of having an unclimbable fence. It is simply enclosed with a post and tube fence so that anybody could get over. We have a football ground, a cricket ground and an open bathing-place, and all the appurtenances of a public park there.

91048. The planting has been more with the view of amenity than commercial profit of any sort?—Yes.

91049. (*Mr. Phelps.*) Supposing you gained your end and secured the opportunity of purchasing the land in this way, what kind of number of people in Walsall have you for whom occupation of that sort is wanted?—Of course, that depends upon the amount of distress which is existing. My own feeling is that a distress committee ought not to hold itself out to find employment for all comers. I think that is a mistake.

91050. What class do you think they should cater for?—We should choose the genuine unemployed man who is thrown out of work through no fault of his own, and who is anxious to do work of some kind, and not able to find work. If you will allow me I will supplement that answer, because I think it may interest you. Our practice has been to find the men three consecutive days' work; we pay them at the rate of 4½d. an hour; and for three days they are at liberty to go and seek for employment elsewhere.

91051. Would it be your idea that you would have a permanent committee for the purpose of the unemployed, or would you think it is only needed at special seasons?—The distress committee should be permanent and would be able to make use of the land whenever necessity arose. They have at their back the trained staff of the corporation, I mean the borough surveyor and all his staff, who can render them whatever assistance is necessary whenever distress reaches such magnitude as to require work to be undertaken.

91052. I see that. What I was thinking is that your young forest might fall on times when the distress committee had no people they wanted to put on that kind of labour?—We should not go on then.

91053. There is constant and continuous work in forestry is there not, in keeping things in order?—Probably what we should do is: we have a large staff in connection with our public parks and any skilled work required to be done in connection with the planting, and so forth, would be done by that staff, but we should always have land available for use whenever necessity arose.

91054. Your idea would be that they should get it into rough order, and then hand it over to the authorities, who would look after it permanently?—Yes.

91055. And whenever the committee was reconstituted they should have a fresh piece?—Yes.

91056. Have you any idea of what number of people you can employ per acre that way?—No, I am afraid my knowledge does not go that far.

91057. Another question of difficulty has occurred to me: how near to your centre of operations could you find these spots?—That is an important question, because we have learned that it is a mistake to deport these men from their homes. If labour is to be of any service it must be where a man can get to and from his family. We could obtain suitable land within a mile and a half or two miles of the centre of our town.

91058. You would not be obliged to put up special housing?—No; we should not think of doing that.

91059. When your men are employed in this way how do you propose to provide for their wives and families?—As I told you the practice has been to pay 4½d. an hour, which is a little underneath the trade union rate of wages; but it is believed that that is a wise proceeding. If you find the men work at trade union rates they would never have any inducement to find work for themselves; and what one wants to do is to encourage them to look out for themselves, and get something better. Then as to the wives and families, a man is better off for three days' work a week at 2s. 8d. a day than on nothing; and occasionally we have relief funds and relief in kind has been given to the wives and families of the men employed.

91060. From voluntary sources?—Yes.

91061. Do you think that men engaged in work of this kind would be unfitted for going back to their ordinary work?—Not in work of this kind; I do not think it would unfit them.

91062. It would be spade work, would it?—Yes; that sort of man could do spade and barrow work, as I call it, because the pit mounds are not heavy material at all,

Mr. John Richmond Cooper.

Richmond
Cooper.

21 Jan. 1908.

they are light to handle ; and a man will do that work, and be able to go back and follow his ordinary employment. For instance, when the South African War was over we had an immense amount of distress amongst the saddlers and harness-makers. I know many men brought up to those trades who had worked at them all their lives who undertook this kind of work, and when trade got better went back and followed their own occupation.

91063. I was going to ask you with regard to the saddlery trade ; you do not think it would disqualify a man from that ?—No ; it is not like stone-breaking, which jars a man's muscles and unfits him for his trade.

91064. Have you a distress committee in work now ?—Yes.

91065. What employment do they find for the unemployed ?—At the present time they have no means of finding employment. It is useless going round to manufacturers who already have more men than they can keep going.

91066. They have not started stone-breaking yards yet ?—We have not started that ; there is a meeting to-morrow to consider what can be done.

91067. (Professor Smart.) With regard to your calculation in Paragraph 8 as to the area of 144 acres, it was estimated it would cost £200 an acre to level ?—Yes, that is to make it perfectly level, or make it fit for building purposes.

91068. That would be a cost of £28,800 ?—It would.

91069. And you offered £750 for it ?—I did, because the levelling which the distress committee would undertake would be of a very different character to that which would be necessary to fit the land for building purposes. It would only be such rough levelling as would be necessary to fit it for agricultural purposes.

91070. Then it would not have cost £200 to level ?—We should not have spent £200 upon it.

91071. You would not ?—As a fact we should probably have spent not more than £20 an acre upon it at the outside.

91072. Still £20 even would be a very considerable sum ?—It would ; but when I say £20 I mean for levelling and planting. The tree planting would be a very trifling matter when the levelling was in hand.

91073. You look forward to work of this sort costing you a very great deal ?—I look upon it as the cheapest kind of work we can undertake to find employment fitting for the men who are likely to avail themselves of it.

91074. You are thinking of suitable work ?—I am ; I think I used that expression.

91075. Certainly not remunerative ; I should be inclined to say certainly very unremunerative, but probably it is the best you can make of it. You think it would cost less to employ the men in that way than in any other way you can think of ?—I certainly think it would.

91076. Even on a labour colony ?—Yes ; personally I have had no experience of a labour colony, but so far as my knowledge goes, the objection to a labour colony is that you remove men from their families, and the man loses the interest he ought to have in the maintenance of his family in consequence. He looks upon his family as being created for the State to take charge of.

91077. That is all true, but still even at £20 an acre, you are making this land cost £3,000, to begin with ?—That is very likely, but we could easily spend £3,000 on the relief of distress without getting any return whatever for our money.

91078. (Mr. Bentham.) There were 144 acres : did you offer £750 for the lot ?—Yes, £750 for the whole. It is a fact that for some eight or ten years that land had not been producing more than £10 a year, and there is no probability of its producing more.

91079-80. (Professor Smart.) Is nothing done with those spoil banks ?—No. These spoil banks will be probably from 15 feet to 20 feet in height from the surface

of the ground, between them there will probably be a valley of 15 or 20 feet, sometimes more. In that valley a little herbage will grow in the course of time, and somebody will take it and turn a poor cow or two on it, and graze it for what it is worth. That is the only practical use they can turn it to until some money has been spent on it.

91081. In Scotland we have found two remunerative uses for this, we make it first of all into red "blaes" when near a city where you have a demand for red cinders, and it has been found profitable to make it into bricks, so that our heaps round Glasgow are used in these remunerative ways. May it not be the case that your landowners, knowing of this, are waiting till invention goes a little further south ?—It is a case of hope deferred maketh the heart sick, I think.

91082. (Mr. Bentham.) What number of unemployed have you on the register that you could deal with at the present moment ?—I could not tell you at the present time. To our knowledge there will be perhaps from fifty to sixty applicants, but the moment it is known that work can be provided you will have ten times that number. Of course, the practice has been to weed out the worthless ones, for I may tell you that I think 75 per cent. of the applicants are perfectly useless as workmen, they never have worked, they never want to work, what they want to get is the daily wage which is paid them.

91083. What percentage would you put it at ?—75 per cent. I should think.

91084. Is there much need in your district for any provision for dealing at all with the able-bodied. Are not they able to take care of themselves and provide for unemployment ?—No, there are times, and especially after a stress of bad weather such as we have had, when outdoor workers who never earn sufficient to save much, and whose habits prevent them from saving anything, must have relief of some kind ; that is it must either be from the guardians or it must be through the instrumentality of distress committees.

91085. Having regard to the habits of the 75 per cent. do you think it advisable to hold out inducements for work at any time that they may need it ?—No, it is not desirable to hold out inducements, but it is desirable that the deserving minority should be provided for.

91086. In operation can you confine the working of the Act to the deserving cases that you have in mind ?—You mean the tendency to attract ?

91087. No, the tendency to deal with those who are less deserving ?—The tendency of the Act has been to check relief given to that class. I think the Act has worked exceedingly well in that respect ; the distress committee have taken the trouble to carefully enquire into every application, and they have weeded out the worthless and sent them on to the Board of guardians.

91088. Under the distress committee you mean that more discrimination has been exercised than there was formerly by the town council ?—Yes, because the town council were not trained to the work ; the distress committees have had experience, and every member of it is experienced in giving relief now.

91089. Have you sufficient faith in a body such as the distress committee is in so administering the Act that these people whom you have said are not deserving under the terms of the Act do not get employment under the committee ?—Only the deserving in my opinion are obtaining employment.

91090. You maintain that that is so now ?—I do, and it is to provide employment for the deserving that I am anxious to obtain these powers.

91091. Would the 25 per cent. be practically the deserving and the 75 per cent. undeserving ?—I should say 25 per cent. would be thoroughly deserving cases.

91092. Have you been able to deal with that quantity at any period since the passing of the Act ?—Yes, more than the quantity ; because immediately after the passing of the Act there was a good deal of distress, and it enabled us to deal with it at that time. Some of the men were employed in double digging at the sewage farm, some were put on levelling some lands we had of

our own, some were engaged in lowering a road which required lowering, because after all up to the present time the corporation is the only body that has been able to find work. You cannot get work found by outsiders.

91093. Is there much work in the local ity for women and children?—No, I should say not, not outdoor work. In our leather trades both women and girls are employed in stitching and so forth, but there are no women working out-of-doors with us.

91094. I meant ordinary employment for women and children in the district?—There are a good number of women and girls employed, but our school age is fourteen, so they are getting a little past children when they are able to go to work.

91095. Are married women employed much?—In some of our local trades they are.

91096. I was only thinking if there was much employment for women and children there would not be the same amount of distress through want of employment as there would be had there been no employment for women and children, which obtains in some districts?—I admit that, but you must bear in mind, if you please, that the proportion of working women and children is very small with us, and there are many instances where a working man would be hardly able to keep a home at all except for the earnings of his children.

91097. Are you satisfied that it is necessary to renew the Act?—My own impression is that the Act should be renewed with certain amendments: one of the amendments being the one I am here for the special purpose of advocating before you to-day.

91098. Any others?—Yes, I furnished the Secretary of this Commission with some particulars of the points which I was authorised by my committee to ask for. The first was that power should be given to distress committees to provide suitable temporary work by opening labour yards, or workshops, and acquiring land for spade work (which is the object I am speaking about now) without any restriction as to the character of the work. Then there should be provision for the contribution of a sufficient sum from the Imperial Exchequer to defray the expenditure of distress committees in carrying out the Act. Voluntary contributions have become a thing of the past, I am satisfied of that, to a very great extent. It is quite possible under exceptional circumstances that a limited amount may be obtained, but no great amount will ever be obtained as long as those best able to pay have to pay through their rates. Then there is the compulsory power of the distress committee to acquire lands. The removal of the obligation to obtain money by voluntary contributions for the reasons I have just mentioned; and the extension of the provisions of the Act to emigration so as to apply to families of married men who have already emigrated. If you would allow me, I would like to say a word upon that. The distress committee have sent a number of men into Canada, some of them were married men with families. The men have not found it the golden land they thought they would when they went. They can get a living for themselves, and they have to work hard for it, because I have been in personal touch with some of these men. When they went out their wives and families were left behind, and they have had to be helped by the board of guardians. It would be a good thing if the distress committee could provide the means for sending the wives and families out to join the men. One of the men in a letter I got a fortnight ago said if his wife and family could be got out he thought he could provide a home for them by about the middle of April. In some of these cases the men were sent out not by the distress committee but by voluntary assistance, some of the Church clergy took an interest in them and raised funds sufficient to pay the passage out, the reason for that being that the men were disqualified from assistance at the hands of the distress committee owing to their having been in receipt of parish relief within the prescribed period.

91099. The distress committee has power, has it not to emigrate whole families?—This is the case where the men have gone out and the families are left behind, and in some cases the men were not relieved by the distress committee.

91100. You mean you want to have power to send a family after the man has already been emigrated by other means?—Yes, I would give that power.

91101. The board of guardians can do that, cannot they?—I know they can, but the board of guardians are not always easy to move.

91102. Are they less easy than a distress committee or a corporation?—I think they are. The guardians see the worst side of the life of the poor, and naturally it makes them a little hard in dealing with them. I am not blaming the guardians, I think they exercise frequently a very wise discretion.

91103. The guardians know more about the cases than the distress committee, is that what you mean?—No, I do not say that; what I do say is that the guardians see the worst side of the poor, the very worst, and naturally, because they have to deal with the lowest. Now the distress committee do not see that worst side, they see a better class of the poor who are entitled to relief as much as the poorest class which the guardians do relieve are.

91104. Is it not true that the guardians see all round the case; they see the good side and the bad side?—I have not said the guardians do not.

91105. A distress committee could not see more than that, though they could see less?—It is possible they see less than the guardians, I admit that much.

91106. (Mr. Patten-MacDougall.) Were these men emigrated with the assistance of the Canadian Government or the Salvation Army, or what machinery was used?—We sent the first batch through the Salvation Army. The Salvation Army took a good deal of trouble, but they lost touch with the men. I believe the Salvation Army undertook too much work, and that consequently they were not able to follow up the emigrants when once they landed in Canada. From the time we sent them until now we have never been able to get any record of what the men were doing, except those who communicated with me personally.

91107. Did they decline to have anything to do with the emigration of the wives and children?—They decline unless a contribution can be made sufficient to cover their expenses. You see the Salvation Army have some very heavy claims on them; I give them credit for all the good they do, or try to do. I think they try to do too much in relation to this emigration question. That is my own personal view.

91108. (Mr. Bentham.) You advocate an Imperial grant for the purpose of paying wages rather than through voluntary contributions, is that not so?—I am not sure that I follow your question.

91109. You say that the day of voluntary contributions has gone, and you advocate that an imperial grant should be given?—I do.

91110. That means for the payment of wages, does it not?—Certainly, and for all the expenses attendant upon the execution of the Act by a distress committee.

91111. You would even go further than the payment of wages, you would go as far as the "fixed expenses of the committee"?—I would.

91112. Would you leave it in the hands of the local committee to deal with the question just as they thought fit, although they were spending imperial funds and not local funds?—Yes, subject to supervision by the inspectors of the Local Government Board. The distress committee have received great assistance from the Poor Law inspectors in the discharge of their duties, and advice too.

91113. Do you mean special inspectors or the Local Government Board Poor Law inspectors?—The Local Government Board Poor Law inspectors.

91114. Then you really bring this under the purview of the Poor Law in that way?—Certainly.

91115. Do you not think really it is only another branch of the Poor Law problem?—Yes.

91116. Do you see any reason why the guardians by some re-formed board of guardians should not deal with the whole matter?—Yes, the complete abhorrence on the part of the honest worker, even though out of employment, to being stigmatised as a pauper by his application to the board of guardians.

Mr. John Richmond Cooper.

21 Jan. 1908.

Powers of the board of guardians.

Men emigrated through the Salvation Army. Refusal of the Salvation Army to emigrate their families.

Imperial grant? advocated with supervision by the Local Government Board.

by Abhorrence of honest worker to applying to board of guardians.

Mr. John
Richmond
Cooper.

21 Jan. 1908.

Abhorrence
of honest
worker to
applying to
board of
guardians.

91117. Can you conceive a Poor Law being so framed that it would make provision for the employment of this class?—I would rather see the law before I expressed an opinion upon it.

91118. I wanted your views on the principle?—I have already put before you my view. The particular thing I want is that you should use your influence as a Royal Commission to get these amendments of the law.

91119. To sum it all up, it is a question of relief, is it not, and you really relieve the able-bodied by providing them with employment. What difference is there in principle between relieving such a man, however respectable, and a respectable man who happens to be in want because he is sick. You allow him to go to the Poor Law with impunity, but the man who is able to work and who would be better able to take care of himself than a sick man you want some special provision made for; why for him and not for the other?—In dealing with the existing state of things, you must take into account the natural prejudice in the minds of the poorer class of people, and their prejudice is against applying to the Poor Law guardians for relief. I could give you dozens of cases where men have starved, positively starved, rather than make the application, respectable men who earned good wages as artisans, and have sold their furniture, everything has drifted away from them, and they would stay at home and starve rather than apply to the board of guardians. That is no uncommon occurrence.

91120. You do not grant that people should get relief on their own conditions, do you?—Certainly not. I think there should be the strictest possible investigation.

91121. Would you let people make their own conditions, because it is difficult to conceive conditions which will not be repugnant to them, and at the same time be in the interests of the community as a whole?—No, I would not let anybody make their own conditions. I think there wants to be a controlling authority, such as a distress committee, which is also controlled by the Local Government Board.

91122. But really it is the conditions of the Poor Law which are repugnant, and not the thing itself. People will go with impunity to the Poor Law in some places, and they will not in others?—That may be; I am only speaking of my knowledge of the poorer classes of the town I come from. I am not going to say but what the Poor Law is wise, although I think it is capable of great amendment. I think perhaps it is well administered by those authorised at the present time to administer it.

91123. From your experience in Walsall you think it is necessary for another body to deal with the respectable able-bodied unemployed?—I think it is well that there should be a separate authority to deal with the genuine worker who is thrown out of work as distinguished from the loafers, the street corner men, who are better dealt with as members of the pauper class and referred to an authority like the Poor Law guardians.

91124. Do you recognise the right of every man to be found employment or subsistence?—No, I do not.

91125. Then your proposal would have its limitations?—What I propose is this, that there should be an authority

with power to give work in cases where they think it is desirable to give such work.

91126. And also where they can provide suitable work?—Certainly, that is my argument, that it should be suitable work that is provided.

91127. Does that not leave it open for the workman to feel that at any rate the community will provide work for him when he is out of employment if he behaves himself, but not if he commits a slip: if he walks straight yet spends his money as he goes along and makes no provision, the community would provide honourable labour for him?—No, my own personal knowledge of working men is just the opposite. I believe they are too proud to apply for relief as long as they can help themselves.

91128. It is said that State provision always reduces the amount of self-provision: you do not hold with that?—It may be so; on the other hand: Is the State to stand on one side and see men starve when it is possible to give them work to do? Danger of reducing amount of self-reliance.

91129. There is a provision you know by law that no person need starve?—I know, but then you brand at once the starving man as a pauper.

91130. (Mr. Lansbury.) There has been a very large extension of public provision through various circumstances during the past 100 years?—Undoubtedly. Extension of public provision recently.

91131. And in the main people appear to have benefited by that public provision in sanitary arrangements, education, public lighting and so on?—Certainly.

91132. You are arguing, so far as I understand it, that when a man is out of employment because there is no means of his getting employment, the State cannot stand on one side and say that man shall starve?—That is my view. Duty of the State towards the unemployed.

91133. And you do not think the public provision made seventy years ago under the Poor Law Act is the proper provision for what we see at the present time?—I agree with that.

91134. In your proposal with regard to afforestation, as I understand it, the question of the cost is not so much the question that is in your mind, but the prevention of the men whom you are dealing with falling into a lower class than you find them in?—That is so. Object of relief works.

91135. You want to prevent deterioration of character?—I want to raise him rather than to lower him. I do not want him to get into the pauper class, I want to keep him above it.

91136. I gather from your statement the reason you advocate this work of afforestation and planting parks, and that kind of thing, is because it could be dropped when there is no need for it?—Precisely. Class of work suitable for relief-works.

91137. And the upkeep of this kind of place is not very much after the initial work has once been done?—It is very small indeed.

91138. One other question about the 75 per cent. of worthless: would you really say of all those you find out of employment that they are worthless because of their own bad character, or because of bad physique, or their not being properly developed mentally?—I quite follow you: the 75 per cent. I referred to are men who are either physically incapable of work, or are morally unfit for it. Physical or moral unfitness of 75 per cent. of the unemployed.

Mr. Thomas
Richardson.

21 Jan. 1908.

Experience
of witness.

Mr. THOMAS RICHARDSON, called and Examined.

91139. (Sir Samuel Provis.) You have been a member of the corporation of Newcastle-on-Tyne for a great many years?—I have.

91140. You are an Alderman, a Justice of the Peace and Chairman of the Trade and Commerce Committee, and have held other offices which have given you a great deal of local knowledge in respect of Newcastle-on-Tyne?—That is so.

91141. You have prepared a Statement which we propose to treat as your evidence-in-chief if you will kindly hand it in?—Certainly. (The Witness handed in the following Statement.)

1. I have been a member of the Newcastle Corporation for thirty years, am an Alderman, a Justice of the Peace, Chairman of the Trade and Commerce Committee and the Schools and Charities Committee of the Corporation, and Chairman of the Dredging and River Works Committee of the River Tyne Commission. During these thirty years I have taken an active part in the affairs of the city.

2. I have not been a Poor Law guardian since the magisterial *ex-officio* qualification was abolished, but as a public man I have kept myself informed upon all public affairs.

3. A labour bureau was formed, as a department of the corporation, some two or three years ago. The proposal was not opposed in the council, the majority of the members thinking it could do no harm and might do good. It was an experiment merely, but looked upon with suspicion, inasmuch as it had a socialist origin and at the beginning a notorious socialist was appointed secretary. This bureau became practically identified with the "unemployed committee" which sprang into existence after the passing of the Unemployed Bill. The bureau has not been a success, and there was no necessity whatever, so far as Newcastle is concerned, for the Unemployed Bill.

4. There has been no abnormal distress arising out of unemployment for a considerable period. The coal trade—with its allied industries, shipping and rail transit (witness North Eastern Railway Company returns)—have been brisk. The manufacturing and shipbuilding yards have been well employed—some of them so busy as to necessitate the taking on of a considerable number of new hands. Skilled labour has had ample opportunities for employment. Unskilled labour has had nearly equal opportunities. The returns of the local Trades Society, published either monthly or quarterly, have made it clear that employment has been good and regular, with one exception—the building trade. After being extremely active, some two or three years ago, that trade has been slack. Speculative builders are engaged largely in erecting houses for the working classes, a considerable portion of which remain unoccupied. This has seriously hit that part of the trade. On the other hand large public building and street improvements have employed a large number of men. In my opinion the speculative branch of the building trade has been adversely affected by the policy of the corporation, who, during the last two or three years, have been erecting dwellings for the working classes. This policy has restricted if not paralysed the speculative trade. With the sole exception of the building trade, all others have been fairly prosperous and the workmen well engaged.

5. It is difficult to ascertain the exact or even approximate number of the unemployed, the returns of the bureau including women engaged in all kinds of pursuits, waiters whose employment is chronically precarious, and a large percentage composed of those who have no adaptability, no training, hangers on, who believe in "jobs," not constant work, and a portion with a "history."

6. It may be taken as a fact—there is no chronic distress by reason of unemployment—and when such distress has arisen in the past, it has been occasioned by severe winters, stopping outdoor work, and by the fluctuation and depression of certain trades.

7. The Poor Law guardians for some time past have experienced no abnormal pressure, but have been and are quite qualified to cope with the difficulty.

8. I think it is highly probable that the institution of the Bureau and Unemployed Committee drew a considerable number of so-called unemployed from outside the city.

9. It must also be remembered that in the best of times, even when there is "a boom" in trade, there is always a considerable number of men on the list of the unemployed. In the case of the organised trades unionists this number is said never to represent less than about 2½ per cent., in the case of non-unionists following similar trades about 3½ per cent.; in the case of organised labourers about 4 per cent., and unorganised labourers 6 per cent. of the total number.

10. The causes of unemployment are difficult to define, and I speak generally:—

(1) I think it is beyond doubt that the effect of the Workmen's Compensation Act has made it extremely difficult for men over a certain age or with any physical defect to obtain employment.

(2) The tyrannical action of trades unions when these are not controlled by thoughtful and far-seeing men. Their action sometimes paralyses industries and leaves results from which it takes years to recover.

(3) Ordinary causes always operating in large cities—*drink*, laziness, want of thrift and application. A goodly number of men believe in "jobs," casual work, not constant employment.

11. As there is no abnormal want of employment and consequently no abnormal distress here, I need not dwell upon the effects. Whenever serious distress has arisen here, say by severe winters, etc., public sympathy has always been evoked. Voluntary distress committees have been formed, money has flown in plentifully, and district or ward sub-committee have administered the necessary relief after investigation into the cases. Even then voluntary there has been a considerable amount of malingering, and caution has had to be exercised.

12. The remedies for unemployment are less legislation, less Government and municipal interference. I have no hesitation in saying that the Unemployed Act will have a most deteriorating effect on the *morale* of that class of the community who are not eager for work. It can only intensify the evil, and especially if loss of vote or *status* is not to follow State or municipal assistance.

13. Any exceptional distress can be met by the community (not when chronic) and by giving more elasticity and power to the Poor Law authorities.

14. To ask the municipality to provide work—as I have argued in the council—*can be no remedy*—it is hardly a palliative—on the other hand is more likely to accentuate the evil. If special work is to be *created this year*, the work wont be required *next*, and another danger is, that the provident and regular workman will be ousted by such provision. After mature consideration I have come to the conclusion that municipal provision of work will intensify the evil and in the end increase the number of the unemployed.

15. The reflex action on the members of the governing body is extremely demoralising.

16. "Back to the land" is the universal panacea. Being in the grain trade and with some knowledge of agriculture and country life—whilst extremely anxious to see some of the surplus population of urban districts back to the land—I am extremely dubious as to the success of such an experiment. The exodus of the people from country to town has a history and a meaning. The change in the conditions of farming and of so much arable land being changed to pasture is not an accident but an evolution, and is the outcome of economic laws and the wants of the British population.

17. A well considered, well organised, assisted scheme of emigration is *the remedy*. If unemployment arises from congestion of population and labour, there is no other remedy. It will not destroy the feeling of self-respect, but on the other hand recognise it and encourage it. Many of the unemployed require to be lifted out of their old roots and environments, and given a chance of correcting old habits, and, under entirely new conditions, work out their own salvation. Many sons of well-to-do parents who have gone to Canada (for instance) have applied themselves to work there that they would not have touched here.

18. Canada (to wit) is in urgent need of skilled and unskilled labour, and to plant the unemployed there is not transportation—not starving this country—but only placing them in another part of their own dominions—amongst their own kin and people—and in conditions which will enable every willing worker to find work and better himself in position, means, health—and in opportunities for his children.

91142. (*Sir Samuel Provis.*) I gather that a labour bureau was opened by the corporation before the passing of the Unemployed Workmen Act? Did that labour bureau do anything to obtain work itself, or did it merely register the names of persons who wanted to get employment, or wanted to get employees?—It registered the names, and then did seek to get situations if it possibly could for the applicants.

91143. Therefore to a certain extent it did work of a similar kind to that of the distress committee?—Yes.

91144. Were the expenses of that defrayed by the corporation itself?—And private subscriptions.

91145. Practically did the private subscriptions cover the cost?—No. For the first two years, I think, the expenses were mostly in salaries and office expenses.

91146. They were borne by the corporation?—Yes.

Mr. Thomas Richardson.

21 Jan. 1908.

Relief of distress in the past by voluntary charity.

Remedies for unemployment.

Deteriorating effect of Unemployed Act.

Proposed greater elasticity to Poor Law Authorities

Effect on governing body.

The "Back to the land" panacea.

A well considered scheme of emigration *the remedy*.

Operations of the corporation labour bureau before the Unemployed Workmen Act.

Expenses, how defrayed.

Mr. Thomas Richardson. 91147. You say in Paragraph 4 there has been no abnormal distress arising out of unemployment for a considerable period. Your statement was sent in some time ago?—In July.

21 Jan. 1908. Increase in unemployment since the Statement was sent in difficult to explain. 91148. Is that quite the case now?—It is not exactly the case to-day.

91149. You might, perhaps, like to explain that a little?—It is very difficult to explain. There are two very strong facts we have to face; there are the returns, for instance of the North Eastern Railway Company and the River Tyne Commissioners—two unfailing barometers of the condition of trade in the North of England, because you will remember the North Eastern Railway Company covers from the Humber to the Tweed, it has the monopoly of railway transit, and their returns in 1906 and 1907 are higher than they have ever been; they have reached a record. The river Tyne Commissioners are a similar barometer for the city of Newcastle-on-Tyne and the neighbourhood. In 1906 their gross receipts were the highest on record, and I am told by the clerk (I am a member of the commission) that 1907 will exceed 1906. All that is an unfailing barometer of the state of trade in our district, therefore it is difficult to account for the number of unemployed increasing except from this fact, that they generally do increase in the winter months. The shipbuilding trade is not now so good, they have not now so many orders; I believe several men have been discharged, and the building trade is extremely depressed, and these, no doubt, have contributed to the increased numbers of the unemployed at the present moment.

Work provided by the distress committee at Newcastle. 91150. In point of fact the distress committee are taking steps, are they not, to provide work at Newcastle?—They are.

91151. And they have a good many applicants?—The corporation really are doing it all; they are providing the work so far.

91152. I forget what the work is?—The Agricultural Show is being held in Newcastle next year, and the levelling and the turfing and the laying of the water conduit pipes is being done by the unemployed. Of course, that work would have gone into other hands. Then there is some levelling down on the estate at Walker, and road-making, and so on.

Question whether the unemployed committee draws in unemployed from outside Newcastle. 91153. You suggest that it is possible, and indeed probable, that the institution in the borough of an unemployed committee drew a considerable number of the unemployed from outside into Newcastle?—Yes.

91154. Do you think by that they come to reside permanently in Newcastle?—Yes I do, they slide in from the adjoining districts.

91155. Of course, they would not be entitled to assistance from the committee, would they, until they had resided a year in Newcastle?—They would not be entitled until they had resided for twelve months.

91156. But they do, in your experience, qualify themselves in that way?—That is borne out by the report of the secretary of the distress committee, Mr. Wood himself, who says they do.

Always a considerable number of unemployed. 91157. In Paragraph 9 you point out that there are always a considerable number of men unemployed: that is not altogether satisfactory, is it?—I have taken it from their own records. I think it is the normal conditions.

91158. I am not questioning the fact, but merely asking whether it does not seem to you that that is an unsatisfactory state of things to some extent?—I do not think it can be considered a very unsatisfactory state of things.

Unionists supported by their unions. 91159. You divide them into two classes—the unionists, and the non-unionists?—Yes.

91160. In the case of the unionists they are supported for a time by their unions?—They are.

91161. Therefore they do not come on the community at large?—No.

Unorganised labourers by the Poor Law and by charity. 91162. With regard to the others, how do they live?—Do you mean the unorganised labourers?

91163. Yes; how do they live when they are out of employment?—That is very difficult to answer. Some of them, of course, have to call upon the Poor Law board;

but in Newcastle-on-Tyne whenever there has been this winter depression a subscription list has been opened, and the money on the whole has been very fairly supplied by the community to tide over the difficulty.

91164. Has there been a diminution in the subscriptions, since the Unemployed Workmen Act started?—Yes; and that is likely to increase.

91165. You think that is attributable to the Act?—Yes.

91166. Is it not partly attributable to the fact that you have had pretty good times in Newcastle?—I do not think it is likely that people are going to pay out of the rates or Imperial taxes and at the same time pay out of their private benevolence.

91167. Has there yet been an appeal for subscriptions this year?—The Lord Mayor has raised a mayor's subscription fund but there has not been a satisfactory response, I think, for that reason.

91168. What amount have they got this year?—I think including £500 from the Miners' Association and a considerable sum, I think £500, from the Wholesale Co-operative Society (I will not swear to the figure of the Co-operative Society, but I know the Miners' contribution is £500); the total was £1,700 when I left home.

91169. I think your view generally would be opposed to the Unemployed Workmen Act?—Yes.

91170. You think the matter might be left entirely to the Poor Law and to private charity?—I think it intensifies the evil, and is calculated to do so.

91171. The difficulty with the Poor Law is this, is it not, that there are certain classes of people who do not like to resort to the Poor Law and yet who do need assistance?—Yes.

91172. How do you meet that?—That is the crux of the whole question, I admit, and it is a very difficult question to answer.

91173. Have you formed any opinion as to it in your own mind, or any solution of it?—Not any solution; it is a very thorny question.

91174. It is to meet that difficulty that the Act is designed?—Yes; but it does not meet it.

91175. No alternative suggestion presents itself to you that is likely to be satisfactory?—I have no alternative suggestion in my own mind at the moment, not to meet that particular phase of the question.

91176. Your own remedy is really emigration, as I understand?—I do not say that entirely; but if the contention is that there is a congestion of labour, and that that is a permanent congestion, it seems to me the only sensible plan is a well-ordered scheme of emigration.

91177. Do you find that the class you wish to help are willing to emigrate?—That I have had no experience of to enable me to say; but I do not see why they should not be. Let me just state this: it is well known to all around here that there is no doubt the middle classes have done the colonisation of our Empire in the past, and are doing it yet; and if the sons of the middle classes go to the colonies to build up their own fortunes as well as the Empire I do not see why the working classes should not go also. I speak feelingly; I have two sons in Canada, and one on his way to Australia.

91178. (*Mr. Lansbury.*) Are there any figures published in regard to Paragraph 8, the paragraph in which you drawn into say that a considerable number of so-called unemployed the city were drawn into the city?—There are no actual numbers from outside that I can refer you to; but I know that Mr. Wood, Causes of the Secretary of the distress committee, confirms what this. I say.

91179. It is the "considerable number" that I am rather upon?—Quite so, I understand your point. I think in a large city like Newcastle you may assume that as a certainty.

91180. Is that because the unemployed committee was set up? There were unemployed committees set up everywhere; I do not quite see why they should want to travel round and lose their rights?—It is because they got the impression, I take it, that the corporation of Newcastle is bound to provide them with work.

Effect of Unemployed Workmen Act on charity.

Defects of the Unemployed Workmen Act.

Difficulties in connection with the Poor Law.

Emigration as a remedy.

Unemployed

91181. But they cannot get it until they have resided a year. If they stayed in their own district they could get it at once, because everywhere there were unemployed committees, it was not singular to Newcastle?—They may have unemployed committees; but they have not the power to employ men such as the corporation of Newcastle possesses. They have not the facilities.

91182. Did the corporation of Newcastle find such a great lot of work for the people? Have you any figures as to how much they did do?—I have given you the actual work.

91183. The kind of work, I know, but the number of those who registered and the number of unemployed are very different things. To the number who registered the proportion who were employed is quite tiny, I believe?—There is a very remarkable fact concerning that, that out of 2,700 applicants at the bureau, after 2,300 being found employment for, only 300 reported themselves, I think.

91184. Have you the reason why they did not report themselves?—It is impossible for me to give that. I am not on the committee. I only state the fact from the report.

91185. Then Paragraph 8 is only a matter of observation; there are no real figures about it?—We have no absolute figures as to Paragraph 8.

91186. Then to go back to Paragraph 3, you say that the bureau has not been a success, and that so far as Newcastle is concerned the Unemployed Bill was not necessary?—Yes.

91187. Of course, a good many people in Newcastle thought it was necessary, and still think it was necessary. do they not?—That is very possible.

91188. The people who are working the Act?—That is very possible.

91189. You have not worked the Act, have you; you have had no experience in working it?—I am not a member of the committee.

91190. You are in the position of the happy outsider who perhaps sees most of the game?—I see most of the game; you are quite right.

91191. Your opinion happens to be entirely opposed to those who happen to have had experience in the matter?—No, I do not think that.

91192. The people who have formed the distress committee?—Yes.

91193. I suppose you will admit they have had some experience?—Yes; but I am not quite prepared to say they endorse the Act.

91194. We have their returns; we need not argue about it. Are there any figures about Paragraph 10, Section (1)?—No; it is impossible to obtain figures on that point; but that is an acknowledged fact in our district.

91195. You are an employer, are you not?—I am not personally a large employer of labour, indirectly I am.

91196. Have you any information as to the action of insurance companies with regard to men?—Yes.

91197. Whether insurance companies stipulate that only robust young men should be employed?—They do not stipulate that.

91198. Then what is the reason that the Workmen's Compensation Act should clear these older men out?—Because employers are naturally anxious not to employ men about them who have any physical defects, say partial blindness, or anything of that sort. Any physical defect of that sort may be a very serious thing, and throw the whole machinery of a factory out of gear.

91199. Do you think they employed that kind of man through whom there was that amount of danger before the Compensation Act?—The man may grow into that by service.

91200. What I mean is were these men kept on at the particular work which was that danger before the Workmen's Compensation Act was passed?—I think, to a large extent, they were.

91201. Or were they found other jobs?—Naturally if the foreman or the manager or the master knew that

this man who is in a responsible position had a defect I should think they would try to find something else for him; but that is a difficult thing to do. *Mr. Thomas Richardson.*

91202. Do you think it is a right thing that men should be thrown off because their service has rendered them incapable?—I think it is extremely hard.

91203. You would not advocate the repeal of the Compensation Act, would you?—No, I am not prepared to say that; I am only stating here what I believe is an obvious fact. I do not quarrel with the Act.

91204. You are not here to say that that Act ought not to have been passed?—No, I am not quarrelling with the Act.

91205. Then Paragraph (2): are there any examples where the tyrannical action of trade unions have really hurt industries?—Oh, dear, yes. *Tyrannical action of trade unions, e.g., in the glass trade.*

91206. Are there?—Oh, dear, yes.

91207. Could you give us one or two?—Yes, the glass trade. The glass trade of the Tyne was absolutely ruined by the opposition of the trade unions.

91208. Because they did what?—Because they resisted the introduction of new machinery, and would not allow the masters to have control of their own works. That is practically what it amounted to. *Resistance to new machinery.*

91209. I suppose that really means that they would not work for the wages and the hours that the employers insisted upon?—No, I do not think it amounted to that.

91210. Was it not a question of hours and wages?—Not entirely; they resisted the introduction of machinery. But that is going back into somewhat past history.

91211. Let us have one, say, in the last five years?—There has been no glass trade in Newcastle— *Consequent ruin of the glass trade in Newcastle.*

91212. Or any trade?—I should think the glass trade now goes back to about twenty-five years ago.

91213. Is the glass industry carried on in England anywhere now?—I believe it is. I cannot go into that. I believe it is in some parts of Staffordshire, and some other places.

91214. So that really all they did was to shift it, perhaps?—The facilities on the Tyne I should think were such as it was difficult to find elsewhere.

91215. You told us just now, and that is what called my attention to this statement, that the returns of the North-Eastern and the returns of the shipping on the Tyne were barometers to show how prosperous things were, and that 1906 and 1907 were the most prosperous years you have ever known?—Yes. *Prosperity in 1903 and 1907*

91216. That 1907 topped 1906?—Yes, judging by those returns.

91217. It did not seem to me that the tyrannical action of the trade unions had ruined Tynemouth, or from the Humber to the Tweed?—I only say that in certain trades they have. Happily for us in the North of England we have trade unions guided by the best men in the country whose names you are all familiar with. I am speaking of other paltry cases of opposition. *Sound policy followed by some trade unions.*

91218. Which after all were a negligible quantity, and which do not account for the unemployment to-day?—It throws the men out of employment, and upsets and disorganises business; it often throws man out of work for months and months. *Extent to which trade unions have disorganised business and thrown men out of employment.*

91219. Honestly we are talking of what happens now, are not we?—Yes.

91220. You have just told us the Tyneside was never so prosperous as in 1906 and 1907?—Yes.

91221. And still you have the unemployed problem; you have a Mayor's subscription, and there are subscriptions through other organisations, the co-operators, and other people?—Yes.

91222. I only suggest to you that the trade unions cannot have ruined Tyneside, and their action was a negligible quantity in the matter?—I have not said that they have.

91223. I gathered from Paragraph 10 (2) that the tyranny of the trades unions is very bad?—But you must take the whole sentence. I said, "Their action sometimes paralyses industries and leaves results from

Mr. Thomas Richardson. which it takes years to recover." I stand by that sentence to this moment.

21 Jan. 1908. 91224. But that is not operating just now ?—Indirectly it is.

91225. On Tyneside ?—In the district.

91226. With all the tremendous increase in business and the prosperity that the returns of the North-Eastern indicate ?—Yes ; indirectly it still operates.

An instance in the building trade.

91227. Could you tell me the trade ? Is it the glass trade still ?—I have given you one ; and there is no doubt about this, too, that the building trade has been considerably affected. I know a perfectly useless strike which took place in Newcastle that lasted six months, and then was given up on the employers' terms ; but the distress created in the city was enormous. These things cannot take place without leaving after results.

91228. I understand rather that it is a good thing they did strike, and did not go on with the building, or they would have been worse off, because they have apparently over-built ?—That was as to one big public building ; that was with reference to speculative building, which does not affect this at all.

91229. After all that building was finished ?—Yes.

91230. So it does not affect the question at the present moment ?—But it cost the employer £50,000, an absolute waste.

91231. Probably he was as unreasonable as the men, although he starved them out ?—I do not think he was.

Faults of public provision of employment on Government lines.

91232. I understand you think there ought to be no public provision of employment for the unemployed ?—Not on these Government lines.

91233. On what lines would you suggest ?—That is a matter again which I say it is very difficult to answer ; but I have got the impression, after the most careful thought and inquiry, that any such provision of this sort will intensify the evil.

91234. Still we have to do something, have we not ?—We have done something in the past. Nobody has ever starved yet that I am aware of.

Question as to number on the verge of starvation.

91235. There are people die of starvation ; I suppose you know that ?—There may be ; but that is grossly exaggerated. All these statistics that are thundered from the platforms about the 13,000,000 on the verge of starvation you know are arrant nonsense.

Experience of the witness.

91236. I suppose you visit the slums or the bad districts of Newcastle ?—I do.

91237. And you know of your own knowledge that that is not true ?—It is not true.

91238. You know it by close inquiry and visit ?—Yes.

Districts from which the unemployed were attracted into Newcastle.

91239. (*Sir Samuel Provis.*) One question arises out of your answer to Mr. Lansbury. Did those people who came into Newcastle to reside in order to get the benefit of the Unemployed Workmen Act come from rural districts or from other towns ?—Practically Newcastle down to Tynemouth and then westward for six or eight miles is all one city ; the shipbuilding trade is down below and Armstrong's works are above, and they would come from both.

91240. The reason of my question is this, that it is only in towns of a certain size there are distress committees. What I want to know is, whether persons came into Newcastle from towns where there was a distress committee or from rural districts where there was none ?—I should think it was from districts where they had little prospect of getting anything to places where they had a prospect.

91241. From the distress committee or otherwise ?—From the committee of the corporation.

Question of causes of the failure of the corporation bureau.

91242. (*Professor Smart.*) In Paragraph 3 you do not hint that the failure of the bureau was dependent upon the employment of a Socialist, do you ?—No, I do not think it was.

91243. You do not mean to imply that Mr. Wood was appointed in order to get an unemployed Socialist a job, do you ?—No, I do not say that.

91244. You agree with the general opinion that Mr. Wood is a thoroughly good man for the place ?—So far as I know.

91245. If the bureau went on he would in all probability be the head of it ?—He would probably be the secretary of it still. I make no reflection upon him personally.

91246. (*Mr. Phelps.*) With regard to the question you were asked as to insurance, do you know on what basis insurance companies fix the premiums they charge firms ?—I ought to know, because I am a local director of the Royal, which undertakes insurance of that sort, but I cannot give you the particulars. If you wish to have the particulars, I will furnish you with them.

91247. Is it within your knowledge that they arrange their premiums according to the number of accidents on the average in the workshop of a firm ?—They have a tariff, and they take the amount of wages paid, and their average is made upon the amount of wages paid in the year.

91248. They do not take into account the number of accidents ?—If they found that this was a dangerous place, I have no doubt that the tariff officers would lay their heads together and fix a higher rate.

91249. A little lower down in your Statement, in Paragraph 13, you say : " by giving more elasticity and power to the Poor Law authorities." Had you anything definite in your mind under that head ?—I am very glad you asked that question, because one of the best versed men in Poor Law affairs in Newcastle came into my house one evening ; he has been all his life at it, and I asked him to read this evidence. He said : " I agree with everything you have said there, except what is in the 13th Clause." He said : " What do you mean by that ? " I said, " I meant this : I thought the Poor Law authority ought to have the power where they found a man with his family in distress to relieve him without putting him to the workhouse test." He then said : " I advise you to strike that out, because it is a power which I would not advise the Poor Law authorities to be granted."

91250. That is, you would repeal the clause which enabled relief to be given to the able-bodied under ordinary circumstances ?—Yes.

91251. Would you give them relief with or without disfranchisement ?—I think relief ought to be given to the able-bodied under ordinary circumstances.

91252. In the case you name ?—Yes.

91253. You think the better solution would be that the guardians should relieve these people with outdoor relief ?—Yes.

91254. Would you enlarge a little what you say in Paragraph 15 about the reflex action on the members of the governing body being extremely demoralising. What had you in your mind there ?—At this present moment there is a re-action going on in Newcastle ; the unemployed will not submit themselves to the Bureau test, and they have formed a Bureau of their own.

91255. In what sense a Bureau of their own ?—It is impossible not to have pressure brought to bear upon a public body such as the Newcastle Corporation, or the Poor Law guardians, under conditions such as these so long as the men possess the vote ; it is patent and it is obvious. I know of several cases in our corporation where if the vote had been taken by ballot the result would have been different from what it was in open voting.

91256. That is to say the people trim their sails to suit their constituents ?—They are threatened.

91257. The corporation of Newcastle has very large charities to distribute ?—Yes, I happen to be chairman of the School and Charities Committee.

91258. Do you think this demoralisation which you speak of affects the distribution of those ?—Not at all. The recipients of them are nearly all freemen.

91259. Do many of the freemen belong to the unemployed class ?—No, I should think none.

91260. Do you go down to the artisan class ?—Yes. They must have been trained to something in Newcastle : served their apprenticeship and obtained their freedom.

91261. Do you think on the whole the physique of the labouring classes has gone down in your experience ?—No, I do not.

91262. Do you think the morale has ?—No, I would not like to say that it has.

Methods of insurance companies in fixing the premiums they charge.

Question of giving greater elasticity power to the Poor Law Authorities.

Relief should be given to the able-bodied under ordinary circumstances.

Pressure put on governing body.

The Corporation of Newcastle's charities.

The physique and morale of the labouring classes.

91263. You think that the Newcastle labourer is as good a man now as he ever was?—I think he is. I think he is getting a little too fond of football and play, but that is not confined to him.

91264. With regard to Paragraph 16 and back to the land, you have there mainly in your mind, I take it, the growth of cereals when you say that the desertion of the country is an evolution and not an accident?—Yes.

91265. Have you turned your attention at all to vegetables in that connection?—Yes, I have.

91266. Do you not think there is a field there for vegetables?—Yes, I think there is a field for market gardening, but that will apply with more emphasis to the South of England perhaps than to the North, owing to the peculiarity of our climate.

91267. You do not think that round the neighbourhood of Newcastle you could raise any very large proportion of the vegetables consumed there?—I do not think we could really. What I had in my mind with regard to the exodus of the rural population to the city was this, I think it is due to the working of economic laws in this way, that the demand for milk has increased enormously in this country of recent years, and the consumption of flesh meat has gone up tremendously: now you cannot have milk without grass, and I believe the farmer has followed the calls and the demands of the public and the call of the market, and he grows that which he finds the readiest market for and which pays him best. As to extending the growth of wheat, for instance, in this country the experience of the last five years explodes that theory absolutely.

91268. In the country districts of Northumberland do you think the average labourer is as well off as the labourer in Newcastle?—That is a matter of comparison. I think the labourer in the country has made a very great mistake: he has seen the wages, for instance, of a fitter in Newcastle as being 30s. He thinks his wage of 20s. is quite out of proportion to the 30s. I have no hesitation in saying that the 20s. wage in the country is better than the 30s. wage in the town.

91269. On the whole, is the country population in Northumberland well housed?—I think fairly well housed.

91270. You do not think any defect in housing accommodation accounts for the incoming to the towns?—I do not think so at all.

91271. What do you attribute it to in the main?—I think for the main reason I have given you. It is a deep question, but I think it begins in this: There is too much rigid uniformity in our system of education. The system of education applicable to agricultural districts should be somewhat different to what it is in towns; the people who are educated there should be led in the pursuit of things bearing on agriculture, horticulture, and so on, to interest them in their work. This rigid uniformity is destroying the mind of the agricultural population. Then, no doubt, they are enamoured of the enjoyments, and so on, of the city, and there is that other point that they think a wage of 30s. in the town is worth so much more than 20s. in the country.

91272. Would you apply any of that criticism of our system of education to the education given in town schools?—I would in country schools.

91273. Would you apply any of it to town schools?—Yes.

91274. Do you see your way to making elementary education more useful?—Yes.

91275. How do you propose to do it?—That is another matter I would have to go into very carefully, but it ought to be more practical.

91276. Would you be prepared to see the school age raised?—Yes.

91277. Would you be prepared to see a system of continuation schools in which people should be taught trades?—I should be quite prepared for it.

91278. Made compulsory?—I think one of the difficulties is that we have not sufficient apprenticeship to business in our country.

91279. Do you see any means by which the apprenticeship system could be revived?—I do not see any objection to it; I think there have been objections taken on the part of trade unions to the number of apprentices. If I am wrong in that I apologise, but I am sure if we had a better organised system of apprenticeships it would do away with many of the difficulties we have to encounter to-day. The unemployed are the unskilled and untrained.

91280. The great difficulty is the facility with which boys at an early age can earn a considerable addition to the family income?—That is so.

91281. Do you see your way to counteracting that at all?—We have plenty of compulsion in education: why cannot we have a compulsory age with regard to that as well? Surely the Imperial Parliament now does not appear to be afraid of compulsion in anything!

91282. Your remedy would be to make education last longer?—Yes.

91283. And see that the children went to school longer?—Yes.

91284. Do you think that would be popular?—I do not think education is popular at all.

91285. (Mr. Lansbury.) On the question of more apprenticeship and more training, unskilled labour is paid at a far cheaper rate than skilled, is it not?—I should think so.

91286. That is because there is an abundant supply of it?—Yes.

91287. Is not one of the objections of the trade unions a perfectly natural one, that if you get an abundance of skilled labour then the price for that skilled labour will fall?—Possibly that may be the reason.

91288. And they have the fear before their eyes of a lower remunerative standard of life?—If that is the reason I do not believe in it.

91289. Very likely; but I only want to get out the trade unionist point of view?—I believe it would have the contrary effect.

91290. Take doctors, for instance; I take it that you know all about poor districts. Have you seen how the abundance of doctors in a district has brought down the rate that a doctor charges for attendance?—I should think that is very possible. That applies all round; it applies in my trade.

91291. Exactly. The more people there are in an industry, and the more people there are looking for a skilled or an unskilled job, the lower the rate of pay?—I do not think the case of a medical man is analogous to this. I would take the broad view that it must be to the benefit of the community to have as much skilled labour as possible.

91292. Under certain conditions, I agree?—Under any conditions.

91293. It is still true, is it not, that at the present moment there are 6 per cent. of the skilled trade unionists out of employment?—No.

91294. If that is so, I am afraid the Board of Trade returns are not correct?—I will be corrected by you if you say that is so.

91295. That is the latest published record; I do not mind your saying it is not true?—The record I took is over six months old.

91296. I suggest to you, that that being so, it does not show a scarcity of skilled labour in the country; it shows that at least of those trade unions who make returns there are 6 per cent. of their skilled members for whom there is no room?—It shows exactly the contrary; it shows the enormous demand there is for skilled labour. Compare this 6 per cent. with the percentage of the unskilled unemployed.

91297. I am bound to say I do not understand that reasoning, that is all, because they are not employed; and if there was a demand for them they would not be registered as people for whom there was no demand?—Six per cent. is nothing.

91298. It is nothing to you or me probably, because it does not affect us, but it is something to those who

Mr. Thomas Richardson.

21 Jan. 1908.

Question of reviving the apprenticeship system.

More compulsion wanted in education.

Reasons why unskilled labour is cheap.

Trade union objection to an abundance of skilled labour

Proportion of skilled trade unionists out of employment at present not serious.

Mr. Thomas Richardson. are part of the 6 per cent ?—That is only in the winter months; they suffer, like the rest of labourers, to some extent.

21 Jan. 1908.

The receipts of the North Eastern and the Tyne Commissioners as a barometer of trade.

91299. (*Mr. Chandler.*) With regard to that unfailing barometer, the receipts of the North Eastern Railway Company, you say it is an unfailing barometer as to the state of industry at Newcastle-on-Tyne ?—It is an unfailing barometer of the amount of trade going on in the district; and the Tyne Commissioners' return is a barometer really of what is going out of Newcastle and the immediate district.

91300. That would include receipts for carrying the coal from the coalfields of Northumberland ?—The North Eastern return would; but the Tyne Commissioners' return is receipts for everything imported and exported.

91301. Assuming there were a great demand for that coal in other parts of the country, the receipts would go up; but it would not necessarily mean good trade in the Newcastle district ?—If the miners are all employed, as they are, and coining money for the owners, it means that the men are all employed and spending money. We are all one district; you can hardly throw a stone without uniting one village to another, or the city to the whole.

91302. It is possible for the colliers to be well employed and spending their money, and the ship-builders to be in the street with nothing to do ?—That is not the case; the ship-builders have been employed until two months ago.

91303. In the last two months the ship-builders have insisted on a reduction in wages ?—Yes.

91304. Assuming that the ballot that is now being taken results in the whole of the men striking, having regard to the fact that there is good trade, would you be inclined then to say that the employers had anything to do with driving the trade away by their action ?—No; the unions agreed to regulate their wages by the condition of trade. When trade is prosperous they get a percentage of the prosperity, but when things go back, and the masters say: "We cannot get orders unless we can work at a less expense," they object; and it is not only that question, but the high price of coal, that is distinctly affecting the industries of the Tyne at this moment.

91305. It has prevented orders coming in for ships ?—Yes, the cost of manufacture is so heavy owing to the price of coal.

91306. That is really the state of the ship-building trade, is it not ?—Yes.

ONE HUNDRED AND FORTY-THIRD DAY.

Monday, 27th January, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman.*)
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.

Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
The Right Rev. The LORD BISHOP of ROSS.

Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. WILLIAM CROOKS, M.P., called; and Examined.

Mr. William Crooks, M.P.

27 Jan. 1908.

91307. (*Chairman.*) You have been good enough to prepare for us a paper on the question of unemployment, which, I understand, represents the views of the Labour Party Members of the House of Commons ?—Yes, that is so. (*The Witness handed in the following Statement.*)

Failure of the Unemployed Workmen Act.

1. The difficulties which undoubtedly exist at present in dealing with the unemployed are created in a measure by the official tendency to crush the problem and not to solve it. The Unemployed Workmen's Act (1905) was the culmination of a general desire to keep unemployed persons from sinking so low as to compel them to apply for Poor Law relief, and yet administrative methods have accentuated the trouble. Names are registered by local committees, sympathy is excited, and the worst cases of destitution are sent on to the Central Body, with the result that the real workman is on the street waiting for a share of employment, which, in thousands of cases, never comes. The limitation of work is not necessarily the result of scarcity of funds. On the contrary, we see year after year relief funds started, huge sums of money raised and distributed in a haphazard kind of way, that does no real or lasting good.

Result of making the Local Government Board the controlling authority.

2. The anticipated benefits of the Act were nullified, we think, by making the Local Government Board the controlling authority. Tradition and precedent, based upon tests of destitution, which have failed in work-

house administration, are worse than useless when applied to the question of unemployment.

3. The Local Government Board have power to hinder, but are under no obligation to suggest schemes of work, and the remarkable difference of opinion existing between it and the Central Unemployed Body for London on such interesting subjects as Hollesley Bay Training College and workshops for women makes the position almost hopeless.

4. The principle we wish to see established is work and not relief for the unemployed. To make this relief wanted possible it is necessary to have the power to organise work and the intention to enforce it.

5. We therefore think that a Labour Department should be created, with a President of Cabinet rank, whose duties should include (a) Collecting all necessary information in reference to the conditions of employments and trade fluctuations; (b) To organise work with a view to lessening the effect of trade depressions upon the men and women thrown out of employment; (c) To encourage employers of labour to send to this Department (but not for publication) the condition of their order books from year to year for the purpose of providing work in the earliest stages of unemployment; (d) To obtain from every local authority in the United Kingdom particulars of all public works which

Proposed Labour Department with a President of Cabinet rank. Its duties.

could be put in hand at times of industrial depression, such as—

Reclamation of foreshores,
Coast erosion,
New roads,
Afforestation,
Cultivation of derelict land,

and land which would be suitable to place families upon to train in agriculture or horticultural pursuits; (e) To provide training and employment for unskilled men or others who are forced out by new methods of production.

6. The Department should be required to certify and submit to the Chancellor of the Exchequer an estimated apportionment of the cost upon—

A. The local rates,
B. County rate,
C. National Exchequer.

7. With this knowledge, the existence of depression in any given district could be met by orders issued to the Local Distress Committee to put in hand some part of the scheduled work.

91308. (*Chairman.*) I should like to supplement your Statement with a few questions?—Please do.

91309. You think that the anticipated benefits of the Unemployed Workmen Act have been greatly curtailed by the action which the Local Government Board have taken?—Yes, very largely.

91310. Is not your objection really more against the object and limitations of the Act itself than against any action on the part of the Department?—I think the administration of the Act is very largely to blame. Certain regulations and conditions laid down by the Department enabled those who wanted to do nothing to do nothing, rather than encouraging them to do something. Perhaps I may put it in my way: The Department always insisted upon a well devised and properly explained scheme. You are dealing here with men who really want to get work, and the Act was passed—as you will remember perfectly well—for the express purpose of dealing with men as soon as they were unemployed, to enable them to turn their hands to something before they sank so low as to be compelled to apply for outdoor relief—in a word, to save the man and to save his home was the original object.

91311. Was not the theoretical object to give relief to a certain class—that is, a class who were ordinarily permanently in employ, and who, from some depression in trade, were temporarily out of employ?—Yes.

91312. The evidence that we have had from a good many witnesses is that that class have not come up or availed themselves to any extent of the Act?—I think that is perfectly natural. Look at the conditions you lay down. The decent man who has any self-respect, who just goes there as the last resort, finds himself being sifted and investigated and questioned in a thousand ways, and then told to come on some future occasion, and if there is anything to do he will probably get it. No definite promise is given to him. That is no encouragement for decent people—the very class of men we wanted to help—to register.

91313. On the other hand, it has been suggested to us by certain witnesses, that the Act in its operation has registered for the most part persons whose employment is always casual and, in fact, that the tendency of the Act has been rather in the direction of subsidising or making permanent that class of casual labour, which, I think, we all object to?—Was that not the fault of the people who were administering the Act from the very start?

91314. I understood the object of the Act was to give facilities to a particular class, and that is the class of respectable working men who are ordinarily in employment but who are temporarily out of employ?—Yes.

91315. For whatever reason it may be, the Act has not touched that class—at least, so we are informed—and that is your view, is it not?—I do not say it did not touch him in the early days, but it certainly has not in the ordinary way touched him in the least degree since, because the conditions were made so bad at the first, that, to use another word, he shied at it. He said: Why should I go and expose the conditions of my own

family on the off-chance that I might get something? *Mr. William Crooks, M.P.* I suppose your first year's register is a very different kind of thing to what has happened since.

27 Jan. 1908.

91316. Have you had any experience at all of giving work of this kind in Poplar before this Act was passed?—Yes.

Experience of giving work of this kind in Poplar, before the Act.

91317. Independent of the Poor Law?—Yes, independent of the Poor Law.

91318. What was the class who applied then?—Were they much the same class as have applied under this Act or were they a different class, do you think?—There were all sorts of men, from the man who was least likely you would have thought, namely, the coster; the casual labourer came; and there were mechanics who came. You have got to remember that the proportion of men would be very much larger in the casual labour class to what they would in the ordinary skilled mechanic class—I mean at that time, but I will show you presently why it does not act now. These men who were registered were painters and carpenters, and in some instances boilermakers. We could not get the boilermakers, say, and the iron shipbuilders their ordinary work, and they just took the same position as the ordinary casual labourer—they took what you had to offer them—they took the stone-yard; that was what happened. We found work for the carpenter in making shafts for the hammer-heads and that sort of thing, and a lot of little jobs were found which did not hurt him. We also found, of course, that the man who was skilled in breaking stones—that work was part of the scheme that we started in 1894 or 1895—did very well at it; while the other men did not do so well. I do not know whether it has been submitted to you, but there was a report upon the whole scheme which came about through Mr. Hills of the Thames, Limited, whom you know, of course. He offered a sum of money equal to half, for any work that might be taken up in the interests of the unemployed. He sent for myself and a friend named Butler. We pointed out that it would not help if he insisted upon his plan, namely, to pay the half of every piece of work to be taken up, because in all probability there would be a lack of discipline, and it would cost twice as much as it ought to do. The end of it was that he offered us £1,000 conditionally that someone else should give £1,000—he did not care who. We went then to the Poplar District Board of Works, which is now the borough council, and told them the circumstances and conditions. They immediately formed a committee to work with a committee which was practically nominated by Mr. Hills or approved of by him, so that it was a co-operative committee. He gave the money on the one hand, and the Board of Works, on the other, organised the work, that is, they found the work and he found the money, but they undertook to supplement Mr. Hills' £1,000 with another £1,000. We did a lot of work locally. We took up granite setts and put down wood paving, and we whitewashed courts and alleys and that sort of thing. I am not quite sure whether we had given to us—I rather think we did—some huge blocks of stone; we put men on cutting this stone up into small pieces, the same as they do the macadam, but it was rather softer than that. That was the employment that went on. The end of it was that we spent about £5,000 or £6,000, and having regard to the £1,000 that Mr. Hills gave us, the result on the whole was satisfactory; that is to say, the total valued up only showed a loss of 10 per cent., in other words, under ordinary circumstances, this work would have been done at 10 per cent. less than it really was done for.

Nature of the work offered.

Report on Mr. Hill's scheme.

91319. As regards the results, what was the effect of the scheme on the workers? Do you think it enabled them to rehabilitate themselves at all?—May I say that if you save a man you simply keep him from going down, and you prevent him from going down; but when a man is down, it is the utmost difficulty in the world to lift him up. No one can declare that they have lifted any person up by giving relief work. The question is, how many people have you saved from going down? This winter, up to this moment, I can only point to two cases in which we have saved by relief work—one a woman and one a man, that is to say, we have prevented them going down and got a fair start for them.

Effect of relief work on the workers.

91320. There are two processes, are there not? There is the first process of trying to prevent them going further down, and then there is the second process that you hope

Mr. William Crooks, M.P. by the assistance and the training or the employment given, that you may help them to go up?—May I put it in another way? No decent man who could do other things would apply for your relief work under any circumstances, and he would never stop at it—you have never made it attractive enough for him.

Object to be kept in view in assisting the unemployed.

91321. Do we not really want to do two things if we can? We want to assist, as you say, the persons who fall in the industrial or social scale—that is the first thing we want to do; and then having done that, we want, if possible, to put a man in a condition so that when he has finished his work he may be rather better off than he was when we first took him?—He may, on the other hand, be worse. You have got to look at this all round, and you want to know what you are really going to do. In some cases you will make a better man of him, and in others, if you are not very careful in your organisation, you will rather degrade the man. That is what the unemployed committees have been doing with one or two exceptions. At Hollesley Bay you have lifted people up, but other work has had the contrary effect.

91322. Though we may differ as regards methods, I think what we all feel is that we do not want to establish any so-called system of relief which would tend to perpetuate, as regards individuals, conditions which you want to improve?—With the exception of turning men into farmers, I do not see that you could possibly do that—not even by what I suggest. Men would naturally turn to it in the hour of need and would not go and look for a job of this character like they would go and look for a job in their own trade. A carpenter would not look for a navvy's job under any circumstances, and he would not want to go into the park to work; so, on the other hand, a cooper would not like to go into an iron-yard to become a labourer—he would naturally go to the thing he is trained for.

91323. The idea was, I assume, that if he had temporary relief, he would go back to his original occupation?—He would at the very earliest opportunity; that I am certain about.

91324. You have criticised the Unemployed Workmen Act and the results of the Act; shall we now take you on to that part of your Statement where you make definite proposals as regards what you would wish done?—Yes.

91325. You wish to see work established, rather than relief, for the unemployed?—Yes.

91326. If the State undertake that, they would have to keep the system going so long as the individuals wanted work?—Yes, I think it is very likely they would.

91327. I mean it would be the beginning of a very serious undertaking?—Personally, I do not think the consequences are so serious as not doing it; I mean that in all sincerity, and it is not said with a view of making a score. The fact of the matter is that the conditions are so bad now that whatever you do cannot make things worse, but must improve them.

91328. Just following up the idea you sketch out, you would like to have a Labour Department with a Cabinet Minister?—Yes.

91329. You would then collect the necessary information, you would try and organise the work, and in endeavouring to organise this work, you would obtain particulars of all public works that can be put in hand at times of industrial depression, and you enumerate them?—Yes.

91330. Then the works so started should be maintained out of three sources, the local rates, the county rate, and the national Exchequer?—Yes.

91331. They would necessarily have to be on a large scale, and the Government might find themselves—because I suppose it would be a Government body—with a very large number of persons coming to them for employment, might they not?—Yes, they might. The work may be small as well as large, but the Department would have to keep a grip of the whole country, and know exactly what was happening in Sunderland say on the one hand, and in Worcestershire on the other, or in London or Norwich or other places all over the country. They would know exactly what was happening.

91332. I agree with you that if the idea that you sketch is put into practice it must be a combined national effort, but I want to see what it might result in. Would you pay the persons the same standard rate that would be recognised outside?—For the particular work, yes.

91333. You would?—Yes.

91334. Supposing you did, what inducement would any person have to go and seek for employment himself?—Because in the case of the particular man whom you are putting on to this work and helping, it is very long odds that the work you are setting him to is not the work he has been accustomed to. Supposing you were to put them on to charcoal-burning and the regulation rate for charcoal-burning was 27s. per week, I could not do it if you gave me £27 per week, and I should not want to stop there. The same thing happens with the others, I assure you. I know it is a little difficult to make people understand who have not been through it, but a man has an inclination for his own business and his own particular trade; he works happily at it because he understands it, and if you take him out of it, he is very unhappy. May I give you this simple example of my own? I could not say the year, but it would probably be about 1880 when I wanted a job, I wanted, in fact, bread; and I had to go to the docks. A friendly foreman who knew me called me on, and I got work at 5d. an hour. Well, I spent the most wretched time in my life working with these men—wheeling bales of wool, helping to stack bags of corn and bags of sugar. Do you think any kind of pay would have attracted me to stop there permanently the moment I had a chance of getting out of it?

91335. But surely the great mass of persons who would avail themselves of your proposals would be unskilled labourers?—Yes.

91336. And unskilled labourers of rather a low type?—On the border of your argument runs the question of the employable and the unemployable, and the trouble, of course—we are ready to face it—is with the man who will not try to do anything but what you find for him. But then you have led him up to that, and you have left him in the position that he exists somehow on his one, or two, or three days a week. He has sunk so low that he just gets enough to keep him going, without the slightest desire to do anything else; but he wants the next meal to come along. Now, steady work and steady food would improve that man out of knowledge, and he would be a different being in the course of six months.

91337. I put the unemployable on one side, because I do not think, so far as I know there is really very much difference amongst all the witnesses who have come before us in regard to that class?—But there is a tremendous difference between the man who is employable and the man who is described as unemployable.

91338. Quite so; but the difficult class really that we have to deal with is not the unemployable but the class of unskilled, low-grade labourer, is it not?—Yes; but do you not see that the unemployable man is used in evidence against you always, whatever you are trying to do? The low-class, low-grade labourer is always hurled at us when any proposal is made, and we are asked: What will you do with that class of man? We have said: If you give us the work and give us the chance of putting him under proper discipline—I mean reasonable, sympathetic discipline—we will improve him in a way that you little dream of. In fact you have left him to make a living by his wits, and a poor living he is making out of it; and I am not blaming him in the least bit if he tries to take advantage of your softness.

91339. I am not going back to the wage. If that class of person, not the unemployable, but the class, we will say, which is just above it, found out that they got the same wages under Government employ for doing practically very much the same class of work as they would get in private employ, I ask: What inducement would they have to seek for employment themselves, unless you make the wage and other conditions of the Government work less favourable than those that they can get from the private employer?—What you presuppose there is that there is work for everybody. If that were so, we should not be here. The fact of the matter is that there is a

Proposal to pay the standard rate of wages on relief works, and question of its effect on the persons assisted.

Difficulty of assisting unskilled low-grade labourers, and effect of regular work and discipline on said labourers.

Question as to effect of paying the standard rate of wages on Government relief works.

Provision of work rather than relief for the unemployed, and question of effect of so doing.

large surplus of men with whom we do not know what to do. What is a man to do? Is he to come to you, and have you other openings to which you can send him? The moment that there was an improvement in the industrial condition of things you would at once say to this man: You cannot stick here, my friend, there is work elsewhere for you, and there you will have to go. But you are not in that position yet.

Question as
effect of
editions of
employment
Government
relief
works.

91340. Even admitting for a moment that there may be a surplus of labour over the amount of employment available, my point is that unless you make the conditions of Government employment less favourable to that class than those they get outside, you will have a very large number of persons permanently idle, because you will give them no inducement to try and get labour outside?—Very well. They are only filling one man's place, and if the work that you offer is work of a useful character—and for the country's sake I do not want you to start work for work's sake—if that work is of a useful character, he is leaving a job for somebody else. You have already got a surplus of men who are idle, and our ambition and desire is that you should absorb them with work, and that can only be done with a proper organisation.

91341. I am coming rather to the wage now. Is not the standard wage which is laid down by certain unions and labour bodies, based on the assumption that the individual gives an equivalent in the way of work? You now have to deal with persons who are admitted to be the worst class of workers and whose work consequently may be assumed to be inferior. Why, then, should you give them, if they cannot find employment for themselves, the same rate as the competent workman? If you do give them the same rate it seems to me that you will have them permanently on your hands, as you will be giving them a positive inducement to remain with you instead of going outside?—You have got the authority in yourself to turn them off when you like, if you think there is work elsewhere to be done. The reason why we are so keen about the regulation of the rate is that no person, not even the Government itself, should seek an advantage over men who are unemployed by getting their work done cheaply. You have no right to do that.

minimum

mandated.

uggested
endency of
overnment
stitutions
grow.

91342. Assuming that the leaders of the Labour Party could get us a practical guarantee, so to say, that the wage given by the Government would not at all affect the wage given outside, would they then press for this standard wage?—I think they would. There are many sides to the question, as your Lordship knows. There is the argument of the Wages Board, and all this sort of thing. It does not matter who a man works for; employers in this country always fix the minimum wage as the maximum, which is entirely different to what is done abroad, where a man gets paid on his merits. Here you hardly ever get anything of the kind, and if a man is exceptionally skilful, immediately everyone below him is supposed to come up to his standard; but an exceptionally skilful man does not get anything in advance of the ordinary trade union rates. What we stand out for is not a fixed wage or anything like that, but a minimum rate of wage; and we stand out for the minimum, whatever it is in any locality for a certain class of work.

91343. I think if you do that, the inevitable tendency must be that these Government establishments will grow and grow?—I am not on that line this morning. I am trying to deal with the facts that I have got at this moment.

91344. In making that recommendation, you do not wish the Government to have more and more of this class on their hands in permanent employ, do you?—No; but do you not see that the nation has got them on its hands now doing nothing—either idling their time away, becoming wastrels more and more, or recruiting the wastrels of society, if you please to call them so, as some people are calling them; or you have got a burden on the rates, or a burden on sick benefit societies. Frequently, if a man had work to do he would turn to it; and so in a thousand ways the nation is the poorer by having nothing done than it would be by spending money on having something done.

91345. I agree with you there, but that is not my point. My point is really, to go back to the words of the Poor Law Commission of 1834, that I want the persons who cannot find employment for themselves and who are compelled to come to the Government, to find their lot

is less eligible than that of those outside, as otherwise no pressure would be brought to bear upon them to look out for work for themselves?—You would have the ordinary investigation as to whether this or that particular man was a proper person to take on, or whether he had a just and honest claim to it. That would always happen.

Mr. William
Crooks, M.P.
27 Jan. 1908.

Question of
deterrence
in relief.

91346. But once on, under your scheme he would be permanently on?—He would have to do his day's work. Your point of working under the 1834 Act has never been a success. I cannot tell what happened previous, say, to 1850; but coming on to later years it has never been a success—in fact, it has been an abject failure. You have only played at giving them work, and you have never given them work. They have lived with you all the time, but they have never done anything or produced of anything like adequate value. Take whatever Poor Law institution you like and take an able-bodied man or an able-bodied woman, I ask, Whenever did any of them give anything like a decent return even for their food, to say nothing of wages? It has been an absolute waste of time.

Total failure
of the Act
of 1834.

91347. I agree there. Then you would give the same wage as outside?—Yes.

91348. Now how would this work be financed? You say the cost is to be divided between the local rates, the county rate, and the National Exchequer?—The thing I have always had in my head is this, that if the authority, say the Government authority, would issue instructions to the local authority, whoever they may be—it might be even an urban district council—to schedule such work as might be taken up in times of commercial depression, and give an expression of their own opinion as to the value of that work to the locality, to the county, or to the nation, I would accept whatever the local surveyor said about this particular work. Take London, for instance—this would be a very simple illustration: An improvement is wanted, say, in the Westminster Bridge Road; Westminster says: That is a London County improvement; the county says: No; this is a purely local thing, and you are going to get an advantage out of it. I would allow them to express an opinion. On the other hand, the county might declare that the nation as a whole was going to get a benefit from that particular improvement. Very well. The Department would know exactly the opinion of the locality at a given moment, and having all this work scheduled, it would go down to the locality on an application. If, say, Sunderland was asking for a grant, it would go to Sunderland and say: Look here—you have scheduled certain work, and you can employ 300 or 400 men there. We think the work is of a local character, and our decision is final; you will have to charge it to the locality. If, on the other hand, the Department think it is a county one, they will say: Very well, you can do it and the county rate shall pay for it. But if, on the other hand again, you have such things as coast erosion and things of that character taken in hand, the Department would say: This is a case of national improvement and the Exchequer ought to make a grant to do this. In that way the instruction would go from the particular Department to the locality as to who was to finance this particular thing.

The finance
of relief
works and
method of
Government
control.

91349. The plans would be more or less under national control, and if any scheme was agreed upon, then the Department would have the power to say that the locality should bear a certain proportion of the cost?—Yes. This would be one of the things I should be very despotically about—I should insist on the locality going on with the work and meeting the needs of the men at once, and whatever decision the Department came to, that would have to be final.

Suggested
that the
decision of
the Depart-
ment be final.

91350. Who would be the judge of the necessity of starting the work? Would it be the locality or the Government?—It would be the Government Department.

91351. On reports from the locality?—No. The country is not so big but what we can get over it in a day or so. What I would do on an application is, I would immediately send a responsible officer down to report. He would, of course have information in the Department, Labour and he would look up and see, say, that Hull had a complaint that there was a want of work, and he would find that there was work to be done at such and such a place;

Methods of
operation for
Department.

Mr. William Crooks, M.P. he would go there and come back and report to the Department, and the Department would say:—"We will give a decision in a couple of days as to what we think ought to be done."

27 Jan. 1908.

91352. I think I grasp your scheme as regards the finding of work; but my point was, who would decide that this work should be taken in hand in any one locality? Would it be done on the report of the locality that there was a certain amount of work wanted and that there was a certain amount of distress? Would they have to satisfy the Central Department that they should be allowed to take work in hand?—They would make their application. Say there were 300 or 400 men out of work; they would go to their proper authority, and say: We want work, and something must be done. The authority would then make every inquiry, and send to the Department.

91353. That is, send to the central authority?—Yes.

91354. Would you give the central authority power to close the work, if they thought that necessary?—Certainly. They should be able to say: You will get no more money, as we shall give you no authority to go on. There you will have the controlling influence at once. Now you are stuck fast, and have been in every depression that has come along, and I can remember every one distinctly since 1866. Whenever there has been a depression, you may collect money, but you have no organisation to put people to work.

91355. In your judgment, looking at it from another point of view, the past schemes with all their collections of money have resulted in waste, and there has not been an adequate benefit accruing from the money spent?—No more than your breakfast is quite enough to keep you going till dinner-time. That is just what is the matter. You may feed temporarily, but you help nobody; and, you know, the very thing that you are afraid of bringing about is the very thing you do bring about. You get people into that frame of mind that they depend entirely on charity. They get accustomed to calling regularly, and getting a ticket for a shilling or half-crown. As Mr. Lansbury knows, perfectly well, so low have some men sunk that when a day's work comes along, they would sooner have 2s. in relief than they would have 4s. for work. It is all our fault, because we have not offered them work at the proper moment.

91356. Then I may sum up what you say in this respect. I think: putting your actual scheme on one side, as we have discussed it, your idea is that the test of the *bona fides* of the persons applying for work is their willingness to work?—Yes.

91357. And you would apply that test?—Yes.

91358. You would have powers, so that if persons refused to do reasonable work and loafed and so on, you would send them to a labour colony, or something of that kind?—So sure am I that this will work that I will give you two very simple illustrations. We took 100 men down to Long Grove on Mr. Long's scheme; ninety-four I think it was of those men turned up on a bitter morning, on the 1st January, 1903. They took their coats off, some of them were without food, and had been for goodness knows how long, certainly they had had none that morning. They worked on, and one amongst their number was unable to work. I stayed there till half the day was through, and a deputation came down, and said: "Now look here; there is one of our fellows who cannot work; can't you put him in that shed where the tools are to look after two or three things until he gets a bit of food into him and until he can work." Just take that as 1 per cent. Take the next case. That was clearing the foundations at Colney Hatch, and it was a particularly hard job. They had to dig up and clear away roots and old bricks, and a tremendous job it was. Those men got paid the trade union rate, and a grant was given especially for them. They were not there a week before a deputation of the men went to the head, and said: "Now look here, there is one of our fellows who was born tired; he won't try, and we are not going to be disgraced by a man like him." The head man went down, and he said: "I give you a couple of more days; if you don't improve, you will have to go." He went. That only shows that the man who wants to work is not only willing to work but

encourages other people to work too. The experiment is not half as dangerous as people are led to believe. I know that man perfectly well, and he has been looking after relief all the time, but he does not get on so well as he would if he was at work. He has sunk low enough not to care; but what about the others who did care?

91359. It was stated to us the other day by a witness from the north that the persons for whom this Act was a good deal intended—that is, the respectable artisans temporarily out of employ—declined to work in company with some of the persons who get relief, as they did not wish to be associated with them. Has that been your experience at all?—That is the kind of pride that Sir Samuel Provis will know something about. For instance, the Poor Law boys who were trained on the "Exmouth" would not play cricket with the truant boys on the "Shaftesbury," because it was lowering their dignity. The same thing applies here.

91360. (*Mr. Lansbury.*) About the work being so attractive and the wage keeping men always at this kind of work, could not that be got over if there were some system of registering the men out of employment all over the country, and also of registering the employment all over the country, through your new Department?—I think so. You would register every man's trade; and if you look round the depressions that occur and see the men who are thrown out of work, you will see there is seldom anything offers which would be a substitute for their own work and therefore would not be as attractive.

91361. Is not the difficulty in London, and in all the big centres, that while people theorise and say that there ought to be enough work to go round, nobody can tell us where to send the men to find this private employment that is begging for labour?—We have never found it yet. I have had letters, as you know, from all over the country telling me that there are farmers looking for men here and that there are farmers looking for men there. I have taken the trouble to write, but I never was able to hear of any case. I have had letters to say: We want a girl or: We want a man, or something; he must be an exceptional character and all the rest of it. When I have written back, I have never got any reply. It was a mere try on.

91362. In ordinary industrial centres, would you be in favour of a national system of labour exchanges which not only registered men, but also took account of the employers' needs in the particular district?—Practically, I say so in my Statement. If the employers will make a return—and they would do so to a Government Department, though they might not do so to a local labour bureau; if they think it is a thing of national importance, they would make the return, and the big men would say Our Order Book shows that we have to dispose of 500 or 1,000 men on a certain date, and if anything comes in in the meantime, we will let you know—then the Department would know almost exactly what was going to happen.

91363. If that were so, on a man coming to register himself for work under the Government according to your scheme, the Department or the authority concerned would have at its disposal the knowledge as to whether that man's labour could be utilised by private employers in any part of the country?—That is exactly what I have in my mind. Quite apart from the Government at all, if the private employer would make known his possible needs, it would help the Government to arrive at a decision whether the work would be sufficient in a certain place or not.

91364. And would be able to say to a man: "Instead of you stopping here on relief works, you must go there and work under normal conditions"?—Certainly.

91365. And if not, at least that kind of work would not be given?—I think we may sum up the situation by saying that what we have been anxious about is work for willing workers and not work for unwilling workers.

91366. And you do not mind whether that work is provided by the State or by private employers?—No.

91367. All that you want is that it should be organised somehow?—Yes, and it seems to me that that is the way to do it.

Instances of pride, a desire not to associate with certain persons.

Work wanted for willing, not for unwilling workers. Whether from the State or private employers.

Applications to be made by the local authority to the Department.

The central authority to have power to close the relief works.

Failure of charity in the past.

Test of the *bona fides* of applicants, their willingness to work.

Illustrations as to how the scheme would work.

91368. Now about the casual labourers; the difficulty in the East End is, is it not, the question of casual labour in the building trade, the docks, and practically all kinds of trades there?—Yes, but the casual labour in any other trade does not seem to me to be so bad as the system that has grown up at the docks. After the strike of 1889 there was a better system came about here and there—that is to say, more permanent men were taken on; and it looked as though the question of casual employment was settled, and that there would be no more crowds of men praying and beseeching to be taken on. But then they found that they could get a supply, and after all, it was better that they should go out to the gate and see 100 or 200 men there when they only wanted ten or fifteen, so that they might pick them out. Consequently the system is exactly the same now as it was previous to 1889. Immediately after 1889, in the first year, casual employment dropped to very small proportions indeed, which makes this point—that if casual employment was abolished, they could meet all the demands. But it is cheaper for a company that they should have a supply, and they look with considerable suspicion at any attempt to absorb it. Say there were 300 men, and we were talking about taking 150 away and giving them employment of some sort; they would say their chances of picking their men were less. But the nation, as a whole, loses by it. I do not know whether the Commission would feel inclined to make the experiment; but if you have any doubt about the point, you could easily get through on the telephone and find out whether there is a ship up over night, and if you were to go down just half an hour before calling-on time, whatever time was fixed—just now the ordinary time is half-past eight, after the first of March it will be half-past seven, and sometimes they start a ship at seven o'clock or six o'clock in the morning—you would see hundreds and hundreds of able-bodied men clamouring, praying, and beseeching to be allowed to go in to earn a couple of shillings. Why, it beggars description. You cannot get any notion of it unless you have been amongst it, as I have been. I want to know what the nation is thinking about. There is waste of material, if you like to put it that way. You will see able-bodied grown men putting their hands together, and praying the foreman who stands up in a box: "Here, Sir, here, Sir, for God's sake take me on, Sir." About a week before Christmas, a foreman, who is a relative of mine, and a clerk went down to the entrance of Cuba Street, South Dock, to take on four men. There was a tremendous crowd. They called the four, and when they turned to go down the docks to the ship they found they had five. They said to one man: "Here, outside; you were not called." "I was called, Sir." "Go on, we are not foolish; get out of it, you were not called." Then he said: "For Christ's sake, let me stop. I have six children, and we have not a mouthful at home." The foreman went to the clerk and says: "Can we put him on?" and the clerk says: "I think we can give him a couple of hours." I want the Commission to think that you can multiply that by hundreds; and there cannot really be any doubt whether it does not take some organisation to deal with men like that. Casual labour and casual feeding saps not only the men, but their children as well.

91369. Of course, it would be no use our taking away men and allowing others to come, would it?—Not a bit.

91370. Therefore, some steps must be taken besides providing work, for regularising the work at places like the docks?—That is so. But there is a very dangerous point there which comes out in the very old Acts—namely, that you should fix up the locality and say a man should have his own settlement. We have no such idea in our mind as that a man shall not come out of his place; hence the need of the Government regulating this; that is to say, if there was work in Hull and a group of unemployed men were at Wakefield, there is no earthly reason why they should not be transported from one place to the other. I want that done, and I do not want to fix men down hard-and-fast; but I would have them registered, though I know the desirability of transferring men from one place to another.

91371. And there ought to be some organisation at the labour places, like the docks in London and other centres, whereby the casual nature of the employment could be reduced to a minimum, rather than let it be as it is now?

—After the strike of 1889 it was shown that it could be done; but people are offering to let places at a certain rental, and declaring that the advantage of this particular place is that there is always a large reservoir there of casual labour. It is a curious thing, perpetuated frequently by Government Departments pointing out: Well, after all, there is work to be found there—and here are men advertising properties and factories and riverside places, because there is a full reservoir of casual labour to draw from.

91372. (Mrs. Webb.) Do you mean to say that there are really advertisements with that proviso in them?—It is in private letters that I have seen it, and it came out any how in our own inquiry, that the advantage to certain people living in our district was because there is a reservoir of casual labour invariably full to be drawn from.

91373. (Chairman.) Was that an advantage to the employer or to the employee?—The advantage was to the employer of labour, of course.

91374. And as regards his works, not as regards his residence?—That is so.

91375. I thought these were private residences you were speaking of?—No. It might apply to people who were letting their places. Take Maconochie's. I know Maconochie; he is a very decent fellow in every way. Why does he come to Millwall? He comes to Millwall because he can take women on for an hour or two and then put them off. Supposing the supply of women was limited, then he must arrange his work to keep these people on regularly. He does nothing of the kind.

91376. I thought you were rather talking of another matter—namely, that the houses in the immediate neighbourhood of the docks have a special value, because the persons who live there can always be on the spot?—On the contrary I did not mean residents; I meant the people who have large manufacturing premises. I would not like to say for certain, but I suppose it is no exaggeration to say that 75 per cent. of our population do not work at the docks.

91377. (Mr. Nunn.) I think the point the Chairman had in his mind was that whilst this ran wages down, affected it ran rents up at the same time?—Of course.

91378. And so, in effect, lowered wages in two respects at the same time?—Yes.

91379. (Chairman.) My point was, did it give the slums a fictitious value?—I should think that does not affect us nowadays, because that has done all its mischief—I will put it that way.

91380. (Mrs. Webb.) You have had a long experience in the East End; are things worse in the East End now than they were in 1887 and 1888?—I should not like to say so.

91381. Are they just a bit?—I should say they are a bit; and what makes the matter seemingly more acute is that you have to remember that there is improved knowledge amongst the people. They are not going to be content with the conditions under which their fathers lived a long time ago. Every stage of acquiring knowledge naturally makes people feel very acutely the conditions under which they are compelled to live.

91382. And that has been one advantage of the Unemployed Workmen Act, that it has brought the problem before the public?—Yes. May I put it in this way? A man's grandfather was out of work, but he only knew the effect; the grandson is out of work, and he knows the cause.

91383. And he thinks he knows the remedy?—Yes. Therefore to-day although the proportion may be better in favour of the modern-day man the discontent is individually greater than it ever was before; and naturally so. No one, no matter what his position is, wants to go back, and they do not want to go back.

91384. They recognise that that leads to the deterioration of human nature?—Of course.

91385. And that that is worse than the deterioration of machinery?—Very much.

91386. Can you explain to us why it is that the employer, who takes such precious good care that his machinery should not deteriorate, is quite careless about the deterioration of the working-man?—Because he puts

Mr. William Crooks, M.P. the burden of the deterioration of his work-people upon the rates ; but in regard to the machinery he has to bear it himself.

27 Jan. 1908. 91387. That is to say, he has to pay the capital cost of the machinery ?—Of course.

91388. But he has not to pay the capital cost of the workman ?—No.

Failure of the tradition of the Local Government Board in respect to unemployment. 91389. (*Mr. Bentham.*) In your second Paragraph you say : " Tradition and precedent, based upon tests of destitution, have failed in workhouse administration " ; and I take it you mean that the tradition of the Local Government Board in regard to the unemployed problem is a failure ?—Yes.

91390. What is your measure of failure in the test of destitution, under our present Poor Law system ?—You have got conditions under which you are supposed only to help a person who is in a state of destitution. That is laid down as a cardinal principle, but concurrently with that, you fix this principle also, that no person shall be given outdoor relief, unless some person or they themselves are able to pay their rent, for instance. If they are able to pay their rent, are they in a state of destitution ? It is unfair, I know, to ask questions, but I do happen to know that there are very curious anomalies in Poor Law administration.

Anomalies of Poor Law administration.

No belief in destitution as a test of eligibility for relief.

91391. What I rather wanted to gather was whether you consider the poverty and the suffering which remains outside the Poor Law is a measure of the failure of the workhouse principle and of the present Poor Law ?—I am afraid I do not gather the purport of the question.

91392. You do not believe in the test of destitution being applied before an artisan is eligible for some form of relief ?—No, I do not think I do.

91393. You do not ?—No. I tell you that the bigger the liar applying under the Poor Law the better he gets off—and there is nothing to stop it.

91394. That would apply to almost everything that you deal with, would it not ?—It may be, but then, do you not see that you have laid down certain principles which are sworn by, and which we say are an absolute failure. Even supposing that you adopted this system which we suggest in dealing with the unemployed, it would never sink so low as the Poor Law has sunk, because you would get something for what you were giving.

Difficulty of dealing with the able-bodied in the poor-house.

91395. My point is, why do you say it is a failure ? I want to know what is your measure of failure ?—It has failed, because you have tried to administer an Act passed in 1834 in these days, when people have completely changed and an entirely different set of circumstances exists. It is not repressive. The real right-down bad man or bad woman is not deterred by anything you have ever done in the way of administering the Poor Law, as you know perfectly well. Who is your stumbling-block in the poor house ? It is not the aged, or the infirm, and it is not the children ; it is the able-bodied man, and the able-bodied woman.

Objections to the Poor Law. Methods of inquiry.

91396. You consider that it has failed then because it is not repressive to those it should repress, on the other hand there are a lot of people outside the operation of the Poor Law who need assistance ; is that your point ?—I say the people you get inside very frequently are not properly dealt with. I do not want people to go on the Poor Law. I hate the whole system, and I say I know something about it.

91397. Do you disagree with the test of destitution being imposed before a person is eligible for relief ?—I think you frequently do not help people in destitution. Your methods of discovery and your way of inquiry, and the conditions you lay down, are such as are revolting to these people until you have sunk them so low that they do not care what happens. I thought coming along of a single case of a poor woman, whom I know perfectly well, who had a little family. She applied for relief and she needed it, as I well know. The relieving officer discovered in the house when he entered that on the table set out on a dish was a cod's head and shoulders, which was bought for threepence. Here were signs of affluence ; and he went back and reported : " This person does not need

relief ; she was full of plenty when I arrived on a certain day after her having made application to me."

91398. Was that in Poplar, may I ask ?—It was ; but I am talking of when I was a youngster, and not since I have been grown up. There was a case in Poplar last Friday afternoon, where a committee of the county council were in a school where I know there were under-fed children. They looked round, and because the children were clean, and because their hair was combed, they said : " Look there, there is not the slightest sign of any need here ; how can anyone assume that a class like that should be in want." Your investigations are all wrong.

91399. That is rather away from the point I wanted to deal with ?—I know it is ; I am sorry.

91400. I take it that you feel that the test of destitution under the Poor Law has failed as a qualification for relief ?—Yes.

Failure of the test of destitution under the Poor Law.

91401. In the first place, because a number of people who ought to be assisted will not apply because of the conditions—that will be one reason, will it not ?—They are obliged to apply.

91402. They will not apply because of the conditions imposed by the Poor Law ?—I say you make no attempt to save any person. There is a case at Whitechapel, which my friend opposite knows perfectly well, of a woman taking £25 down to the Whitechapel Board—this happened some twenty years ago now—and she said : " I am destitute, but for this "—" We cannot look at you ; you are not a destitute person " ; and so the sooner she had wasted it, the sooner she became chargeable.

91403. Under whatever system you may have, you will have people who take a different view of the conditions and of the restrictions. Now the question of destitution will vary in particular men's minds, as it does in the minds of guardians, and as it does in the minds of officials. You will, of course, have that under any system, if you attach any conditions, will you not ?—Yes, I think you will.

91404. Then is it not rather unfair to say, because people take an outrageous view of what they consider to be destitution, the same thing will apply under whatever conditions you propose ?—There is no reason why not. I do not expect to get any perfect system in this world.

91405. You believe that the duty of the community should begin with the people who are in want before they get to the stage of destitution ?—Most decidedly I do ; I want to stop that recruiting.

91406. But you cannot measure at all, can you, the amount of good that this test of destitution has done in the past by throwing people upon their own resources rather than letting them lean upon public provision ? That is the side which might show the good of a test and yet it is immeasurable ?—I do not want to drop any person or relieve any person of his self-reliance. But what you have done, and what the system of society has done, is that it has robbed them of any opportunity of exercising it. You cannot persuade me anyhow that you are likely by any system to rob a man of his love of home. Bad people have always existed. I have another parallel case. The same kind of argument was advanced against me in a committee. It was said that a man or a woman might murder their child to get 30s. insurance money. " Yes," I said, " and the man or the woman who would murder that child for 30s. would murder it without the 30s. ; they are bad anyhow. I do not want to deal with them, the law is strong enough to deal with them." I want to deal with the decent man and woman who have self-reliance ; I want to deal with him before he has got to sell his home. Once you drive him right down, what does he care when he has got to come to you and beg and pray to you to do something for him ? In my own language, frequently a man comes up and I am unworthy to lace his shoes, so great are the efforts he has made to get work.

Self reliance : how far stimulated by deterrent features of public relief.

91407. I think I quite agree with you as to a good deal of that, but I might not agree with you as to the

cause of it. The point is whether self-reliance, and an enormous amount of self-reliance, has, or has not, been stimulated by the deterrent condition of public relief. Take all our thrift societies of various kinds, would they have been as strong as they are to-day but for this?—I do not believe it.

91408. You do not believe it?—No. I can give you a dozen cases in which it does not apply. Ask me on anything in my own life. I was brought up on Poor Law relief. My father met with an accident when I was a little chap and there were seven of us to keep, and not one able to earn a penny, and my mother had to depend entirely upon what the Poor Law gave us. I know they took the lot of us into the poorhouse—an abominable thing to do—and broke up our little home. Plenty of charity was given to us. But did one of us ever return to it? You did not sap what was in us—the love of our liberty and independence, and you never will, but you went a long way towards breaking it up if there was any weakness in us.

91409. Then it is not true to say that the Poor Law really does the mischief, and that once a pauper always a pauper?—Very largely it is so, because you will insist upon these lines of absolute destitution and begin breaking people's homes up.

91410. But your own example is against that, is it not?—It only shows that what you are trying to argue is what has frequently been quoted against me. But you cannot prove that once a pauper always a pauper, because if you look at modern statistics, you will see that that has been completely knocked on the head by improved education during the last twenty years. May I go a little further, and say that you cannot go to a Poor Law school to-day and find the low type boy or girl which you could twenty-five years ago.

91411. I am not disagreeing with you on that point. I agree that it is not once a pauper always a pauper, and that the Poor Law is doing a good deal to rehabilitate people; but it might do more, you may say. Now you do not agree that State-help kills self-help?—No.

91412. (Mrs. Webb.) The Education Acts have not killed self-help, have they?—I cannot understand the argument. The nation frequently makes a subsidy to a colony. Has it ruined the colony, because it has given £20,000, £30,000, £50,000 or £100,000? I say it has encouraged self-help. But when it comes to the individual it is "ruining" him.

91413. (Mr. Bentham.) There is rather a difference between the two, is there not?—All right; but I say it is the individual that makes up the nation.

91414. It is by individual effort, is it not, that we build everything up, and if you kill the effort you cease to build up?—Very well. My answer to that is that you have already killed it in more cases than are ever likely to arise in the days to come under a properly-organised system.

91415. In Paragraph 5 of your Statement you suggest that a labour Department should be created, and that labour department you state should do various things which you have put under various heads (a) (b), (c) and (d); and the first one is work that is already done very largely by the Board of Trade, is it not?—No.

91416. "Collecting all necessary information in reference to the conditions of employments and trade fluctuations?"—What do they do with it when they have got it?

91417. That is rather a different question?—Very well. If that is collected, that only means that you have got to transfer it to the other Department. That is so much saved.

91418. You would transfer it to this new Department that you would set up?—Yes.

91419. Then you suggest that this new department should be the one that should deal with employment and with the provision of work?—Yes.

91420. I do not mean to say that it should carry it out, but it should regulate the provision of the work?—Tell me what you mean by regulating. It could not regulate the conditions of work; it can only regulate the conditions of employment, or of unemployment

rather; that is to say, it could not go to Armstrongs or Mr. Williams to Maxims, or to the big Lancashire mills and regulate their work.

91421. I am thinking of public work. Would you put the control of the labour exchange under the same department?—Yes, I think I would; but I am not very keen about that side of it, because I think the system has not worked out as I should like it to have it worked. To use my own language, it is usually a means of supplying cheap labour and letting certain employers understand where they can get unemployed men at a low rate. The best kind of man has not come to you yet; I hope he will.

91422. If you have got to deal with casual labour and that floating class of labourers who are more or less out of employment, is it not absolutely necessary to know what the quantity is, and can you know it by any other means than having labour exchanges where every man shall register? You know the problem is really how to get a thorough system of labour exchanges?—I know that if you get a register, it does not mean a labour exchange. With a register you would know exactly what is happening; the department would know of that.

91423. You mean a register of people who are unemployed and who want employment?—Yes, of course. The exchange, as I understand, is a place where employers may go and see how many men are out of employment, and regulate their wages accordingly. You cannot wonder that I am a little shy of this sort of thing. I am not in favour of a sweater, even though he can tell me that he can get twenty people to do it cheaper.

91424. But there are advantages apart from that, are there not, in having a labour exchange? Labour might be required in a given locality when there was a plentiful supply in another?—Yes.

91425. And rather than set up works for absorbing this plentiful supply of labour in one district, it would be much better to transfer it to the district where there was work ready, would it not?—Certainly.

91426. Can you do that without a proper system of labour exchanges?—You must have the names registered, and you must know exactly what is happening. If you have the men who are unemployed registered, and if you have a record of the employers, and if you have a schedule of the work; that is all you want. Supposing, for instance, a man in Hull wanted 200 men, and there were 300 men out of employment in another place, and those 300 men applied to their local authority to put into operation the Act of Parliament and start work for them, then immediately your inspector from the new department would go down and he would say: "Really we cannot start this work here; there is an employer in Hull who wants 200 men; you go down there."

91427. But how would he know that the employer wants 200 men, if the employer does not say so?—I am assuming that the employer makes known his needs.

91428. Employers usually get their workmen in the best way they possibly can. If there was such a thing as a labour exchange where an employer could make application for 200 or 300 men for a special work, then the conditions of work generally might be rather improved providing that he applied to this exchange to get his labour?—I should think an exchange of that character would be exceedingly useful.

91429. It has been suggested that to have a register open for people out of employment would be rather a dangerous thing, but that it might be far more helpful if they put their names on the register with the object of having work found for them through a labour exchange?—I do not see any serious objection to it. What is happening now is infinitely worse. If a man goes and registers his name, he is asked, has he received outdoor relief; and if he says: "Yes, two months ago," then he is told: "You are not eligible to be taken on and to be recommended at this exchange for another ten months"—a wicked thing.

91430. (Mr. Nunn.) May we ask what exchange that is?—The local exchanges.

91431. Surely that is not so?—Do you mean to say it ought not to work like that?

27 Jan. 1908.

Defects in the working of labour exchanges. Proposed system of labour registers.

Difference between labour registers and labour exchanges.

Objections to present administration of labour exchanges.

Mr. William Crooks, M.P. 91432. Your evidence surely is not true of any employment exchange in London? That question may be asked in connection with a register of the unemployed which is being kept by the distress committee, but that is quite another thing. An employment exchange is surely quite apart from the distress committee's register? —But your employment exchange is run under the Central Unemployed Body.

27 Jan. 1908.
Objections to present administration of labour exchanges.

91433. It is run under the Central Unemployed Body, I know; but it is in different hands and under quite a different committee to what the distress committee is?—After all, you are all working one Act.

91434. We are working under one Act, of course, but what has that got to do with it?—Do you mean to tell me that all these men who are on the distress committee's register are not sent round to the employment exchange?

91435. No, they are not?—All right. I say they are—not in every case, for in cases that I know they have said, "You cannot go to an employment exchange; that is, we are not going to recommend you, because you have had relief within two months or within three months."

91436. Was it not your point that everyone who went to an employment exchange was asked whether he had applied to the Poor Law; and I asked you to give me a specific instance?—I have in my mind that they are both one thing—and both one thing they are.

91437. They are quite separate and are kept quite separate throughout London?—I hope they are, but in our case it is not so.

Defects of distress committees.

91438. (*Mr. Bentham.*) I understand you do not agree with having the two separate, that is, the labour exchange as a separate system apart altogether from the register of the unemployed?—I do not want to work on that line. Distress committees are working entirely wrong. It never was intended that they should sift, sift, sift, right down, and make men wait months before they get a chance. Naturally, they are driven to the Poor Law, anyhow.

Class of work suitable for relief works.

91439. Now with regard to the class of work that you have mentioned in Paragraph 5. First, the men who are accustomed to outdoor employment, men in the building trades and various other outdoor employments are most suitable for these kinds of work. The other class of persons who might apply would either do this work very badly for a time or they would be excluded by the rush, as it were, of those who were able to do this kind of work, because after all, these localities would not want to lose by this work if they could possibly help it, and the men who were accustomed to it would rather get the preference, would they not?—I daresay that is very likely, but does that not get over the trouble about men having work found for them and depending on it entirely?

91440. What I was going to say was this, that possibly this might become a sort of permanent profession for a particular class of workmen, and that another class of workmen who need quite as much consideration would never have any provision for them except in a distasteful way, because it would be distasteful to the latter to be making new roads, and it would not be distasteful at all to the man who was a builders' labourer?—That is so.

Agricultural training for unemployed, difficulties in providing workshops.

91441. And so it would be congenial to one class and uncongenial to another; and that would be unfair to the trade which was excluded?—That is how it appeals to you, but let me tell you how it appeals to me. Supposing the man is turned out of his work by improved machinery and the alteration of fashion—and you know both of those cause many men to be unemployed. He has got to look after something else rather than his particular calling, and he must turn his hand to something else. What I want done is to see that that man shall have an opportunity of learning something else. The only thing that occurs to me at this moment—and a hundred other things may occur as we gain experience—is that he should have an opportunity of being trained in agriculture or horticulture. We have got dozens of instances where men have turned, say, from a compositor or even a watchmaker, to that class of work; and they have taken very kindly to such work as agriculture or horticulture, and all the rest of it. Now that is not going

to be done cheap; that is going to be an expensive process. First, you have got to train the man and you have got to take him to a training college, as I prefer to call it; but some people think that you can say a nasty word about it and call it a farm colony. But you have got to train him, and in a very little time he will be a self-reliant man with plenty of openings for him at home—and if he cared to move there would be plenty of openings abroad for him; I would not tell him to go, but he could go.

91442. Should you like the absorption of these surplus-labourers, if I may call them such, in agriculture rather than by making provision in workshops of all kinds of trades? You do not go so far as that?—I should say you would not go on making things by hand that you could turn out more quickly by machinery.

91443. I mean rather than to set up workshops of that kind in order to provide the particular work that a man is accustomed to do?—I do not think you can do it, if it is proved that a number of men are thrown out. Your best illustration in the world is that of Leicester. At this moment, I am told, there are at least 600 men in Leicester for whom no work will ever be found in shoe-making again. The machinery has come in and it is turning out the work; the demand is as great, but it can be met with 600 men less. The problem you have to face is: What are you going to do with 600 shoe makers? The answer is the answer I have given: What is the good of my building boot shops?

91444. You prefer to absorb them in agriculture?—That is so.

91445. Even providing the work which you suggest here, there is a difficulty if the local authority has to suggest the work, which is rather likely to occur, because the central department when it is set up would not know in a particular district as well as the local people what was required. If there was to be part payment by the department from national funds, would there not be a danger of the local authority delaying work which they do in the ordinary way in order to start the work as a provision for the unemployed in order to get national grants?—Yes; and then your department would say: "No, friend, this is local work which you would have had to do under any circumstances; therefore our instructions to you are; since you have asked for it to be done, do it."

91446. You think the department itself would be able to regulate such a thing as that?—I hope it would.

91447. (*Professor Smart.*) May I ask in what trade you got your personal experience?—I am a cooper.

91448. Would you kindly explain what you mean in Paragraph 5 by Section (c)?—There is no compulsion about it; we need not trouble about the very poor employer, but as to men who have to deal, as they do deal, in thousands of men and millions of money, surely they would be glad enough to come to our help and give us this information, if only to help to keep up the supply of good men physically.

91449. Do I understand you want to know what are their slack seasons of the year?—Yes. Nothing positive could happen, neither would I allow it to be public. That would be unfair. But I think big employers might say: Our orders are falling off, and the chances are we shall be a thousand men short; or on the other hand they might say: "There will be so much more wanted here, and we shall probably want a thousand men on."

91450. I understand you think the machinery of some labour exchange in one form or other would be necessary?—Yes; if it is to be a permanent register—call it what you like—where every man may go. The present system of registration under the distress committees is simply appalling for raising hopes and dashing them down.

91451. I understand you entirely assent to the principle of labour exchanges?—Yes. In what has happened up to now our experience has not been good, namely, that it has been used by a certain class of employer to know the conditions of the labour market and to regulate their wages. You cannot expect a man like me to take kindly to a thing like that.

Agricultural training for unemployed, difficulties in providing workshops.

Proposed regulating powers of labour department.

Trade of witness. Desirability of co-operation by big employers.

Failure of present system of labour exchanges.

91452. I understand you are going to make a perfectly honest attempt to get all those into private employment who can be employed?—Yes.

91453. And this department is simply to take up the residuum, as it were?—Exactly.

91454. You have no thought in your mind of instituting a new Socialistic experiment to compete with private industry?—No, I have no such thing in my mind.

91455. But you could understand that a great many people are a little afraid?—I can. This is the thought that has been running most through my head during the last week. I said: "We seem to be running exactly on the lines of the Salvation Army, whom nothing can satisfy but Heaven; and the Labour Party upon the other hand are going to have certain things; so we shall all get there some day, when we are good enough; but in the meantime we have to live. We may get these beautiful things in the days to come, but people have to be fed now."

91456. (*Mr. Bentham.*) Do you know Mr. Beveridge's proposal with regard to labour exchanges?—No.

91457. (*Professor Smart.*) My difficulty is very much this, that, after the labour exchanges have done all their work, you will find a permanent body whom no private employer will ever employ if he can help it?—I see that as plainly as I see you. I see a mass of men whom no person can deal with but the State; and I say to myself: What is going to happen there? Then, I say, the State must step in and rescue these people. I will put as a concrete case Medland Hall, Medland Hall shelters 400 or 500 men every night in the week. They have gone through their pockets, I understand; and the biggest sum discovered amongst all the lot was about 3d. They get supper and something when they are turned out in the morning at six o'clock; and then they have to waste all day long; they crawl about the streets and then come back. I put it to any man: What is to become of them? No employer would give them 2d. an hour, and no one would be worried with them. Your State organisation could not deal with them, it could not put them to work. What is to become of them? I would turn them out on to the land. I say it should take them by physical force; it should put them into a barracks, if you like. It should cleanse them; give them clean clothes and feed them; treat them as though they were hospital patients; for a little while; and when the doctor affirmed that these men could now work, that they were in a physical condition to work, then I would make them work. But I see that army always dragging the rest of them down; and I am prepared to face them, and I am prepared to argue about the liberty of the subject, and all the rest of it. There it is. You have got to face it; and the unemployed are always kept back, and any attempt to deal with them is kept back, by this army. They say, What are you going to do with them? That is what I would do with them.

91458. (*Mr. Nunn.*) How long would you exercise powers of detention over such people?—There are some cases that would improve slowly; and I would leave to some person discretion as to whether this man was to be detained longer or not. My own feeling at this moment is that I would prefer quite an independent medical man for seeing to whether those fellows were fit to work.

91459. A magistrate and a medical man. You would have a magistrate, of course, to order detentions?—It all depends on the district. I am not keen on some magistrates, who might find a fellow a vagabond because he found a dead rabbit in the road, and all that kind of thing. I should keep an open mind about it all. I should prefer that a department should send out an independent medical man or a fellow from the department, and say: "Look here, the history of this man is so-and-so; very well, we will give him another fourteen days to stop, after which he will have to go and be dealt with properly."

91460. I am afraid a great many of these men would pass a medical examination except for sheer cleanliness?—Then you would have the history of the man for a few weeks before you, and you would know what was happening.

91461. Then it would seem, because I am assuming a medical man, that you would have to have some other authority?—You have heard me say before, the man who can and will not will have to be made; that is all. It is pretty strong to say so, but I feel it. I have to deal with all classes of men, and I know. *Mr. William Crooks, M.P.* 27 Jan. 1908.

91462. Then my point was: How long are you going to detain him; and are you going to trust his order for detention to an elected body or a magistrate?—I do not know. That will develop itself.

91463. You have not decided that point?—No.

91464. (*Professor Smart.*) I am afraid I go further than you; because I imagine after you have done everything to restore the men you will find a very large proportion who are still not fit for employment?—In the Bill we are introducing into the House we propose to deal with them if work is offered to them and they decline to do it; they should be dealt with under the Summary Jurisdiction Act, and be made to. *Proposed treatment of men who decline work.*

91465. I mean men who are not able to do work?—Then you will have to give them infirm treatment all the time.

91466. I do not mean to call them quite infirm. A man may be a little below the standard required by the private employer. I can quite understand the State as a matter of Poor Law, or charity, or whatever you like, giving a man employment under the standard rate; but I am perfectly certain you will have a very large proportion of that residuum who are never fit to earn the standard. You seem to think by putting them on the land you will make them able to earn their living?—Yes.

91467. I do not think you will?—After training?

91468. After training. Is agriculture such an easy trade to learn, and is it so profitable?—I do not think it is so easy to learn. I do not know where you get that idea. I think you would have to train a man for a considerable time, because there are so many branches. I do not expect him to be ploughing and reaping and sowing all the time. After all, agriculture, horticulture and flower-growing and that sort of thing, open a tremendous field. We have found perhaps a dozen or so of men who have been really quite unworthy of work from the physical standpoint who have done very well in that work. *Light work on the land for the partially unfit suggested.*

91469. But they must have exceptional brains to make up for the want of physical strength?—I am afraid you cannot class ordinary men with imbeciles; the mentally deficient you cannot expect to do it.

91470. I want to know why you are so strong upon putting the work on a new Labour Department? Would the Board of Trade or the Local Government Board not be able to take up this work also?—If you are going to develop the Board of Trade, do so; I do not want it to go to the Local Government Board. I want them to deal with Poor Law things entirely. I think, in a word, that while workhouses and infirmaries are necessary, and while children become chargeable, although personally I think children ought to be put under the Education Department whatever their conditions are, I would leave them there. They should not deal with able-bodied men and women at all. *Objections to the Local Government Board as authority.*

91471-2. (*Mr. Phelps.*) To take that last point for a moment, you must be familiar, as we all are, with the spectacle of children growing up habitually under conditions which are in favour of this class which we have been speaking of: have you any remedy to suggest with regard to that?—By taking the children. *Proposed treatment of children of tramps, etc.*

91473. Where you see children are growing up under conditions which are likely to throw them into the ranks of the unemployable, or whatever you call them, what remedy do you propose to meet that?—I would take the children entirely. I said that years ago.

91474. Take, for instance, a case which we happen to know of: Bermondsey. You would take all the children practically and put them out?—When a home can be maintained even under very poor conditions, I should let the children stop there. When I see these children—what has been running in my mind is the children of tramps and that sort of thing—I would take them away. I should not care what the father or mother thought about it.

Mr. William Crooks, M.P. 91475. Do you think the existence of this unhappy class you speak of in connection with Medland Hall is mainly due to physical or moral causes?—I should think both.

27 Jan. 1908. Physical and moral causes is a man falls out of work, and he lacks that moral fibre of unemployment-able class. to carry him on, and he drifts down, and the result is that he soon becomes physically incapable as well as morally incapable.

91477. I quite see in many of your proposals the effect upon the physical conditions of the men. Have you anything to suggest with regard to that moral condition of the men?—I think his morality has a tremendous lot to do with his fighting, a good deal more than you think. A man stopped me a fortnight ago. I could see he was trying to overtake me, and I let him catch up. He said: "What is going to become of me, Mr. Crooks?" I smiled, and said: "What do you think; what is the matter?" He said: "I was not in a bed last night: I am not likely to be in one to-night. I have been a teetotaler for seventeen years; I have done so long in the Army, and now I have been going up and down to the South"—he meant the South West India Docks—"The East and the Vic., and have had nothing now for four weeks." I said: "Where did you sleep last night?" He said: "On the Embankment." I said: "Why in the name of commonsense could you not find a doorway down here"—we were in Poplar at the moment. He said: "Because the Embankment is the only place where the police do not keep on moving you on; they let you stay and sit about there, but they will not anywhere else." That man had the moral character to fight: he keeps going, but the next man you may meet is without that moral force, and would simply knuckle up under it, and when he gets a day's work would not be able to do it at all.

Beneficial effect of regular employment and regular food.

91478. That I follow, but in the case of your colony and your system I see a great provision for reconstructing the physical powers of the men; have you any machinery you can suggest for dealing with the moral side of the question?—My own feeling always about that is that the man who is lax morally has not that backbone to fight. The moment his physique goes down he doubles up altogether, but if you get a man back to his health and to work, then it helps to strengthen him morally by the fact that he can remember what he has gone through through his own lack of fibre in fighting, and he will pull himself round. Take two men out of our twenty-four we sent to Canada. These men were real moral and physical wrecks. We had them down at Laindon and I went to see the twenty-four of them off at St. Pancras. These two fellows singled me out, and I walked along the platform in the dark with them, and one said to me: "How do you think I look?" I said: "You look like a changed man," and he said: "I am a changed man too." He said: "You know the last six weeks I have absolutely enjoyed working." There is a good deal in that. The other man said: "Mr. Crooks, you have been a friend to me once or twice, although you have made it rough for me once or twice, and I hope if ever you come to Canada I shall be able to put you up." He said: "You know how my arm used to be, now feel it." And I did, it is as hard as the calf of my leg, and his eyes instead of being like dead fish's were absolutely sharp. Here you get the men in the open. He would get his bath and his food regular and he had got different notions of life to what the workhouse could ever have given him.

91479. Do I understand you to think that regular employment and regular food is all that is needed in these cases. That is what I want to get at?—That is so.

Deteriorating effect of charity.

91480. Do you think it will restore moral fibre?—Take another case that has worried me for five years. This man was a coachman, evidently quite a smart chap. He came and spun me a very fearful story which I did not believe a word of. He did not look the kind of man, and I said, I am not having anything to do with it, so I put some sharp friends of mine on it. They came back and told me that the man's story was absolutely true. We fitted him up, looked after his wife in her confinement, bought a bed and one thing and another, but he has never done a regular job, and he has developed into a regular cadger now. He does not mind stopping you in the street and asking you for a shilling with all

the cheek in the world as though you owed him one. The man has simply deteriorated. If we had had a job of work to put him to it would have saved him.

91481. (*Mr. Gardiner.*) With regard to what you said a few minutes ago as to the condition of labour at the docks, I think you said it is as bad now as it was before 1889?—Yes.

91482. Have you any recommendation or suggestion to make with regard to the regularisation of labour at the docks?—It is very difficult to say what you should do. My own feeling is that if the big employers of labour would come to our assistance and just regulate their work for a permanent staff, you would get rid of, say, 75 per cent. of casual labour. I leave them a margin for fluctuations or urgent demands. That is to say, if 25 per cent. of their labour was considered casual. It would be very difficult; they may say it is only 25 per cent. now, I do not know. All I know is that at least 300 or 400 per cent. of people applying for work cannot get it.

91483. What steps would you take; would you go to the dock company?—I am afraid it would not be much use, but the organisation of work such as I have suggested might gradually wean these men away. I want to absorb the surplus labour.

91484. You want to take away from the docks those people who are practically unemployable?—And who are starving. If the agricultural labourer comes up and stands at the dock-gates, the foreman looks at a puny fellow and says "No," and he takes the agricultural labourer, and there is one more gone down.

91485. Your experiment is really that you want the bottom class removed from hanging round the docks, by showing them it is practically impossible for them ever to get a job?—Yes.

91486. Then you would want to deal with them in some shape or form?—Yes.

91487. Either by the means suggested here, or what is called a labour colony?—Yes.

91488. Have you anything to tell us about the age of school attendance. We have heard a great deal as to what you know perfectly well: the deterioration that ensues to boys who get jobs as van boys, newspaper sellers, and things of that sort. What steps would you like to see taken to prevent that which I suppose you would say ruins as many boys as anything you know of?—I have always been in favour of compulsory school attendance to help these youngsters between fourteen and eighteen.

91489. Continuation Schools?—Yes, Evening Continuation Schools.

91490. Would you just elaborate that a little bit from the point of view of the East End, that is to say, give us the hours you would recommend: seven to nine, or that sort of thing?—I should give them from eight to ten hours a week, I will put it that way.

91491. You would enforce that school attendance exactly as you enforce the attendance now?—Yes, I should be inclined to.

91492. You would not accept any excuse but ill-health or properly certified over-time?—Yes. What would happen would be this, that instead of the poor little van boy running to seed as he does (the remarkably clever little van boy is like the clever boy selling newspapers, he gets to the time when he develops into a hooligan or ruffian) he breaks down and becomes a consumptive or rickety boy, and he is a burden on you the remainder of his life, I know people who would make a useful man of him in the other way.

91493. With regard to one further point in this direction, taking the other class of boy who is not exactly apprenticed to a trade now, and does not get a better sort of employment than a van boy or a boy selling newspapers, he would be, through making attendance at a continuation School compulsory, given a chance?—I think his chances in life would be greater and better.

91494. Would you extend the half-time system?—No, I would not have the half-time system under any circumstances.

No half-time system under any circumstances.

91495. Not where a boy has begun to go to work at, say, fourteen?—No.

91496. They must work the whole time in the factory or office as well?—Yes, either be all a schoolboy or nothing. I want to develop him when he gets to work; a normal boy creates a demand as it were. I will give you an instance. I know a lad, whose name I do not want to mention, he is an orphan boy, his grandfather kept him; when he was fourteen he came and asked me what should he do. I said: "I cannot tell you, Tom, but if I were you I should join the classes at the People's Palace, and learn shorthand and typewriting." He had several common jobs—packing at the Mazawattee Company, gate-boy at an engineers' yard, and he worked at the post office. About three years ago I met him in the City, with a roll of papers under his arm, and I said: "What are you doing?" "Oh," he said, "I am working," and he named a firm. I said: "You do not know anything about that." "Oh, yes, I do," he said. "I have just designed an engine, and it is going fine." I said: "Since you have been to see me, what have you been doing?" He said: "I was secretary to an American commercial man, and I have been out of work several times," and he said: "Here I find the advantage of your advice; I took up shorthand and typewriting, and whenever I am out of work I drop down to Remington's, who send me off to a job and I get my £2 a week there at that work; if they have a casual job offered to them, they send me off to it." That is only one case in which the chap has made something for himself—created a demand for his casual services which pays him, and does not interfere with his development. In the last paper he has sent to me he is marked as an Associate of the Institute of Mechanical Engineers.

91497. That is to say, he has developed a subsidiary employment?—His shorthand came in for it; he has been in and out of that with the knowledge that he gained.

91498. (Mr. Chandler.) Shall I be right in assuming that the recommendations in your Statement here are practically endorsed by the Labour Party in the House of Commons?—Yes, they were considered and passed unanimously.

91499. Then they believe the success of these recommendations will largely depend upon the establishment of this Labour Department that is mentioned here?—Yes.

91500. With a President of Cabinet rank?—I do not think they would stand solid to any Department, but it appeals to them that that is the way out.

91501. Do they feel that the Board of Trade and the Local Government Board have sufficient to do without the Labour Exchange?—They think they have more than they can do, and this important work simply gets neglected in consequence, or regulated under old-fashioned regulations.

91502. Is the idea of the Bill that the collection of statistics by the Board of Trade may be taken from them?—Yes.

91503. (Mrs. Bosanquet.) As to these boys of fourteen to eighteen, is it not rather severe on them if they have to work long hours and do their schooling in addition?—I do not think it is; one has to remember that frequently at home in your own house the boys will want to escape going to school; if you make it that they need not go to school in the evening they probably find some recreation outside which is not going to do as much good, so you must regulate him or he will regulate you.

91504. You would not like to see it made by shortening his hours of work?—I would rather, but I cannot get into my head anything like sympathy with half-time. Some years ago we went down to Hoxton and met a number of employers in the cabinet trade, and what we did there was to persuade some of the employers to let their boys have half-days to go and get some technical instruction in cabinet making.

91505. It might meet it if one could get a regulation that people employing boys from fourteen to eighteen must let them off for this purpose?—It would be nice if they could, but my problem is the idle hours of the boys and how they can be usefully employed.

91506. You wish to see the boy occupied every moment really?—He may do a hundred things. I want to keep

him from the corners of the streets. He may go and play football, but I want to keep him from all the temptations that loafing about the streets leads him into.

91507. Do you think another way of doing that would be to have public playgrounds. A boy needs his recreations?—Yes, but then you would want organised and organised games.

91508. Would not they organise their own games, if they had the place?—Yes, they do to a limited extent, but what we are always troubled with is not the well organised boy, but the unorganised boy, who gives you endless trouble.

91509. To turn back to the men you sent to Canada, have you had any reports of them since they got there?—Yes, we had an exceedingly bad character about some of them, which was not justified. We made a further inquiry. You might ask Mr. Lansbury on that; he has the latest information.

91510. (Miss Hill.) I gather that you are anxious if this Government employment or municipal employment is provided, that the people should as far as possible get back to private employment, that they should not linger on at the work which is specially devised for people out of employment?—In every case I lay down here it is work that could be taken up and dropped.

91511. I was thinking about the effect of it. I gather from what you said to the Chairman you thought there was no fear that the men would stay on at that work if there was employment for them elsewhere?—I do not think they would, but supposing they were inclined to stay on, then I would simply turn them out.

91512. There were two questions I wanted to ask you about with regard to that. Supposing your 300 men whom you imagine coming to the municipality, and saying they were out of work were men on strike, what course would you take with regard to them?—I do not think you are called upon to interfere. I do not think you are called upon to start State employment, or to organise them as unemployed, where there is a dispute on between master and man.

91513. It would be difficult for the Department to judge between the parties to a trade dispute, would it not?—If you mix up a trade dispute with the unemployed, then I do not think you will ever get a solution. You must keep yourself quite clear of that.

91514. So you would not advocate this for men on strike?—No, but I would not like to bind myself down to saying such a thing was not possible, or it would not happen. I should think it was very improbable, because men on strike have no inclination to turn to other work, their feeling is they want to beat this man, and, of course this man is anxious to beat them. If they could only get absorbed in their own particular calling elsewhere they would be, and you must also remember strikes invariably happen amongst the skilled class of men.

91515. If they got permanent work under Government or under the municipality at market rates of wages, would they not remain there, or will they not at any rate remain there sufficiently long to give a very considerable impetus to the success of the strike; it will take them off their trade union?—Will a man register himself as an unemployed man under this scheme if he is on strike? You may frame regulations barring people on strike from registering.

91516. I was wondering whether that was your view, that those regulations must be framed, or not?—I should have to deal with that circumstance as it arose. I cannot bind myself to say now under no circumstances would I allow a certain thing to be done. Let me give you another case of what did happen. There was a lock-out that happened in a colliery district, and the masters ended by showed no sign of giving way, they locked the men out, the men were not inclined to go back and the men started relief works by making roads, and whether the men were right or wrong the colliery proprietors had to pay for it, so it ended the lock-out; they were paying the men to make a road they did not want.

91517. You have no definite scheme before you how the supply of work should deal with the question of men on strike?—I do not want to touch men on strike at all, but I do want this, that an employer who feels inclined to cut wages down should not have a large army, back on.

Mr. Wil'am Crooks, M.P.
27 Jan. 1908.

Playgrounds and organised games.

No intention of relieving when private employment is to be had.

The proposed Labour Department not to interfere in trade disputes.

Instance of a lock-out lock-out that happened in a colliery district, and the masters ended by showed no sign of giving way, they locked the men out, starting relief works.

The employer not to have a reserve of men to fall back on.

Mr. William Crooks, M.P. as he has now, march in to starve another lot out. I think you will agree I am right there ?

27 Jan. 1908. 91518. I was only wondering how this scheme was going to deal with this problem which is pretty sure immediately to arise ; there will be a strike somewhere and men out of work in consequence, and the authority will have to take one line or the other?—The authority would not be called on to interfere one way or the other.

91519. If the men want work would not they ask for work?—They might, then the Government Department would have to make up its mind what it was going to do about it. They might say: These are not *bona fide* unemployed workmen, therefore we are not called on to interfere.

91520. Any Bill you would propose would not lay down a regulation with regard to that, I gather?—I am afraid they will not let me lay down regulations anyhow, whatever the Department is.

The problem of the man who prefers casual labour. 91521. Then, secondly, I may illustrate what I have in mind by what I know happened: A friend of mine in the country was very much distressed about the account of the dock labourers and she got one of them transferred to the country who had some little knowledge of agriculture and put him on to her garden to work there. He worked a certain number of days, and then he said he preferred going back to the dock labour. He said he could work on and off when he chose and take a holiday when he chose, and off he went. It struck me that the same thing would happen; you would get people who were not prepared for the quiet work they were wanted for, which was perhaps done in not very exciting surroundings, and they would prefer to work with a large gang of men. How would you deal with that?—If you allow them to get into that state of moral deterioration you would have to put up with them. You will always find men and women like that. Why are people always changing their servants, or those in any position? Exactly for the same reason. When they get a gem they make much of it, but they do not want to frame Unemployed Acts on their experience of their servants.

How to deal with agricultural labourers. 91522. Are you not providing what would rather increase dependency, a certain amount of work altogether with great regularity; and if municipal bodies are responsible for work they are apt to provide concerts in the evening and exceptionally cheerful conditions; will not that be rather an attraction, we will say, to the agricultural labourer who is in the village?—I would keep him on the land, he would be dealt with in a proper way.

91523. But they do not stop there?—Take the other side; supposing you do not do anything and you just leave them alone; very well, what is the condition, as we know it to-day, in London and every big city? Moral deterioration going on as well as physical deterioration by men and women, and because of the possibility that something such as you suggest may happen, therefore leave them alone to the misery they are in at the present moment. Whatever you do must be an improvement upon present conditions.

Danger of injuring self-reliance. 91524. I do not think we need pass entirely from an elaborate scheme of provision for everybody out of work to doing nothing at all, because we feel that a large system of universal supply of work will be a difficulty. I do not think myself that it will stimulate self-reliance, I doubt it, and I think you will have the difficulty that it will be an attraction to the people who have not very exciting surroundings?—Supposing it is so, then they leave vacancies for other people to fill. You have got a surplus number of men and women to deal with. What are you going to do with them? Are we always to have the argument that you have no business to attract people to this because it will make it more difficult for them to have a selection? Why should there be five men praying and beseeching one person to give one of the five a job, and that one can only get it by accepting starvation conditions?

91525. Some of us may think it is because the five persons are not using their best endeavours.—Well, what are we going to do with them? You have to keep them.

91526. That will be a question for afterwards.—The point is that this Commission is sitting to find out what it is going to do.

91527. The Poor Law, as certainly most people will agree, has improved in its way of dealing with the young and the sick and old; at any rate there are certain improvements, but where it appears most unaltered is with regard to the able-bodied? Is not that so?—Yes.

91528. Have you thought at all that the difficulty of employing them was in consequence partly of the grave fear of competing with other employers if anything was introduced into the workhouse which was sold, the idea of the old Poor Law people was that these people should work, and yet it is very difficult to find them work; is that because they are forbidden from entering into any productive industry?—Nobody cares to think of anything except breaking stones and oakum-picking. That is as far as the imagination of guardians has gone. When we tried to introduce something new we were held up to ridicule and scorn. We were the only people who dealt with the able-bodied in a proper manner. We found the man was an adept at picking oakum and we gave him stones; if he wanted stones we gave him oakum. We simply did our level best, and the proportion of able-bodied, in spite of all reports, as far as Poplar is concerned, is in our favour in comparison with other unions in the matter of increase in twenty years.

91529. Do you agree with the assumption which has been made for a great many years that no Poor Law institution should take up work which was done by independent workers outside?—I do not think it ought.

91530. You mean you think that was a right assumption?—I do not think you ought to subsidise labour, and this Commission certainly ought not to be in favour of it. What right have you to subsidise labour to give men keep and shelter and to enable them to produce a commodity which cannot be made outside for the price. You are subsidising a few people at the expense of the ratepayers.

91531. You are subsidising agriculture, are you not, by the labour colonies; surely that is the same?—I have not heard of it.

91532. It seems to me you are?—I understood the last Government subsidised agriculture by letting them off with half rates.

91533. (*Sir Samuel Provis.*) I am not quite sure whether your statement is intended to be practically in a different form the Bill that was introduced last session by Mr. Ramsay Macdonald, or does it modify that Bill in some respects?—This was a proposal put before the whole thirty-one Members of the Party in the House and unanimously agreed to.

91534. It is not quite the same as the Bill, is it?—No. What we are anxious about, as you know, is that we should get a second reading of our Bill in the House, and then whatever modifications the Government propose on the Act (which will have to be renewed this year or dropped) the two things should go up together, and the Committee should thresh out any of the points. We do not swear by the Bill as introduced.

91535. I thought that this statement in some respects was not on quite the same lines. For instance, the Bill does not propose a new Government Department?—No; what we felt was that if we could get a Second Reading of the Bill and send it to a Committee, it would be threshed out very largely on this thing that we have.

91536. Take a more important point where there seems to me (perhaps I am mistaken) not to be entire agreement between the statement and the Bill. The Bill does not confine itself to exceptional distress, does it; it takes rather, does it not, the right of the worker to work?—Yes, to work anyhow.

91537. You have not gone into that?—That of course is a tremendous subject which will be threshed out as to whether the mere application for work carries with it the right to be employed immediately, or whether, on the other hand, it should be under conditions of absolute need of employment. Take, for instance, transfer of work; a man wants to transfer his job; should he have a right to come and transfer himself from one thing to another. In my own trade if I do not like one master I go to another, but if the other master gets wind that I am leaving to come to him, he probably will not have me; it works that way.

How to deal with the able-bodied unemployed? How they were treated at Poplar.

Danger of subsidising labour through the Poor Law.

The Bill introduced by Mr. Ramsay Macdonald. Its terms. Questions raised by the Bill.

91538. Practically under the Bill anybody might go and register himself as desirous of work?—Yes, the argument there remains rather that a man offering himself for employment was a proof that he needed employment, which could only be tested by employment being given him.

91539. The Bill goes on to say that thereupon when he is registered it shall be the duty of the local authority to provide him with work, or if they cannot, to maintain him in the meantime?—Yes.

91540. Therefore you would, under that system, be likely to get a man registering himself because he would lose nothing by registering himself, and he might gain something?—I should think there the Bill would want strengthening, or rather a definition as to what is meant; whether he shall be a *bona fide* unemployed man, or whether he may register for the sake of changed employment.

91541. Otherwise there would be the danger of overwhelming your authority by a number of people who would not need work at all?—That is so.

91542. Coming to the operation of the Unemployed Workmen Act, you remember the way in which it started?—Indeed I do.

91543. The object of the Act was, was it not, really to meet times of temporary distress, such as winter distress?—Yes.

91544. The object of the Act, whether rightly or wrongly we are not going into just now, is not to afford permanent employment?—No, but the failure came in through no well organised schemes being submitted, or no well thought out schemes, and then it was only such persons as the distress committee sent on. You know what happened; they sent up the most distressful cases, and with all respect to them they might have been dealt with honestly under the Poor Law, while on the other hand you might have rescued many a man from going to the Poor Law at all. The intention was to save these men from recruiting the ranks of the permanently unemployed—to tide them over.

91545. The Act did not say anything about that, did it?—No, I wish it had, but all the speeches ran in that direction.

91546. Nor did the Regulations. It was not destitution that was the test; it was really, was it not, that of being a deserving case, a man who could not obtain employment from circumstances not under his own control?—That is so.

91547. Therefore, in judging of the Act itself, ought we not to leave out the notion of destitution?—That is so; that is where they have administered wrongly.

91548. I thought you a little suggested that the Local Government Board was responsible for that?—I thought you were, and I do now. You never stepped in once. You were critics, you were not advisers. You are not obliged to be, I wish you were. You never started in once to point out what the Government or the Act wanted, but just let these people shape this thing in their own way. The result was that the Act itself was of no earthly use for the people we wanted to help. It was: "How long have you been out of work; how many children have you got? have you ever received parochial relief?" which is purely a Local Government Board groove; it ran in that groove, and we never got it out of it.

91549. You agree it was right to investigate the particular cases, as I understood from what you said before?—The modification did real good. I took the trouble to see a man who was registering names, and he said: "Of course now the enquiry is excellent," but see what happened by having this whole army of regularly in and out men on the list; you shut out the decent fellow; you did not give him a chance at all, unless he got so low that he had to go for relief as well. That is where they have killed the Act. The Act had all the makings of a good Act. That might have served for an excellent Bill, but it seemed to me, and I say it with a full sense of responsibility, there seemed no other desire from start to finish but a desire to kill it.

91550. The difficulty, of course, is in the investigation, is it not?—But we could have had an investigation which is quite right, but the distress committee took

the most distressful cases, which they had no right to take. One has to help distressful cases every hour of the day, but you are not rescuing people from poverty; that is what we want to do, and what the Act started to do.

91551. That is not the fault of the Act or the Regulations, but a matter of administration?—Yes, for which I blame the Local Government Board for not holding a firm hand over its administration.

91552. The Regulations the Board have laid down did not say anything about destitution?—I think the Local Government Board has got fixed ideas as to everything it touches. It is not sufficiently elastic to deal with this question of the unemployed outside Poor Law. Supposing I had been trained like you I can quite understand my doing worse things than you. I do not think I am as genial as you are, and probably I should be worse, but the fact remains you are not the people to deal with it.

91553. But what I am rather anxious to bring out is, and I think we are agreed on the point, that neither the Act nor the Regulations make destitution the test?—No, it did not, it was the means for employment being found.

91554. The case being a deserving case?—That is true.

91555. Any difference between us is as to the extent of the investigation necessary to determine whether it was a suitable case?—Then they began at once to use it in the way I have said, and pick out the bottom men instead of saving the top men from getting to the bottom. Now you have got into such a muddle you will never be able to get out of it. I do not know what Mr. Nunn thinks about it, he probably will not agree, but of all the delightfully chaotic committees I have ever had anything to do with, commend me to the Unemployed Committee.

91556. You have suggested that amongst other arrangements, employers should send their order books to some central authority?—I would not go so far as that, you would only raise tremendous opposition. I do not think I would attempt that. What I should probably do would be to persuade them, or get their sympathetic support for the effort you are making, telling them that you did not intend under any circumstances to publish their communications to you, but that it would enable you to deal with sudden cases of emergency from unemployment, etc., and I think they would do it, and have always thought they would do it.

91557. I quite agree you could not publish it; do you think they would send the information?—I think so. There is a tremendous difference in the feeling about the country now to what there was, say, twenty years ago. A man feels that after all it is part of his duty to keep up the moral and physical calibre of the people of the nation, and if he can help a Government Department in a just and proper manner, I think he would do it.

91558-9. (Mr. Gardiner.) Would not he be glad also to use the machinery you suggest, in order to keep together a body of workmen who would be suitable for his trade?—What has happened is this: I cannot believe that some of the big employers who fall back on casual labour now are in the end much in over it; they would have to regulate their work to keep a permanent number of people on.

91560. (Mr. Nunn.) With regard to the Central Unemployed Body, we are agreed, I think, that the Local Government Board laid down that the men who were to be preferred for the work were men of good character and thrifty habits, who had been in regular employment and had lost it; that was the case?—Yes.

91561. Was it not the Labour Party on the Unemployed Body who did their utmost to enlarge the borders of the men who were to get relief, by trying to abolish the test of destitution. The Local Government Board had laid down that men who had applied to the Poor Law during the twelve months previous to their application should be disqualified, but it was the Labour Party, was it not, on the Unemployed Body who tried to remove that, and let in the paupers?—Will you tell me who they consisted of?

Mr. William Crooks, M.P.
27 Jan. 1908.

Defects of the Local Government Board in dealing with unemployment outside the Poor Law.

Destitution was the means for employment being found.

Wrong methods adopted by the Unemployed Committee.

Desirability of co-operation by employers. Greater feeling of responsibility now.

Rules laid down by the Local Government Board.

Question as to the action of the Labour party on the unemployed body.

Mr. William Brooks, M.P. 91562. There was a deputation of several members, most of them representing the Labour Party?—There was a very small deputation which you could easily have over-ridden if you had liked; but what we wanted and what we most want now is—I know men may be obliged to go and get a medical order, and things like that—

91563. Medical orders were not included, because they do not disqualify?—Not now. There was the question of destitution which we wanted struck out—perfectly true.

91564. Does that not at once lower the standard? While a certain party on the Unemployed Body was trying to keep up the standard was not the other party trying to drag it down?—No, but even if that was so it does not convince me. What we wanted was to help the best of the men.

91565. Why did you try to include the men who had applied to the Poor Law during the past year?—I do not remember having done so, that I remember.

91566. I remember it very well?—You cannot remember me doing it.

91567. Not you, but the representatives of your party?—We had a lot to do with the carrying of this Act.

91568. (*Chairman.*) You do not agree with the members of the Labour Party who attempted to do what Mr. Nunn has said?—I will stick to what I said, that what we wanted to do was to rescue the men before they got low down. The distress committee have taken the men at the bottom instead of at the top.

91569. (*Mr. Nunn.*) Mr. Keir Hardie was the man who headed that deputation?—There is a good deal to be said for it, but it does not work out in the method I suggested.

91570. They dragged down the standard which the Local Government Board set up?—As to the question of destitution and twelve months' relief, I am against twelve months' relief now—a man having had relief within a year. I think a man might have relief quite easily. We gave it at the time of the unemployed difficulty down there.

91571. Is not the answer to that—I am afraid I must put it in the form of a question—that if you are going to have a lot of paupers come to apply for employment for relief you practically exclude the highest class of working men?—Yes, that would be so. I am not now complaining about that test of destitution being put in, but personally I want to help the man at the top, but supposing it happened that the man at the top had a bag of bread or meat given him, he is immediately outside the Bill.

91572. Is not the answer to that question that the man at the top hardly ever does go to the Poor Law. My experience of Benefit Society men is that.—You are a lucky man.

91573. My experience of the men we tried to get the Act for is that they do not apply to the Poor Law. With regard to the Bill I do not think there is anything in the Bill, is there, that contemplates that when a man is supposed to have had enough work he is to be dismissed. There you part company with them. You are dealing with exceptional distress in your paper, and you provide when the exceptional distress is over the man shall be sent about his business to seek employment on the market, but there is nothing in the Bill to that effect?—That may be. You heard what I said about it.

91574. The Bill offers employment to practically everybody, does it not?—Yes.

91575. Is it not your experience (I know the men come to you a great deal on these subjects) that amongst the lowest class of men who occasionally seek for employment a municipal job is just the sort of job they prefer. If they can get on to the road they prefer it to any other job where they may not have the same continuous employment?—That only happens about once in a lifetime. You soon fill up with them.

91576. Is not that what they all desire?—The general idea of men is to get a regular job, but after all, apart from the working man, is not that what is the matter with most people. Do not pick working men out.

91577. The more it extends through society the more we ought to set our faces against it?—Not at all. Supposing a man renders to you value for your money, whether he is on the road or doing anything else, I do not see what you have to complain about. Let me give you a case which has happened within the last two or three years. The Government have employed forty-two extra men in the Estate Duty Office—forty-two. They have only increased the Estate Duty in six years by £400,000, which is very little indeed, and taken £9,000 odd a year to pay these men. It would give 750 men 5s. a week for a year. Might I not be arguing: What right have these men to go there at all; by what means do they monopolise a Government Department and get employed? and all the rest of it. Why only apply that kind of thing to the men who want to get work.

91578. I might answer that these men are required for a special job?—I say exactly the same thing about the men who are on the job; somebody has got to do it.

91579. The point was that when once these men have got a municipal job under the Bill there is nothing to prevent them from keeping to it.—You heard what I said about the Bill. It is a second reading Bill: we want it discussed in the House where criticisms such as you are offering will certainly be heard.

91580. Perhaps it is not fair to criticise the Bill now, so I will go to one or two less contentious matters. You spoke of abolishing casual labour. Have you any suggestions to make. You said: "when we have abolished casual labour." You did not say how that was to be done?—I do not know; I have not come here with a panacea for all the evils, but the Government having called this Commission together do not expect even when you have finished your labours you will have found a way out. We agree that you will very largely help us to solve that problem of casual labour, because many men, many minds, but I am strongly of opinion that casual labour can be reduced to a minimum. We want to get that minimum as soon as we possibly can. The pioneers of your country, the pioneers of your Empire have been the men who did not like a permanent job—casual workers if you like. They have been men who could not rest anywhere, so they have pushed abroad and so that characteristic is not to be condemned in everybody because it happens to be amongst the poor as well as the well-to-do.

91581. Not at all?—Whatever the reason is, let us reduce it to a minimum.

91582. There is only one other point, and that is this training for agriculture. Are you proposing to train them to take agricultural jobs under farmers who rent their farms, or with a view to take small holdings? Which would you favour?—I am speaking with a limited experience, but I am in favour of small holdings. But you know how limited my experience on that is.

91583. Then, with regard to training people for this, is it not really better supposing you take a long view of things? Would it not be better to take the boys as they leave school and give them their training in agriculture, rather than wait until they had made a mess of London life, and then put them on to the land?—I think very largely you are right. There again you cannot tell the bent of a lad until you have given him an opportunity.

91584. Supposing you had the chance by means of legislation to give boys continuation evening schools, about which several difficulties have been suggested which I feel the full weight of myself, but supposing you could keep boys and girls at school until they were sixteen, would that not have a very beneficial effect on the labour market to begin with, by keeping out a certain amount of competition and giving boys an opportunity for their first start in industrial life by a thoroughly good technical education?—I should think that would be likely, but then you would be met with a very large margin of boys who show no capacity up to a certain age.

91585. The State has to turn out good citizens, and that is the whole object of elementary education. Would it not be a good thing to prevent a certain number of these defective boys going out into the world at all?—I do not agree with you, unless they are absolutely mentally deficient. You must know there are men, and women

Question of relieving men who have applied to the Poor Law.

Question of reducing casual labour to a minimum.

Training for agriculture. Small holdings favourable.

Terms of Mr. MacDonald's Bill.

Popularity of municipal jobs because more continuous.

Effect on labour market of raising the school age.

Problem of defective children.

too, who have been sadly behind in ordinary education who still have done excellently well in the world. We have a man (you may have heard me speak of him before) who cannot read or write and never could; he takes a boy about with him to dot down anything that happens during the day.

91586. Is it not a question for the State to consider if it cannot detain boys even beyond the age of sixteen, supposing they do not show any likelihood of earning their living in any department of life, and put them on to a farm colony for years?—Take the other side of the mentally deficient; we are at the present moment at the pleasure of the Local Government Board detaining mentally deficient boys and girls till they are twenty-one.

91587. Might you not apply that to the work of public elementary education?—I think it is a much bigger question than the mere dealing with the unemployed, such as we are discussing now. It is worth thinking about.

Mr. ROBERT VICTOR BROODBANK, and Mr. A. EVAN THORP, called; and Examined.

91592. (Chairman.) I believe, Mr. Broodbank, you are General Secretary of the Poplar Borough Municipal Alliance?—(Mr. Broodbank) I am.

91593. And you have prepared certain answers to questions on compounding which have been submitted to you by this Commission?—That is so.

91594. If you will kindly hand those in we will treat them as your Evidence-in-chief?—Very well. (*The Witness handed in the following Questions and Answers.*)

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—Composition by owners for payment of rates is the rule in the Borough of Poplar, the abatement allowed to owners being as follows:—

Without agreement to pay rates whether property is occupied or not, 15 per cent.;

With agreement to pay rates whether property is occupied or not, 25 per cent.;

The maximum rateable value of properties of which abatement is allowed being £20.

The total number of private houses in the borough in the year 1905-6 was as follows:—

Houses rated at over £20 - - 3,259

Houses rated at under £20 - - 19,866

Total - - - 23,125

The total amount of abatement allowed during the year 1905-6 was £37,648 18s. 3d., which is equal to about 11d. in the £ on the rates. The rate levied for the year was 12s. in the £.

Question II.—Is direct payment by occupiers (a) possible, and (b) advisable? If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—My opinion is that it is not only possible, but advisable that all occupiers should pay rates direct.

My committee instituted the Modern Rent Card, for the weekly collection of rates with the rent, by the landlord or his agent, and it is urged that this method is a sound one, seeing that the tenant is called upon to participate in all fluctuations of the rates. I desire to draw the attention of your Commission to these rent cards, twenty sets of which I have pleasure in furnishing herewith, and further supplies are at the service of your Commission should you require same. (For specimen card see *Appendix No. IV. (A)*). It will be observed that each rateable value in the rent card has its individual tint of card for ready identification by landlords owning, or agents controlling, properties of various classes, and it will be found that the table on the back of each distinct rateable value varies with each change possible in local rates. These tables were found necessary owing to the difficulty of the tenant and landlord agreeing as to when minor variations in rates should take effect.

The argument used against direct payment has been the difficulty of collecting rates quarterly from the ordinary weekly tenant, and the great cost that would

91588. It is one of the preventives?—I do not think you could include it in any unemployed scheme. *Mr. William Crooks, M.P.*

91589. You advocate the reclamation of older people by putting them on farm colonies?—I do not think that is quite fair. What I said was, there may be men who had been out of employment in consequence of improved machinery or alteration of fashion, and things of that kind, who were obliged to learn some other occupation to that which they had been trained to. *27 Jan. 1908. Question of farm colonies*

91590. Do you not intend farm colonies for people who have made a mess of their lives?—It may be an abject failure, but it is worth trying.

91591. You are prepared to try it at that time, but you will not try it before?—I will not say anything of the kind. You may do what you like, but I do not think it comes within the purview of what we are talking about.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp.

be involved in securing payment in such circumstances, together with the premium that would be placed on weekly tenants vacating their premises when pressed at the final period for the payment of rates. Further, the cost of legal proceedings to enforce such demands would be great, and the exemptions that would have to be made by justices would cover every person in receipt of relief, and specially in the case of the casual labourer whose earnings are difficult to confirm, and to whom a quarterly charge for rates amounting to, possibly, £2 10s. in one item would be overwhelming.

At present a tenant paying, say, 10s. per week, including rates, pays the agent or the landlord this amount, which includes rates and taxes, and it would appear feasible that the landlord or agent should collect the rates on account of the Borough Council at the same time as the rent is collected, receiving an ordinary commission for doing so. The contention that the cost of direct collection of rates would be excessive, is met by this method, as there is no reason to suppose that the agent, acting at present for landlords, would not also be prepared to act for the Borough Council.

At present the rent includes rates and taxes.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—Variations in the rates do affect rents to a very large degree in Poplar, where compounding is the rule, but this is entirely a matter as between each individual landlord and his own particular tenant or tenants. There are cases where rents have been increased repeatedly owing to the rates, but against this there are others under our notice where tenants have had no change made for some years, indeed since first occupying their premises, and it would appear that with the better type of landlord it is not usual to increase the rent to an old tenant, but this rule only seems to be the case where the landlord acts as his own collector.

How far a rise in rates affects rents.

Generally speaking, rents have increased materially through the rates being raised so abnormally, with the result that tenants previously occupying whole houses have had to let off part. Others occupying four rooms have reduced their accommodation to three rooms, and so on. Unfortunately, whereas rents are so often raised when the rates go up, the reverse is not general, but I am glad to be able to say that a good number of instances have come to my knowledge where the landlord has reduced the rent sixpence per week owing to the recent welcome fall in the rates in Poplar.

Result of rise in rates rents.

The point as between landlord and tenant is just what variations in rates justify any addition or reduction to the weekly rental, but the adoption of some such means as our rent cards prevents any large variation, or change, beyond a penny or so per week.

Effect of our rent cards.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government, and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—The effect of direct payment of rates by occupiers was clearly shown by the storm of protest

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp.

27 Jan. 1908.

The occupier who pays rates direct takes an intelligent interest in borough affairs.

Belief of some tenants that they paid no rates.

Position of limited liability companies.

A testimonial to our rent cards from Miss Octavia Hill.

raised by the ratepayers under the auspices of this Alliance when the rates in Poplar reached the high-water mark of 12s., and which protest resulted in the Poplar Inquiry held by the Local Government Board. Generally speaking the occupier paying rates direct, watches the call for rates, and takes an intelligent interest in the affairs of the borough.

My association, the Poplar Borough Municipal Alliance, in its efforts to endeavour to educate all classes of voters in the Borough of Poplar as to their duty and responsibility in the election of representatives on the Borough Council and Board of Guardians, was much struck by the statement repeatedly made by weekly tenants that they paid no rates, they knew nothing of rates, and cared nothing about rates, not realising the fact that the increases in their rents were mainly due to the abnormally heavy rates in the borough. This expression of irresponsibility on the part of this section of the electors caused my Alliance to consider whether direct collection of rates would not bring home to the weekly tenant the necessity for taking more interest in local affairs, and, seeing that there are 19,866 houses in the borough rated at and under £20, and the total number of electors on the register for borough elections is only 27,338, it can easily be imagined how seriously the question of compounding affects the well-being of this borough.

I am directed to call your Commission's attention to the unfortunate position in which all limited liability companies are placed in having to contribute so heavily to the expenses of the borough without having any voice whatever in the election of those responsible for its administration.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Answer V.—I have had no personal experience in the weekly collection of rates from occupiers, but would refer you to a letter of recent date from Miss Octavia Hill, who manages the property of the Ecclesiastical Commissioners:—

(COPY.)

190, Marylebone Road, N.W.
Dec. 18th, 1907.

Dear Sir,

We have found your rent cards readily understood by tenants, and have found no difficulty in introducing them.

I have no suggestion to make as to alterations therein. I consider their use should be advocated and made as widely known as possible. They would teach weekly tenants, who form the bulk of the electors, what a rise in rates really means, and would teach them to advocate such expenditure only as is necessary. They secure this most desirable end while giving the local authority and the landlord the advantage of compounding, and the tenant that of paying weekly. —I am,

Yours faithfully,

(Sd.) OCTAVIA HILL.

To R. V. Broodbank, Esq.

Miss Octavia Hill has had many hundreds of the rent cards from us, and is best qualified to speak of the result of using the cards, while Miss Lumsden, who co-operates with Miss Hill, has also found a most delightful interest evinced by weekly tenants in local affairs through the use of our cards.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Cost of compounding in Poplar. The same agent could collect rates and rents at the same time.

Answer VI.—The cost of compounding for the year ended March 31, 1906, in Poplar was £37,648 18s. 3d., and the cost of a weekly collection of rates on this class of property could not possibly approach that amount. If the landlord or his agent be utilised to collect the rates, when collecting the rents, the saving would be very considerable, and in either case, the borough would have the advantage of all electors directly participating in every fluctuation of the rates, and that in itself would make for proper and economical administration. Any agent at present collecting for a landlord would probably agree to collect for the local authority, and the one call would be sufficient for both purposes. This is, in fact, what happens now, when the weekly rent is collected. For instance, on a 10s. a week house, approximately 7s. 6d. goes to the landlord, and 2s. 6d. to the Borough Council, through the landlord; there should be no

more trouble in the agent remitting the 7s. 6d. to the landlord and the 2s. 6d. direct to the Borough Council.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—The system of compounding has no effect upon the value for rating purposes of property compounded for in Poplar.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

Answer VIII.—I am of opinion that an allowance for payment of rates in advance is neither necessary nor advisable.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

Answer IX.—The practice in Poplar is a quarterly payment of rates, and these rates are not usually demanded till the third or fourth week in the quarter for which the rate is required, and payment is not pressed for till about the eighth or ninth week of a quarter, so that it cannot be said that payment is made considerably in advance of the need for them.

91595. (Chairman.) The upshot of your answers I gather, is that composition is general in Poplar; but so far as you know you do not see any insuperable difficulty to abolishing compounding?—(Mr. Broodbank.)

I see no insuperable difficulty. Of course, whenever one makes a change that is radical difficulties always do crop up, but nothing that absolutely cannot be dealt with. The question is with the tenement householders, not in the county council dwellings, but in ordinary weekly houses in Poplar, now, tenants are letting off one or two rooms out of a six-roomed house. That is where the difficulty would come in, the tenant pays only part on account of the rent, otherwise in principle there should be no difficulty at all, as far as I can see.

91596. We have had several statements from different authorities, and I think the collectors are almost universally against it. I think the answer is that they will be asked to collect weekly?—It would be impossible from my point of view to attempt to collect weekly through the borough councils.

91597. The only way it can be done in your judgment is to collect the poor rate with the weekly rent?—Collect the poor rate and the borough rate with the weekly rent, with the as is done every day. It is being done throughout the country where they collect the ordinary weekly rent; the rates and taxes are embodied in it.

91598. I saw some cards that you sent us; those cards are new, are they not?—They are twelve months old, or rather older.

91599. Have those cards worked well?—Miss Octavia Hill, who has been our best friend in trying them, reports in a letter to me, of which I have given you a copy in my statement, that they are not capable of improvement as far as she is concerned, and that they answer admirably. The difficulty has been to get the house agents to do a little more clerical work. It is the agent who will stop the way. I do not think the ordinary landlord would object, though the ordinary landlord would probably object to abolishing compounding; on the other hand, if he looked a bit further he would see it was to his advantage to abolish compounding.

91600. A borough council can always stop compounding if they choose?—Yes; but I do not think any borough council is sufficiently drastic to suggest asking the landlord to collect his own rates. The course has never been entertained by a borough council, as far as I am aware, of adopting our suggestion, which finds cordial support in every direction as to its feasibility. It is collecting as they do it now, only they would have to make two items of it.

91601. They collect the rate and the rent together?—Yes.

91602. Supposing that was universal, I assume that there would be a certain composition for the landlord the agent for collecting; but he would get less than he does under the present system of compounding?—Considerably less than he does now I suggest. Take an ordinary agent collecting for his landlord. He gets 5 per cent., and in

The system of compounding has no effect on the rateable values in Poplar.

An allowance for payment in advance not advisable.

In Poplar payment of rates is not much in advance.

Difficulties in abolishing compounding.

Impossible for borough councils to collect rates weekly.

Proposal to collect rates as done now.

Opposition of house agents and landlords to proposed change.

Extent of proposed change.

Position of the agent for collecting under proposed scheme.

some cases as low as 2½. Why should he get more for collecting it in future than he has done in the past. He collects, say, 10s. a week, which is typical; and when he collects it it is 7s. 6d. for the landlord and 2s. 6d. for the borough council. Why should he get more in this case, where he has only to make two entries on this card as against one in a book?

91603. Supposing he collects the rates, what does he do when they are collected; does he wait till the quarter is due?—I have left that an open point as between the landlord and the borough council. It is not impossible to suggest that 5 per cent. for collection and 5 per cent. for payment in advance could be arranged. What I am striving at, and what our association has been trying to get at, is to let the man who pays his rent weekly know how the rates fluctuate. At present it only fluctuates when the landlord puts on 6d. or 1s. a week. What we want to do is to let him feel the penny, a sort of pin-prick.

91604. When the landlord compounds does the tenant nearly always pay his share of the rate weekly or does he pay it quarterly?—He pays it in the rent; the 6s. a week or 10s. a week he pays includes every charge, even the water rate.

91605. There is no case where a tenant would pay so much weekly for his rent and at the end of the quarter pay a lump sum of whatever is due for rates?—Not to the landlord; there are cases, a few of them, where the tenant is a weekly tenant, and pays the rates as well, but the landlord has no grip on that tenant. He could wait till the ninth week of the quarter, or some convenient time when he did want to move, and then leave with his rates owing.

91606. There is a practical difficulty where there are several tenements in one house?—That means poverty, and where you get poverty you get casual labour; where you get casual labour you get spasmodic payments. The man who is a mechanic or workmen in regular work, pays two, three, four, five, six or any other number of shillings' rent, is ready with his money; it is the labourer who gets £1 one week, 12s. the next, and 35s. the next, who in the middle week pays no rent, or only 2s. or half of it on account.

91607. What I understood rather was, the difficulty would be if there were a certain number of tenants in a house each taking two rooms, apportioning it between them?—No, because their rent is the basis.

91608. Apportioning between them the whole rate they ought to pay?—That is not a serious point at all. If the rate for the whole house was 2s. 6d. a week, and it was a gross rent of 10s., there is the percentage as between each portion. If you got a separate tenement you would have to get a separate rateable value for each property. They are rating now separate floors and separate parts of houses.

91609. The difficulty you mention about the casual labour is a difficulty which applies, does it not, to the payment of rent?—Equally, absolutely; it does not bring us any new feature.

91610. So far as they are concerned you are where you were before.—Absolutely.

91611. Are those who have tried this and watched the effect of it pleased?—Absolutely satisfied. If you were to ask Miss Lumsden to come, or Miss Octavia Hill, they would give you some experience of their dealings with the tenants; some of them are amusing. It all shows that the tenant is alive to his responsibility even if he only has a 5s. a week rent.

91612. What is the effect on the tenant: do you think he takes a great interest in the expenditure of the rates, and the amount he pays?—Absolutely.

91613. Is the difference noticed?—Yes, the point is that when you get a weekly tenant you do not have him coming to a ratepayer's meeting, where you would get the ordinary man who is rated for his own property.

91614. It seems to me that if he saw that his rate was rising, the weekly tenant would be more concerned probably than the other tenant, because it increases far more to him?—Absolutely, and it would only come in pence, and the pence would be paid by the wife, who is the housekeeper, and she is keener on pennies than

the man would be. It is a reminder there is a 1d. more to pay this week than there was two weeks ago, or 2d.: it is the pin-pricks which tell most.

91615. Would you say the present system of compounding is bad in two directions, that the borough councils lose by it, and it destroys the personal interest of the occupier?—In both ways, absolutely. The borough council loses by it because the landlords would not use it unless it paid them, would they? and in the other way it is undoubted that the tenant does not take an interest: there is that irresponsibility: "Let us have a new park: we do not know where the money is coming from, but the county council will find it."

91616. Does the amount of rebate or commission which is allowed to landlords under the compounding vary very much throughout London?—I do not think so, but I am not prepared to answer that point.

91617. What is it in Poplar?—15 per cent. for collection and 10 per cent. for payment, whether empty or full. When the landlord takes the risk of empties, he gets the extra 10 per cent. (*Mr. Thorp.*) I have the figures here.

91618. It is 25 per cent.?—Yes, including both factors.

91619. The composition apparently is everywhere 15 per cent. and then with regard to the agreement relating to empties, the amount varies as it naturally would; the poorer the district, the higher the percentage?—(*Mr. Broodbank.*) Yes.

91620. What proportion of the owners in Poplar compound for rates?—The percentage is about 85.

91621. Would that be a very high percentage, as compared to the East and South of London?—I should think it is abnormal. I have not the figures of other districts, but I should certainly think it is abnormal.

91622. (*Sir Samuel Provis.*) I think we had better get the exact state of the law applicable to Poplar clearly before the Commission. The case in Poplar is this, is it not, that there is an order in force there under which the owner of property of a less rateable value than £20 is bound to pay the rates; it is not voluntary with him, it is compulsory on him.—Yes, that is under Section 4, but that Section 4 can be rescinded.

91623. I want to take it exactly as it is now. Therefore it is compulsory upon the owners of the tenements to pay the rates?—Yes.

91624. But it is not compulsory upon him to pay whether they are occupied or not?—That is so. He is not obliged. He can renounce. If it does not pay him he does not do it.

91625. In the first case of his being bound to pay the rate, he is entitled to an absolute deduction of 15 per cent.?—Yes.

91626. In the second case, that is to say if he agrees to pay whether the premises are occupied or not, he is entitled to a further deduction which must not exceed 15 per cent.?—That is so.

91627. And the amount depends on the agreement between the owner and the council?—Yes.

91628. In Poplar it is 10 per cent., I think?—Yes.

91629. How far in Poplar do you find that the landlord agrees to pay whether the house is occupied or not?—It is practically universal.

91630. What is exactly the inducement to him to do that?—That he has not 10 per cent. of empties in his property, and the fact that while he is collecting the rent he may as well save himself that. (*Mr. Thorp.*) I think that goes to show there is very little empty property of that description in Poplar.

91631. It would pay the landlord obviously if his property was practically always let?—Yes, certainly it does pay him.

91632. Let us now come to the system that you work upon. Do I rightly understand that the agreement between the owner and the occupier is this, that the occupier pays to the owner a fixed rent, plus the rate whatever it is?—(*Mr. Broodbank.*) The occupier today takes it on a weekly tenancy at so much per week, inclusive of everything.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp.

27 Jan. 1938.

How the borough councils lose by compounding.

Amount of composition: (1) for collection (2) for taking risks of empties.

85 per cent. of owners compound in Poplar—Abnormal.

Compulsion on the owner to pay rates on property under £20.

Not compulsory to pay whether occupied or not.

Practically universal for him to do so in Poplar.

Little empty property of this description in Poplar.

The occupier pays a fixed weekly rent inclusive of everything.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp. 91633. Is it a fixed sum that he pays?—A fixed sum that he pays, subject to a week's notice on either side.

91634. Therefore, if the rate is altered the amount that he pays is not *ipso facto* altered?—No.

27 Jan. 1908. 91635. You have to make a fresh agreement with him?—That is on the system at present in vogue, so that if the rate went up 1s. the landlord would very likely say: We must put 6d. a week more on, but 1s. might only be equal to 1d. per week.

Practicability of an arrangement by the tenant to pay the rate. 91636. Would it be practicable, do you think, as an arrangement that there should be an agreement between the landlord and the tenant that the tenant should pay to the landlord so much a week for rent, together with the rate, whatever it was?—I see no difficulty in making it two amounts instead of one providing the total at the beginning did not exceed the amount then being paid.

91637. Otherwise you have this difficulty, have you not, that you have to have a fresh agreement if the rate is altered?—There is no agreement, it is taken by word of mouth.

Proposed that the rent be split into two parts. 91638. There is a verbal agreement?—Yes, to take the house at 10s. a week. We will take it at 10s. a week if that is agreed to be paid, in future we are going to split it into two, 7s. 6d. and 2s. 6d.; the rates are 2s. 6d. If there is an economical policy adopted by the borough council you may get your 2s. 6d. down to 2s. 4d., and the 7s. 6d. will remain. That would make the man take interest. (*Mr. Thorp.*) Inside the book you will see: Rent of premises as agreed; and: Borough rate as levied; so it would be an agreed rent, and an agreement to pay the rates and taxes, whether they fluctuated one way or the other.

Rent card system; how it works. 91639. What I understand from Mr. Broodbank is, that in point of fact there is an agreed rent with the occupier, which includes the rates?—That is so now. (*Mr. Broodbank.*) But not where these books are in vogue. I am talking of the ordinary weekly tenants case, where a woman goes and says, "I want that house." The landlord says: "Where is your rent card?" "Here it is." If he is satisfied she takes it, thereupon the rent is so much. With a card like this you would have to take it just the same as an ordinary tenant; instead of so much a year, it would be so much a week plus rats.

91640. That is where you have this card?—That is the plan that is recommended. What each individual tenant agrees with his landlord, I am not in a position to speak of.

Proposal that tenant pay net rental plus rates. 91641. I think what you are contemplating is that there shall be an agreement between the landlord and the tenant, that the tenant shall pay a certain rent, together with the rate for the time being, whatever it is?—Yes, that is so, a net rental plus the rates.

91642. And then he would get the benefit of any reduction in the rate?—Yes.

In Poplar the rates are made quarterly. 91643. In Poplar is the rate made for a whole year?—Quarterly. The board of guardians make their demand on the Borough Council half-yearly, but the borough council halve it for each quarter, and they make their own rate quarterly.

Amount paid by tenant would vary quarterly. 91644. Therefore under the existing system, if the tenant is really to pay the rate, there ought to be a revision in the rent every quarter?—Not of the rent. The amount he would pay weekly would vary.

91645. Not under the book, under the other plan?—Yes, that is so.

Under the card plan big variations would be avoided. 91646. You would avoid that under the plan for which this card is intended?—Yes, because it would not otherwise be clear to the tenant why he is being pushed up or down. Here it is clear, and further than that, to alter the rent 3d. or 6d. a week means a big increase in the rate. The practice has been for the landlord to put up with the increase till it becomes in his opinion intolerable, and then put the extra 6d. on.

The card system. Extent to which it is used. 91647. How long has the system with regard to these cards been in force?—Just about twelve months, it may be eighteen months.

91648. To what extent has it been used?—We have sent out a very large quantity of them. We are getting enquiries repeatedly for them. I had an enquiry on Friday from Portsmouth, where some house company down there was thinking of adopting them.

91649. Take Poplar, to what extent is it used in Poplar?—Practically not at all, the agents find it will be a little more trouble to them, and landlords do not find it worth their while.

91650. Who are the people who applied to you?—House agents and property owners all over the country; they were from Shields and Scotland down to Devonshire.

91651. (*Chairman.*) Why does the house owner want these cards?—Because he wants the rates in the district brought home to the tenant, because he finds it is becoming burdensome.

91652. And he contemplates I suppose that under the new system he may lose the present composition?—That is so.

91653. But he would run that risk provided the tenant will keep his eye open as regards the other?—Yes, I think it would pay any landlord to do it, because in Poplar it means 11d. to 1s. off the rates, straight off the reel. My view is we should never have had anything like a 10s. rate if the public had had a rent card like this, because they would have watched things as they went.

91654. (*Sir Samuel Provis.*) I gather you are not in a position to say what has been the effect of the adoption of the policy to which this card relates, in any particular place?—No, I do not lay myself out to give evidence of that kind at all.

91655. You cannot say what effect it has had on the voting?—No, it has never been adopted in any district sufficiently widely to have any material effect.

91656. What would your plan be exactly with regard to the future? Would you say you would abolish compounding?—I should say so, but I am not prepared to lay down a hard and fast plan how it is to be done. The sense of responsibility is gone unless you pay direct yourself. It is like children with things that mother finds, they do not know that something has to be gone without to pay for them. The man who pays his rent on Monday, pays no heed to what the council is going to do on the Tuesday.

91657. Under the plan of these cards you get the benefit of the compounding now as far as the local authority is concerned, do you not, because the local authority would look to the owner and not the occupier for the payment of the rates?—Occupiers in East Ham I believe are rated direct without compounding at all.

91658. But under the plan of this card?—I should treat each occupier.

91659. Is it not included on this card that the owner should pay the rate to the local authority?—Absolutely.

91660. That comes to the same thing as compounding?—It does, certainly.

91661. The local authority would be in this position that they would much prefer getting the rate direct from the owner because they have fewer people to look to, and they are substantial people?—That is what they are doing now.

91662. Therefore, if you could have some method by which this plan of the card could be made compulsory, that would answer the purpose?—Absolutely.

91663. And be better than any other plan, surely?—Undoubtedly.

91664. Let me take one other point about which I want to ask what you say. It is this, it may be suggested that the collector of rents might be also the collector of rates, and responsible to the local authority for the sum so collected?—Yes.

91665. Are there not some difficulties in the way of that that means an army of collectors?—No, the men who do it to-day. It is done to-day; the landlord when he goes for the rent collects the rates.

91666. But he is not responsible to the local authority?—Yes, because he has undertaken to pay the rates.

91667. The local authority looks to the owner for the rates because the owner is the person who is rated?—I give this qualified expression of opinion, I think you will find in many cases the collector is rated as owner; he accepts responsibility on behalf of the owner and pays as the owner.

Advantage to house owner in proposed rent card system.

No evidence available as to the effect of the rent card system.

Moral effect of compounding.

Direct payment of rates in East Ham.

Difference between rent card system and the present system.

The rent card should be made compulsory.

Present responsibility of landlord for payment of rates.

91668. The agent does?—Yes. (*Mr. Thorp.*) I think that I am rather inclined to the belief that it would be a rather difficult matter to collect these rates direct, and I am inclined to the opinion that some law should be made by which this method, or something similar, should be made compulsory so that the tenant could be made to realise that he is paying rates and should take his responsibility accordingly. But in Poplar, for instance there are many more tenements now, that is to say one house that used to be occupied by one tenant is now occupied by two or three. That has been brought about to some extent by rents going up, and therefore the people have had to put up with less accommodation. That means that many more rate collectors would be necessary to collect the rates and I can see many difficulties, because if you authorised those agents to collect you would have to get them guaranteed, and if they collected to-day 5s. on account of rent and rates, it would be a little difficult perhaps to find out how much of that is rates and how much is rent and to remit the proper proportion to the local authority. What I would suggest now would be that this Rent Card or one similar should be made compulsory, and that the compounding should be modified. I think it is a great pity that the Maximum Rateable Value should be so high as £20 per annum. That means 16s. per week, and a tenant paying 16s. per week should assume a greater amount of responsibility than a tenant who is paying 5s. a week. I would suggest that the Maximum Rateable Value be reduced from £20 per annum to £15. I think that would help matters very considerably. Then I consider again that 15 per cent. abatement for Collecting (I think it was in 1869 that the law was made that you should be compelled to allow 15 per cent.) is very large, and I think it would be a good deal better if that were reduced to 5 per cent. and a compounding allowance, that is to say, pay whether empty or full, of any amount from 5 per cent. up to 15 per cent., to be left with the local authority to use their own discretion; if there were a lot of empties in one borough they could make it 15 per cent., but if there were not so many, 5 or 10 per cent..

91669. (*Mr. Lansbury.*) Surely £20 a year is 8s. a week?—£20 rateable value is 16s. a week. (*Mr. Broodbank.*) That is rateable value against rental value. (*Mr. Thorp.*) £20 is the rateable value.

91670. (*Miss Hill.*) Have you the county council list because it will show the comparison between the weekly rents. Sixteen shillings to £20 seems extraordinary. Is it the arrangement in Poplar that a 16s. rent is rated at £20?—Yes, I have the figures here. Sixteen shillings a week works out at £41 12s. per annum, less a contingency allowance of 7 per cent., that brings your yearly rent to £38 13s. 6d.: rates and outgoings (that is reckoning the rates at 12s. and water 5 per cent.) £13 5s. 9d., that brings it down to £25 gross, and then there is an allowance of a fifth for repairs, etc.; that brings it down to £20. (*Mr. Broodbank.*) And the 16s. a week of course, includes rates. £20 compounded makes it 16s.

91671. (*Sir Samuel Provis.*) Is not the difference between the gross value and the rateable value 25 per cent.?—Ours is 20 per cent. (*Mr. Thorp.*) My point was that a man paying 16s. a week should realise that he has a large amount of responsibility; and, therefore, I should consider it wise if that £20 rateable value were reduced to £15. It might interest you to know that in some of the other places it is lower. In Liverpool, for instance, it is £13, and, of course, I can understand a £13 house in Liverpool is not quite the same value as a house in London; and in Manchester it is £10, in Birmingham it is £10, and in the rest of the country £8.

91672. Are you aware that there have been proposals to raise those sums in the country?—No, I am not aware of that.

91673. There have been.—I should like to see it reduced from £20 to £15 in London.

91674. Under Section 4 if there is an order in force the owner must be rated?—Yes, the owner must be rated.

91675. And the local authorities, therefore, have no option?—No.

91676. What would you say to a proposal which enabled the local authority to determine whether they would or would not compound in those cases?—(*Mr. Broodbank.*) They can do it now by altering the section.

91677. In that case the owner is not bound to be rated?—No.

91678. Are you familiar with the provisions under the Public Health Act?—(*Mr. Thorp.*) No, I am not.

91679. That Act applies outside London. Under the Public Health Act in the case of small tenements the local authority may compel the owner to pay, but is not obliged to compel all the owners to pay. Have you considered how far that would be beneficial in London?—No, I have not.

91680. You see the difference?—Yes. (*Mr. Broodbank.*) The object I have in suggesting the reduction of the compounding is that I want to see every householder take more interest in what goes on in the borough, and let him have the responsibility; that if he is demanding that every man in the employ of the Council shall have 5s. a week more money, it would bring home to him that he is paying. Then there would be no objection to any scheme coming forward, so long as the man was prepared to bear his burden. One of the largest difficulties we have, of course, is the migratory character of the population.

91681. That is one of the objects of the compounding; that the local authority shall not lose the rate because the person goes away?—That is so.

91682. You know that compounding was absolutely abolished in 1867?—I believe so.

91683. And that it had to be re-established in 1869, because of this. The point we are rather discussing is how to get over the difficulty.—We get over the difficulty by making the weekly collection through the book.

91684. I think Mr. Thorp realises that the local authority would find some difficulty in treating as a person who is accountable to them each person who collects the rent?—(*Mr. Thorp.*) I do. (*Mr. Broodbank.*) Yes; but if you give them 5 per cent. for collection and compounding it is only what they do now.

91685. You would have to make each person collecting the rent accountable?—If you make him agent; but if you make him in the same position as he is now you would not.

91686. That is to say, if you made the owner still responsible for the payment of the rate?—Certainly, it is not so much the question of abolishing the compound as bringing home to the tenant his responsibility.

91687. Therefore you are inclined to the view that the most practical course would be to still recover the rates from the owner?—Reduce the compounding; but make the tenant pay the rate apart; and let it fluctuate.

91688. You are opposed to making any allowance to the occupier if he pays his rate in advance?—It is practically unnecessary. There is no payment in advance in Poplar with a quarterly rate. I will go this far and say that every borough should make its rate quarterly if that would help. (*Mr. Thorp.*) The tendency is all the other way. They want to make it yearly or half-yearly. (*Mr. Broodbank.*) Collectable quarterly.

91689. The reason for making the rate half-yearly or yearly is to save the trouble of making out the rate four times a year, and also the cost?—(*Mr. Thorp.*) Yes. (*Mr. Broodbank.*) In Poplar they make it quarterly. The rate paper does not get round for about three or four weeks, and it is four or five weeks before they start pressing, so that it is not paid until the ninth or tenth week. Where the injustice seems to come in is with regard to the large ratepayers. They seem to pay without any trouble at all. You go and collect ten times as much from them as from a landlord and they get no rebate or discount or anything, and they do not even get a vote.

91690. Are you thinking of limited liability companies?—Yes, the want of representation on their part, and the amount they pay without rebate.

91691. What is your suggestion precisely on that point?—That they should either have representation or else they should have the rebate; I do not care which way you put it.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp.
27 Jan. 1908.

Provisions of the Public Health Act.

Objects in view in reducing compounding

Advantages of compounding, and difficulties in the way of abolishing it.

Extent to which compounding should be retained.

Allowances for paying rates in advance unnecessary.

The collection in Poplar is quarterly. Position of limited liability companies.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp. 91692. When you say representation, you would give them a vote?—Yes.

27 Jan. 1908. Possibility of manufac- turers creating faggot votes. 91693. What would be the use of one vote?—It would not be any good. I do not know whether I am right, but it is quite possible that big manufacturers may have to resort to the subterfuge of letting each bench they have in order to get the responsibility of their servants attached to the rateable value of the place.

Extent to which rated property is unrepresented in Poplar. 91694. You mean split up the hereditament so as to get a number of votes, i.e., make faggot votes?—Yes.

91695. Do you know any case where that has been done?—No, I do not, but that is the only remedy that seems open to the big companies. Take a dock company with a rateable value of £50,000; it has not a single vote. (*Mr. Thorp.*) In Poplar it affects us to this extent, that out of a total rateable value of £839,736 there is representation for £511,294. In taking that I have only estimated one figure, and that is with respect to the factories. I have taken 50 per cent. of the factories in the borough as belonging to limited liability companies having no vote. That means to say there is representation for nearly 61 per cent. and no representation at all for over 39 per cent.

Difficulty in making the landlord's agent responsible to the local authority. 91696. (*Miss Hill.*) In your suggestion that whoever collects the rent should be agent also for the local authority and collect the rate, would there not be this difficulty, that the local authority would in that case not appoint the agent, and could not very well get security for him; he would not be in any sense their choice. It seems to me there would be a very great difficulty in making the agent of an owner collect the rates for a local authority?—(*Mr. Broodbank.*) It is done now under a different name. The agent, as agent for the landlord pays the rate, and, as agent for the landlord, he goes and collects the rate

91697. He has not to account for a number of small sums collected from a great number of people. If he compounds he pays the rates in full, but as you suggest, he would be paying only the rate he collected to the local authority. What check would there be upon him?—I do not suggest there should not be some allowance made for taking risks.

91698. I cannot help thinking that would be a difficulty still. The agent of the landlord is usually paid 5 per cent. for collecting rents?—In Poplar it has got down as low as 2½, but 5 per cent. is usual.

Difficulties in council appointing its own collector. 91699. Do you see any real difficulty in the council, if it so chooses, appointing its own collector at the same amount?—I do.

Useless to collect fortnightly. 91700. It is now allowing 15 per cent. to the owner; why should not it collect say fortnightly and pay its own collector 5 per cent.?—For one thing, you can take it really that the amount of rate in a place like Poplar is about 25 per cent. of the amount collected by landlords. You would have to go four times to get the same amount, and further you would never get two week's rate in one week; it would be useless calling fortnightly in Poplar.

91701. Such borough collectors would have a good deal of strength; although the amounts are smaller, you get a very large amount of property contiguous, and I think 5 per cent. pays very well where you have that. It is where it is scattered that it is difficult, but supposing you give your borough collectors 10 per cent. you have got your 15 per cent. to go upon. Would it be impossible to have it collected fortnightly?—I do not see why, if the landlord can do it, the landlord should not have a little benefit. You are paying for something in two calls that could be done in one.

91702. That really brings us very much more to the plan which is adopted in these cards; you give up very much by losing the direct contact between the tenant and the officials of the parish, and you lose the advantage of his getting the demand note with all its information on it. But you do get the variable rate?—I quite appreciate that.

Objections to direct payment of rates by the occupier. 91703. This may be better, but it is not as good as a direct payment.—I quite agree, but there are so many technical and practical objections in troubling everyone in the borough twice, where once would do.

91704. These cards have the advantage of combining the system of compounding which is certainly very convenient for a tenant for the landlord, and the local authority, and at the same time making the tenant feel the smallest rise and fall of rates?—Yes, then it is optional whether they do it one way or the other, but they think of it; but 15 per cent. for collection to the landlord is too much.

91705. I was not questioning the amount of percentage at all one way or the other, I was saying here you get the advantage I suppose of a fixed rent and a variable rate?—Yes.

91706. The tenant feels the rate going up or down?—Yes.

91707. And he feels every penny of it?—Yes, every movement.

91708. He has the advantage of paying weekly?—Yes, in one call.

91709. That is the great thing that is to be said for these cards?—That is so.

91710. And that they also save the collectors a very great deal of calculation in so far as they carry their own scale on them?—That is so.

91711. And that shows the tenant what he pays, and why he pays it?—I think a similar card would have been adopted years ago if anyone had happened to light on the idea of making a separate rent card for each rateable value, and putting a table like this. What has non-plussed many has been how to deal with it.

91712. You think it is very much fairer that the tenants who practically now vote the expenditure, should feel the rise and fall?—It is unquestionable they should.

91713. And decide on whether they really think it worth while to pay more, or think it worth while to save?—Certainly, and they would take a more practical view of the work of the borough, and certainly a keener interest in the conduct of its affairs.

91714. You feel very strongly that a limited liability company should in some way be given some representation?—Some representation I think. I am not prepared to say how I think it should be, but it is open to abuse. If the owner of a factory was to make each bench of £10 rateable value, and let it to his servants and charge that man with the rates off his wages, he would soon get a vote that way.

91715. Has it ever occurred to you that it is still more important in cases where large loans are contracted by local authorities, where payment is spread over sixty years, where weekly tenants are free to leave any week and can escape from all future payments, that in anything involving a loan specially some voice should be given to those who have some more permanent connection with the locality?—I quite agree. I think everything in the borough should be that way, that the payment should be the ratio of the influence.

91716. And that specially the larger owners should be brought in where it is a question of loans. If there is a difficulty felt in giving them votes about ordinary expenditure something should be contrived which would give them a vote upon that which goes on for a greater course of years?—One covers the other; I would rather see some representation. A man with a rateable value of £2,000, a managing director of a limited liability company, cannot even sit as a member of the council. (*Mr. Thorp.*) They feel the effect of a large loan straight away, inasmuch as loan repayments and interest become very much larger.

91717. They do to a certain extent?—Therefore they would feel that evil; that would affect their pockets to the extent of 1d. or 2d. a week.

91718. I suppose one real difficulty to the direct payment from the tenant is not only the question of the complication of the collection, but it is unpopular, is it not?—(*Mr. Broodbank.*) The very unpopularity of it draws attention to it.

91719. Sometimes the local authority is not too eager that the people should see the effect of what is being done?—Quite so. The people are deceived; the people are asked if they would like a free library, but they are quite amazed if they are paying their own rates, if it costs anything; they tell you: "I thought you said it was a

Advantage of making the tenant feel the smallest rise and fall of rates.

Question of giving a vote to limited liability companies.

Payment should be the ratio of influence.

Unpopularity of direct payment.

free library." I think with regard to swimming baths and the other adoptive acts, the public would still go in for them, but they would be satisfied with a less embellished building. They would buy something they themselves would be satisfied with, rather than what the architect cared to give them.

91720. Have you known instances in which tenants who have a variable rate are very keen about economies in the parish?—Yes, and I have heard Miss Lumsden give some of the experience she has had in that respect. They take a keen interest. You find if anyone has been a weekly tenant, and they take on new premises, and they get the quarterly notice of rates, they want to know all about it, and where it goes to.

91721. You are asked what the sweepers are doing sometimes, are you not?—Yes.

91722. For that reason, and also because no one likes the unpopularity of collecting rates from people, it is easier to go to a big man and get a big cheque?—It is, and yet he gets no discount for it.

91723. It is unpopular, it is not wholly a question of whether it would pay in certain localities?—That is so.

91724. (*Mr. Bentham.*) I notice on this card that you put the gross amount of the rate which the landlord is levied upon?—Yes.

91725. But he gets 15 per cent. off that, and in one of these houses where the rent is 10s. a week, it makes a difference of 6d. a week. Should not you put the lesser amount on the card?—The idea of this card was that the man should become the direct tenant at the net rent, not the gross.

91726. The man who is collecting the rates on his 10s. a week puts it down at 3s. 10d. per week?—Yes, that is the amount that is due from that house.

91727. But the landlord only pays 3s. 3d.?—The landlord is given 7d. for collecting it.

91728. He collects his rent at the same time, it cost him nothing to collect that?—Yes, but if this house were rated direct by the borough council and the collector came, he would collect 3s. 10d.

91729. But he would save the 15 per cent.?—Yes, but would not it cost the borough council more than 7d. to send an official to collect the 7d.?

91730. It might. I am not prepared to say. At any rate this is not the net amount that the landlord pays. He pays 6d. per week less than that in rates?—That is if he compounds.

91731. Yes, I am taking that?—We have to prove that the man has three houses to compound. If he has only one house he could not compound.

91732. That is, if he is living in one?—Supposing he had one house at Poplar and one at West Ham, if he came to the Poplar one to collect it, it would be 3s. 10d. he had to pay.

91733. There is another point that I want to put. I suppose the rateable value is arrived at in the way you state, after all expenses are taken off?—All possible expenses.

91734. If the rates go up that increases the expense and the rateable value should go down at the next assessment, you would get it reduced, would you not?—There was a case (I cannot give you the details of it) where there was an appeal against that very thing.

91735. The rent remaining the same and the rates going up, the landlord paying the rates is quite entitled to a reduction in the rateable value?—Yes, but unless he was a large house owner I do not think he would fight it.

91736. Why?—Because of the cost of appealing.

91737. Do you not circulate to all your members a scale upon which the assessment will be based?—The borough council have scales that are supplied to applicants duly accredited, but my Association does not touch property owners. We are simply there for the good of Poplar generally. The Association embodies all, of course.

91738. That shows that the whole of the increase of the rates does not fall on the landlord of a compounded house, does it not?—If he gets his reduction it does not.

91739. He is really entitled to a reduction if that is the basis of assessment?—Yes, but the general plan of the landlord is to increase the rent to meet the increased rate. One can find such contradictory cases that it is difficult to set any hard and fast line.

91740. If all are compounded for, the higher the rates go up and the lower the assessment, it is really annihilating the annual value by the increase of the rates?—Yes.

91741. You have not found it so in Poplar?—I have not gone into that point. The practice is if the rates go up that they increase the rent.

91742. Will not the landlord do both sometimes?—I do not think the rating clerk would allow him to get the better in that way. He could not get both.

91743. So he takes the easiest way?—Yes, to put it on the tenant, if he thought he could get it.

91744. If there is a plentiful supply of tenants they can put it on the tenant, it is the least trouble. If the house is empty, he would naturally appeal against the empty in assessment, and get it down?—Yes, the number of tenements empty in Poplar is not great. There is a tendency, as one sees, of the progress of things spreading eastwards, turning these houses into workshops and workrooms. There is a tendency to make Poplar of the Mile End character.

91745. You have given us the rateable value, and we have in your statement the number of compounded houses as 19,866. Do you know the rateable value of those houses?—(*Mr. Thorp.*) Houses rated at under £20, £259,140; that is about 31 per cent. of the total.

91746. (*Mr. Lansbury.*) Your Association is made up of all kinds of people, is it not?—Every type.

91747. You have property owners there, have you not?—Some; they do not join as property owners.

91748. You have the agents as members, have you not?—There may be one or two, but not prominently.

91749. What is the reason why this rent card is not put in operation?—The agents, as I have mentioned look on it as a little more clerical work without any additional benefit to themselves.

91750. So you would propose that there should be a law passed to compel them to put it into force?—I should like to see it. Of course it wants fully threshing out to see that it is practicable.

91751. I understand from the answer that you gave to the Chairman that you only know of one place actually using the cards?—Where they are used freely.

91752. How many hundreds is "freely"?—Over the thousand.

91753. In one district?—Yes.

91754. Is that in London?—Yes.

91755. Will you give me the name of the place?—It is Miss Hill's property. I could not give you the details at the moment.

91756. You say that the rents have gone up in Poplar owing to the rates. Do you know anything about the last quinquennial valuation?—Not specially.

91757. Would you say that generally the rents have gone up in Poplar the last two years?—Gross rents have.

91758. And the weekly tenants are paying more rent?—That would be very variable; because if even the rateable values went up all landlords have not put the rents up.

91759. I am not talking about rates but rent. I want you to tell me the districts where the rents have increased?—I get reports in from all districts saying that rents have increased, and I get reports from the same districts saying that their rents have gone down.

91760. Is it not the fact that in the old Bow district from Malmesbury Road to Bow Road, where the rates are levied direct, as a matter of fact the rents went down, and the burden of paying the rates was actually put on the landlord?—With the result that now Malmesbury Road is being let in tenement houses, and they are raising the rent on that.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp.

27 Jan. 1908.

Not many tenements empty in Poplar.

Total rateable value of houses under £20.

The Association, of whom composed.

View taken by Agents of the rent-card.

One place where the cards are used freely.

Extent to which rates have raised rents in Poplar.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp. 91761. I was wanting to get whether it is not the fact that when the rates went up in Poplar the rents of the houses that were let to tenants who paid rates direct were reduced in proportion to the rates that were levied ?—I would not say in proportion.

27 Jan. 1908. 91762. Probably less than in proportion :—When the tenancies ran out the rates were up, the rates were frightening the tenants away, and the tenants said : If you do not reduce the rents we will go.

Question as to what govern rents. 91763. Does not that really prove that what really governs rents is the number of people who want to live in a certain district ?—No, I do not agree with you quite. It governs the class of people who live there, and the accommodation they put up with.

Conditions in Poplar. 91764. Will you tell me why it is that the rents are if anything, higher in the Stepney Union, where the rates are very much lower than Poplar, than they are in Poplar ?—Stepney to a large degree is getting a manufacturing district, and accommodation there is scarce.

91765. Exactly ; but that surely is what I said just this minute, that the rents are determined by the number of people who wish to live in a given district ?—I put it with regard to the class of people in such a road as the Campbell Road, if the landlord wants a tenant for the whole of a house he has to take less rent than he had before, because the neighbourhood is going down.

91766. You have hit on a bad road for your argument ; I have a tenancy there, and the rent is the same as it has been for some time.—If you want to get a single tenant in Campbell Road you have to reduce the rent. There are many houses empty opposite your place there.

Effect of increased rents. 91767. Not many, two or three.—There are four before you come to the Bridge. (*Mr. Thorp.*) I think it is more a question of the tenants having a good deal less accommodation than they had in the past ; it is not altogether a question of their paying more rent. It is a question of their paying the same rent with less accommodation ; the fact being that more and more tenements are coming about for weekly or monthly tenants in our borough.

91768. I was coming to that in a moment. You, however, assert that the rents are governed by the rates, and not by the people who want to live there ?—(*Mr. Broodbank.*) Not governed, influenced.

Extent to which rents are influenced by the rates the landlord pays. 91769. They are influenced by the amount of rates that the landlord pays ?—Certainly.

91770. And you cannot give us any evidence of your own particular cases where rents went up when the rates went up in that particular year that you spoke of ?—I could give you instances of weekly rents.

91771. It would be rather interesting, because the borough council has been trying to get some information about this. If you would put in a return of the number of tenancies where rents were raised during that particular year it would be useful ?—(*Mr. Thorp.*) I could get you some figures ; because I believe the landlords have been rounded on to that extent. The assessments have been put up because they have been getting more rent. (For letter received from witness, see *Appendix No. IV. B.*)

91772. I want that particular year when it came to 12s., because there may be other cases ?—I think every now and again we get complaints from tenants of the landlords putting up their rents.

91773. Of course, the rents now are supposed to be going down, are they not ?—Yes.

Tendencies causing people to move further out of London. 91774. As to these people moving out and fresh people moving in, is that not a tendency that has gone on in Whitechapel, Stepney, Mile End and Bethnal Green ?—(*Mr. Broodbank.*) Moving out and moving in ?

91775. People moving out of a big house, and the big house becoming either a workshop or let out in tenements ?—Yes ; that is partly due to the natural growth.

91776. Why should it be due to rates in Poplar and not in Whitechapel ?—It is the last straw. Bow up till recently has been residential ; and what has drawn the people out of Bow has been that they could pay their railway fare from an outlying district with the difference in the rates between that neighbourhood and Bow. It is the last straw that does it.

91777. You say that applies in Poplar and it does not apply in the districts round us ?—No. (*Mr. Thorp.*) There is this point ; it might not apply to Poplar where it might apply to Stepney and Whitechapel ; because Whitechapel and Stepney respectively are a good deal nearer the city, and people want to get to the city, and they live where they can get nearest to it and save expense and time.

91778. It is only one side of a street you are in Stepney and in the other side of the street you are in Poplar, so there cannot be all that difference.—Perhaps I was thinking more of Whitechapel than Stepney. Whitechapel is a far cry from Poplar.

91779. If you do not mind we will take the three boroughs that we run into, that is Hackney, Bethnal Green and Mile End. Do I understand you seriously to say that the tendency which you complain of in Poplar is due to rates, and in these other three parishes it is due to some other causes ?—I interposed just for that point. I do not know what Hackney's peculiarities are, or Stepney's.

91780. It is not the fact that with increased means of locomotion all kinds of people prefer to live just a little way out rather than in a district such as ours ?—I should say that is the tendency.

91781. And that they will do that whatever happens to the district. I suppose you are aware that Islington and Kensington, and practically all the inside boroughs are complaining of exactly the same thing that you are complaining of here this afternoon, namely, that their better property is becoming property that is let out in tenements. I suggest to you that the same causes that operate in these other places are operating with Poplar and the Bow district of which you spoke, and what are called the better-class residents are feeling that it is better for their children and themselves to sleep and be brought up in fresh air ?—That may be so. (*Mr. Broodbank.*) At the same time what has finally sent them away has been the rates. They may have used it as an excuse, you will put it, but it is a strong reason given.

91782. That is your opinion ? I put it to you as against your opinion that the same tendency exists, and has existed for a long period of years, in all these other boroughs. It has not been the rates, because the charge against Poplar is that their rates are higher than any other ?—(*Mr. Thorp.*) Some evidence of that I have in my office. One of my old clerks lived in Bow for many years with his mother. I think it was in 1904 the rent began to go up. It had then been 10s. 6d. for many years ; but it went up 2s. and then another 2s. The landlord of that house, you might know him, was Mr. Hall, a linen clothes manufacturer ; and he said : "I must put up your rent, because the rates are going so high." Then the rent was put up ; so now they have gone down to Chingford to live.

91783. Do you say the rates went up 4s. a week on that 10s. a week house ?—No, I do not suggest that, but the rent up from 10s. to 14s.

91784. It would be strange arithmetic that the rates went up to that extent ?—I suppose the rates had been going up all the time, and 10s. was the original amount of rent.

91785. It went up 2s. and then another 2s. ?—After one or two years. I do not mean in two consecutive years.

91786. Is that one of the houses in Armagh Road ?—I think it is.

91787. Was it not because those are better houses than the main houses in that street, and probably get a better rent ? I do not want to pursue that. I want to deal with the other point you mentioned. You are aware that Mr. Cahill first of all represented the London and India Dock Company on the Board of Guardians, when they were the Assessment Authority, and that he has liability been, and now is, Chairman of the Assessment Committee of the borough council ?—(*Mr. Broodbank.*) I remember he was on the Guardians when they were the Assessment Committee, but he is not there now by any right of representation. Question of representation of limited companies, whereby they may be represented.

Position of affairs in Whitechapel and Stepney.

Tendency now to live further out than our district.

The rates are given as a reason.

An instance of rents going up in Bow.

91788. He is there as their officer, and they are now trying to get him off to come and attend to his duties —I am not aware of that.

91789. You are aware that he is a servant of the Dock Company, and sat as Chairman of the Assessment Committee which fixed their assessment at the last quinquennial?—I did not know that.

91790. You do not know he was Chairman of the Assessment Committee?—No, I do not without referring.

91791. I am sorry your local knowledge is so bad. What is to prevent the Managing Directors of people who carry on their business there living in the borough?—That was not the point, that they could not live in the borough. The point I wanted to get at was that the property for which they pay rates carries no representation with it of itself.

91792. I suggest they can get representation just as those people get representation whose businesses are not limited liability companies, that is to say the manager of a given concern could live in Poplar and get his qualification in that way to represent his interest?—Yes, he is entitled by living in a place to his own personal representation, but he cannot represent two parties; he gets his own vote, but his personal responsibility is different from his firm's.

91793. So that, because of his dual capacity as an individual, if he lived in Poplar he could not represent his business concern?—I put it to you, take your own case; you might have a manager of your business voting for the company one way and for the other way himself.

91794. Certainly, but if a company wished to get representation, is it not the fact that they can manufacture and do manufacture methods by which they get representation?—That is so; it can be done. It is done, but the property does not carry with it, or the amount of rateable value and the rates paid do not carry with them, the right to representation. That is all I am thinking of.

91795. I am only trying to point out there is no reason under the law why every limited liability company could not arrange with their managers to live in the

district and so get the vote or the qualification which will enable them to sit on public bodies?—If he was under-manager and lived there.

91796. I am talking, if you do not mind, about a managing director who ought to be an agent that considers the interest of his business and the rest of it. What is to prevent him living in Poplar?—Nothing, but the managing director, as Mr. Brown, is entitled to his vote and not as a limited liability company.

91797. I only wanted to suggest to you that the limited liability companies, when they got representation, would have to suggest somebody to represent them?—Certainly.

91798. I suggest to you that the person they would be likely to suggest would be one of their managers or one of their under-managers, and I further suggest to you that there is no reason why they should not do that now by letting him live in the district?—I should suggest that that does not carry the right of representation with the responsibility for the rates.

91799. (Sir Samuel Provis.) Have you formed an estimate of how many agents for landlords there are in Poplar?—I should not care to make any estimate.

91800. (Chairman.) Is it very large?—Landlords collect for themselves. I cannot tell you how many landlords there are. There are perhaps about a dozen or twenty what you may call advertising agents, people who are property managers. There is Mr. Hooper of the Isle of Dogs; he manages a large property.

91801. (Sir Samuel Provis.) So there are a good many people collecting rents?—Yes, quite a number. There must be a lot. There are 30,000 properties to collect there.

91802. (Miss Hill.) Have you any arrangement in Poplar by which there is a different assessment on houses where the tenants pay their own rates and where they are compounded?—None at all.

91803. You do not know any parish in London where there is a distinct arrangement that the assessment is different, where the tenant pays the rates?—I have heard of it, but cannot trace it.

Mr. Robert Victor Broodbank and Mr. A. Evan Thorp.

27 Jan. 1908.

Number of agents for landlords in Poplar.

No different assessments where tenants pay the rates and where they are compounded.

Mr. CHARLES GEORGE DYE, called; and Examined.

Mr. Charles George Dye.

27 Jan. 1908.

91804. (Chairman.) You are Secretary of the Firewood Trade Association?—I am.

91805. You have been good enough to prepare a Statement, which I think, places your case very clearly. If you would kindly hand it in we will treat it as your evidence in-chief?—Certainly. (*The Witness handed in the following Statement.*)

1. I shall be glad if you will lay before the Commission this, the complaint of the firewood trade, against the continued and increasing evils caused by the giving of woodcutting employment by charitable societies, etc., as a means of supposed relief of distress.

2. As will be proved by the figures and facts contained in this complaint, such a system of diverting of employment from a class of hardworking workpeople (as the professional woodchoppers undoubtedly are) to provide tasks in labour yards, or homes for unemployed, tramps and other less deserving subjects, only results in a worse state of affairs being created, and the causing of unemployment and misery to the deserving ordinary woodchoppers.

3. For every day's employment of woodcutting given by a charity or a union means a day's employment less to the ordinary worker of the firewood industry—our contention being that, inasmuch the demand for firewood being limited any part of that demand being filled by the produce of charity or union labour, must lessen the employment and earnings of the ordinary or professional worker of the industry, and be the cause of such ordinary workers to be thrown out of employment, through the diverting of the means of their livelihood.

4. For years the woodchoppers have been complaining to certain charitable armies of the hardships they have been compelled to suffer through these institutions increasing encroachment upon their livelihood or industry,

and though one of the armies mentioned has discontinued the manufacture of firewood in its homes quite a number of mistaken benevolent persons have started, and are carrying on firewood making in mission or other labour homes, for the providing of "work" for the unemployed, "under the fallacious idea that destitution is being relieved by such means," so that the state of the ordinary wood-chopper is even worse than before.

5. In the summer season, owing to the use of gas and oil stoves, the demand for firewood is very limited, and the woodchoppers look forward to the winter months when the demand increases to provide them with full employment, with which they hope to balance this slack season—only to find each year more and more of the philanthropical societies opening firewood making homes, and boards of guardians opening firewood making relief labour yards for the presumed benefit of the unemployed, who, unlike the ordinary woodchoppers, are not asked to make any provision for slack times.

6. No relief for the "unemployed" woodchoppers in their (summer) slack season—yet when the winter comes and work in the firewood making trade commences, they must still suffer, in order that the shiftless or unthrifty may earn, or pretend to earn, the charity given them.

7. So largely have the Church Army, and other institutions, entered into firewood manufacture, and so great has, in consequence, been the distress caused amongst woodchoppers during the past ten years, that the Firewood Trade Association has been formed to try to combat the ever growing evil, and has made public the grievance in the press, remonstrating with the offenders, with, it is feared, little result—though in certain instances the association has convinced some boards with the result that their institutions have discontinued trading in firewood.

Wood-chopping a winter trade. Extent of interference by charitable societies.

Firewood Trade Association formed to combat the evil.

Mr. Charles George Dye. 8. A very large number of the woodchoppers have been forced out of the industry, and it is to be feared that a great many have had to enter the workhouse; also, the competition of the enormous output of Union and charity-made firewood put upon the market regardless of cost, has reduced the selling price very greatly, and the piece-work rates paid to the woodchoppers have also, through the low price obtainable for the manufactured article, fallen twenty per cent. on the average.

27 Jan. 1908.
Unemployment and diminished wages among woodchoppers due to charitable competition.

9. My association, with a view of ascertaining the extent of the mischief done by the competition complained of, recently circularised the London trade for figures, and whilst the statistics gathered can only represent part of the injury—"a large number of firms who admit of serious injury to their business, do not care to give figures, feeling that they would be disclosing secrets of their businesses"—we find that in seventy firewood firms a reduction of nearly 1 000 woodchoppers, or 75 per cent. in the ten years previous to 1906. The figures being :

In 1895	-	-	-	1,483	employed
" 1905	-	-	-	528	"

955 reduction in ten years.

Many small dealers driven out of business.

10. Also, I am informed that a very large number of small firewood dealers have been driven out of the business together with their workpeople, owing to being unable to compete and make a profit.

Serious grievance of the men forced out of employment.

11. That nearly a thousand self-supporting workpeople have been forced out of their occupation, is, we assert, a most serious grievance, and the fact that the employment which has been diverted from them, to provide farcical tasks on "Labour tests for inmates of Labour Homes not self-supporting but having to be bolstered up by rates or public charity," does not tend to make the complaint less serious.

The Church Army's methods.

12. It seems from the complaints of the majority of the firms that the Church Army is the worst offender—that the Army is said to be the most unscrupulous in its methods of trading—its numerous honorary or salaried agents seek orders for Army-made firewood, supplying at any price or size, at any sacrifice, to get the order. Where a shopkeeper has been paying, say, 3s. per hundred the Army will supply at 2s. 10d. or 2s. 8d., and still give a larger bundle.

13. Also, the buyer is led to believe that the Army is finding useful employment for the deserving and destitute, nothing is said of the plight of the unfortunate professional woodchopper who is being made destitute in the process.

Impossibility of ordinary traders competing

14. The ordinary trader has attempted to compete in order to keep his customer, but finds it utterly impossible to do so in face of a competitor which sells practically 4s. worth of material and labour for 2s. 8d., his competitor having the public purse to make up the deficiency from.

Examples of the methods of the Church Army and other bodies.

15. In order to prove how impossible it is to compete with the Army-made bundles of firewood, I would inform you that a trade made thirteen inch bundle of firewood, made from the cheapest material obtainable, costs 3s. per hundred to produce, of which 1s. 4d. represents labour alone, and on which price there is no profit, yet the Church Army sell 15-inch bundles at 2s. 8d. per hundred, and I am informed at even lower prices, the main object being to get rid of the enormous quantities made in their homes.

16. Another, the West London Mission, is selling fourteen inch bundles at 2s. 9d. per hundred, which cannot be profitably sold by a trader under 3s. 4d. per hundred.

17. I am aware that the Church Army also sells to householders at 3s. 6d. per hundred, thereby depriving the shopkeeper of his customer and profit. Even at this price the Church Army admit being unable to make firewood pay.

18. As I have already pointed out, the woodchoppers who are displaced are deserving and industrious workpeople, who do not ask for charity, but the employment which is rightly theirs. On the other hand, we find that the inhabitants of the Army labour homes are mainly recruited from the worst characters in workhouses, etc.

The class relieved by the Church Army.

19. I understand that the Church Army bargain with board of guardians to take such men who are incorrigible in workhouses, with the intention of offering such characters employment, if they leave it to return to the house (for any reason) the Church Army assists in the prosecuting and convicting of such men.

20. The Church Army homes are for criminals, inebriates, tramps, and unemployed, and for such the wood-chopper is deprived of his livelihood and compelled to suffer privation.

21. Information of Charitable Army or Union balance sheets, is practically unobtainable as regards the truth of

their trading, but it will be perhaps interesting to the Commission to know the results of two at least of guardians' experiments in firewood labour test yards for the relief of unemployed.

Financial results of experiments by guardians

I.—Bromley Union.

22. Bromley Union, Kent, which in 1904-5 expended £3,000 in the purchase of wood, which was made into bundles of firewood by the unemployed and which realized by sale £1,500 only—a loss of over £1,500 on the material alone, not mentioning what was paid to the unemployed for labour.

Disastrous experiment of the Bromley Union. Its effect on the trade.

23. This union's trading was done at such cut-throat prices that several ordinary dealers employing numbers of workpeople were driven out of the district, and almost ruined—one, a Mr. C. Green, of 9 Prince Street, Deptford, losing hundreds of pounds through the competition, and at the present time is still suffering from the results of the Bromley Union trading in firewood.

24. (It is satisfactory to note that this union's disastrous year's trading has satiated it, and I believe the Bromley Board of Guardians has no further desire to trade so largely in firewood.)

(II.—Parish of Leicester.)

25. The second instance is a balance sheet of the Leicester Board, wherein I find that the bundles of firewood made by the Leicester labour test, cost, to produce, 10s. 0½d. per hundred, and are sold at 2s. 9d. per hundred, at a loss of 7s. 3½d., which loss falls upon the poor rate, under the guise of out-relief.

Leicester Board's balance sheet. Heavy cost of labour. Effect on firewood dealers.

26. Further, I find, that the labour cost of making was 6s. 10½d. per hundred, or seven times as much as what the ordinary woodchopper receives.

27. A Mr. J. Hefford, of West Umberstone, Leicester, who was, until the union became a competitor, a large dealer in firewood, informs me that his business is practically ruined and he has been compelled to dismiss the greater part of his staff of workpeople.

28. These are two glaring examples of the fallacy and evils of union labour tests as applied to firewood, and we are assured that in every instance of union or charity firewood manufacture similar losses are the result.

29. Before leaving the question of union trading in firewood, I should like to place before you the case of the Paddington Union, which has a relief yard for "unemployed," where seven woodchoppers, who had become unemployed for the reasons complained of in this letter, were set to work at firewood making, thus placed in the position of pauperising their industry and themselves. Their employer had been competed out of the market by the Church Army and was unable to find them work, yet the Paddington Union put them to woodchopping and sold the produce of their labour on the market at a loss and thus still further restricted the self-supporting employment of woodchoppers. (For list of woodchoppers known to have become inmates of workhouses, etc., see Appendix No. V. (A).)

Woodchoppers as inmates of workhouses.

30. In the Westminster Union it was found that aged men of from seventy to ninety years of age were being put to woodchopping, and that board having considered this fact, together with our protest, decided to discontinue trading in firewood.

Woodchopping discontinued by the Westminster Union.

31. "A guardian supporting the resolution said that public bodies should not do the work which helped to swell the ranks of the unemployed."

32. A number of encouraging notices have been given to the grievance by the Press, and I enclose a short reprint of some.*

Sympathy has been aroused.

33. A deputation from the trade waited upon the Right Hon. J. Burns, President of the Local Government Board, on July 6th last, and received a most courteous and sympathetic hearing.

34. The question as affecting the evasion or offence against the Truck Acts by charitable institutions has been placed before the Commission sitting upon those Acts, but it seems that the unfortunate firewood trader and workpeople has no redress except publicity of his grievance which, in face of the influential support the charitable institutions have, is very hard to obtain.

35. I have been in communication with M. C. Jackson and Mr. T. Jones, investigators to the Commission, and have endeavoured to put the grievance, which is shortly that Peter (the woodchopper) is being robbed to pay Paul (who is perhaps a wastrel or otherwise undeserving clearly before them, and I believe both these gentlemen have been greatly interested.

Grievance of the woodchoppers.

* Not printed in Appendix.

36. Therefore I hope that the reports of these two gentlemen and this statement may sufficiently interest the Commission and be the cause of some relief being given to the unfortunate firewood trader and his workpeople.

91806. (*Chairman.*) Speaking broadly, the contention of the Firewood Trade Association is that they are subject to an unfair competition from the various religious societies, notably the Church Army?—That is so.

91807. Do you state anywhere in your Paper whether there has been a great reduction in the amount of firewood sold to the public since these charitable associations have been in operation?—The bundles of firewood produced by the Trade have naturally decreased owing to the increased production of bundles by the Church Army and other institutions.

91808. Have you been long connected with the firewood trade?—I have relatives in the firewood trade, I am not connected with it myself, except as being Secretary of the Association. I have taken a very close interest in the business for a number of years, through having relatives in the business, and I have been Secretary of the Association for this past two and-a-half years.

91809. Does that industry employ a large number of persons?—The manufacture of bundles of firewood still finds employment for many hundreds of workpeople, but self-supporting employment could be found for a very large number more if the output of charity firewood was stopped. The Secretary of the Woodchoppers' Union informs me that his members do not number as many hundreds as they, ten years ago, numbered thousands.

91810. I suppose the wood-choppers are scattered about?—Yes, the majority of them, I think, now are forced to earn very precarious livelihoods running about with barrows.

91811. I suppose the profit is very small?—The profit is practically gone. The bundles of wood are being sold at the present time at a loss.

91812. I suppose the profit was small, and the people were limited in the amount that they sold?—The profits were so small that the large merchants have given up manufacturing largely, their work-people have gone out to get a living, and are practically giving their labour away to the shops, owing to competition by the large bundles that are placed upon the market.

91813. You mention in the appendix to your Statement (*See Appendix No. V. (A)*), a number of persons whom you have known, who have become inmates of workhouses. Were they what I may call master woodchoppers?—These were cases that were given me by a number of our members, as to their own work-people; instances in which they have known where such work-people have gone.

91814. These various associations contend on the other hand, that they do not cut into or sell below the market price. Your allegation is that they do, by increasing the size of the faggot?—Yes, and also in the price too.

91815. You have two samples before you; are those supposed to be the same sort?—This one is the largest bundle that can be made in the trade at the present time, the standard size. It is practically a 13-inch bundle, though it is really 12½; they have to thieve half-an-inch to sell it at the price. That bundle is 3s. per 100, the net cost of the material and labour. It is 1s. 3d. per 100 for labour; that is 9d. to the woodchoppers for chopping and tying, 2d. for sawing, 3d. for the carter and the cartage, and ½d. for the boy that carts the wood to the mill.

91816. (*Professor Smart.*) Nothing for resin?—There is no resin; we are not allowed to use resin in London.

91817. (*Chairman.*) What is that sold for?—For 3s. per 100. That is being sold at the present time by a large merchant. This bundle is sold in the shop, for ½d. The shopkeepers sell it also in large quantities at 3s. 6d. per 100, and as shopkeepers insist on having a profit, and we are compelled to sell them at 3s. in order to give them a profit. In many instances the trade is compelled to sell at less than that and lose money by it. This large bundle I have here is being sold at the present time by a union at 3s. 3d.; it contains more than half again as much wood as the other article, it is a better quality of material. Of course, it is made by pauper labour, and that represents the size that the Church Army is selling to householders at 3s. 6d. per 100.

91818. Would you mind repeating what the proportions of material and labour are on the trade bundle?—The material in it costs about 1s. 7½d., because they have

cribbed half-an-inch out of it, and the labour is about, say, 1s. 4d. to 1s. 6d. per 100.

As to this, the witness subsequently sent the following note of explanation:—"The cost of wages, labour, &c., varies according to the distance delivered. Delivery costs from 4d. to 6d. per 100. The material in a full 13-inch bundle will cost at the present time 2s. per 100, but by reducing the girth ½ to ¾ of an inch the cost is reduced about 4d. per 100."

91819. How long does it take a man to make 100 bundles?—There are generally three people employed making them. One is chopping, one is picking up, and another is tying. Usually the pickers-up and tyers are girls or women, and a number of women are now chopping owing to the reduced wages now ruling; they would make in a full day of twelve hours' work, chopping, picking up, and tying, 900 to 1,000 bundles, so that 1,000 bundles at 9d. per 100 is 7s. 6d. to be divided amongst three people, and that is paying full rates.

91820. Is the complaint general amongst the Firewood Association?—Yes, it is general amongst the whole of the members and outside, I am afraid.

91821. You give two instances, one Bromley and the other Leicester where the Leicester people employed a large number of persons who came under the head of unemployed, and gave them this class of work?—Yes.

91822. Therefore your complaint is that this particular business is being unfairly competed with by a number of agencies, which are subsidised by public funds?—That is so.

91823. (*Professor Smart.*) Has your Association any connection with the Scottish Firewood Manufacturers' Association?—It has no connection whatever, but we have been in communication with them from time to time.

91824. How long have the present houses in the trade been in existence?—The large merchants have been in existence for a great number of years, but the small men I am afraid are come and go.

91825. What do you mean by a great number of years?—One man I speak of has been in the business for forty years, Mr. Davies, who used to employ 200 work-people, and has now twelve at work.

91826. You know the answer that is made by a good many charitable agencies;—that they were first in the field, and the private employers came in and cut the prices, and they were forced to go further?—I cannot admit that.

91827. It has been often said that this was one of the original manufactures of the Poor Law?—That may be so with regard to country unions, but I believe in London the firewood industry is a very very old one indeed.

The witness subsequently added the following note:—"I am informed that manufacturing firewood was carried on by the trade more than 100 years ago. There are old men of over sixty years of age chopping at the present time whose grandfathers did woodchopping. The Church Army has not done woodchopping more than 12-14 years."

91828. What wages do you pay?—That is part of the complaint we make that the wages that are being paid at the present time are much under Trade Union rates, the material has increased in price; the merchant is unable to reduce the cost of his material, and to compete he has to reduce the cost of labour, and so sweating has been created.

91829. So it is a sweated industry?—Yes at the present time, through the competition in the market.

91830. Is the demand unlimited?—I am thinking that the demand is very much restricted, from year to year it is becoming less and less, owing to the continued increasing use of small gas and oil stoves, so that the merchants are still worse off, by having a less demand, though I will admit that in the winter the demand should be equal to previous years on account of the very great increase of population.

91831. The fire-lighters have come into force too?—I do not think the fire-lighters interfere very greatly.

91832. Do you find the reduction in price has increased the demand?—We have not found that so.

91833. You spoke of the price as ½d. per bundle?—Yes.

91834. Last Tuesday night I heard these bundles being called in a London street at ½d. a bundle by a private dealer.—I suppose they were small bundles made to catch the public.

91835. They seemed to be about the same size as that. So I think there is as much cutting on the part of the

Mr. Charles George Dye.

The complaint is general.

The Scottish Firewood Manufacturers' Association.
How long the present houses in the trade have existed; before the charitable agencies.

Sweating in the firewood industry.

Lessened demand and reduced price.

Mr. Charles George Dye. private individual as there is on the part of the Church Army?—That we admit, and we contend we have been forced to cut one another for the limited market that is left to us.

27 Jan. 1908. attempts to negotiate with charitable bodies. 91836. Have you tried to come to any agreement with these charitable bodies?—We have written repeatedly asking them to see us or to cease it. They have refused to be approached by the Masters' Association, though I believe they have met the work-people.

Extent to which the Church Army cuts prices. 91837. The experience is the same in Scotland. I have been assured very often by the Church Army in other places than London that the price they charge per bundle was higher than you?—We contend it should be higher still. In some instances it is higher, for instance this bundle here represents the size of their 3s. 6d. per 100 bundles. We contend that that should be 4s. 6d. If, in the trade, we had to make a bundle that size with that length of stick, and that size round and the same quality of wood, we could not make it profitably for 4s. 6d. They sell it for 3s. 6d.

91838. I gather the price is not really higher?—Not on account of the size.

91839. Not higher than yours is?—Higher in price in some instances, but not generally. Where they sell to the trade, such as shopkeepers, their price is lower.

Restrictions on using resin. 91840. You say resin is forbidden in London?—It is not forbidden so much, but the restrictions placed on its use by the London County Council are such as to make it prohibitive.

Methods used by the trade to compete. 91841. (*Dr. Downes.*) When you speak of a 13-inch bundle or a 15-inch bundle, do you speak of the girth?—Yes, not the length of the stick. The length of the stick varies. In consequence, in the trade, they have tried every means possible to compete with these bundles. You will see that the trade bundle is half an inch less in stick length. That makes a greater production from a fathom of wood, and enables the trader to come still further to a lower price, but even with all these advantages we are unable to compete.

Methods of work in the trade. 91842. In the trade is the chopping and bundling done by different people?—Usually.

91843. Do not they work in gangs?—Yes, in gangs of three. There is usually a man, though I am afraid the men are fast leaving the business and women are replacing them (owing to the sweated wages allowed a man for chopping), a young girl for picking up and a woman or an older girl for tying.

Amount turned out by a gang of three. 91844. How many hundreds can a gang of three turn out on an average in the trade?—I was speaking of figures given me last week by a large merchant, Mr. Lillie, of Deptford. I think the average for twelve berths was 4,800 in a week, some had done more, some had done less. The most one berth had done was 6,200, that is sixty-two nines.

Hours worked. 91845. Do you know how long they worked for that?—The man in that berth that had done the largest quantity had come in practically every morning at six o'clock in the morning, and did not leave until eight o'clock at night, having no time off for meals, he would actually sit and eat his meals at the block. The women come in at eight o'clock and leave at eight. We are compelled by the Factory Act to do that with regard to women. They work twelve hours a day, excepting Saturdays, when they finish at four, so that the women had done fifty-seven hours I think, and the man had done about seventy-five to seventy-eight, for which they had earned between them £2 6s. 6d.—between the three.

91846. That is the highest?—At trade union rates. In most yards they would not earn anything like that sum.

stances of men going to the work-house and firms ruined. 91847. With regard to the table in your appendix (*See Appendix No. V. (A)*), where do you get the information from as to these wood-choppers who are in the workhouse?—These were instances given me at a meeting of the association by the different members when I asked them for instances they knew of that had been actually forced into the Church Army or the workhouse. They gave me the names of the men who had worked for them as to whom they had knowledge of where such men had gone; the merchant had been compelled to discharge them on account of the work leaving him, and the men had gone direct to the workhouse.

As to this the witness subsequently added the following note:—"I have four instances furnished me of master Woodchoppers (or firewood dealers) who have been ruined by charitable competition.

i. Messrs. Daniels Brothers, of Bow.

ii. Mr. Graves, of Homerton.

iii. West London Firewood Co., of Wandsworth.

iv. Mr. W. Jones, of Hammersmith.

Many others have had their business seriously injured."

91848. Was it known if they had been in the work-house before?—That I am afraid we did not go into as to wood-choppers who have gone to work with the Church Army. I might say I have information from the Firewood Choppers' Association with regard to the men that went to Paddington. I have also information here in writing from one of the members of the association, Mr. Watts, of his men Mills, Fowler, Stevens, Tydeman, Smyth and Hare, who all went to work with the Church Army at the Walmer Road branch, when he discharged them through slackness of trade. Four of them are still there.

91849. (*Chairman.*) They went direct from employ?—Small wages of wood-choppers. They went direct from his work. Their wages are so small, that the moment the work is discontinued they must either go into the workhouse or sell matches, or adopt some other precarious livelihood of the same sort.

91850. They practically were competent workmen who went and were put to the same class of work they had previously been doing?—Yes.

91851. (*Mrs. Bosanquet.*) You speak in Paragraph 12 of the numerous honorary and salaried agents. What are the honorary agents of the Church Army?—I think I saw in an article in the Press that some lady of title had been awarded an article of furniture (a cabinet, or something like that) for her proficiency in gathering Honorary and salaried agents of the Church Army. In orders for Church Army firewood, so I take it she would be one of the honorary agents, not exactly a salaried agent. Their salaried captains and their col-porteurs travel from house to house with a lot of literature. They see the householder, offer their literature and ask for a contribution. The householder may give something, but as a rule he says that he will read the literature that is given him; then finding that they get no cash they ask for an order for firewood; and they invariably get it because they offer a larger bundle than the trade bundle.

91852. It is the honorary agents that interested me. How do you suppose they get the orders? Does the titled lady go to the shops?—No, I do not think that, they travel from shop to shop; I think their orders are mostly got by their influence among their friends.

91853. And the Church Army offers a reward?—I do not say they offer a reward; but they rewarded a lady of title by giving her a cabinet for her proficiency in gathering orders.

91854. We have had a document submitted to us on behalf of the Church Army in which it says two officials of the Firewood Choppers' Trade Union waited on the Church Army last August; they were asked whether they complained of the society for under-paying its men, or under-selling the trade; the answer to each question was in the negative. Would you admit that Statement?—I am afraid I cannot admit that. I was not with the officials of the Woodchoppers' Union, but I have a letter from the Secretary giving a history of what took place at that interview and he mentions nothing of that at all. I rather think that that would be just one of the points that they would complain of: that the wages paid by the Church Army are not the wages that should be paid; and that is part of the cause of the cheap bundle. (*See Appendix No. V. (B)*).

91855. Possibly we ought to have the other Statement put in, as this is a definite statement that no complaint was made?—I might say on behalf of my Association, which is the Association of Masters, we do complain bitterly of the wages they pay. We complain that they pay for this work in truck, and they get a greater amount of labour for the small amount of truck they pay. I was informed verbally by one of the labour home captains of the Church Army that they pay a price of 8d. per 100 for making these 15-inch bundles, the trade union price of which should be 1s. 3d. 1d. per inch girth is the recognised price, the Church Army paid 8d. per 100.

91856. (*Chairman.*) When your evidence is sent to you will you add that statement of your Association as to the interview with the Church Army?—I will see the Secretary of the Woodchoppers' Union myself, personally, and take his view of the matter.

Draft of Memorial submitted to Church Army by Woodchoppers' Union subsequently sent. (*See Appendix No. V. (C)*).

ONE HUNDRED AND FORTY-FOURTH DAY.

Tuesday, 28th January, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The^r Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman.*)
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.
The Rev. L. R. PHELPS.

Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
The Right Rev. The LORD BISHOP of ROSS.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. JAMES THOMAS HELBY, called; and Examined.

91857. (*Chairman.*) You have been kind enough to prepare for us a Statement which, if you will hand it in, we will take as your evidence-in-chief?—Yes. (*The Witness handed in the following Statement.*)

1. I have been a member of the Metropolitan Asylums Board, nominated by the Local Government Board, since May, 1898, and after occupying the chairs of the Finance, Works and Hospitals Committees, I was elected Chairman of the Board in May, 1907.

My previous experience in Poor Law work and on other public bodies was as follows:—

April, 1893—September, 1898. Member of Camberwell Board of Guardians (Chairman of Finance and Workhouse Committees).

May, 1893—September, 1898. Representative of Camberwell Board of Guardians on Board of Management of South Metropolitan School District.

May, 1893—December, 1896. Member of Camberwell Vestry (Chairman of Public Health and Assessment Committees).

November, 1885—November, 1891. Member of late School Board for London (Chairman of Works Committee and of various sub-committees).

April, 1884—April, 1886. Member of Wandsworth Board of Guardians (Vice-Chairman of Board and Chairman of Assessment Committee).

2. While serving as a member of the different authorities mentioned I have had considerable experience in connection with contracts of all kinds. I formed the opinion quite early that the system generally in vogue under which tenders were obtained, contracts made, and goods received, was most unsatisfactory, and this opinion has been confirmed and strengthened as my experience has increased.

3. So far as the Metropolitan Asylums Board is concerned the procedure with regard to entering into contracts is governed by an order of the Local Government Board, dated June, 1867, and I believe that the procedure of boards of guardians is subject to similar regulations. Where any difference exists the guardians are probably confined within even narrower limits than those which affect the Asylums Board. Though the regulations have been modified in particular points of detail from time to time yet in the main they still stand in the original form.

4. It is very desirable that regulations framed so long ago should be completely revised. They were doubtless drafted to meet a condition of things which has materially altered. Contract requirements, which forty years ago were comparatively small, have increased with the growth of institutions in size and number until with a central

authority the turn-over is equivalent to that of a large modern stores. The Asylums Board alone now spend on goods supplied under contracts some £300,000 per annum, and enter into about 800 such contracts annually.

Mr. James T. Helby.

28 Jan. 1908.

The theory which seems to underlie the existing regulations, viz.:—that the supplies required by a Poor Law authority would be so small a matter and so easy to deal with that they could be obtained by the unvarying rule of advertising for tenders, and that the tenders could be opened and completely dealt with at one sitting, has therefore ceased to hold good for many years past. Such regulations were apparently devised, first to ensure the obtaining of the best or most suitable article at the lowest price, and secondly as a security against malpractices.

5. The uniform application of the rule as to advertising for tenders does not necessarily secure the result desired, indeed it may lead to an exactly opposite one. The authority is precluded from obtaining tenders from selected firms, a course which it is agreed is desirable in many cases, and from taking advantage of the state of the markets. The rule is also an obstacle in the way of free dealing between the authority and manufacturer or producer of the goods required.

I believe it is recognised that in open competition many of the best firms get tired of tendering, while manufacturers who would readily enter into a limited competition, especially if it were known to be confined to their own class, refrain from coming in where the competition is open to both manufacturers and retailers alike. This is understood in government departments where open tenders are not the rule, but under existing regulations Poor Law authorities have not the same freedom.

It is not easy to lay down a rule which would cover all cases, but, speaking generally, I consider that the best results would be achieved by limited competition and by having selected lists of firms to tender for each class of goods.

There would be no difficulty in the way of determining whether manufacturers only should be dealt with for any particular class of goods, and of inviting applications by advertisement from firms desirous of being placed on the selected lists. Any enquiries as to the *status* of firms would be made before they were placed on the list, and one source of the delay which now often occurs between the date of tendering and that of notifying the result would be avoided. The existing regulations, moreover, as they stand, do not admit of any exception, such, for instance, as when it is desired to carry out works by the direct employment of labour and purchase of materials, or when something is required which can only be supplied or performed by one person.

Mr. James
T. Helby.

28 Jan. 1908.

Opening of
tenders.

Relative
position of
Poor Law
and other
authorities.

Metropolitan
Asylums
Board
practice.

Preparation
of schedules.

Estimated
quantities.

Extension of
purchase in
bulk.

6. Since it is no longer possible in a great number of cases to open and deal with tenders for supplies, some containing schedules including hundreds of items, at one meeting, there can be no reason for continuing a regulation which requires a formal meeting for the opening of tenders. Tenders such as those referred to require careful collation and tabulation before they can be discussed by a committee or board, and sufficient safeguards can be provided by means other than those which the regulations seek to enforce.

7. While the Poor Law authorities are subject to such regulations as those mentioned, the great number of municipal and county authorities, who obtain supplies by means of tenders and contracts, as well as the government departments, are subject to no similar restrictions. At the same time it is a matter of common knowledge that while these regulations are in some respects obsolete and in others tend to hamper the action of the authorities, they have not availed in the case of Poor Law bodies to prevent irregularities of a kind and on a scale which have not been apparent in cases of non-Poor Law authorities. While I have no desire to see the ultimate control of the Local Government Board removed, I know no reason why a competent Poor Law authority should not be free, within certain limits, which should be much wider than they are at present, to arrange for the supply and delivery of each class of goods, and for the performance of each class of work, in the manner which is found by experience to be most suited to that class.

8. I should like to point out here that the views I have expressed above have been adopted by the Metropolitan Asylums Board. It should also be mentioned that during the last ten years a great advance has been made by that board in the system of obtaining supplies. Detailed evidence with regard to the present practice of the board has already been submitted to the Commission by the clerk to the board, by whom particulars were given of:—

(i) The establishment of a central stores for the reception of manufactured non-perishable goods.

(ii) The re-arrangement of the forms of tender by the thorough sub-division and re-grouping of the large numbers of items contained in the schedules, and the comparison of tenders received, item by item.

It was also pointed out that the board, with the approval of the Local Government Board, have in some cases applied the principle of direct purchase and of the purchase of goods in bulk from manufacturers and producers.

9. Taking first the preparation of contract schedules I would lay stress upon the following points:—

(a) The carrying out, as far as possible, of the policy of sub-dividing the lists of items contained in schedules, the goods being thoroughly separated into the different trades.

(b) The omission from the schedules of those goods of which the quantities required are very small, separate arrangements being made for the purchase of such goods.

(c) The omission from the schedules of goods and materials which have to be specially made, in all cases in which stock patterns and stock materials can be found to answer the purpose required.

(d) The settlement of standard patterns to be used for the same purpose in all institutions of one class, thus preventing the inclusion in the schedules of many different patterns of the same article.

10. I question the value of the insertion in many cases in the schedules attached to periodical contracts of the quantities of goods estimated to be required during the period, especially, when they are prepared, as is generally the case, by institution officials.

In cases where estimated quantities are necessary it would be better to leave this work in the hands of the accounting staff at the central office. In many cases, however, and especially in those of such articles as fish, meat, fruit and the like, detailed estimates are of little value.

11. It would, in my opinion, be very desirable to extend largely the system of making contracts for quantities, and not for periods, *i.e.*, to extend the principle of purchasing goods in bulk. This course is rendered simple by the establishment of central stores. The quantities to be purchased would be fixed with some regard to the nature of the article, to the need for keeping a

stock sufficient to obviate the necessity of continually inviting fresh tenders, and to storage capacity, but as a rule a six months supply could be contracted for. Where articles are bulky or are produced slowly, or for any other sufficient reason, arrangements would be made for deliveries to be spread at intervals over a specified period, but the quantities to be taken would be none the less fixed.

12. In cases where samples are necessary, I think more expert attention should be paid to their selection, and to changing them when required, than is generally done at present.

13. Tenders for goods received at central stores would be invited from time to time as required. I think that it is unnecessary to pay strict attention to Poor Law half-years, and that the tendering should be spread over the whole year. It might be objected that two sets of prices would make more book work and would render comparisons of cost by half-years less easy to make, but the gain would quite counterbalance any such drawbacks.

I have mentioned the great desirability of reducing to the smallest amount possible the time taken between the date for the reception of tenders and that for announcing the result. The state of the market may change considerably, and tenderers may not be able to keep an advantageous offer open for the time required, and generally it may be said that a long interval opens the door for the withdrawal of tenders for reasons both good and bad.

The question of greater promptitude applies also to the payment for goods received, and it would, I believe, be an inducement to tenderers if they knew that all goods would be paid for within, say, a month of acceptance.

14. Passing to the general question of the arrangements to be made for the reception of goods and for determining that the article received is the article contracted for, I believe it to be a sound principle that the consumer and the contractor should be completely separated. By consumer, I mean the institution officials responsible for the actual use of the goods. There will always be a certain proportion of goods, chiefly articles of food, which must be delivered direct to an institution, but I think that the more the principle of receiving goods at central stores can be extended the better. The Metropolitan Asylums Board have for years rented central stores in South London, and they are now replacing these by a new building of their own. In any extension of the principle of central control and supply, it might well be necessary to have at least two such stores in London, one on the north and one on the south side.

15. The advantages of these stores to a public body controlling a large number of institutions are, I believe, generally recognised, and have no doubt been put before the Commission. *Inter alia* they afford the best way of securing first, that the goods supplied are in accordance with the contract by providing one examination of these goods, and that an expert one, and secondly, that the quantity and value of the stock in hand is reduced to a minimum by keeping it mainly in one place and not scattered over many institutions.

It is quite impossible to secure for each institution officials who are qualified to judge of the merits of every class of goods used therein. Moreover, the fault-finding, often vexatious, which here and there amongst a number of institutions inevitably follows the introduction of a new contractor, is evidence of the need for finding in the larger use of central stores a means of keeping the contractor and the consumer from direct contact with one another.

I would not lose sight, however, of the safeguards which are necessary in the management of a central stores. The control of the central authority over the stores, as exercised by a committee appointed for the purpose, must be complete, and the appointment of permanent experts to deal with the goods received should be avoided. It seems to me that it would be quite feasible to keep lists of qualified judges in each class of goods and to have the various deliveries examined by persons selected as occasion requires from these lists, and paid by fees.

Due provision should also be made for the examination of goods in course of manufacture, and sufficient time should be allowed after the reception of goods for their proper examination. Goods not up to standard in some non-essential detail might be taken at reduced rates.

16. I believe great differences exist in the manner of furnishing institutions of similar character when this work is undertaken by different bodies. It is obvious that great saving can be effected, not only in the original outlay, but also in the upkeep of institutions if the question of furnishing is approached on business-like and practical lines.

The Metropolitan Asylums Board originally attempted to deal with it by establishing standard samples, but have found it much better to settle standard patterns by means of working drawings and specifications. In furnishing, as in other branches of contracting, the larger the field of operations, the easier it is to employ the best skilled advice and assistance in preparing the contracts and examining the goods in course of manufacture and on delivery.

17. The question of the arrangements for the examination and condemnation of articles worn out and unfit for further use, and for requisitioning for fresh supplies is one which needs careful attention. I believe the practice in these matters is very varied in Poor Law institutions. A form should be used for each ward or separate portion of an institution on which the officer in charge should enter the number and description of articles to be repaired or condemned, and this should be checked and certified by a responsible officer, such as the matron or steward. The articles to be repaired should be sent to the workrooms or shops and subsequently returned and receipts would be exchanged. The articles to be condemned would await the decision of the Visiting Committee, who, by themselves or by delegated members, would inspect them and certify the summarised list submitted with the goods. On the summary sheet would be columns for issues which when totalled would be carried in total to the appropriate stock book. The stock book would show a full quarter's receipts, issues, stocks in hand and valuation at end of each half-year compactly in one opening. With modifications this system could be applied to most of the stock accounts, and would effect a considerable simplification in the books, would tend to reduce the possibility of fraud, would enable the staff to work readily on any book of account, and would give a better basis for checking. Regulations should be laid down for the proper disposal of articles when condemned.

18. With regard to the authority for the issue or orders the general practice, I believe, is to insert the requirements in a requisition or requirement book which is submitted to a visiting committee or sub-committee for approval. This was done in the case of the Asylums Board institutions until 1903, when the question was enquired into. It was felt that the control of members over special items of expenditure was obscured by the necessity for looking through a large number of items over which no real control could be exercised by them. For instance, in the case of provisions, the issues are really determined when dietary and rations scales are laid down for patients and staff, and the expenditure when contracts for supplies are entered into.

The checking of the quantities issued must be a work for the accountant's staff at the head office, and the issue of orders may well be left to the accountant, subject to his being satisfied as to the reasonableness of the requirements and to their being within the scales prescribed. This arrangement has been adopted by the Asylums Board and has resulted in clearing the requisition books in all of thousands of superfluous entries per annum, with the result that the remaining items being so many fewer, doubtless receive a much closer scrutiny. The principle may well be extended to many other classes of goods, the issue of which is based upon regulations and scales and the contracts for the supply of which have been settled by the managing authority.

Dealing with requisitions within an institution I think it is important that there should be a written requisition for all issues, and a receipt for all goods passing between officers. Slips might be used, for it is not necessary for a requisitioning officer to know what he received in the past, but what he requires for the immediate future. It is likely that the use of books invites officers to make comparisons between themselves, particularly when a requisition is reduced, thus tending to an accumulation of goods. A fixed equipment should be settled for each place and no additional stock issued unless in specially approved circumstances.

19. The question of stocktaking is another important item in the administrative machinery. It is very desirable that as short a time as possible should elapse between the last day of a quarter and the stocktaking, and for this purpose too many stocktakings should not be thrown upon one person. I think that exhaustive stocktakings of all goods need not take place at each institution more often than annually, and that such a number of institutions should be taken each quarter as would distribute the work equally among the four quarter days. At the central stores the stocks should be taken by an outside stocktaker, but at many of the institutions, at any rate, the stock might be taken by members of the accountant's staff, while occasional visits might be made between annual stocktakings when the whole or specified portions of the stocks at any institution might be taken.

20. In addition to the audit by the district auditor appointed by the Local Government Board and the continuous examination throughout the year by the accountant of the whole of the books and accounts of accounting officers, there should be visits of inspection, test examination and enquiry, without notice, by a travelling officer deputed for the purpose.

21. I believe that a great many of the improvements I would like to see in regard to the arrangements for contracts and supplies for Poor Law institutions, especially in London, can only be secured by bringing the institutions under a central authority. This authority, while under the general control of the Local Government Board and subject to regulations made by that Board, would be in a position to deal with the matters referred to in a way which is not possible for a large number of small and independent units. Take the instance of central stores. I consider it absolutely essential that the body controlling the contract and stores arrangements should be the body controlling the institutions in which the goods are to be used, and that without this complete central control any arrangement for central supply would be unworkable.

These remarks as to central control hold good, in my opinion, with special emphasis in connection with works and supplies, in regard to which, as recent events have shown, there is so much scope for extravagance and waste. I believe, however, that the need for more uniform administration, both in regard to outdoor relief and indoor relief, is very pressing, and that this can only be met by removing the determination of general principles and rules from local authorities, and I would like to close my statement with a few suggestions on this subject.

22. In my opinion it would be extremely difficult, if not impossible, to place the administration of outdoor and indoor relief in the hands of independent bodies. If this is so, it would be necessary for a central authority to work, so far as outdoor relief is concerned, through local committees, and there seems to be no reason why the visitation of institutions should not be left in large measure in the hands of such committees.

This would give a central body of workable size, which might be comprised of elected members, with a large addition of members nominated by the Local Government Board, to ensure the inclusion of persons who would be chosen for special knowledge and experience rather than for party reasons.

Such a body could deal through central committees with the different branches of its work, very much on the lines of the Metropolitan Asylums Board, with its hospitals, asylums, children's, finance, works and contract committees.

It could define the general regulations under which outdoor relief should be administered; make all arrangements for works and supplies; prescribe wages, uniform and dietary scales, and the necessary staff regulations for each set of institutions; reserve to itself the appointments of chief officers and determine the rules under which those of lesser rank should be made.

It could settle the arrangements for visiting institutions, deal with the reports of the visiting committees, and generally undertake all the work which might properly be kept in its own hands.

The local committees could be appointed by the central body. With largely reduced functions they could be materially smaller in number than the present boards of guardians. They would have a divisional office with a divisional correspondent acting under the central body.

Mr. James

Central
control.

A central
Poor Law
body.

Mr. James
T. Helby.

28 Jan. 1908.

I believe that the Poor Law institutions, now controlled by the guardians of the poor, numbering roughly 130, with accommodation in round numbers for 70,000 could be satisfactorily and economically governed on some such lines as I have suggested, nor do I think that the scheme would require material alteration even if some or all of the existing institutions of the Metropolitan Asylums Board were added to the number.

Moreover, I think that such a scheme would make sufficient provision for the necessary element of popular representation, and for enlisting the sympathy and co-operation of the large number or persons of capacity who would bring voluntary service to assist in the administration of the Poor Laws.

Experience
of witness.

91858. (Chairman.) From your Statement, I gather that after occupying the post of chairman of the finance, works, and hospitals committees of the Metropolitan Asylums Board, you were elected chairman of the whole board in May, 1907?—That is so.

Procedure of
Metropolitan
Asylums
Board
governed by
Local
Government
Board
orders.

91859. Your evidence, I think, mainly or largely relates to the question of contracts. The procedure under which you act is governed by an Order of the Local Government Board, dated June, 1867, you say?—Yes, that is so. There have been one or two amendments, I think, since, but they are merely of a minor character.

The Local
Government
Board orders
out of date.

91860. You think those regulations are so antiquated as hardly to be applicable to an authority as large as yours, which has to obtain articles on so very large a scale?—They are very antiquated—like a good deal more of the work of the Local Government Board.

Tenders.

91861. The theory which governs you is that you must always advertise openly for tenders?—Yes, unless we have the sanction of the Local Government Board. On certain occasions we ask them to be allowed to go to selected firms.

91862. Do they allow you to do that?—Occasionally.

91863. But, as a rule, you have to purchase under unlimited competition?—The orders are to the effect that we are to advertise a certain time before the tenders are received.

91864. Is there any rule as regards those who tender? Must they be manufacturers, or may they be brokers?—There is no limit of that kind at all.

91865. I suppose your experience is that it does not necessarily follow that the lowest tender is always the one which it would be advantageous to take?—Certainly not. Unfortunately the rule is to accept the lowest tender, but it is not at all times advantageous to do so. In the advertisement we always lay down that we do not bind ourselves to accept the lowest or any tender.

91866. I suppose that it sometimes happens that it would be an object to a person tendering to get the contract?—I should say so.

91867. Independent, I mean, of pecuniary considerations?—Quite so.

91868. Do you not find that is done frequently?—I do not say it is very frequent, but I say there are cases of that character.

91869. It is done as a matter of reputation, in order to be able to say that they are contractors to the Metropolitan Asylums Board?—Yes.

Running
contracts.

91870. Are you allowed to have running contracts with the big firms?—There are occasionally contracts of that kind for instance, for stationery and printing. Those contracts have run for three years. But it is not the rule by any means and our contracts are generally six-monthly or twelve-monthly contracts.

91871. Then you are practically precluded from obtaining tenders from a limited number of firms selected in advance?—That is so.

Lists of
selected
firms from
whom
tenders are
invited.

91872. Of course, all systems are open to some disadvantages, and it is sometimes alleged that under this system favouritism is shown to firms, and that they are selected sometimes on account of the political opinions of the leading members of the firms, and so on; but in your judgment, does that system, if it is properly worked, answer as well as having only a limited number of selected firms?—It all depends upon the circumstances of the case. In large contracts, especially in contracts for building works and that kind of thing, my experience

is that it is a very great advantage indeed to have a List of selected list of tenderers. My experience when I was chairman of the Works Committee of the London School Board, if I may refer to that, was this: We went for selected lists of men, and we obtained them in this way: we advertised for those who were desirous of tendering for works between certain amounts, say, from £500 to £1,000, from £1,000 to £3,000, from £3,000 to £5,000, and so on. Then all the details were gone into and the particulars—for instance, the references were referred to, the financial position of the individuals was obtained, and their works were visited to see how far they were capable of undertaking the work. By that means we obtained a very excellent list of contractors who were able to do the work under those conditions. We found that we got far better men to tender, that is, men of good reputation, whereas before there was a difficulty always to get the better class of men to tender, because after a time they found they had no chance of getting contracts, and so they would not take the trouble or expend the time in having their quantities valued by their own quantity surveyors. By these selected lists we got a far better class of tenderers and we got our work far better done. I think the same thing would apply to all large classes of work of that character.

91873. In the case of the school board tenders, I assume there were only a limited number of persons who supplied the particular class of articles that you wanted?—I speak especially of building works. In those cases, the list is taken in rotation; you take a certain number off the list and you ask them to tender. You would not have the slightest hesitation at all in accepting the lowest tender because you had made sure, your man being on the selected list, that he was a man capable of doing the work. I may say the same would apply with regard to works of a large character, and even to manufacturing firms in the same way. With regard to large tenders, for instance, instead of going to the retail people it would be a great advantage to go direct to the manufacturers; but of course now under the system of advertising anybody can offer.

91874. Then your experience is that some of the best class of traders after a time decline to tender?—Certainly. That has been my experience for many years past. You gradually get into a regular ring of tenderers; the system of tendering becomes practically an art, and it is carried out by certain firms, and so you get into the hands of a ring.

91875. This is rather technical; could you just explain to us how it becomes an art?—In this way: First of all, schedules are made out; the schedules show the estimated quantity in the first column, and in the next column, the articles themselves. Contractors who are in the ring obtain information as to certain articles of which more or less would be required to be supplied, and they naturally put their figures against those items in accordance with the quantities required. I know of instances where a certain number of articles have been estimated to be supplied, and perhaps a low price inserted, and another article estimated at fewer in number inserted at a much higher price. When you come to the end of the year and make inquiries, you find that the number supplied of the articles estimated for at the lower price has not been anything like the number supplied of the articles estimated for at the higher price. By some means, they ascertain, and they go in for a system of valuing out their schedules and their tenders in accordance with the information that they obtain. The result is that we find, as far as the Asylums Board is concerned—and I know perfectly well it was so at any rate in connection with the boards of guardians I have been on—that the same firms practically get the contracts and that they are always the lowest tenderers.

91876. They get the contracts because they understand the principles of tendering better, not from any improper or corrupt influence?—No, I do not say that there is corrupt influence, but they obtain the information from those who are able to give it to them at the various institutions. They must obtain it in that way, as there are no other means of obtaining it.

91877. There is a rule about opening tenders, is there not?—The rule is that they are all to be opened in the presence of the Contract Committee. When you get schedules, perhaps in some instances comprising fifty,

Opening of
tenders.

sixty or a hundred different items, before you can deal with them they all have to be tabulated, and therefore they have to go into the hands of clerks to be tabulated; then they come up again afterwards to the committee.

91878. Where you have to get articles on the scale required by the Metropolitan Asylums Board, this opening of the tenders publicly becomes a mere useless form, does it not?—It is a perfectly useless form. I give you a case that took place not very long ago. The tenders were all opened and they were initialled by two members of the committee and then they passed out of the hands of the committee. Shortly afterwards a question arose with regard to one item which came to my knowledge and necessitated my going into the matter. I found that a letter which was sent with one of the tenders objected to a clause, Clause No. 5 it was, and this somehow got adrift—how I do not know; at any rate it did—and the committee and the Board knew nothing at all about it. They had supposed that they had accepted this tender subject to Clause 5, whereas Clause 5 was actually omitted by this letter which was embodied in the tender. This shows that the opening in Committee does not provide a safeguard that cannot be even better secured in another way.

91879. The large local authorities, such as the big municipalities, are exempt from rules similar to those contained in the Order of the Local Government Board of 1867, are they not?—I believe they are.

91880. The Metropolitan Asylums Board have by their practice of recent years to a considerable extent freed themselves, have they not, from the more irksome restrictions of this regulation?—No; the Order still stands good. What we do is that occasionally, for instance, with the sanction of the Local Government Board, we purchase direct some few items such as tea, coffee and wine and spirits. We purchase coal direct from the collieries, and some soft goods from the manufacturers in bulk. Take the question of coal. Some time since—some two or three years ago—we applied to the Local Government Board for power to purchase direct at the collieries. That has been of the greatest advantage. Of course it was met with a good deal of opposition from the trade, naturally, and few collieries sent in tenders for the first year, but the tenders gradually increased in the second year, until now we have any number of tenders that we require, with the result that we are getting coal of the value of something like £60,000 to £70,000 a year direct from the collieries, and therefore we are saving considerably on the profits of the middleman—something like between £2,000 and £3,000 a year according to circumstances. I may say that that does not interfere at all with the employment of the people, because the same men are employed in London for the conveying of that coal and the carting of that coal, as though it were done by the middlemen—that is, by the coal merchants. But of course, the benefit is to the rate-payer by our getting this coal at considerably less cost. Not only do we get it at considerably less cost, but we get the coal that we contract for, and we know we are getting that coal; therefore we are saving in consumption as well as in price.

91881. I put the building repair contracts for the moment on one side. I assume the great mass of the articles which you have to purchase are perishable articles, such as provisions and clothes?—A very large quantity would be probably—I should say much more than half.

91882. As regards the non-eatable things such as clothes or stuffs or drugs or instruments, I suppose you have in those cases, as a rule, a standard pattern of some sort?—In some cases. In many instances you cannot have a standard pattern, but wherever we can have a standard pattern we have one.

91883. Do you think that that works well?—Yes. Much depends on the working of it—how often, for instance, your pattern is selected and whether you are going to have an antiquated pattern, or whether you are going to have a new sample each year or every other year.

91884. I suppose patterns a good deal affect the tenders, because certain manufacturers can supply one particular pattern easier than another?—Yes. Even there you may make mistakes with regard to the patterns. It is a

mistake—as we have found out—to select a pattern which has specially to be made, because then you are bound by that one pattern; whereas if you can go into the market and buy almost anywhere a large quantity of one pattern which will answer just as well as another, you will thereby save considerably. Otherwise, you will have to wait and you will have to take whatever is made.

91885. Now with regard to your stores supplies, most of them being perishable items, I presume there is no stock taken of that class of goods?—You cannot keep a stock of those goods as a rule. Of some few things you can, as you can buy them of course in bulk. Take articles of this character—currants, raisins, and things of that kind; they generally have those in considerable stock, lasting perhaps three or four months. Those are the things that certainly might be bought in the season when they come in, if we had the opportunity. You must remember in regard to those articles that the new season stock remains in the stores of the retailer or the contractor during perhaps six or eight months or even twelve months.

91886. Of the non-perishable things, have you periodical stock-takings?—We have. There are stock-takings every half year, and I do not think the stock-taking is worth, I was going to say, the paper it is written on as a rule. The Local Government Board Orders lay down that the stock-takings shall be done every half-year, in the week which ends on the Saturday nearest to the Quarter-Day. Take the Asylums Board. We have one stock-taker who gets £200 a year. I believe that he is also the stocktaker for many of the workhouses of the unions in the Metropolis. He has to take the stock of all the large institutions of the Board numbering twenty-four, thirteen of which are around London while eleven are in various parts of the country. The consequence is that the taking of the stock is delayed for from one to ten days after the day on which the accounts are closed. It is not by any means an uncommon practice for the stewards to take their own stock and make their books agree with the stock. To enable the stock-taker to take the stock when he visits the institution he sends a form to the steward to be filled up showing the receipts and issues since the day the accounts were closed, which, of itself, is most unsatisfactory. In taking stock, many articles of clothing are made into parcels, with the numbers stated on the outside. These are taken as correct although there may be fewer in the parcel than the number stated, or the parcel may contain rubbish. Therefore, to my mind, the regular stock-takings, when they know when you are coming and can prepare for you, are a great mistake. Furthermore, the sixth-monthly stock-taking to my mind is unnecessary. If it were taken regularly once every twelve months, and there was a surprise visit made at any moment during the year, and the stock taken then (which can always be done) you would do a great deal more good, because then the man who has to keep the stock would not know but that at any moment he might be pounced upon to prove that his stock is correct.

91887. So that you are in favour of stocktaking, but you would alter the system?—I would alter the system certainly for stock-taking. I would have the stock-taking once a year, but as for the sixth-monthly stock-taking, in the way it is done I do not consider as a rule that it is worth the paper it is written upon, and I would not trust it, from what I have seen.

91888. Just following up that point—I am not taking in any sequence the different paragraphs of your State-ment—I will deal next with the question of the inspection of goods as delivered. Have you experienced any difficulty about that? It is sometimes represented that those who accept the goods are necessarily persons in receipt of a comparatively small pay, and that there is sometimes a difficulty in getting them to do their duty?—My own opinion is that the system for the reception of goods is most defective. For instance, you place the steward in charge of the stock at an institution, but the greater portion of the work is done by the stores porter. Unfortunately the steward is looked upon and is classed as a principal officer, and therefore he considers himself a very big man, and he delegates a great deal. Although the Local Government Board orders do not permit any delegation of his duties, still it is done invariably, and in very few cases that I know of does the steward accept the goods, although he may accept the meat. In fact,

Mr. James
T. Helby.
28 Jan. 1908.

Mr. James T. Helby. 28 Jan. 1908. Inspection of goods on delivery.

in my inquiries, I have over and over again found that the stores porter practically receives the majority of the goods. The stores porter is a man with about 24s. or 25s. a week and his board and lodgings. I do not suggest that he is dishonest, but there is a possibility of his being able to square matters with the contractor's representatives. When one sees from time to time that goods are tendered for at prices at which you know perfectly well that they cannot be supplied, one feels that there must either be some means of getting goods received of an inferior quality or that the quantity must be short. If you place matters in the hands of a man of that standing, you cannot expect otherwise. Furthermore, you cannot expect a stores porter, who perhaps has been simply a labourer just brought in, to be able to understand whether the goods are up to sample or not. I believe in having a central stores under certain conditions, and those conditions should be that the officers receiving the goods should be of such a standing that they would be free from any suspicion. I do not believe in putting a man on £2 or £3 a week to say that these goods are up to contract or not. Only a few weeks ago—I am not giving any secrets away—I had a case of this character, where it was brought home to me. Three tenders were brought in for goods wanted urgently, and the suggestion was that we should accept the medium priced one. I immediately asked, Why the medium price, and why not the lowest price? That led to my having the individual who suggested this before me. I asked him at once, Why do you suggest this? On going into the matter he had to admit at last that actually the lowest priced one was the better one; and it was accepted. There is a case in point where you have a man of £2 or £3 a week to pass things which is open, I say, to strong objection. If you have work of that character, it must be done by men who are capable and who are in such a position that they are free from all bias of any kind. That applies to the whole of your various institutions throughout London.

List of qualified judges to inspect goods.

91889. That is a difficulty which, as I dare say you know, is experienced by the Government departments in just the same way?—That is so, and I know it perfectly well. I am an old Admiralty official, and therefore I know something about it.

91890. You are against appointing a permanent expert, but you think it would be advisable and feasible to keep a list of qualified judges in certain classes of goods who should examine them?—Exactly so.

91891. For instance, when it is a question of material it becomes a matter of touch, does it not?—Yes.

91892. No porter or labourer can possibly decide there?—It would be impossible. You want a man who is accustomed to it. What I say is, you want a man who knows nothing at all about any of the individuals who supply, but who knows perfectly what the character of the goods required may be. If you have a list of specialists of that character, you could put the goods before one of them without his knowing whom they come from, or anything else, and he would be able to say which is the best article.

91893. If the tendency is on the part of the Government to increase the areas of concentrated authority in the hands of central bodies, the amount of stores they purchase will become larger and larger, and therefore it is very essential that there should be qualified persons to accept the stores?—Yes.

Central store.

91894. I assume you would put the two together, and that if you have a very large central store purchasing on behalf of a public body controlling a very large area, you would say it is absolutely essential that there should be experts to test the quality of the goods?—Quite so. I say there is no reason at all why we should not centralise all that work and carry on that class of work, the same as a big firm would. Take, for instance, a large co-operative society; surely if they can deal with these things—and they do deal with them to the amount of £3,000,000 worth of goods in a year, and goods of a similar character in all respects—there is no reason why, if this work were consolidated, it should not be done by a public body on somewhat the same lines. We should thereby save an enormous amount of money over the middleman's charges, and we should also ensure—and this is a great point—that we should get the goods that we contract for, both as to quality and as to quantity.

91895. You make the suggestion in your Statement that it would be desirable to extend the system of making contracts for quantities and not for periods, that is, to extend the principle of purchasing the goods in bulk will you please explain exactly what you mean?—You have it in regard to what we are doing now in tea. We go into the market and we buy tea in bulk. We practically do the same with regard to coal. We enter into a contract for coal, and although it is a contract, still we are practically buying it in bulk, that is, we are making a contract for so many tons of coal per month. When you come to the question of soft goods, of which you want a very large quantity—I am speaking now on the supposition that you centralise your work, and, therefore, you know that a certain material is required in enormous quantities—you can go into the market and buy those, in fact you can do that with numerous things which are required for pretty well every-day use. Take the clothing, for instance; instead of buying your clothing made up, you can go into the market and you can buy the cloth and have it made up afterwards, which is much more satisfactory.

91896. Then as regards requisitions, you think that the quantities required should be checked by the accountants' staff?—Yes; they can do it much better, because they can take the average quantity. What you want to do is to get all that work away from the consumer and keep him apart from the contractor. That is the great point to go for; keep them separate, and let there be no contact between the contractor and the consumer in any shape or form.

91897. That is, you would have your contract, and deal directly with the contractor, and then you would bring in a separate lot of persons on behalf of the user who would see that the article is up to pattern?—That is so. Then, if you have a central store you have a double check, because you check on receipt into the central store, and then you issue to the local institution and the receiving officer at that institution would very soon see if the article is wrong, and he would complain if it were not up to the mark. So practically you would then get a double check.

91898. Going on now to that part of the work of your board which consists in the distribution of stores, you practically equip, furnish and feed all the asylums connected with infectious diseases, imbeciles and children suffering from ophthalmia and ring-worm?—Yes; we have about forty-eight to fifty institutions altogether.

91899. Have you found, as a central authority, any difficulty in meeting their daily wants?—None whatever. Sometimes you might get a little delay in getting their goods from the manufacturers, but that would be one of the things that we should avoid by adopting the suggestion I make as to centralisation.

91900. I was referring to the daily supplies?—We should have no difficulty there. The only difficulty that we have, and that is one which I have now got in hand and which I am very strong about, is on the question of the milk. The milk is not delivered in sufficient time in the morning but that, as I say, is a matter we have got in hand now.

91901. As regards machinery, there would be no difficulty, would there, in so developing the machinery that it could supply all the institutions?—None whatever. It is purely a matter of organisation, and, of course, of administration.

91902. If you were able to deal as a central authority with the supply of all these other institutions, you would probably be able to do it cheaper and more efficiently, than it could be done by a large number of scattered authorities?—Certainly; there is no question on that point.

91903. You have, no doubt, had great experience?—I have gone into it very closely indeed, and I have not the slightest hesitation in saying that it could be done with the greatest of ease. Of course, you must have the proper organisation, and you must have the right committee—and the smaller the committee the better.

91904. In your experience, has a contractor in one district ever broken down suddenly, and then have you been able to make good his deficiencies through the other contractors?—I do not know of any case of that

kind occurring. Of course, that may be done without the knowledge of the contracting body, and probably is.

91905. Assuming you had to deal with difficulties which contracted and expanded as regards numbers, a central body would be able to cope with them much better than a small body, would it not?—Yes. The more you centralise work of that character the better it is—as I say, again, subject to proper organisation.

91906. Really what your Statement wishes to point out is that there are certain difficulties in existing regulations and certain improvements to be effected; but a central system does unquestionably give to the public a much better return than if it was carried on by a large number of separate local authorities?—Distinctly. Think of the mass of red-tapeism that takes place now before even the supply reaches the institutions, when it all might be done direct. Think of the sub-committees and the committees.

91907. You make this further suggestion, I think, in your last paragraphs, that assuming there was a central authority so far as supplies were concerned, it would be inconvenient to place the administration of indoor and outdoor relief in the hands of independent bodies; does that mean two separate bodies?—No; I do not mean two separate bodies.

91908. It is not that you wish to point out the impossibility of one set of people undertaking indoor relief and another set outdoor relief?—No not at all.

91909. Now, as you are here, I should just like to ask you one or two questions outside your Statement. How many does your board consist of?—Seventy-three, I think it is.

91910. That number, I suppose, has been fixed, not so much for the purposes of business, but more in order that adequate representation might be given to the different boards of guardians in London?—Yes. The board was established in 1867—forty years ago. Then there were sixty members—forty-five elected by the Metropolitan Boards of Guardians and fifteen nominated by the Poor Law Board. In 1886 this was increased to seventy-two—fifty-four by the boards, and the order is that in addition one-third of that number should be nominees of the Local Government Board; that made it seventy-two. Then there was one additional member added since, making seventy-three in all. So that three-fourths you may say are elected by the boards of guardians, and the other fourth are nominees of the Local Government Board.

91911. You were a good many years on the London School Board, I believe?—I was six years there.

91912. As regards the numbers on your board, supposing you had a free hand, would you for business purposes diminish or increase them?—If you ask me my opinion how I would do it, I would prefer far to have commissioners—that is the idea in my mind. But if you come to the question of numbers, I should say that for a central board I think about eighteen or twenty people would be quite sufficient, with a large element of Local Government Board nominees. My experience has been that those are the members practically who do the work, because they have little else, most of them nothing else, to do. They give the whole of their time to the work of the Board. But when you come to deal with these representatives of the boards of guardians, they have a very great deal of work to do and their work has been done most inefficiently. I know it is done to the best of their ability, and I am not complaining of them—but they have no time. I may refer to one member, for instance. He is a member of the county council, he is a member of the Metropolitan Asylums Board, he is a representative on the Thames Conservancy, he is a representative on the Water Board, he is a Chairman of his own board of guardians, and he is a member of his borough council. What can you expect from that gentleman? Then, again, a majority of the representatives of the boards of guardians are members of the boards of guardians and they are members of the borough council, as well as being on the Metropolitan Asylums Board. I do not hesitate to say for one moment that if a man is to do his duty to the Asylums Board he must give a great deal of time to it. I know this much, that I have been there now nearly ten years and I give at least four or

five days a week to the work. I was a member of the School Board, and I gave four days a week to that work. Where you deal with matters as they are dealt with and have been dealt with, the waste of time that takes place is something dreadful. You have a sub-committee, for instance, for a hospital. There are four members, and a rota member who makes a fifth. What happens? They go down there, and they have an extremely good lunch, which is the principal part of the work done. The actual work that is done is a mere nothing. Between the two meetings there are visiting members, and two of them go down and visit. I am bound to say that they do that to the best of their ability; and when the meeting of the sub-committee takes place the suggestions of these two members are brought up; the requisition book is there and it is signed, and so on; but all matters are perfunctorily dealt with. Then it comes up to the committee, it passes through the committee, and in nine cases out of ten without a word; then it comes to the board, and so the whole thing is done in the most perfunctory way and it is not properly looked at. At our board you will find a question of giving 10s. a week to a man discussed for over an hour—I have known that to happen; and the next item that comes on, an expenditure of £60,000, passed without a word.

91913. What was the 10s. in connection with?—It was some man's wages. That is the kind of thing you get. I have no hesitation in saying that if we had at the Metropolitan Asylums Board a commission of five or six men, we should save £50,000 to £60,000 a year at once—I have no hesitation in saying it. I can give you an idea. The minutes of our sub-committees run to 600 pages a month. Imagine the work of the clerks in making out the minutes of those sub-committees; and what they are worth?

91914. Your printing bill must be considerable?—It is very considerable.

91915. Now going away from the administrative work, there is the visiting work; I gather you are not satisfied quite with the way in which that work is done—what would you suggest?—My suggestion would be to place one member in charge of a hospital who should report to the central committee. You have your medical superintendent at the hospital; put him really in charge. You are bound practically by him, and you cannot interfere. No member of a Board can; I, as Chairman of the Board, cannot interfere with the medical superintendent in regard to the treatment of the patients. Therefore the principal work is the question of going into the supplies and seeing that the patients are properly attended, by visiting and going round the various wards. There, again, it is a very difficult thing for the men who come upon the hospitals committee, for the simple reason that men do not like going into the infectious wards, and so it becomes very onerous upon the few. Those few, having not enough time to give to the work, you can understand that the work is done in a very perfunctory way.

91916. Then your scheme would really be purely an official scheme?—Quite so.

91917. And you think that the class of visits and the work of inspection is such that nobody other than an expert or a trained person could do it effectively?—Quite so. There is, of course, the business part of the work, but that is another matter. You want business men to look after the supplies, and so forth.

91918. Now we will just turn to the suggestion that Central Body you make about the Poor Law. It has been suggested for Poor Law sometimes that the whole of the administration of the Poor Law in London should be put into the hands of a central body; do you think you could work that purely by officials?—Yes, under a very strong central committee or central Board.

91919. Would you have to bring in the elective element?—That is the point. Unfortunately that always comes in, and there is the difficulty that you have to face. You must, I suppose bring in the elective element. If so, I should do the same as we do at the Metropolitan Asylums Board—let us have a large contingent of Local Government Board nominees.

91920. We have had a good deal of evidence from abroad and elsewhere, and what strikes one as the essential difference between the English method of managing English and foreign methods in managing local affairs.

Mr. James T. Helby.

body.

local affairs and the foreign method is that foreigners put an expert at the top and bring in the amateur and the elective people underneath, but in co-operation; and here that is rather reversed?—Yes, I know it is so.

91921. Do you think that a better blending of the expert and official elements with the elective element is possible?—I think it is possible. We had, some time since, Dr. Bridges, who had been one of the officials of the Local Government Board, as a nominated member. We found him of the very greatest use upon the Board. He gave an immense amount of time to the work, and his advice and assistance were of the greatest advantage and he was always listened to.

91922. You were a Poor Law Guardian, I see?—Yes. I have been a Poor Law Guardian for the Wandsworth and Clapham Union and also for Camberwell since soon after I left the service—in 1883, I think it was.

91923. The most difficult work that Boards of Guardians have to do is in hearing the applicants for relief, is it not?—Yes.

91924. Supposing that you had a central authority, how would you manage that?—To my mind the central authority should put certain local people to deal with those questions and report. When you deal with a question of relief my experience is that that is where the mistake is made; and where the fault lies to a large extent is with the relieving officer. I had great cause of complaint when I was in the chair of these relief committees, because we did not get the information from the relieving officers that we ought to get. My view is that the relieving officer ought to have a form in which the information that is required from him should be filled up and signed, and that his reports should not be made *viva voce*. I will give you an instance. I was in the chair at a relief committee and a woman came in for relief. She had had relief for some time. She came there, and the case was adjudicated. We found it was not a case at all where she ought to have relief. She had two sons and daughters in our opinion doing extremely well, and living in a nice little house. When I told her this, she turned round upon one of the guardians, and she said: "You are a nice fellow! You promised me to get my rent paid for me if I voted for you." That is not an individual case; I am only mentioning it as one instance. That is a kind of thing in my opinion that goes on to a very large extent. The point to my mind is that the guardians do not get the information that they ought to obtain from the relieving officer. If the rules as laid down by the Local Government Board were adhered to, I say that a great many people who get relief now never would get it.

91925. Illustrating the defects of the system by your story, I assume I may take it that you think it is a wrong principle that an elected person should distribute relief to the persons who elect him?—Certainly, to a large extent. But let me say this—that I am one of those who believe in every class being represented on public bodies; on the other hand, I do object to those giving relief who are practically themselves in want of relief.

91926. Your idea, therefore, would be as regards the work now done by the relief committees, that there should be persons specially appointed in each locality to do that work?—Quite so; and that the information from the relieving officer should be of such a character that it could be depended upon, and that it should be in writing. You can then bind the man to it. You know what it is—in fact I have had experience of it. I have said to a relieving officer when he has come up next time: "You said so-and-so before." "No, Sir; you misunderstood me." That is the kind of thing that takes place. Now I say, pin them to it. The Local Government Board orders are so-and-so; there are the questions printed, and let him put the information on in reply. If you have got that before you, you do not want to ask a lot of questions, and the relief business then would not take half the time.

91927. Assuming you could get over the electoral difficulty, and the natural desire there is that the people in the localities should have some voice in the manner in which their funds are distributed, would you see any administrative difficulty in the way of carrying out the Poor Law in London from a central authority?—Not the slightest; and I believe that an enormous saving might take place and that the work could be done in a much better way.

91928. You would get efficiency, economy, and more uniformity?—Quite so. You would not hesitate then, if you had that done, about having a general rate. Advantages of central body.

91929. You have had a very exceptional experience, because you have been on two central authorities and you have also been a guardian. You are strongly in favour of some central authority?—I am very strongly in favour of it. The more and more I see of the work the more and more I am satisfied, so far as I am concerned, that it is the right way.

91930. (*Bishop of Ross*.) The Metropolitan Asylums Board consists of seventy-three members, and you have about fifty institutions under your charge, I think you said?—Yes.

91931. You take the contracts for the supply of all these institutions?—Yes.

91932. With regard to milk, vegetables and other articles of that sort, I presume the contract must be given locally in the neighbourhood of the institution?—No, that is not by any means necessary, and they are not given locally either. Local contracts.

91933. Do you take one general contract and distribute the stores to the various institutions?—No. Perhaps one meat contractor may contract to supply half-a-dozen or eight institutions, another three or four, and so on. It is distributed in that way. It does not follow that the contracts are given to men residing in the immediate neighbourhood of the institution.

91934. I can quite see that in regard to clothing, coal and other things, but in regard to meat and vegetables and commodities of that sort, I should have thought it would have been different?—No. All the meat practically comes off the meat market. Central supply of food stuffs.

91935. Your institutions of course are scattered over a considerable area?—Yes. But even outlying ones, such as the imbecile asylum at Caterham and another at Leavesden and another at Darenth, are supplied with meat from London.

91936. Are all the contracts regulated by a single committee?—Yes.

91937. What you call the Contracts Committee of the Board?—Yes. Of course each contract is approved of by the board, but that as a rule is simply a formal matter. committee.

91938. Do all the supplies come before that single committee?—Yes.

91939. Whether for food or clothing, or furniture, or coal, or any of the other necessities?—Yes. In a case of urgent need, some are accepted where there has not been an advertisement for tenders. Small things, urgent matters, are simply accepted and reported to the committee.

91940. Does the Contracts Committee find the work heavy on them?—They ought to—you can understand that—but I am afraid they do not give the time that they ought to.

91941. They take it with a light heart? If all the Poor Law work of London were under one central authority, do you think that one committee of the central authority would be able to deal with all the contracts?—I do not think there would be the slightest difficulty. I think if you put the whole of it into the hands of three or four who did the work, it would be very simple. It is much better to put it into the hands of three or four who will do the work, than to put it into the hands of a dozen who do not do the work.

91942. Would the doing of it mean that each individual would have to devote four or five days a week to it?—Certainly, they would have to give the time; that is my point, and that is the whole of my point. You must give the time. Amount of time required by duties of committee.

91943. So that membership would be incompatible to a man who had private business to do, such as a manufacturer, or a professional man who had his own private work to attend to?—He could not do it satisfactorily. I see that every day, and I have seen it for the last twenty-four years. I see a man come into a committee when it is half over, stay five minutes, and go. I see it all the way round with every Board that I have been on.

91944. Consequently, you desire to have a strong nominated element in order to find men of leisure?—That is so.

91945. Do you find that electors will elect, not men of leisure, but busy men?—Exactly so.

91946. Do you find that the busy men are not efficient?—Unfortunately, it has come to this, and it is a complete curse to my mind—that all these public bodies are made now political bodies. That is the worst of it all. If Party were entirely out of it, there would be no difficulty; but as it is there is the difficulty. But these institutions have nothing whatever to do with Party.

91947. The inmates belong to all political parties?—Quite so. I am thankful to say that we at the Metropolitan Asylums Board do not know Party, but I believe we are about the only institution in London that does not believe in Party.

91948. (Mrs. Webb.) With regard to the hearing of applications in the different parts of London, you are not in favour of an elected committee for that?—No, I am not.

91949. Are you in favour of any committee?—Yes; I think that a committee should be appointed by the central authority, and I think it would be a very good thing if occasionally they were changed.

91950. How would you secure uniformity of decision against the various committees? Would you have any officer of the central body present?—Of course, the central body would have an officer to attend. The question of uniformity arises, I think, upon the instructions that are given. As I have pointed out, if the relieving officer replied to the questions in writing, by that means you would get uniformity, because you would have them all upon exactly the same lines then.

91951. But it is very difficult to draft questions or to draft regulations which secure uniformity if the persons concerned who have to make the judgment are not really anxious to secure uniformity, is it not?—Of course, that is a matter that would have to be watched, and it would come under the administrative part of the work.

91952. Have you visualised what would be the officer of the central body who would go round and see that these committees were acting on the proper lines?—Certainly, you should have an officer who should report to the Board. If you look to Section 22 of my Statement, you will see I say there, "They would have a divisional office with a divisional correspondent acting under the central body."

91953. Would you mind telling us what kind of person you visualise; would he be a man of the £800 a year type?—Not as much as that.

91954. You would want rather a superior person, would you not?—Yes, but I should not commence at £800 a year, because I think you could get the class of man that you want for less than that.

91955. Would you have a man with legal knowledge? I rather want to get at the type of person you have in mind?—I am not at all sure that you would require legal knowledge, but, of course, if you could get a man with legal knowledge, the better. It does not necessitate having a man with legal knowledge, because the orders and instructions that are laid down are very clear, and if you have got the questions which have to be asked clearly stated, then if this committee did its duty, there ought to be no difficulty in arriving at decisions mostly upon a uniform basis.

91956. The difficulty is that you want the sort of man who would impress the various committees, do you not?—Yes. I should have a man with some experience of the Poor Law.

91957. You want a man of some social standing?—Certainly.

91958. Who would have some influence with these various committees?—Decidedly. You have a similar thing occurring now with regard to the Education Body of the London County Council.

91959. You have inspectors there of considerable standing, have you not?—Yes.

91960. And paid rather highly?—Yes. You want want something of that class.

91961. The County Council delegate perhaps too little as they delegate almost nothing to the managers; but you are going to delegate a good deal to these local

committees, are you not?—I should not be prepared in my view to delegate as much to these men as the London County Council would. I think it is a mistake to delegate too much. Let them report. If this man saw anything going on in the ordinary way and well performed in every way, there would be nothing for him to report, and he would simply say that that was so; but if he saw anything outside of that, he would report it to the central governing body.

91962. You would rather look forward to a superior *Status* and type of officer, but not so superior as £800 a year?—Salary of No. You should have a class with a maximum and a local minimum salary, the salary increasing according to the length of service.

91963. (Mr. Bentham.) Would you think it advisable to have on all these local committees a member of the central body?—If you had sufficient. On the old London School Board we had fifty odd members, and each member had charge of so many schools and that member recommended the managers who attended that school. There never arose any difficulty in any matters that cropped up; they had certain rules laid down, and the member in charge whenever he possibly could, would attend his schools. You should have a somewhat similar thing here to my mind.

91964. It would tend rather to keep the local committees in close touch with the central body, would not?—If you do something of this kind, yes.

91965. And the members might rotate; they might not always be on the same committees?—Yes.

91966. In that way you could get a certain amount of uniformity of administration?—Yes.

91967. With regard to contracts, do you advertise for tenders?—Yes, we are bound to advertise—the Local Government Board orders us to advertise.

91968. It is only particular kinds of goods that you deal with by selecting the firms?—That is right, and then we have to obtain the sanction of the Local Government Board before we can do that. Take electricity; supposing we were fitting one of our hospitals up with electricity, we should ask—and we have as a rule asked in that case—that we might ask half-a-dozen or a dozen perhaps of the best firms to tender instead of advertising for tenders.

91969. Have you to get permission for every separate contract, or once you get permission for a certain kind of goods does that hold good for all time?—You may take it that in the case of some goods it is a sanction for twelve months and then it has to be renewed. But there are very few things that we deal with in that way.

91970. Have you got a list of them?—Tea, coffee, and wine.

91971. You do not advertise for those articles?—No. For tea we go to the market; then there are coffee and wine, and those are really the three things where we continue to do that. If we want anything else, then we have to apply in each case to the Local Government Board for permission. Coal we advertise for, but we get it from the collieries. I will not say that things do not crop up occasionally where we think it advisable in the interests of the board to ask the Local Government Board to allow us to go to selected firms.

91972. You suggest in your Paper that open advertisement might open the door to rings being formed by those who tender; but by adopting the other system and having selected firms do you not also leave it open to the same temptation?—I do not think so.

91973. It would necessarily be a smaller list than the lists of firms tendering because of an open advertisement in the paper which everyone interested in the trade might see?—Those that we generally go for are important matters—matters where really and truly you can only get the work done well by a few and they would be firms who would not be open to anything of that kind. In fact, we have never found it so; we have always found that we get very fair competition indeed. Of course, by you always have the fear with regard to the rings that if you have got a selected list the lowest man may go to the next man and say: "Look here, I am the lowest, if you give me so and so I will withdraw." That has

Mr. James T. Helby.

28 Jan. 1908.

Mr. James T. Helby. been urged, but we have never found that, because we have gone to firms who would be above anything of that kind.

28 Jan. 1908. 91974. But these firms like to make as much profit as they can?—Quite so.

91975. And if they can see their way to get their heads together, they usually do?—Yes; but there are those who would be above that, I think.

91976. At any rate, judging from your experience you think so?—I have never found in my experience a case of that kind. My experience on the London School Board of what we did was that we had these lists, and we took the names in rotation—so many, six or eight or ten and asked them. We never had anything of that kind occur.

Opening of tenders.

91977. Now with regard to the opening of tenders. You say in one of the paragraphs of your Statement that it is not possible to deal with all the schedules on one day; is it necessary under the Order to deal with them all on one day?—You have your committee once a fortnight, and your difficulty is in getting the men together again. You cannot do anything in a committee without a quorum of five, and it is a difficult thing to keep a quorum with men who have other business to do, or indeed to get them together.

91978. How do you do it?—I say this is the way it is done. These tenders are all opened and they are rushed through and passed round the table and two members initial them; then they go down to the office to the clerks and they are tabulated; and then they come up to the next committee meeting. Then it is a purely formal matter and it goes before the Board to be accepted.

91979. That is all within the order, is it not?—That is within the order of the Local Government Board.

91980. And there is no objection to that, is there?—Yes. I think myself that it would be far better and more preferable if, for instance, the opening of these tenders, which is such a formal matter, could be done by the Chairman of the Board, the Clerk of the Board, and the accountant, and then dealt with; then when they get the full particulars, the tenders could go before the committee.

91981. If these tenders are opened at a full Board meeting, they can be relegated to any sub-committee, consisting of the Chairman and of the officials, for classification?—Yes, they could do so.

91982. And they would deal with them in exactly their own way?—Yes.

91983. So the order is no hindrance except that in the first place it forms a safeguard against getting a certain tender from a particular party who has not tendered as he might have tendered; for instance, it leaves it open, does it not, if the Chairman and the officials have these tenders to open that before the committee meets you might find that a second tender had come in from a firm asking the committee to accept the second tender, which was based upon information that had been received?—You close your box at a certain time. The tender box is closed up at 10 o'clock in the morning and no tenders are received after that time. The box is opened and taken away, so that you could not send in a second tender.

91984. Such things have been done, and we read of cases where such things are done, where for instance, the chairman of the committee takes a tender away in his pocket, and then by and by another tender comes in and the committee is induced to accept the second tender, because a mistake has been made in a certain item?—Then all I can say is that the committee are not doing their duty in permitting such a thing.

91985. It leaves it open to that sort of thing, does it not?—I do not see how it leaves it open to anything of the kind. If these tenders were all initialled by two members of the committee I do not see how any second tender is coming in afterwards, because they are all numbered and a record is made of the number. You must understand this—you can never do anything in this world to my mind to prevent fraud, but you can detect it. That is the only thing. You cannot prevent it, but you must do all you can to detect it.

91986. You do not use that as an argument against Opening of the abolition of all regulations, do you?—I do not suggest tenders, for one moment that you should abolish the regulations I think what you want is regulations, and to see that they are adhered to. Your suggestion is that the regulations are not adhered to, and that they go outside of them as they must do if anybody could take a tender away in his pocket.

91987. I was not speaking of the Board of Guardians who are under these regulations, but of other local bodies, who are not under such regulations; that was my instance?—Then where does the Board itself come in, not having made regulations? They are at fault; the administration there is at fault.

91988. Possibly I admit; but is it not necessary to have some such public method of opening the tenders, and then leaving it to the committee to deal with them in whatever way they think proper afterwards in the best interests of the Board, and on strict business lines?—Certainly.

91989. In the first instance there can be no tampering with the tenders, if they are opened in the presence of the committee?—There is no objection to that, but I think the same object could be secured in another way and time saved.

91990. I thought you suggested that they should be opened by the Chairman and two officials, say?—I think if that could be done, it would save a good deal of time. But it could be done in that way even in the presence of the committee. You see there is a great deal of other business, and it all resolves itself into this—a question of the time that the members can give.

91991. With regard to condemning the goods sent to the institutions, the largest items will be clothing and bed clothing. will they not?—Yes, clothing and house linen are the principal things. Inspection of goods sent in.

91992. It is rather a difficult thing for a committee to supervise that, is it not?—It has been so, but according to what we have done now, I see no reason why it should be. I think a book comprising all the articles to be condemned should be kept and submitted; but of course, you must put the responsibility upon the responsible officers, such as your medical superintendent and matron.

91993. Decidedly, but I thought you rather suggested that the committee should see these things?—The committee are seeing them now under this new system, but it is not only a question of seeing them, it is a question of what becomes of them after they have seen them, and making sure that they do not come back to be condemned again.

91994. There is no object in seeing them unless the committee comes to some decision whether they ought to be condemned or not?—Quite so. One member of the committee is sufficient for that purpose obviously but as I say—and here we come back to the old story again—the difficulty is to get the men to give the time to it.

91995. (*Mr. Phelps.*) I have listened to your experience with regard to London, but I speak rather from country experience. The difficulty we always find is the great objection to going outside the local firms; but you make nothing of that objection, I gather?—That is so. Local contracts.

91996. You do not think that it is worth considering for a moment?—No, I do not.

91997. Take the case of London; supposing that you contract with a central authority for any particular article; the contract for the whole of London would go to one firm ordinarily, would it not?—No, it does not follow that it would go to one firm; it may go to two or three. Contracts with central authority.

91998. How would you manage that?—You would send out for your tenders or your prices for certain quantities of goods. One man might say I can supply £500 worth or £1,000 worth; and there is no reason if the goods are of the same character—and we will suppose that they are, and of the same quality, and the price is practically the same—why you should not accept the tenders of three, four or five, if you like.

91999. Supposing, for instance, you had to supply the same commodity in Wandsworth and in Highgate, you might send the contract for Wandsworth to the south of

London, and for Highgate to the north of London, might you not?—Yes.

92000. But supposing you found one firm was cheaper for both?—If he could provide goods of the same quality for both, I should give it to the one.

92001. However, the effect of it is this, is it not, that you would tend to create a body of firms who live on contracts almost entirely?—Unfortunately that is the case now; but I should go beyond that, because I want to go to the manufacturer. The manufacturers have few opportunities now.

92002. Do you not think the same thing would repeat itself, and that you would have manufacturers who would make contracting their principal business?—No, I do not think so. If you go up to the north, into Derbyshire and Yorkshire, you will get such an enormous number there that you will find they will compete one with the other.

92003. You would rather tend to take your contracts entirely out of the hands of what we might call tradesmen or dealers and put them into the hands of the producer?—With the enormous quantities that you consume why should you not go to the producer? Although you might say perhaps a tradesman in London could supply them, on the other hand if you get them cheaper the whole of the ratepayers of London benefit by it.

92004. I did not realise that you would go as far as that?—It is not only a question of price—it is a question of quality. If you get a good quality of material it is going to last considerably longer, and therefore it is economical.

92005. I quite agree to that, but you will find it extremely difficult in smaller areas than London to get people to act on that wide principle?—That, of course, is a matter that you would have to consider in each place, how best to do. When you come to deal with an enormous area like London, with its 5,000,000 or 6,000,000, people, it becomes a different thing. Not only so, but there is a great idea now, especially in London, for the equalisation of the rates and so forth; if you are going to deal with that you can only deal with it from a central body, and then you must deal with all those questions from that point of view. I think your great point with your provincial bodies is to keep these things in mind as far as you possibly can, and to keep the consumer and the contractor away from one another—bring your line of barrier between the two. That is your secret.

92006. Do you not foresee difficulties, not necessarily economic but partly political, from the growth of a series of firms whose main business it is to supply the Government?—I do not see any difficulty at all about it.

92007. You do not see that political difficulties, I will not say in the nature of trusts, and so forth, might arise?—I do not see why they should.

92008. You do not believe in that?—I see no reason for it at all. You may get one firm of one way of thinking and another another; and so competition goes on.

92009. With regard to a central authority for London for Poor Law purposes, supposing we substituted that for the present system what rules would you lay down with regard to finance? Who would be responsible for making the rate?—The central body.

92010. Supposing you had local bodies which administered outdoor relief what would be the financial relations of those to the central body?—If you get a central body they would look after the financial arrangements all the way round, and I take it the central body would have a general rate.

92011. My point is this: Would you allow a local body to administer money which the central body had to raise?—You could not help that. The central body would take care to supervise it. That is one of the points the Chairman and Mrs. Webb asked me about—uniformity.

92012. What would you say of a scheme by which the local bodies should send in an estimate and should be more or less tied to that for the coming year?—I take it that one of the administrative duties would be to have these estimates sent in from the various parts. But on the other hand you cannot always bind them, because you may have perhaps a very hard winter when you will get much more poverty, and another winter

you may not get so much. It would be just the same as with us on the Metropolitan Asylums Board. We have just gone through a period with regard to fever which is the highest in the last forty years; of course, we did not anticipate it, and the expenditure this year will therefore be considerably higher than usual.

92013. I grant that exceptional circumstances must always be dealt with exceptionally. Have you any experience of the system of estimates in the sense I described, and do you know whether it leads to economy or the reverse?—Economy all depends upon the question, Is the central body keeping hold of the reins?

92014. That is to say, are they laying down stringent rules as to the limitations within which outdoor relief can be given, and are they seeing that those rules are adhered to?—Certainly. You cannot get uniformity otherwise.

92015. What power would you give to the central authority of enforcing its decrees and rules?—I take it the Local Government Board could give them authority to enforce then as they do now, when each individual board of guardians is acting under the special orders and general orders of the Local Government Board.

92016. That I understand with regard to the Local Government Board; but would you give the central board for London the power of surcharging, for instance?—No. You could not give that power to the central board; that is a power which can only be given to the Local Government Board, and it is given by law.

92017. Then how would the central body enforce its decrees or its rules?—The central board would be, if you may so term it, the paymaster.

92018. But then by your showing the local body is to say what sum it wants and the central body is to pay it over without demur?—The expenditure must come up from week to week, and so on, and if they watch this expenditure and they see it is going beyond what it ought to be they will call attention to the fact.

92019. In the background you must have some sanction to that, must you not?—I take it that in constituting that central body they would give it certain powers for dealing with all these things.

92020. But you are not prepared to say what form these powers would take? You see the difficulty, and it is a great difficulty?—Of course, it is like everything else. When you come to some new system there are always difficulties which have to be overcome; but I have never seen anything yet but what could be overcome. It all depends upon the individuals who have to do it.

92021. (*Mr. Bentham.*) Your local committees are formed by the central body?—Quite so.

92022. And if there is a representative from the central body on it as was suggested a little while ago, it would really be a part of the central body?—Quite so.

92023. And not an independent body?—Quite so; it would be part and parcel of the whole.

92024. (*Sir Samuel Provis.*) Suppose the committee did not obey your instructions would you dissolve it and appoint another one?—Exactly.

92025. (*Mr. Phelps.*) Have you any experience of what is called the case-paper system?—Yes.

92026. Do you think that answers your requirements with regard to registration?—Not entirely.

92027. Do you not think it is definite enough?—My experience of the case-paper system is that it is not carried out. It is like many other things—your laws are quite sufficient if you carry them out, but they are not carried out, and that is the difficulty. That is where your central board would come in and see that these things are carried out.

92028. If it was well and properly carried out, do you think it would be sufficient?—I do.

92029. (*Dr. Downes.*) I see that you propose that the central body should reserve to itself the appointment of the chief officers, so you would have, would you not, the appointment of the chief officer in charge of each local committee?—Certainly.

92030. You would have control in that way?—Yes.

Mr. James T. Helby.

28 Jan. 1908.

Appoint-
ment of
officers in
charge of
local
committees
by central
body.

Mr. James T. Helby. 92031. Your experience is confined to London, I think?—Yes, principally.

28 Jan. 1908. 92032. And what you say in your Statement relates chiefly to London?—Yes.

92033. And, I suppose, other large urban centres?—Yes.

System applicable to London not suited to rural districts. 92034. But you do not propose that it should be applied to the whole of England?—I do not think that a system which applies to London would apply to the rural districts, by any means. It is the same with any other body. Take the educational question; it is quite a different thing to deal with a provincial district to what it is to deal with London.

Contracts. 92035. I gather that your experience of contracts is not confined to the Poor Law only?—No.

92036. You have found very much the same sort of thing all over?—I have found very much the same sort of thing all the way through.

Local Government Board orders. 92037. The Act of 1867 probably never contemplated such a body with such extensive operations as the Metropolitan Asylums Board?—No; I should think not.

92038. There are, as a matter of fact, smaller bodies still formed under that Act—sick asylums, for instance?—Yes.

92039. So you have really outgrown it?—Yes. In fact, we have not gone with the times. We have got rather fossilised in that way.

Tenders by selected firms. 92040. In limiting competition how would you proceed in detail? You are suggesting that the tendering should be one of limited competition?—I should go on something of these lines—that there should be no cause for complaint that certain tenderers and certain tradesmen were kept out; I should advertise first for all those who were prepared to have their names placed upon the list.

92041. So you would have to advertise in the first instance?—Yes. This is what occurred in regard to the London School Board: We put an advertisement asking that all those who were prepared to tender for certain items or for certain amounts, say up to £500 or £1,000 or £10,000, should send in their names.

92042. Would you repeat that from time to time?—I would repeat that from time to time.

92043. Would you retain all the names which came in in answer to the advertisement?—No. They would then have to go through the mill. Perhaps I may just state from my experience what took place, as it would be perhaps more explanatory to the Commission. We advertised; we got all these names in; they gave the names of certain architects and certain institutions and others for whom they did work; then they gave references as far as financial matters were concerned and they stated where their various works were. We got all that and then inquiries were made. The firms and others to whom they referred had a form sent to them asking some very deep questions. At that time I was obliged to have the replies sent to my private address for the simple reason that if I had not done so any rate-payer might have come in and seen those papers. So that part of it was sent to my private address and brought up afterwards at the School Board. We had an officer whom we sent round to see these manufacturers and their work-place and who saw what they were capable of doing. Then we sent to ascertain their financial position. Having done that, then, as I say, they were selected and put upon the list. Perhaps we should find a man capable of doing £500 worth of work, but he could not do £5,000 worth of work. The lists having been arranged they were taken regularly when a job came up. Say there was a £500 job, the list of those men was taken, the first six, seven, eight or nine names were sent to; and when the next £500 job came along, the next batch of names and so the list was run down. The same with all the others. That is the system, to my mind, that should be adopted. You should ascertain the capabilities of the people first and then put them on the list. You may find a man capable of doing £1,000 worth of work, and another man capable of doing £10,000 worth of work, but I should not put the first man out; I should let him come in on another list.

92044. Then you lay stress on the importance of the preparation of the schedules?—That I look upon as of schedules most important. The system I am afraid is not what it should be. It ought to be in the hands of a central body with your officials specially expert.

92045. You want expert assistance with regard to the schedules?—Yes.

92046. Have you considered whether there are any recognised trade associations that would assist in preparing schedules for public bodies?—No, for myself I should prefer it being done by your own experts. You might get one or two, but there are not many who do that kind of thing.

92047. With regard to the stores, both local and central, Accumulation have you found a tendency, unless there is very careful of stores.

supervision, for the accumulation of stores?—Yes. I may say even with the best of wishes that if you do not take care, the stores are not properly administered. We experienced that, I may say, in the Asylums Board some three or four years ago. I took it up. I found we had got an accumulation there. It resulted in the superintendent of the stores leaving the service. We got an accumulation of the stores there and at the various hospitals, which at that time amounted to something like £153,000, and is now reduced to £86,000, by checks.

92048. That occurred, I think, both at the local institutions and at the central stores?—Yes.

92049. Should you regard it as easier to detect and deal with at the central stores than at the local institutions?—Yes.

92050. Though accumulations may occur in both cases, yet it would be much better to deal with them at the central institution?—You would have things much more under control because then you would have the requisitions up and you could watch them.

92051. I think you have had some experience as to the importance of the safe custody of samples?—Yes, Samples. that is a matter which the central body would be able to do much better. On one occasion I was examining some clothing and I am sorry to say that the clothing was not up to sample. It was a sealed sample that was shown to me. Between that and the time of investigation, this superintendent had shifted the sample and put the seal on to make the cloth correspond with that which had been received. All that wants very careful administration, and it ought to be done by a central body with a special officer to look after those things.

92052. In the smaller places where they cannot carry out all the precautions which you suggest, do you think Disclosure of stock in hand to contractors. it would be beneficial if, in inviting tenders, they were to disclose to all who are concerned the quantities in stock, so that the knowledge of what they are likely to require would be shown to everybody, and not exclusively to those who chose to send through particular channels?—You mean to disclose to the contractors?

92053. Yes?—It would be a great convenience and advantage if these bodies did say at the time what they have in stock; but unfortunately in very many instances the tenders are for materials which they have to make, which to my mind is a mistake.

92054. Let me give you a concrete instance: supposing a board of guardians want boots, and they have in stock a large quantity of, we will say, number sevens, and a very small quantity of number eights. It is material to the tenderer to know that there is a small quantity of eights and a large quantity of sevens, because he probably would have to supply more eights?—Yes.

92055. If that were known to everybody, no one contractor would have an unfair advantage?—I agree that that is so. The question of the boots is a very difficult one because of the sizes, and you often get a stock that you really cannot avoid. My own view of the matter is that we lay in too much stock in boots and shoes, because of the different sizes; the stock is too great as rule whatever institution you go to. You get a large number of a certain size remaining in stock and doing no good. It is much better that you should go to the firm where they could tell you the sizes they have and keep them in stock.

92056. In dealing with a large number of institutions do you find that you are able to check expenditure by comparing their expenditure with the expenditure at similar institutions?—Yes, at the Asylums Board, we have the half-yearly accounts brought up showing materials and quantities and values at each institution. That I instituted some three years ago, I think, with one of the asylums, and now it is carried out throughout the whole. We have found that of the greatest advantage, because now we can send to the superintendents and say to them, Your institution has consumed so much, and another institution so much less, how is it? The result has been that the they are brought more into uniformity, and that has been done with the greatest advantage. Of course, that could be done all the way round because it is a very simple matter. It is simply taking off the information from the necessary books at the institution.

92057. Have you any system of checks on the quality of the materials, such as to compare with your stock-taking in regard to the quantities?—We have a check on the quality at the central store. There is a man there for soft goods and another for the ironmongery, and hardware, and another for the boots and shoes. I cannot say that it is as satisfactory as I should like it to be, for the simple reason that these men are men of £2 and £3 a week. I have nothing to say against their probity, or honesty, but I do not think it is a wise thing that men of that standing should be called upon to pass thousands of pounds' worth of articles. That is one advantage that you would have in having a very large store.

92058. Then you would provide an independent expert?—I should prefer to have an independent expert, and not the same one always.

92059. To whom would you entrust the appointment?—To the central body entirely.

92060. Would you apply that to the coal also?—It would be the same thing with coal. There your engineer-in-chief could help you. Our engineer-in-chief is our expert there. He sees the quantity of coal that is used, the returns are made to him, and he looks into the matter.

92061. I am told that is possible with comparatively few exceptions to tell from what pit a particular coal came?—There are experts who can do that.

92062. But your engineer will not be able to do that?—He will not be able to do that, but, of course, he can go into the consumption of the coal and the quantity of the smoke, a thing with which we have to deal so much in London.

92063. Would he be competent to see that you are getting the proper quality that you tender for?—In regard to coal, you can always tell from what colliery it comes—there is no difficulty about that, because it is on the truck. The point is, which is the best class of coal to use for certain work. He would be the judge of that, because he would go by experience. But if you were purchasing coal outside of the collieries, then it would be advisable to find out where the coal came from, and the engineer-in-chief could not tell you that—you must have an expert in the coal trade then.

92064. With regard to the constitution of your board, you spoke of the absence of party politics; do you attribute that to your constitution, and your mode of election?—Yes; I think that is an advantage. We have members sent us by the boards of guardians, and there is unfortunately in all boards of guardians a good deal of party spirit; and, of course, there it would be brought into operation; but so far as we are concerned at the Metropolitan Asylums Board, I do not know of any case where any party politics have ever been shown at all.

92065. Some point has been made as to the difficulty of finding men with sufficient leisure to do the work which is demanded of them on the Asylums Board; but in the case of London, is it not the fact that you are exceptionally well off for men who are business men but who have partly retired from business?—Yes, that is so. No doubt there are plenty of men who could give their time, but they will not offer themselves for election. They will not go into those fights that take place. They are quite willing to work, and they have got plenty of time, but they will not offer themselves for election in the manner that they are required to do now. That is one of our difficulties. I think if the

Local Government Board nominated men with a large amount of liberty who could give the time and who were retired business men, that would be of the greatest advantage, because they have got long experience. We have found in several instances where we have had retired business men that they have been of the greatest advantage to us in some things.

92066. And retired officials too?—And retired officials. I mentioned just now Dr. Bridges; his knowledge, and so forth, was of the greatest value, and he was always listened to.

92067. Then you suggest that the central body might be composed partly of elected members; would you elect them directly to that body?—I do not see how you could otherwise do it. The elective system is the difficulty. Our board at the present time is the only board with a qualification. I do not think there is any other public body, I was going to say in the world, but certainly in England or the United Kingdom, where there is a qualification. Ours is a £40 qualification. The stupidity of the thing is that you are perfectly powerless with regard to the qualification, because there is no penalty. Therefore, the thing has fallen by the board entirely. You have men there who are not qualified, and who is going to bell the cat?

92068. Would you retain that qualification on paper?—No, I do not think it is worth retaining. I want to get the very best men who will give their time and abilities to the work. That is what I want to see. I am sure there is a great deal to be done.

92069. Have you considered whether there should be any representation of the county council?—No, I have not considered that; but there is no reason why there should not be. There is no reason why the county council should not nominate members; they are an elected body.

92070. They might nominate members upon the central body?—Yes.

92071. Should they appoint them from their own body, or from outside?—I should give them power to appoint from outside. Of course, I would much rather have them from outside because the members of the county council have got quite enough to do themselves without any further work—too much in fact.

92072. Do you think they would get too far away from the elective principle in that case?—I daresay it would be, to a certain extent, getting away from the elective principle, but, as I say, I am not at all sure. It is a difficult question really to decide or to give an opinion upon. But what I should like to see—and I lay it down as a principle—is that they should have men who can give their time and who have practically nothing else to do but the work of this public body. It is quite as much as they can possibly do to carry it out in the manner in which it should be done. Taking my own experience I should say that I could not possibly take on the duties of another public body, and in point of fact I have refused over and over again to go up for any other public body. This work is quite as much as I can do.

92073. (Mrs. Bosanquet.) Would you suggest that the new central body should absorb the Metropolitan Asylums Board?—Yes; let it take the whole of it, because this, after all is said and done, is part of the Poor Law. You see the boards of guardians are represented on our board, and not only that but we have to go to them for our precepts.

92074. But you deal with certain classes of cases which are outside the Poor Law?—Yes.

92075. Notwithstanding that, you think there would be no objection?—None whatever. We also, I may say, practically deal with the public health as well as with the Poor Law. Anybody who applies and who is certified, or rather notified, can come into our hospitals. Then you see we do a certain amount of Poor Law work. Take the children, for instance—we take the convalescent homes which are for Poor Law children; then take ringworm, ophthalmia, the imbeciles—all those are Poor Law cases. At the present time we are relieving the unions to an enormous extent, in a way which, to my mind, is very unfair; they are sending even their old-aged and infirm to us and unfortunately they are having them certified. So that practically a great deal of our work is really and truly Poor Law work.

M. JAMES
T. HELBY.

Mr. James
T. Helby.

28 Jan. 1908.

Purchase
of stores
through
buyers.

92076. I believe some of the large stores work through buyers; would it be possible for you to dispense with contracts and to get your stores through buyers?—Under supervision I see no reason why it should not be done.

92077. It would be very much simpler in many ways, would it not?—In many ways of course it would. They are all points which would have to be fully considered and thought out. There is no reason why the principle should not apply. Our Asylums Board spends £300,000 a year; I do not know what the other institutions do, but it would not come to much less than a million and a quarter or a million and a half a year. There is no reason why it should not be all done exactly on the same lines.

92078. I suppose the buyer going into the open market very often would do better than you could do by buying off a contractor?—Much better.

92079. But you would have to get a highly salaried man?—Certainly. If you want your work done properly of course you must have a highly salaried person for that purpose.

92080. But even so, you think that a buyer might be better than a contractor?—I am perfectly satisfied of that. Many a time we might have bought things for considerably less than we have if we could have gone into the market there and then.

Milk
contracts
and
inspection
of dairies.

92081. On the question of the dietary and your contracts for milk, do you inspect the dairies at all?—The milk question is one of the things that I feel very dissatisfied about. We accept tenders for milk at the present time which I am practically satisfied cannot be supplied properly at the price we give. But we are in this position that we cannot call upon the public health authorities to come and take samples of our milk and prosecute. The difficulty is this: We send down to a hospital and somehow or other it gets known—these things will leak out. This is what I should like, but of course only the Local Government Board can give us the order. I should very much like that the medical superintendent should go and take a sample of milk when it arrives and send it immediately to the medical officer of health and have it analysed. I should like to give him power to do that, because the quality of the milk is one of the most important things with regard to hospital treatment that we have. We are in hopes that something will be done shortly. At any rate, what we are doing as far as we can now before we get our next tenders in for our milk is, we are having a specification drawn up giving power to inspect the dairies and inspect the other places. I have just seen our medical officer and been through it, and we are taking full power to see to that.

Tenders of
local bodies.

92082. (*Miss Hill*.) I can understand you would consider that any amount of business could be carried through by a central body, but I should like very much to hear a little bit more about what you would propose for the local bodies. I gather that you would entrust the tenders mainly or entirely to the central body?—Yes.

Out-relief.

92083. And that you would have some one responsible official there from the central body who would watch over the local committee? Of course, there would be a great deal more detail work than there was even for the school board. The cases of out-relief would be very numerous?—Yes.

92084. And they would have to be dealt with immediately, they are not like things that can be referred and considered?—Yes; they would have to be dealt with at specified times, once a week or once a fortnight, as is done now.

Delegation
of powers
to local
bodies.

92085. So that you would have to delegate a great deal of power to these local bodies, and that you would be prepared to do. It is quite a different subject to the delegation to the managers by the school board?—Yes, it would be quite a different character. For instance, you delegate to the managers of the school board the seeing of parents of children that are absent from school. That is something of a similar character.

92086. I think I am right in saying that the powers delegated to the managers of schools were not so great as to enlist the sympathy of a large number of volunteers?—No, that is probably so.

92087. You think in this case more might be delegated and therefore you would hope for more of the volunteer element and spirit?—Quite so.

92088. I see that you turn with great desire towards the nominations by the Local Government Board?—I do.

Nomination
by Local
Government
Board.

92089. I suppose you consider they were a very great power in the old times on the board of guardians. The members nominated by the Local Government Board did a great deal of good work?—They did the work.

92090. And led the reforms, as a rule?—Yes.

92091. You point out, I think, what is a very great difficulty: the way in which men go on such a very large number of boards. Would you propose any limitation of their power?—I should like to very much.

Plurality
of appoint-
ments.

92092. It reduces it to an absurdity?—Exactly so, a perfect absurdity.

92093. And often they are men who have a business also?—Exactly so. For instance, we have a man on four or five boards. He is mayor of one of the boroughs. He is on one committee, I think it is, he likes the trip to Margate, to the home there, and of course he goes to Margate all right; but you never see him anywhere else, except it is to come and criticise the work done by the men who work hard.

92094. He comes in for ten minutes or a quarter of an hour and gets his name down as having attended the committee?—That is the principle.

92095. You would be in favour of limiting this?—I would.

92096. If you give a nomination to anybody like the County Council you would be prepared to say, perhaps, that they should nominate people who were not on their own body, for that very reason?—I would certainly.

92097. Because clearly the county council has plenty to do?—Yes. I want men who will work. I do not blame them, I am not doing that at all; they cannot help it, but they cannot do the work.

92098. (*Sir Samuel Provis*.) With regard to your committee it practically would be a nominated body, would it not?—Practically.

Local
committee
a nominated
body.

92099. Do you not anticipate some objection being raised to that on the ground that they must necessarily spend a good deal of money?—Of course, you would get objections, I know that perfectly well. I am only speaking from the point of view of doing the work (that is what I am looking at) in the interests of the ratepayers generally.

Objection
of ratepayers

92100. You would have ratepayers objecting, would you not?—I think it is very possible; but I say I am dealing with it from that point of view; I am not dealing with it from the ratepayers' point of view, except in their own interests for saving money.

92101. I was thinking a little of the practicability of the scheme, and the amount of parliamentary objection that might be raised?—I do not know how else you would get out of it. You would have to meet it or else let the thing go by the board.

92102. Supposing you set up a new central body for London which should be a Poor Law authority, would you at all discriminate between the present duties of the Asylums Board, leaving some of those to the central body and others to another body? You have pointed out that part of the duties of the Asylums Board are Poor Law duties, and the others are practically Public Health duties?—Yes.

Absorption
of work
of Metro-
politan
Asylums
Board.

92103. Would you think it desirable that the new Central Poor Law Board for the whole of London should take over the whole of those duties, or do you mean the Poor Law duties?—I should give them the whole of what we are doing now. I do not see how you can separate it. Of course all but the infectious hospitals are Poor Law.

92104. The hospitals would be the thing, of course?—Hospitals Yes, in the hospitals you could apportion them; I have and paying argued for it a long time. I consider myself that so far patients. as hospitals are concerned we ought to have paying patients. I do not agree with the principle that everybody can come in there and get all the very best atten-

tion and expert medical advice for nothing. We constantly get them offering money; they are prepared to pay for it.

92105. Do you refuse when they offer money?—We have to. We cannot take it; the Local Government Board will not allow us.

92106. There is no prohibition?—But there is the hospital open free. We may here and there have accepted something, but we cannot put it to the advantage of the rates. We give it, perhaps, for some furniture, or some pictures, or something of that kind.

92107. Some present?—Yes. You are not supposed at the present time to have classification; but as a matter of fact, do what you may, there is a certain amount of classification. That is the argument used: You must not have classification; but you do have it. Take our smallpox hospital: There a costermonger woman of the lowest of the low may come, and in the next bed some nice respectable girl; there they are, perhaps dying, and using the most filthy language, and there they would have to remain; prisoners were even brought from Pentonville, so you cannot do otherwise. It actually took place on the Smallpox ship at the last epidemic. Then you have the other hospitals, you have your various wards, and they are staffed so that you must put these

people together there. Here and there you do not have it. If you only had in hospitals a ward or two, or a block, for paying patients, you would relieve the rates enormously; but we cannot do it. I have brought it up twice at our Board, but could not carry it, because I was told at once that classification came in.

92108. (*Miss Hill.*) You have found that the influence of the nominated members on your Board is very great, is not it?—That is so.

92109. So that if it should be found impossible to eliminate the elected element altogether on any of these bodies, you would feel that if there were a certain number of nominated members they would, by their knowledge and attention to work, probably have greater weight even than their numbers?—Quite so.

92110. (*Mr. Lansbury.*) Would that be quite fair, that the nominated members should be such as to outweigh the elected members?—You must not take it that way. What I look at is this: It is not a question of outweighing anything; I take it we should all be imbued with one motive only, doing the very best we could in the interests of the rate-payers of London.

92111. Should the fact whether you are elected or nominated make any difference in your action?—Not the slightest difference.

Mr. James
T. Helby.

28 Jan. 1908.

Nominated
members of
Asylums
Board.

Mrs. DUNN GARDNER, called; and Examined.

92112. (*Chairman.*) You are a Member of the Chelsea Distress Committee, and a Member of the Central Unemployed Body for London?—I am.

92113. You have been good enough to send us a Statement which we will treat as your Evidence-in-chief if you will kindly hand it in?—Certainly. (*The Witness handed in the following Statement.*)

1. I have been a member of the committees dealing with unemployment in Chelsea since 1904, and am one of the representatives of the Chelsea Distress Committee on the Central Unemployed Body. On this I have been a member of the classification and women's work committees, and I am a member of the working colonies, works, and employment exchanges committees. I have been a guardian for about five years in Lambeth and since 1904 in Chelsea. I am a school manager.

2. My knowledge of the classes and character of persons affected by unemployment has been chiefly gained from a fortnightly interview with all admissions to the workhouse. I can recall no case where unemployment alone had brought into the workhouse a man of really good character who was able and also willing to work. (The master of the Chelsea Workhouse agrees with me in this after an experience of fifteen years.)

3. Little difficulty has been experienced in getting out of the workhouse the few men of fairly good character who, though physically handicapped to some degree, were actually desirous of working. The very few really able-bodied men who are occasionally in the workhouse and who cannot be adequately dealt with under the guardian's present powers would be suitable inmates for a penal compulsory working colony.

4. The persons who, I think, are brought to the workhouse as the result of unemployment are:—

(i) The old and disabled who have been supported by relatives. These relatives having fallen out of work have become unable longer to support their dependents; and

(ii) The most incompetent workers in casual trades who are pushed out by better men who, being unable to get work at their usual occupation, have been driven to take up casual work. This, of course, lessens the chances of employment of men handicapped by age or physical or moral defect.

5. In 1903-4 I was acting as temporary hon. secretary of a church relief committee in Camberwell, where an elaborate scheme for the benefit of the unemployed was being worked. The church relief committee referred some cases to this organisation, and after the most complete inquiries these were, as a rule, accepted. The tendency then certainly was for the relief committee to look on the case as dealt with, and for the man to relax his own efforts to obtain work. The result was that

after a long delay three days' work was given by the municipal authorities, mostly at road sweeping, and that this was in some instances repeated after an interval of several weeks. In the cases I know, I certainly think that more harm than good was done.

6. In 1904-5 I was a member of the committee in Chelsea appointed under Mr. Long's scheme, and acted as hon. secretary to a sub-committee dealing with the cases from two wards.

7. Work was given in wood paving by the Borough Council and some men were employed through the central organisation.

8. The expenses of administration were very small. The superintendent of the local labour bureau, with one extra assistant, took down applications and made inquiries with the help of volunteers. In the sub-committee to which I belonged all inquiries were made by volunteers and were, in my opinion, quite as efficient as those of the paid workers under the Unemployed Workmen's Act.

9. The ordinary objections to relief works of course applied to the wood paving works, but I think that some slight check on the sort of men employed and on the amount of work done by them was exercised by the ratepayers, who were able to go and watch their own money being spent. The effect on the men was no worse than that of the work given under the Unemployed Workmen's Act; of course the mere fact of the work having been made for the men raised hopes of what would be done in the following winter.

10. *The Unemployed Workmen Act, 1905*, as administered during the past two years has, in my opinion:—

(a) Failed to benefit those for whom it was intended (see pars. 11-14) and

(b) Has failed to deal with those it has relieved in such a manner as is best calculated to put them in a position to obtain regular means of supporting themselves (pars. 15-21). *N.B.*—I wish to exclude the work of the emigration and of the women's work committees from these remarks.

11. The Act was intended for the benefit of those who, from exceptional causes over which they had no control, were temporarily unable to obtain work, but it has been used in a large number of cases for the relief of men who have for years lived by jobs or been engaged in seasonal trades.

12. I form these conclusions from the numerous record papers I have seen, both at Chelsea and at the central office. I have also a list herewith enclosed (*see Appendix No. VI. (A)*) of fifty recommended cases from Chelsea for 1905-6, and fifty for 1906-7. Among this 100, taken quite at random, I find that from the evidence afforded by the papers only seventeen had been in regular employ-

Relief work
under
Mr. Long's
scheme.

Effect no
worse on
the men
than work
under
Unemployed
Act.

Failure of
Unemployed
Workmen
Act to
benefit those
for whom
it was
intended.

Proportion
of casual
workers
relieved.

Mrs. Durn ment for at least a year before applying, eighty-three had been in the habit of living by jobbing work. I have also a list herewith enclosed (*see Appendix No. VI. (B)*) of fifty case papers for 1905-6 and fifty for 1906-7, taken quite at random from those sent up to the central body to fill vacancies from all parts of London. Of this 100 there is a record of only thirty having been in regular employment.

28 Jan. 1908.

Provisions of the Act too attractive for the class of men actually dealt with.

Recurrent cases registered with Distress Committees.

Men assisted under the Act subsequently applying for Poor Law relief.

Work provided did not train the men.

Garden City and Fambridge.

No improving occupations.

Men treated as children rather than as adults.

13. By providing regular winter work for men such as these, who are usually only casually or seasonally employed, we are, I consider, increasing the troubles of the labour market by making these forms of work easier and more attractive both to employers and men.

14. The provisions under which the Act has been administered were devised for the requirements of the high class of regular workmen for whose benefit the Act was intended. They are, I think, far too attractive for the class of men who have, in fact, been dealt with by the Act. The majority of the men employed have not, I believe, for years—even if ever—earned for sixteen consecutive weeks as much money as has been paid them under the Unemployed Workmen Act, and certainly many of the wives of men at the colonies have not been so well off during their husbands' normal employment. The shortening of the hours of labour instead of the lessening of the rate of pay has removed the objection that these casuals, who never wish to work for a whole week, might have had to the employment.

15. The work given has, I believe, failed to deal with those whom it has relieved in such a manner as is best calculated to put them in a position to obtain regular work or other means of supporting themselves. The truth of this is, I think, clearly shown by the fact that a much larger percentage of those who were given employment during 1905-6 reapplied in 1906-7, than of those to whom employment was not given. A complete list can be obtained from the Central Body, but as examples I may quote :—

	Percentage of Assisted Cases reapplying.	Percentage of Not Assisted Cases reapplying.
Chelsea - -	71	18
Finsbury - -	42	7
Fulham - -	63	3
Hackney - -	54	25

The men to whom work was not given and who did not reapply certainly did not—in the case of Chelsea—go into the workhouse, and there has been no corresponding rise of able-bodied pauperism throughout London.

16. Another fact showing that the work given has not materially improved the men's position is that many of them, on returning from the working colonies on the completion of their sixteen weeks' provided work, have at once, as no doubt the Commissioners will have heard, applied for assistance to the relieving officer or to some charitable society.

17. The work provided has not (except in the case of Hollesley Bay, of which I will speak later) been of a "training" nature. It has merely been directed to tiding the men over a certain number of weeks or months.

18. At Garden City and Fambridge employment was found for the working hours, a few games were provided for recreation and some evening entertainments were organised, but there was no system of improving occupations for the men when not on the works, such as instruction in the use of tools or home industries; they were not even encouraged to mend their own boots and clothes.

19. The men were treated rather as children than as reasonable adults. They were relieved of all responsibilities for the welfare of their families and themselves. Everything was done for them, every detail attended to without effort or choice on their part. They had no chance of bettering their position; all they had to do was to get through just enough work and to keep just sufficiently sober to avoid being sent back to London. Such treatment cannot but have been harmful to these characters.

20. Though so much was done for the men, no efforts were made to raise their standard of cleanliness, order, or civilisation. At Garden City the bunks were infested with fleas and other insects, and the meals were served in a way we should regret to see copied in the homes of respectable working men. But the food itself was better and more plentiful than the men could have provided for themselves at home, and was always ready the moment it was required. The men, who were expected to remain at least sixteen weeks at the colony, had no place in which to put away any belongings. (Some of them had a nail in the wall and some brought small boxes in which to keep things.)

21. The neglect of any civilising element in the domestic arrangements of the working colonies is, I think, in measure due to the charge of the works and of the home life of the men being entrusted to the same superintendent. It is not likely that a really efficient foreman of large works should prove a successful organiser of domestic arrangements.

22. Of the *Hollesley Bay Farm Colony* I can only speak from the reports submitted to the working colony committee. The element of training is certainly considered there, but it has been primarily the training of men for the occupation of small holders, an occupation which it seems to me could never—even if all the plans suggested had been adopted—have absorbed any considerable number of London's unemployed. No systematic effort has been made until quite lately to train men as dairy-men, carters, gardeners, farm hands, etc., and to place them in situations about England.

23. The settling of London's failures in small holdings under most favourable auspices seems to me likely to encourage rather than to retard the exodus from the country of those men who, though fitted by a lifetime's experience to manage a small holding, have no chance of obtaining one for themselves by remaining in the country.

24. Hollesley Bay is also used as a training school for emigrants, but I have seen no evidence as to whether the men trained there have succeeded better abroad than those emigrated direct from London. If training is really necessary to make successful emigrants, it seems to me important to extend it to the wife and elder children as well as to the man.

25. *The Distress Committees* are, in my opinion, expensive and useless bodies which could well be dispensed with. There are in London twenty-nine of them, consisting of over 500 persons. These persons are brought face to face with distress, for it is their *duty* to receive, inquire into and discriminate between any applications made to them by persons unemployed, but their only *power* to relieve the distress they have discovered is the privilege of referring the persons requiring employment to the Central Body. As a matter of fact, many of the distress committees have failed to discriminate between the applications made to them and, in most instances, *w*en evidence has been brought before them that distress existed in a home including young children, and that this distress could be relieved by the giving of work, they have not withheld their recommendation that that work should be given. The evidence which has really weighed with most of them has been that of the size of the family and the acuteness of the distress rather than that of the man's past character and industrial record. "After all," as I have heard it said, "he is only asking for work."

26. Under these circumstances the inquiries made by the distress committees are, in my opinion, practically worthless. Paid officers are only human and are not likely to take great pains to collect difficult facts if no attention is paid to them when they are produced. Though a few distress committees have made thorough inquiries, so large a number have not that I am in favour of abolishing the inquiries altogether.

27. A proof of the inefficiency of the inquiries of distress committees is that the emigration societies which work for the central body cannot accept the inquiries made by the distress committees, but have to inquire afresh into cases before deciding them. How little the distress committees have been able to interest local workers is shown by the fact that in many districts no women have been found to pay the weekly allowances to the wives of the men at the working colonies at their own homes.

No effect made to raise standard of cleanliness, order, civilisation.

Hollesley Bay Colony.

Effect of settling London unemployed in small holdings.

Training wife and elder children of emigrants.

Distress Committee failure to discriminate in accordance with the Act.

Inquiries made by Distress Committee of small value.

28. *Emigration.*—I have had no experience of the work of the emigration committee, but it is obvious that when suitable persons are sent under favourable circumstances to a country where there is proper assurance that work is awaiting them, they are being dealt with in a way more calculated to put them in a position to support themselves than are those who are given sixteen weeks on relief work.

29. *The Administrators of the Act.*—The elected members of the Central Body are Londoners chosen chiefly for their experience of London and its wants and are, it seems to me, absolutely unsuited for the duties which the Act has caused them to assume. No amount of good intentions combined with a few visits to the country can make a man or woman an expert on subjects which are still difficult and doubtful of solution after a lifetime has been devoted to their study, such as keeping out the sea or introducing new systems of agriculture. Administrators anxious to do something, and being always reproached for not doing more, are apt to be attracted by experimental and expensive schemes, the benefits of which, if successful, are skillfully set before them, while they lack altogether the experience which would teach them the number of chances that exist against their success.

30. The fact that new work undertaken by the Central Body, such as the sea walling at Fambridge and the special gardening schemes at Hollesley, has proved expensive cannot be wondered at nor certainly can the members of the body be blamed for it. They, in their ignorance, have done their best, and are slowly gaining their experience at the expense of the London ratepayers and the National Exchequer.

People of experience able to advise on such matters might have been introduced onto the body by the Local Government Board in the persons they were entitled to nominate to it, but the Local Government Board has not thought well to select such persons.

31. *Labour Bureaux.*—I am a member of the employment exchanges committee, but I do not feel able to form an opinion as to the possible utility of the exchanges as long as they are worked under the Unemployed Workmen's Act—an Act which, I think, inspires confidence neither in employer nor in employed. I should like to see a fair trial given to the exchanges under the Board of Trade.

32. *Women's Work.*—I was a member of this committee for some time. It seems to me that the wages paid are not such as are allowed by the Act, and that many of the women helped are not eligible for assistance under this Act.

33. The wages paid are not, I think, less than would under ordinary circumstances be earned in London by an unskilled workwoman for continuous work during the same period. The wages are: for a single woman, 10s. a week, with dinner five days a week, and fares expended over 2d. a day; for women with dependents, the same sum and allowances, plus an extra allowance for each dependent, with a limit of 7s. 6d. a week.

34. I also consider that a large number of the women employed are not eligible for assistance under the Act. I formed this conclusion while I was on the committee from examining a number of record forms. I have now a list (herewith enclosed, see *Appendix No. VI. (C)*) of fifty recommended cases for 1905-6 and fifty for 1906-7, selected at random, which bears out this fact. The majority of the women do not, as far as is stated, under ordinary circumstances earn even 10s. a week—several of them are domestic servants and if their characters are good should have no difficulty in obtaining ordinary situations—several of them, far from being only temporarily out of work, are now driven to seek it on account of widowhood or illness of husband. The cases are no doubt excellent ones for assistance, but do not seem to me suitable for treatment under the provisions of the Unemployed Workmen's Act. Several of them were at the date of application still engaged in the partial employment which they had had for years.

35. It seems to me very remarkable that, considering the great advantages offered by the women's workrooms, there have been so few applications for employment in them.

36. The work given to the women in the workrooms seems to me, without doubt, to increase their general usefulness and their chance of getting work at the end of the sixteen weeks.

37. If the workrooms were to be increased the question of the disposal of the output would become a very serious one. Even the sale of garments to the emigration committee has interfered with the work of the women who were previously engaged in the emigration outfits.

38. I have visited Lingfield and Hadleigh Labour Farms and I know something of the working of the Church Army and Salvation Army Labour Homes. All these seem to me to be efforts at the reclamation of the unemployable, not attempts to deal with the question of unemployment.

39. The method of dealing with unemployment under the Unemployed Workmen Act is, in my opinion, not a "remedy" for unemployment, but a means of subsidising casual and seasonal work.

40. If at any time it is decided that trade is so depressed as to require special State aid for its workers, I would advise that work of national utility such as shore protection land reclamation, afforestation or road-making, should be undertaken by some department directly under the control of the Government, that the work should be advertised and given to contractors in the usual way with the exceptions that:—

(i) The contractors should be required to engage their men at the employment exchanges in whatever proportion should be considered advisable, and that

(ii) The wages to be paid should be decidedly below the trades union rate. This would be necessary in order that it should be to the workers' advantage to leave as soon as possible work undertaken not because it was immediately required, but for their benefit, and to return to their ordinary occupations, where they would be supplying actual requirements.

41. Under this system men would be employed by ordinary business employers under ordinary business conditions. The rate of wages would be low, but the best men, if they chose to accept it, would be the men to get the work; the habitual casual or loafer, even if engaged, would not remain long on an ordinary working job. If any man did not give satisfaction he would be discharged and another taken on in his place. The whole cumbersome, expensive and useless machinery of the distress committees and their inefficient inquiries would be done away with and the men would escape the danger of deterioration inseparable from all charitably managed relief works.

42. I think this is a question rather of Poor Law than of unemployment, but I should like to be allowed to add that I am convinced that the present system of dealing with young persons in workhouses is highly unsatisfactory. I feel sure that the right thing to do is to get them out of the workhouse as quickly as possible, but whether this is or is not done depends at present entirely on the chance of some guardian being interested in such cases or on the energy and resourcefulness of the master. The number of young persons who seek admission is not large, and I believe that all when they first come could be dealt with. But when they get used to the restrictions of the workhouse and come to regard it as really their home, it becomes often impossible to do anything for them and, with short intervals, they settle down to be practically inmates for life. Many guardians are not, I think, aware of the possibilities which exist for dealing with such persons outside the workhouse, nor of the great disadvantages of allowing them to remain inmates. I should like reports of the number of persons between the ages of (say) fifteen and twenty-five who are in the workhouse to be sent to the Local Government Board regularly with a statement of the reason of their remaining and of the efforts being made to get them out. If it were to prove that there is at all a large number of this class, male and female, and that the guardians are as a rule not dealing effectively with them, I think it would be well worth while to appoint a special inspector for their supervision, at any rate, until the guardians learnt to take up the work themselves.

92114. (Chairman.) From your Statement I gather that you have had considerable experience of social work, that you have been a guardian for five years in Lambeth, and for some time in Chelsea; and in addition you are a school manager?—Yes.

92115. Your evidence divides itself into two heads: that which relates to Poor Law proper, and that which relates to the unemployed. You make a statement in Paragraph 2 with regard to the unemployed that you cannot recall any case where unemployment alone had brought into the workhouse a man of really good character who was able and also willing to work?—That is so.

92116. By "able" I assume he was a competent worker, too?—With the will and the mental capacity to work.

92117. And the physical capacity?—Yes.

92118. That is to say, an able-bodied man fit and willing to work?—Yes.

92119. Your experience is, you do not know anybody who, from unemployment alone, with those physical attributes, has been brought into the workhouse?—No; and I have seen the workhouse men and talked to them; every man that comes into the Chelsea Workhouse I see and talk to over and over again; so that I can say that quite definitely.

92120. When a man of fairly good character, and who is willing to work has got into the workhouse, you have generally been able to find him work outside?—I have generally been able to persuade him to find himself work outside. In other cases, we have sent him to the labour homes or labour colonies, or down into the country, or done things of that sort with him.

92121. Do you keep touch with those? How do you know what happens to them afterwards?—We do not, except the ones who go to the homes; I know what happens to most of them. I do not know what happens to the men who go back into the ordinary labour market; they do not return to us.

92122. You do keep touch of the persons who go to an institution such as a labour colony?—Yes.

92123. Until they get re-employed?—Yes.

92124. You are temporary Honorary Secretary of the Church Relief Committee in Camberwell, and you do not think that the result of the subscription work given was beneficial there?—Not in the cases I know; the inquiries were very elaborate and the benefits given were exceedingly small.

92125. Now we come to the Unemployed Workmen Act. That Act was passed to relieve those who were ordinarily in permanent employ and were temporarily unemployed. Your experience is that that class have not registered or made use of the Act?—In very small proportion to the other class, the casual worker.

92126. Has your committee been able to do anything for those that were of that class?—They have been able to recommend them to the central body.

92127. Has the central body been able to do anything for them? I suppose you lose touch of them?—I am a member of the central body.

92128. Assuming that there are two different classes who come before you, one the persons generally in employment who are temporarily out of employ, and the other those who are always under-employed or employed on casual jobs, has it been easier to get employment for the first class than the second?—I think it has been exactly the same; the names have been sent up to the central body, and the central body have put them on to the work which they have had going. We have been told that preference ought to be given to those who have been in regular work, but as a matter of fact I have found preference has been given to those who have had large families.

92129. Preference was not given to a man according to his competence as a workman, but according to the size of his family?—Yes.

92130. You think that as the Act is at present worked it is too attractive to a certain class, that is to the class who are generally under-employed, because it gives them more consecutive work than they ordinarily get?—Yes.

92131. The shortness of the hours of labour, which, of course, reduced the emolument, had not a deterrent effect on them?—No. I think that the man who is not accustomed to regular work prefers a week of five days work to a week of six days work.

92132. Your objection to the Act from this point of view is that it tends, in your judgment, to rather to subsidise and to perpetuate this kind of casual under-employment?—Yes.

92133. You have set out a short table in Paragraph 15 as to the percentage of persons who have been assisted who re-apply?—Yes.

92134. Is that in two consecutive years?—Yes.

92135. And also the percentage of non-assisted re-applying?—Yes.

92136. What conclusion do you draw from those two sets of figures?—That the treatment under the Act has not been such as to make the men more able to support themselves after they have had relief under the Act.

92137. What proportion would the number of persons who were not assisted form to the number of persons who were assisted: would it be about half?—Not so many as half, I think, were found relief.

92138. That is to say, that more than half would be passed over?—Yes, certainly. I have got some more figures now. The figures have come out more since I wrote that statement. I do not know if you would like them.

92139. You give percentages. One would rather like to know what the actual figures were to which the two different sets relate?—I could easily supply that table if I might give it afterwards. I have here the figures from nineteen distress committees added together. Of the 22,779 applicants not assisted in 1905-6, 4,302, or 17·7 per cent., re-applied in 1906-7. Of the 5,580 applicants who were assisted in 1905-6, 2,476, that is to say, 44·4 per cent., re-applied in 1906-7 (see Appendix No. VI. (D)).

92140. Then the number of those who were not assisted is very very much larger than those who were assisted?—Very much larger.

92141. Of course, it may be that one reason why the percentage is so small is that a great many of them thought it was not worth while re-applying?—But they managed for themselves somehow: they did not go into the workhouse.

92142. That is your point, that they did not re-apply and as far as you know they did not get public assistance?—Yes.

92143. You found that a certain number of those for whom sixteen weeks' work was provided, afterwards had to apply to the relieving officer or some charitable society?—Yes.

92144. Were there any considerable number of those that so applied?—My district is a very small one, so there are only small numbers that I know of personally; but I have heard of it having happened in several other districts in London. I thought figures had been given to this Commission about it, so I did not try to get any figures about it myself.

92145. You object rather to the principle upon which the men were treated. You think they were treated rather as children than as reasonable adults, that is to say, everything was done for them?—Yes.

92146. What would you suggest on that point? They are not of a class who would be likely to cook for themselves, are they?—Of course, they would not have the time to do that if they were at work all day.

92147. Your criticism on the administration is that you want two different sets of men: you want a successful organizer indoors and an efficient foreman outdoors?—If we are going to continue this kind of colony I think that is necessary.

92148. You would say that the colony was not instructive at all domestically, and only found work for them?—It only found work for them, and, I think, weakened their characters. I think they had everything for sixteen weeks very comfortably done for them, and they were not given any teaching of any sort to strengthen their characters to counteract that weakening tendency.

Act tends to subsidise casual unemployment.

Recurrent cases.

Proportion of cases assisted and not assisted.

Application by men assisted for Poor Law or charitable relief.

Treatment of men relieved.

Colonies not educative.

92149. Your criticism, I suppose, is very largely directed against the short period of sixteen weeks as insufficient to permanently elevate the class that was so working?—I think sixteen weeks is quite inadequate for training, but I think if the men had remained years on the colonies on the lines of the colonies I know, they would be worse off than after the sixteen weeks.

92150. They would become more dependent?—Yes.

92151. Have you ever thought out the sort of colony that you would like to see in operation?—I do not know for what sort of men; if you mean a penal labour colony, that is a different thing.

92152. A colony that would be rather curative in its effect, that would tend to infuse habits of cleanliness and of order, and which would bring home to the individuals a greater sense of their responsibility to their families, assuming they were married, and so on?—I think the first thing would be to know whether it was a compulsory colony or a voluntary one. If it were a compulsory colony then I think that the whole of the time of the men ought to be considered. The management should provide for the whole of their time, not only for those hours which are spent in actual work.

92153. You have not seen Hollesley Bay, have you?—I have seen it once, but I do not know anything personally of the working of it.

92154. Coming on to the administration of the Act, you were not favourably impressed with the capacity of the elected members for certain classes of duties. You thought that more business experience was required as regards the nature of the work and of the operations that should be undertaken?—Yes. I think most of them had not had any experience of the management of land, and that sort of thing.

92155. Do you attach much importance to labour bureaux?—Yes, I attach great importance to them, but I do not think they have had a very fair trial hitherto.

92156. What you think is that the exchanges should be under the Board of Trade?—Yes.

92157. Assuming they were put under the Board of Trade do you think if they were universally established and linked up and dissociated, or at any rate not solely occupied with registering this particular class of worker, that their effect would be beneficial and would tend to improve the mobility of unskilled labour?—I think so very much indeed, but I should like to see a bigger scheme for employment exchanges than has been suggested yet. I want to have it not only linked up with all the other exchanges in England, but I should like to see an Imperial movement. I should like to see exchanges also in the colonies, and emigration done through these exchanges, just as migration is done in England now, or rather as one hopes it may be done.

92158. Have you considered any scheme of that kind at all?—I have thought over it a good deal, but the only thing is to get the employment exchanges started in the first instance.

92159. Assuming you had some employment exchanges of this kind, would you hand over to them the able-bodied who now may come to the Poor Law?—I should not hand over the able-bodied to them. I should let every person who wished to register have the opportunity of registering; I should not make them register.

92160. At present the Poor Law deals with able-bodied men if they are destitute. Do you think that your labour bureau could be so administratively constructed that they would be able to deal with that class?—No; I do not think that an employment exchange should be given power to relieve a man or to make him work if he did not wish to do so.

92161. Any labour colonies you would keep under the control of the Poor Law?—I should keep them under the control of that authority which was dealing with unemployment, whether that would be the Poor Law or not. I hope it would not be the Poor Law as at present constituted.

92162. What is the sort of labour that you had thought your labour bureau might undertake? You would wish, I suppose, under your system that employers and employed should have recourse to these labour bureaux?—Yes.

92163. And that they should be managed, say, by a joint committee of employers and employed?—Yes.

92164. You would still, under your scheme, have this casual unemployed lot to deal with, and you also would have the class that now comes to the Poor Law, who are able-bodied. Have you ever thought how you would deal with them?—For the really able-bodied men who could work who come to the workhouse I should like the Poor Law authority to have a compulsory labour colony, where they could detain them and teach them some trade, if their failure to earn a living for themselves was due to not knowing a trade.

92165. Assuming you had something of that kind, would you let them work for a wage?—No.

92166. Not?—Not money. I do not know whether you would call 6d. a week or that sort of thing a wage. I do not. I would give rewards for good work, but I do not call that a wage.

92167. You would give them some remuneration for their work?—I would give them some inducement to work well.

92168. Which, if it accumulated, would give them a certain fund with which to start when they left the labour colony?—Yes.

92169. You would encourage them in some way so that they should take a direct interest in their work?—Yes.

92170. The labour colony, you think, is the best practical solution of dealing with this particular class?—I have not thought about that sufficiently to be able to answer that question. I would rather not answer that. I am not quite sure enough about it.

92171. As to the various religious colonies that you have visited, were you satisfied with them?—No, because none of them seemed to me to have taken sufficient thought as to what would happen to the men when their time at the colony came to an end. At Lingfield, for instance, the only outlet for the men seemed to be emigration, and very many of the men were not fit for emigration; consequently they stayed on and on and on at the colony as long as any board of guardians chose to pay for them.

92172. The training as an educational system was defective in the sense that it did not give those who went through it such a moral and physical recuperation as to give them a fair chance of getting a livelihood when they left?—Yes, that was the effect. The training seemed to me to be very good, I could not say where the defect was, but the result was that I never knew a man who did go to work in England from Lingfield who did not fail almost immediately and have to return to the colony, but then the men at Lingfield are very much lower than the men who are accepted under the distress committee. They are not the same class; they are the unemployable rather than the unemployed.

92173. And the officials there were very badly paid, and undertook the work rather from a religious sense?—Yes.

92174. Your general objection to what has been recently done is that in your judgment it is mainly a means for subsidising casual and seasonal work, and it is not the real remedy for unemployment?—Yes.

92175. And you think that if it is determined to take measures for dealing with unemployment, that the State ought to undertake that work and that schemes of general utility should be undertaken by some department, and that the work should be given to contractors who should engage competent persons to perform that work?—Yes.

92176. Are the men to be employed to be competent men at that particular class of work?—Yes; I want the standard of work to be an ordinary one, not an artificial one, as we have on our relief works at present.

92177. To check persons coming on who otherwise would get employment, you would make the rate somewhat below the standard rate?—Yes.

92178. Supposing you had a scheme of that kind, the difficulty rather is that if you started it you would not be able to get rid of it. You would have permanently on your hands the persons whom you take on?—Yes, that might be so, if you did not give them low enough wages.

92179. You would say the wages would be the test?—Yes.

28 Jan. 1908.

System of
dealing with
young per-
sons in work-
houses.

Demoralise-
tion due to
residence in
workhouse.

Girls in
workhouse.

92180. If they could get anything outside, they would go; if they could get work; the fact that they stopped would be a proof that they could not get work outside? —I do not think it would be quite a proof, because I think there are some men who would rather stop on at a low wage than bother themselves to look for other work.

92181. Now we come to a question of Poor Law rather than unemployment. You are strongly of opinion that the present system of dealing with young persons in workhouses is very unsatisfactory?—Yes.

92182. What class are you thinking of, boys or girls?—Both. I do not think any young people ought to be kept in workhouses at all.

92183. What sort of girls were you thinking of, or what sort of young persons?—Any girl or any boy. When they are of school age they go to the schools direct; when they get to be over that age there is no provision made for them. In many workhouses no one troubles about them very much, and they are simply kept in the workhouse from year to year and allowed to go out if they want to, or not to go out.

92184. I suppose these boys do a good deal of work in the workhouses; they are useful in that way?—The work they are given to do in the workhouse does not in any way train them to earn their living in after life.

92185. You would like to put the onus on the workhouse authorities for keeping these young people there; they would have to show reason why they were kept there?—Yes.

92186. What do you think could be done with that class of girl or boy?—I think each one must be dealt with as he or she comes into the workhouse. It is not very difficult to deal with a person of fifteen or sixteen, or even older than that. While they are young you can do something with them. After they have been for years using the workhouse as their home it is practically impossible in many cases to do anything with them at all.

92187. You think that the Poor Law authorities, if the employers would apply to them, would be able to place a good many of these outside?—Yes.

92188. For various reasons, they do not exert themselves in that way?—Yes.

92189. If attention is called to the matter, that there are young people in the workhouse, in the manner you suggest, then the Poor Law authorities would bestir themselves to place them outside?—I think so.

92190. Your idea is that once they remain a length of time in the workhouse, they are almost hopelessly demoralised?—Yes.

92191. The spirit of self-maintenance is almost eradicated?—Yes; it is very nice to feel you have a home somewhere, and those who are homeless get to feel that the workhouse is their home, and they come back there whenever any difficulty arises.

92192. There would have to be some discrimination in working this. Supposing a girl loses her place or she is an indifferent servant, or possibly her character is somewhat indifferent, she could come to the workhouse. You would not be able to get her out, because people would not take her. What would you do with that case?—If she had lost her character, there are plenty of charitable institutions who would be glad to deal with her, probably without any expense whatever.

92193. And that girl would probably be in a less eligible position, if she is sent to a home, than the other girl who had perhaps temporarily lost her employment and went out again and got employment?—Yes.

92194. You do not want any alteration to be made by which the one with the indifferent character would be allowed to stop in the workhouse, and the one with the good character would be pushed out?—I would not allow any young person to stop in the workhouse. Of course, a girl with a good character practically does not come into the workhouse, unless she has fits, or something of that sort. It is quite possible in your infirmaries you may have a good many young persons, but not in your workhouses. I think you ought to deal with them elsewhere.

92195. Has Chelsea a large workhouse?—No, Chelsea is a small district.

92196. Are there many of these young people in Lambeth?—Many.

92197. More than a dozen, should you say, or twenty? —While I was there there were certainly more than twenty, taking it altogether.

92198. Were there twenty at a time?—No, not so many as twenty at a time, but at Chelsea, I think, when I went there first, there were more than half a dozen of these young persons.

92199. And there they remained?—No, they did not remain.

92200. They came back?—They are all earning their own living outside.

92201. You got them placed outside?—Yes.

92202. But taking the ordinary action of certain boards of guardians there they would have remained?—Yes, and there they had remained for several years before I happened to go on the board.

92203. (*Miss Hill.*) What did you find the best machinery in getting those young people out? Has it been done by an energetic guardian, or have you brought in the co-operation of any outside body, such as the Charity Organisation, to get them out?—I think part of it has been done through one of the guardians. It has not usually been necessary to call in charitable help.

92204. The younger the person the easier to deal with?—Yes.

92205. You get the respectable girl out to a training home, and then into service usually?—Yes.

92206. Then there would be a number of comparatively young people about thirty who would have to be started with a good deal of care and thought?—I think care ought to be taken to start every possible person.

92207. Do you think the guardians in general have time to take up that, or that they want assistance for it?—I think it wants suggesting to them, but it is a thing that they ought to do. It has not occurred to a great many of them that there are all these different ways of dealing with the young people.

92208. Does it occur to you that in the Poor Law great strides have been made of late years in improvements in dealing with the children and the infirm and the old; but very little attention, comparatively speaking, has been turned to the able-bodied?—I quite agree to that.

92209. And that certainly the London workhouses have found it extremely difficult to find any employment for them?—Yes.

92210. Has that been, do you think, increased by the fact that the workhouses are precluded from any work which can possibly compete with outside independent work?—No, I do not think so. That has not affected it at all.

92211. They would take up brush-making or mat-making, or anything of that kind, without scruple?—When I was at Lambeth they started among other trades mat-making.

92212. That was not objected to?—No.

92213. Is that because it is one of the exceptional trades that have not been objected to. They would be barred from many trades, would they not?—I do not think so, but I think it would be very difficult to find a trade which your able-bodied could do. Mat-making and such occupations are more work for the old, something just to keep their time occupied. They are not suited to the able-bodied out of whom one ought to get a full day's work.

92214. You do not want to keep the men, if they can be started in trade at all; it should be outside?—Yes.

92215. When you have no ground attached to the workhouse it is very difficult of course to find suitable work, is it not?—I cannot imagine in a London workhouse being able to find suitable provision for the able-bodied.

92216. It must be somewhere away from the London workhouse, must it not?—I should think so. I do not know of any means of dealing with them adequately in the workhouse.

Getting
young
people
out of work-
house.

Difficulty
of obtaining
work for
able-bodied
paupers.

Difficulty
of providing
employment
for able-
bodied
paupers.

92217. I gather from what you say about Hollesley Bay that you feel it would be really better if they turned their attention to starting people in independent work. You say: "No systematic effort has been made until quite lately to train men as dairymen, carters, gardeners, farm hands, etc., and to place them in situations about England." You would be more hopeful of the success of that than in starting these men at small holdings?—Yes, I think so. There have been several reports from the Hollesley Bay Committee that they are starting men in those situations.

92218. The other plan is rather starting people who have least experience in what is certainly a very difficult problem, making a small holding pay and succeed?—And starting them under most favourable conditions.

92219. It hardly seems fair to the hard-working agricultural labourer?—No.

92220. (*Mrs. Bosanquet.*) Do you think there has been a tendency for the number of the unemployed to increase with the special provision that is made for them?—There have been many more men registered this year than last year.

92221. Do you think that has anything to do with the fact that work is provided for them in the winter months; are they less careful to look after themselves?—I think myself that it is a great deal the result of agitation. You can get men to register in very large numbers. I have no evidence of that; it is only my own opinion. I do not think myself the number of men who register in a district is any real criterion of the amount of distress or unemployment existing in that district.

92222. Would all the registered cases be enquired into?—No, I do not think in any part of London that has been done, because the amount of work which has been available to be given has been so very small that it has been felt this year that it is a great shame to take up the characters of men, and to trouble employers about men when there is really no prospect whatever of getting them work.

92223. If one watches the question for a whole ten years in London, say, one hears of enormously increased numbers of unemployed every winter; do you think that represents a real increase?—I do not know that I can say.

92224. About this State scheme of work, do you anticipate that it should be put in hand, say, if there was a specially hard frost or only if there was some crisis like the cotton famine?—I believe that those in authority ought to decide that, but if anything is to be done for the unemployed, then I think if we did what I suggest in Paragraph 40 we should be doing something less harmful than we are doing now.

92225. That would touch the genuine unemployed; it would not touch the ordinary casual odd-job man about London, the half capable man, of whom there are so many?—If that man did go there and train to work regularly instead of only working two or three days a week, it would be doing something which would be a gain; it would be sending him back more fit to earn a living than before.

92226. Do you anticipate they would really go?—No, I do not.

92227. Then they and their families still remain to be dealt with. I think you said you did not want the Poor Law to be the authority to deal with unemployment. Do you mean you would not have the Poor Law deal with this residuum class?—I thought the question meant to refer to labour colonies, relief works and such like.

92228. Supposing it was thought desirable for this half-working class that they should go to a sort of semi-penal colony, a detention colony, do you see any objection to that being under the Poor Law?—No, I should like to have the penal labour colony under the Poor Law, with power of detention.

92229. And even perhaps a colony in which there might be training with detention, without being actually penal?—I do not see how you can really make it training, unless you have power of detention, because a man could leave any moment he did not like the training, which must necessarily be a little severe.

92230. (*Chairman.*) I think we generally use the word "penal," and Mrs. Bosanquet has so used it, in the sense that it would be a colony where the conditions are harder than those of the farm colony to which people are sent.

Mrs. Dunn Gardner.

28 Jan. 1903.

92231. (*Mrs. Bosanquet.*) One connects the word penal with crime?—I do not want to do that at all.

92232. (*Chairman.*) You mean simply a colony where there is power of detention?—Yes.

92233. (*Mrs. Bosanquet.*) We have had a great deal of evidence about boys between fourteen and sixteen, or fourteen and eighteen, and on leaving school, how they drift into this irregular life, have you any suggestion to offer with regard to them?—We have only been considering them lately in connection with the employment exchanges, and I am inclined to think that under present conditions they ought not to be dealt with by the employment exchanges as at present constituted, because the employment exchange is an open market for labour, where the employer and the employed are brought together, and I do not think that a child just leaving school ought, without advice, to be left to make his own arrangement with the employer. He has no experience to guide him in the bargain which he makes.

Boy labour and labour exchanges.

92234. Can you suggest any other way of helping them into good work?—I think the skilled employment societies which are being started throughout London really do not deal with more than the very fringe of the subject. They deal with so very few trades and so very few children. There are several plans that one might suggest, that the employment exchanges might be given special power for dealing with children between the age of fourteen and sixteen, and then they could enquire into the school history of the child. For that it would be necessary to attach a Juvenile Advisory Committee to each exchange. I do not know whether that could be arranged. Or there might be after-care school managers for all the schools, in the same way that there are after-care School Managers for the children in the special schools of the London County Council.

Skilled employment societies.

Children and employment exchanges.

92235. (*Mr. Chandler.*) You state in Paragraph 2 that you can recall no case where unemployment alone had brought into the workhouse a man of really good character, who was able and also willing to work. Did you find in your experience on the distress committee that a different class of men altogether came before you than you had been in the habit of meeting at the workhouse?—Many of them seemed to be just the same class of men, but to have managed to keep out of the workhouse; they were a little more independent, or something had happened to prevent them coming into the workhouse.

Applicants to distress committee and Poor Law compared.

92236. I notice you had before you quite a number who had had fairly long service in their last situations?—Yes.

92237. In Paragraph 40 you make a suggestion that if at any time it is decided that trade is so depressed as to require special State aid, you advise that work should be taken in hand. Have you in your mind simply the State taking it up at certain periods, or do you contemplate the establishment by the State of some system such as you advocate now?—Only taking it up in times of quite exceptional depression. I was not suggesting any permanent provision of work.

National works.

92238. (*Mr. Phelps.*) What proportion of the time and attention of the central body which dealt with this Act was taken up by the case of unemployed women? Did it figure very largely?—One committee, which consists of, I think, six members only, deals with that question.

Women's relief work.

92239. The impression left on your mind was that the problem was a much smaller one with regard to women than men?—The number of those registering is very much smaller.

92240. How do you account for that?—I never have been able to account for it; I do not know. In Chelsea for instance, I believe only two women have registered this year.

92241. Is it when women have to work they bestir themselves and find work?—I do not know.

Mrs. Dunn
Gardner.

28 Jan. 1908.

Reliance of
men on
wives' work.

92242. Do you find in your experience going about in London, that there is an increased tendency on the part of the married men to rely on their wives' work?—There is a very great tendency, whether it is an increased tendency or not, I do not know.

92243. You have noticed it in fact?—Very much so indeed.

92244. Both on their wives and children?—Yes.

92245. Can you give any explanation of it?—No.

Hollesley
Bay.

92246. Then you say with regard to labour colonies, that they ought to train people in agriculture, and should have persons who understand agricultural work to train them?—Hollesley Bay is the only colony under the Central Unemployed Body where such training could be given.

92247. Supposing the labour colonies became more general I mean?—Why do you select agricultural work?—I do not think I do put agricultural work as the work for which they ought to be fitted.

Agricultural
work in
labour
colonies.

92248. Supposing we had a large number of labour colonies, that the principle was adopted that every county should have its own colony, would you be inclined to make them agricultural?—I think agricultural work would have to come into the system of training, but I am quite sure you would require other trades as well, because agriculture does not last all the year round for one thing, and on many days you are unable to do any agricultural work.

Reproduction
of local
industrial
life in
labour
colonies.

92249. You say that the West Riding of Yorkshire if it had a labour colony, should reproduce the features of industrial life in the West Riding. As far as I understand, that does raise great difficulties, does it not?—Yes, but I do not see necessarily why they should reproduce the life round it; the man having failed in that life, perhaps it would be better to teach him something fresh; he might be more wanted in that.

92250. How far away would you go for that? Would you make a man who had failed in spinning, a weaver, and keep him to the manufacturing employ?—I do not know anything about the weaving trade. I do not know whether that is a trade you could easily have in a colony.

92251. The difficulty is that they require an immense amount of capital, and so forth?—Then I should think it was an unsuitable trade to have in a labour colony.

Trades in
labour
colonies.

92252. Any industry except agriculture almost does?—Boot making, tailoring, and that kind of thing, does not require any great expenditure.

92253. It would be difficult to start a labour colony with a boot-making and tailoring industry?—I think if you have a colony, you must have also some things to do in the evenings, and on wet days.

92254. A colony should be self-supporting in that sense. They should make their own boots and clothes, as far as possible?—That might be one way of doing it, though I do not think it is necessary. I should like to see that done, but there might be other possibly better trades.

92255. Do you think public opinion would support a scheme for turning out some commodity, such as boots and clothes, and selling them in the open market?—I should think not.

Effect of
training
in labour
colony.

92256. In a place like Hollesley Bay, where agriculture is the staple industry, what is your view with regard to the future of the men. Are you in favour of emigration?—I do not think that sixteen weeks' training will change a man and make him, if he is a London person, into a countryman, or into anything different to what he was before.

92257. Supposing you could keep him there three years, at the end of the three years, what would be your hope for him?—I think you must consider the man a little. The man is not a fixed quantity, but if he was a man who cared for the country, I think that with three years training you could make him fit to take a situation in the country as a gardener and so forth.

92258. At the end of the three years you would practically set him to get his own living?—Yes.

Afforestation.

92259. I see you speak of afforestation. Should you be prepared to see any such system of afforestation, into the service of which he could be drafted?—I had not thought of that, but it seems to be quite a good plan.

92260. With regard to the workhouses and workhouse employment, do you think that that employment on in work—the whole should be deterrent in its character?—I think house. if the dietary and the accommodation is deterrent, that the employment need not be so.

92261. Do you think the employment ought to be Workhou educational?—I do not think myself you could make cannot be the workhouse an educational place. If by the work-made edu house you include the colony, which might be attached tional. to the workhouse, then I do think so certainly, but I do not think the workhouse can be a place where you could educate people, and turn them out better than they are when they come to you.

92262. That is really the result of your experience?—Yes.

92263. Have you any experience of introducing the Teaching system of teaching into workhouses, and having in- in work- structors for the able-bodied?—I have read about it house. at Whitechapel, but that is the only place where I have heard of it being done.

92264. You have never tried?—No, I am glad to say we have not a sufficient number to justify us in doing such a thing.

92265. You think on the whole that the life in the London workhouse acts as a deterrent?—No, I think Workhou life not it is ceasing to act as a deterrent very much. deterrent.

92266. Why?—Are you speaking of the young or the old?

92267. We will take the old first?—I think the great factor which is making it cease to be deterrent is that so very much more leave is allowed than used to be allowed. They can go out and see their friends practically as much as they please now.

92268. You think the restriction of liberty is the great deterrent, and that the relaxing of that makes the Restriction of liberty a workhouse much more popular?—Yes. deterrent.

92269. Are they, for instance, allowed to go out not in workhouse clothes?—The superior ones are given a different sort of clothes, not uniform clothes, to go out in.

92270. They go out in clothes belonging to the workhouse?—Yes.

92271. Do you think the changes in the dietary have Dietary. made much difference in the popularity of the workhouse?—They have in expense, but I do not think that has been a factor which has made it more popular.

92272. When you visit amongst the poor outside the workhouse, should you say that you had detected an alteration in their tone and their attitude with regard to it?—I cannot think of any instance which would help me to answer that question.

92273. Not people who have looked forward without any great reluctance to going into the workhouse?—I cannot recall at this moment any case.

92274. With regard to young people, do you think it Workhouse has ceased to be a deterrent to young people?—I have not deterrent never known the workhouse to be in any sense a horror to young to the young people. They have always seemed to people. adapt themselves so very much to circumstances that they will adapt themselves to the workhouse quite cheerily.

92275. In England as a whole the number of able-bodied in the workhouse is very small indeed?—Yes. Able-bodied paupers.

92276. In the country workhouses you will hardly find anybody who is what you would call able-bodied?—That is so.

92277. But you think in London it is different?—I notice in London there are many young people who could be got out.

92278. In cases which you met in that way, do you think much is due to the surroundings, and the way the children have been brought up?—A great deal, and I think a great deal is due to this: a very large proportion of these people, I believe, are semi-feeble-minded, and therefore very much more consideration is due to them before you can get them started in life. They may have had a fair start once and have failed, and that has been put down to wickedness on their part, whereas it is really a lack of mental ability.

92279. Inherited weakness? — Mental weakness—whether inherited or not I do not know.

92280. In that connection, would you be disposed to enlarge the powers of the guardians in the way of adopting children?—I think they are large enough without adopting children. I should like them to be given power over children after they are sixteen; over, for instance, feeble-minded young women who come to the workhouse with babies. I should like to have power to detain them, not in the workhouse, but to place them in a suitable institution.

92281. With regard to children who have been brought up by your board, have you an after-care committee which looks after them?—In London the M.A.B.Y.S. looks after all the girls.

92282. They all go to service?—Yes.

92283. And they are all looked after by the M.A.B.Y.S.?—Yes.

92284. And the boys?—Well, the Boys Befriending Society, I suppose, looks after them. There is only one union in London where I know of a proper organisation for looking after the boys and that is in Southwark; it is called the Southwark Boys' Aid Association.

92285. (*Chairman.*) Do you know anything about the Jews Boy Brigade?—No.

92286. (*Mr. Phelps.*) As to the labour colonies, do you think that it is possible for a labour colony to make the employment really deterrent to prevent the people coming constantly back again, preferring rather to be there than to be on their own feet in the world?—I think that if they were given some encouragement to get a start, and that after they were started they did not avail themselves of the start, then it might be made more difficult for them to get that encouragement again. I suppose very much of the encouragement would be to give them better dietary, and on their second return it might be very much longer before they got that.

92287. I understand encouragement, and we are all agreed with that, but do you think that with an elected board, in short with the general tendency of modern democracy, you could really get discipline insisted on in a labour colony?—I would not suggest having it under an elected board myself.

92288. You would have it under a department of the Local Government Board or the State?—I would have experts to manage it.

92289. They must be responsible to someone?—Yes.

92290. You would have it really controlled by the central government?—Yes.

92291. And not by the board of guardians or the local government?—I have not thought that out very much.

92292. (*Mr. Lansbury.*) As to the able-bodied men that you have had to deal with or the supposed able-bodied men, there is a very small percentage that would be able-bodied in the ordinary sense, is there not?—There are very few of them who would be both able-minded and able-bodied.

92293. That is what I mean, he has either a mental, moral or physical defect in his way?—Yes.

92294. Do you not think the classification of "able-bodied" wants changing, I mean another word substituted. For instance, people say in London there are so many thousand able-bodied men chargeable, but, when you come to examine them, or put a doctor over them, you find that the number is reduced very considerably?—Yes, I think the term is very misleading.

92295. As far as the workhouses, even in London, are concerned, the number is very much smaller in proportion to the population than ever it was?—A doctor does not look over the people outside the workhouse and tell us whether they are really able-bodied or not. I think a number of persons who are earning their living if gone over by a doctor would be found not to be able-bodied.

92296. You get a man in and you have to deal with him, and we can only deal with the things we do know something about, and as to the outcry about the able-bodied men in the workhouse, the point I want to make is that "able-bodied" is the wrong term to use to the bulk of them?—I agree to that quite.

92297. Of course, you can make a workhouse so deterrent that anyone would rather die than go into it?—I do not think you can under the regulations of the Local Government Board.

92298. You can reduce the dietary?—Not below a certain point.

92299. You can be very strict in the administration, your officials can be pigs to the people?—I have never had any experience of that.

92300. You can restrict the leave, cannot you?—Yes; you could restrict the leave.

92301. And you can restrict the visiting?—Yes.

92302. You know, if you want to make it really deterrent, you have means at your disposal to put down pauperism altogether?—I thought you were speaking of the able-bodied.

92303. No, I am speaking of the old people just now?—I do not think under the present regulations you could make the House so deterrent that no one would come into it.

92304. But you can restrict visiting?—Yes.

92305. And you can restrict people going out?—It is only quite lately that this large amount of leave has been allowed, and certainly the workhouses were not absolutely empty before then.

92306. No, but you have just said in answer to Mr. Phelps that they are not so deterrent as they used to be?—I do not think they are.

92307. I only suggest to you that you might go a little further and make them so deterrent that nobody would come in. Society has to choose whether it ought to take care of these people or not?—I cannot imagine any regulations which one could legally make which would make the workhouse so deterrent that nobody would come in.

92308. It has been known that people have died rather than go in, has not it?—It has been known that people die, but whether that was rather than go in, I do not know.

92309. We have the returns of starvation, have not we?—I think very few of them have had orders given them for the workhouse. I do not recall any such case in any district in which I have worked.

92310. I only suggest that you read the return of people starving, then I think you will find some of them have?—I do read it.

92311. Another thing is, if it is known that the only thing they will get offered them is the House, and the House is a deterrent, that is a reason why they would not apply, of course?—It might be.

92312. It is not necessary to say to a person: We are going to treat you very badly; it may get out as to the conditions of such a place that the discipline is so strict, and the regulations are so strict, that self-respecting persons would not submit themselves to it, and therefore they do not apply and die of pneumonia accelerated by want of food and that kind of thing that you read of?—Your picture seems to be quite a fancy one; it does not in the least represent any workhouse that I have visited.

92313. I only suggest again that you read the return; that is what most of them die of?—I mean to say your picture of a workhouse.

92314. I am on the point of deterrence. I want to get from you whether you think we ought to make the workhouse deterrent so that people should not come?—I do not think we ought to make the workhouse so deterrent that the old people who have no place to live outside should not come there. I certainly think they ought to come there, and we ought to make their lives fairly comfortable if we get them.

92315. Then we must not grumble if they come, must we?—If it is necessary for them to come I should not grumble if they did come.

92316. And if we have a decent comfortable home we should have more. If we make the conditions comfortable for the old people they will come in larger numbers than if we make it uncomfortable for them.—"Comfortable" is such a very wide term, is it not?

Mrs. Dunn
Gardner.

28 Jan. 1908.

Workhouse
as deterrent.

Workhouses
less deterrent
than
formerly.

Starvation
cases.

Workhouses
—degree of
comfort.

Mrs. Dunn Gardner. 92317. We will use it in the ordinary sense that people understand, comfortable as you or I understand comfort? —I do not think you ought to make your workhouses comfortable in the sense that I should understand comfortable. I disagree to that.

28 Jan. 1908.

Dependence of husbands on labour of wives.

92318. Then as to the number of men who live on women's labour, do you not think that the reason there are so many more women at work to-day is because of the enormous extension of industries amongst women; occupations for women?—I do not know that from my own knowledge at all. I only know, for instance, the number of scrubbers in the infirmaries or workhouses who are keeping their husbands, who I do not think ought to be working there.

92319. Who are able-bodied men?—Yes.

Women's work.

92320. But still it is true that there are more openings for women's work to-day than formerly?—Yes; just the same as I suppose there are more occupations for men, that trade is getting more varied.

92321. But women have entered more into the industrial life than formerly, surely?—I think they have.

92322. As to the reason why women do not apply to the distress committees, large numbers of women who might otherwise have to apply to the distress committees get parish relief, do they not?—Not in Chelsea, because there is quite a small number of young women with children who are getting parish relief.

Outdoor relief.

92323. Chelsea may be exceptional; but it is the fact, is it not, that the bulk of out-relief in London is to widows and children, and to aged people?—To aged people. I should not have thought the bulk went to widows and children.

92324. But it goes to those two classes, surely?—Yes, those two classes.

92325. Able-bodied men are ruled out, except when they are sick?—Yes.

92326. Therefore if the women, many of whom say they come up because they are out of work, went to the distress committees and got employment, they would be taken off the rates in certain seasons, would they not?—They would be ineligible because they would have had relief.

Women's relief work.

92327. If they had come to you before they had got relief, if it had been known. Do you not think, if it was as well known that a woman who was out of work, if she applied to the distress committee, could get work, more would have applied?—It was made known in the same way by posters; and also the hours of registration of women were made different to those of men, so that women might not be deterred from coming there by there being a crowd of men about the office; but it did not seem to make any difference.

92328. It is the fact that very little was bothered about women by the central body till quite lately?—Nobody seemed to take much interest in the women's work certainly, during the first year hardly anything was done.

92329. It was only last year that you got the work-rooms under weigh at all, was it not?—The first work-room was opened in May, 1906, the three were opened by the end of September, 1906.

92330. So it is possible that women did not see the small posters that we put up?—The same publicity was given in the parts I know to the women applying as was given to the men applying.

92331. You would not say that was true of all London?—I do not know that; I could not answer.

Garden City and Fambridge—management.

92332. Now about Garden City and Fambridge. You were on the Garden City Committee, were you not?—Yes, and the Fambridge Committee, too.

92333. There was no reason why you should not have made any suggestions you pleased there, was there, towards getting things done differently? This is a very bad picture you paint here in these paragraphs?—Yes.

92334. There was yourself, and I think it was two other people who were members of that committee?—Is it wise to go into questions which we have already discussed?

92335. You have made statements reflecting on some- Garden body. I only suggest it reflects on you. You were City and one of the executive committee?—Quite so. Fambridge —manage- ment.

92336. You were really part of the visiting committee of that colony?—I made various suggestions, I think.

92337. Your suggestions as a rule were carried out. I suggest that you give us the suggestions now?—I did make various proposals on various colony work.

92338. I am talking of Garden City, which is the one that you severely criticise in Paragraph 20, and which you and Mr. Beveridge were more or less responsible for.—The proposals which I had made on Fambridge and Hollesley Bay were so met that I did not think it would serve any practical purpose for me to make any proposals on Garden City.

(*Note by Witness:* I ceased to be a member of the Working Colonies Committee of the Central Unemployed Body in October, 1907).

92339. I suggest that you should tell us if you ever proposed that there should be a separate person to superintend indoors?—I think myself it is inadvisable to bring forward these matters, but I will do it if you wish. As to that about the men having no place in which to put anything away, I had made no proposal about that, because when I had been going over Hollesley Bay, I said to Mr. Smart it seemed to me very uncomfortable for the men to have no cupboard or anywhere where they could put any of their things, and I thought they would be much more comfortable if they had some place where they could put away their things. He said "We lose quite enough things already," and meant if there was any place where things could be put away that more things might be stolen.

92340. I am only suggesting to you that that is Hollesley Bay.—We are dealing with the same class of men, and of my having made the suggestion.

92341. Your Paragraph 20 is the paragraph I object to.—I was dealing with the last two lines of Paragraph 20.

92342. The whole tone of Paragraph 20 is, I suggest to you, a reflection on the committee whom the colonies committee entrusted with the care of that place.—The serving of the meals, as I suggest, might have been better done.

92343. Was not that in your hands entirely?—I do not think so.

92344. Surely if a committee in London ask certain people to visit a colony such a thing as serving the meals in a decent way is a thing they ought to have controlled?—I am quite willing to accept my share of the responsibility.

92345. On the question of serving meals have you seen contractors' men on such a job as Garden City getting their meals?—I have not.

92346. Have you seen the mess-room of an ordinary railway contractor?—I have seen no contractors' men getting meals.

92347. I understand you wanted these men treated as ordinary contractors would treat them?—I do not think I said that.

92348. I thought you wanted them treated in the ordinary normal condition as they would be if they were working for a railway contractor?—That is what I suggest should be done in the future.

92349. Then I am asking you if you know anything about the conditions. You were cutting a railway siding at Garden City, were you not?—Yes, and we were, I thought, attempting to train the men to be more fit at the end of their sixteen weeks to earn their living than they had been before.

92350. Was any question of training involved at Garden City, except keeping the men in health?—No training was given.

92351. Can you tell me anywhere where the colonies committee or the central unemployed body laid it down that they were training men at Garden City for any particular piece of work, except keeping body and soul together?—It was suggested that Evening Classes and Lectures, and such things, might be done.

City 92352. That was to occupy their leisure.—Yes, which, I think, would have had a training effect.

92353. That is not the point. The difference between Garden City and Hollesley Bay is that Garden City was to do a specific piece of work, after which the men would come back to London, and Hollesley Bay was definitely a training place. I am putting to you that Garden City being a contract piece of work which was undertaken by the central body for the Garden City Company, under your scheme the conditions would have been the ordinary contractor's conditions. I want to know if you know anything about ordinary contractors' conditions for housing men away from home and allowing them means of getting their food, and the rest of it?—I do not. I do not think that the charitable manager of relief works ought to intervene at all between the contractor and the men.

92354. Very well. I suggest to you that even your Paragraph 20 would not be a bad description of the ordinary contractor's arrangements for serving food, and for living accommodation, and the rest of it.—But Paragraph 20 describes a state of things which was enormously expensive, whereas an ordinary contractor's work would be only paid for on the ordinary rates.

92355. What was enormously expensive?—The work at Garden City. I have the figures.

92356. You need not get the figures?—I should rather like to.

92357. Are you aware whether the building and the whole of the accommodation was not put on foot by an experienced official of the Local Government Board, together with the chairman of the Jewish Board of Guardians, and Mr. Scotland, the contractor's foreman, who was employed originally to superintend that work?—That, I believe, happened in the previous year, not under the Unemployed Workmen Act at all.

92358. They were the same buildings?—But when you have wooden bunks occupied by this kind of men I think that the bunks do not keep clean. There was eventually a disinfecting chamber started at the place, and it was started because it was found impossible to house the bedding and put it away. We had not even been told that the bunks were practically alive with insects until the question of housing the bedding was brought up.

92359. But the wooden bunks and the rest of it are the kind of things that an ordinary contractor would supply his men with?—Then I think it is rather rare that he would use it for two or three years, as it was at Garden City.

92360. Some railway jobs last two years, and a water reservoir would last more than two years?—And they sleep in wooden bunks which are not cleansed?

92361. They are probably cleansed. I only suggest again to you that if they were not cleansed it was the fault of the visiting committee of whom you were one?—It was the fault of the visiting committee having to be composed of persons like myself without previous experience of such things. I am learning them at great expense to the community. I knew none of them when I started.

92362. With regard to Fambridge, I notice you saying in Paragraph 30: "They, in their ignorance have done their best, and are slowly learning their experience at the expense of the London ratepayers and the national exchequer"?—Yes.

92363. Is it the fact that the whole of the work at Fambridge was carried out under the supervision of an expert?—It was the intention of the committee that it should be done. Whether it was done or not, I think there is a difference of opinion upon.

92364. Whether it was done according to the expert?—Whether he sufficiently supervised.

92365. The point is, did the London ratepayers pay for an expert?—Yes, they did.

92366. Then the ignorance of the committee did not matter?—I think if the committee had been more experienced they might have made a better arrangement with their expert.

Mrs. Dunn
Gardner.

28 Jan. 1908.

92367. As to the casual labourers, who, according to you, are the bulk of the people who get employment, are not they as a rule men who are permanently employed, only at a variety of jobs?—Not in my experience. The ones I have known are those who have been much more out of work than in work.

Class of men
relieved
under
Unemployed
Workmen
Act.

92368. I understood you to say that a large number of men's cases were not inquired into at all?—Yes.

92369. Would you say that the men for whom work was found were on the whole not men of good character and respectable?—I should not say that. I should say they were not men who were exceptionally unemployed; they were men who were chronically unemployed, the large bulk of them.

92370. You think that that class of men ought not to be assisted?—I think they ought not to be assisted under the Act, which was passed for the benefit of those who are usually regularly employed and are only out of work owing to exceptional circumstances over which they have no control.

92371. Might not the casual labourer whose work is more or less regular be out of work for a long period because trade is very bad?—I should think that is possible.

92372. Is it not the fact that the Stepney Committee really was the committee which brought about the definition of things, that a casual labourer was eligible under this Act because he had more or less regular employment, although with different employers?—I do not remember that.

92373. Do you think that the men are getting worse each year?—I think the class of applicants is getting better.

92374. So we really have not injured the men; although they are the same men that have come up again, they do better service?—We are not allowed to have men more than two years running.

Effect of
Unemployed
Workmen
Act.
Recurrent
cases.

92375. I understood just now the argument was that we got the same people year after year?—That would be impossible.

92376. This table in Paragraph 15 surely is to show that those who were assisted re-applied, and they re-applied because they were assisted. We cannot have it both ways. The man cannot get work more than two years running if he applies?—Up till now he has been able to get it for three years, because Mr. Long's scheme did not come in under the Act.

92377. But the Act says he shall only have it for two years?—Yes.

92378. So that the Act provides for that danger?—Yes. The object of that table was to show that the work which was given had not made the men more able to support themselves.

92379. Might not that be because there was not any other work for them to go to?—A larger proportion of those who had been assisted re-applied than those who had not been assisted.

92380. The Chairman put it to you, so I do not want to pursue it, that that might be because they thought it was not worth while applying?—Yes.

92381. You said just now a larger number had applied this year?—Yes.

Increased
number of
applicants.

92382. Would you say trade was as good this year and the condition of work in London was as good this year as last?—I do not know enough about it to make a comparison.

92383. You cannot give any real reason why it should be more this year?—No, I could not.

Mrs. Dunn
Gardner.

28 Jan. 1908

National
works—
wage below
standard
rate.

Hollesley
Bay—
advertise-
ments for
employment.

Working of
Unemployed
Act in third
year.

Difficulty
of obtaining
work.

92384. If a contractor takes on the work under your scheme, why should the labour be lower if the man goes and is employed under normal conditions, and the work is useful work?—Because the work would only be undertaken for the benefit of the men, not because it was wanted at that time. Therefore it would be for the good of the man and the community that he should go back to the work he should be doing when there is an opening in that work.

92385. If this is to be work of public utility, and you do not believe in made work, would not that lower the whole standard of wages?—I do not think so.

92386. You think the working classes ought, because of industrial depression, to carry out public improvements at less than the standard rate of wages merely so that they can live?—Yes.

92387. One other thing about Hollesley Bay and the advertising for other employment. I understand you to say that has only been done just lately?—It is only just quite lately that there has been any systematic effort to do it.

92388. I suppose you are aware that it has been done at the end of each season since Mr. Long's scheme?—I do not think it has been done on any large scale at all, from what I have heard.

92389. Do you really know?—I know what you have told me.

92390. Do you know of your own knowledge what newspapers have been advertised in?—You told us in committee one day how many and what their names were, I believe.

92391. Are you aware whether any more than that has been done now?—I am aware that a number of names of newspapers were taken down and sent down to Hollesley Bay, and a number of situations were found. Whether it was the result of taking down those names or from advertising in those newspapers I could not tell you.

92392. I suppose you are aware that the bulk of the people have gone into Cornwall and Devon?—Yes, because the south of England was at that meeting specially recommended.

92393. I suppose you are aware that of the men that have been placed the bulk have been placed by the mayor of Helston, and not by the body at all; it was a local gentleman who interested himself in the matter?—That has not been reported to the body, I think.

92394. (*The Bishop of Ross.*) It is some months since you wrote this statement, I believe?—Yes.

92395. I think you make reference more than once to later evidence and later statistics?—May I say something about the third year's working of the Act? My Statement was written in September, and since then I have seen the third year's working of the Act, which I had not done then, and several points have come out I think on that which rather emphasise what I had said before. One is that the idea that the Act is only intended to benefit those who are temporarily unemployed has more and more fallen into abeyance. Many of the distress committees have objected to the clause as to not being able to employ the men more than two years running, and have asked to be allowed to employ them year after year, and not to disqualify them because they have had two years' help. Then the difficulty of getting work has been more emphasised this year, I think, than ever before. This year there has been no outside work; the work outside London has not been taken on at all, not because it has not been looked for, because it has been looked for most carefully, but because no schemes have come up which it seemed possible to adopt.

92396. (*Chairman.*) By work, what do you mean?—Work like Fambridge or Garden City.

92397. Not ordinary work, but work proposed to the committee?—Yes, and not one scheme has been able to be adopted. There has been another scheme suggested for the reclamation of more land near Fambridge, but that has not so far been adopted, and no scheme at all has been taken up. Then, previously, schemes which in the ordinary way would have been paid for out of the

rates have been refused by the central body; but this Working of year those schemes have been accepted by the central Unemployed body. There was a scheme for paving at Camberwell which was refused last year on the ground that it was a scheme which would be paid for out of the rates in the ordinary way. This year it has been accepted. Then a scheme has been accepted, though it is not going to be carried out, of building a reservoir for a workhouse, which seems a thing which in the ordinary way would be carried out by the rates. Another scheme for improving a profit-earning cemetery has been accepted, and is going to be carried out. Then about the women's workroom, the disposal of the output has become a much more urgent difficulty than it was before. Hitherto it has been disposed of as outfits for emigrants; but this year they have already made as much clothing for the emigrants as the emigration committee say they can use during the year, and there is no outlet possible for the disposal of the garments which are being made in the three workrooms. At the last meeting of the unemployed body it was settled that arrangements should be tried to be made for giving away the clothes made in the women's workroom because they could not be disposed of otherwise. It is not settled they should be given away, because no plan was made; but that was the idea. Then another point is that it seems to come out more clearly how impossible it is to prevent the work of the unemployed from competing with and lessening the work of the ordinary workman. We have now at work in the Royal and County Council parks, or shall have next Monday, 1,800 men. I think it is perfectly clear that there cannot be as much work left in the parks for men who have hitherto been employed in the ordinary way working in those parks. Another point is that on the question of wages, Section (f) of Article 5, which says that the wages paid shall be less than would have been earned in continuous work by an unemployed workman, seems to have been quite given up this year. Hitherto very little skilled work has been paid for; but it has now been accepted, I believe, with the full approval of the Local Government Board, that skilled work is in future to be paid for at the ordinary rate of wages.

92398. What does "skilled work" mean?—It means Alexandra painting, masons' work, bricklaying and tiling. Some Palace work is being done at the Alexandra Palace which will take all those in, and the provision as to the wages to be paid has been absolutely altered; and as far as I can see it is not to be thought of any more. From Woolwich we had a suggestion that the whole scale of payment should be reconsidered, and suggesting, though it did not absolutely insist upon it, that 30s. should be the lowest wages. Rates of paid to any unskilled workman. At Kensington, where the question of tree-planting came on, and they were told that their unemployed men were to be paid 21s., they at once remonstrated and said it could not be done; they could not pay such wages. I think those are the new points.

92399. (*Bishop of Ross.*) You said the number of applications this year was greater than last?—Yes.

92400. Have you any record of the number so far? I am afraid I did not bring them. I thought you had those.

92401. (*Chairman.*) What you have just said rather emphasises your evidence that in your opinion, if this Unemployed question is to be dealt with thoroughly, it must be dealt Workmen with by a general scheme and by the Government?—Act. Yes; of course, I think that by dealing with it as we are doing now we are doing harm and not good. I have here a bound book of all the reports of the distress committees; may I read this very short paragraph to show you what I do mean about the harm we are doing? It is from Bermondsey, which is not a committee which is run on very strict lines, I think. They say: "We are obliged, however, to repeat the statement of last year, namely, that as the distress in this district arises from a permanent excess of unskilled labour over the demand the men on completing their terms of employment find their local labour a drug in the market just as it was before." It seems to me that anything we do to keep this large amount of unskilled labour, which is not in demand, in this district, must do harm, and not good.

The Rev.
J. H.
Anderson.

28 Jan. 1908.

The Rev. JOHN HENDRY ANDERSON, called ; and Examined.

nces
ss.

92402. (Chairman.) You are Rector of Tooting ?—I am.

92403. You were Chairman of the Works Committee of the Unemployed Fund of 1904-5 ; and you have since been Chairman of the Works Committee under the Unemployed Workmen Act ?—That is so.

92404. You have prepared a Statement, which we will treat as your evidence-in chief if you will kindly hand it in ?—Certainly. (The Witness handed in the following Statement.)

1. I was appointed Chairman of the Works Committee of the London Unemployed Fund in 1904, and to the

same position under the Central Unemployed Body in 1905 ; and I have been re-elected Chairman annually, and am at the present date still Chairman of the Works Committee.

2. The Works Committee deals with schemes of work of a non-colony character arising out of correspondence with the London County Council, the Borough Councils, other Metropolitan Authorities and Government Departments, and it becomes the duty of the Works Committee to carry out such schemes as may be adopted by the Central Unemployed Body.

3. In the winter of 1904-5 the London Unemployed Fund carried out the following schemes of work :—

Works
Committee
of central
body.

Works
carried out.

Authority Providing.	Place.	Work.	Number of Men.	Average Number of Weeks' Work per Man.
Asylums Committee of L.C.C. - -	Long Grove - -	Ground work -	1,208 - - -	8½ Weeks.
London County Council - - -	L.C.C. Parks -	„ -	692 - - -	7½ „
H.M. Office of Works - - - -	Green Park - -	„ -	336 - - -	7 „
City Corporation - - - - -	City Markets -	Painting - -	133 - - -	10 „

4. In the winter of 1905-6 my Committee carried out the following schemes of work :—

Authority Providing.	Place.	Work.	Number of Men.	Average Number of Weeks' Work per Man.
City Corporation - - - - -	Chingford - -	Making cricket ground.	382	8·0
London County Council - -	Long Grove - -	Ground work -	510	7·0
Do. - - - - -	Parks - - - -	Do. -	2,020	4·36
H.M. Office of Works - - - -	Royal Parks - -	Do. -	308	6·0
Wandsworth Borough Council - -	Tooting Common -	Making bathing lake.	312	9·1
Battersea Borough Council - - -	Battersea - - -	Laying out recreation ground.	117	9·0
Bermondsey Borough Council - -	St. Mary's Church-yard.	Laying out as open space.	40	5·5
Camberwell Borough Council - -	One Tree Hill -	Do.	100	8·0
Fulham Borough Council - - -	New Cemetery -	Laying out - -	187	12·0
Islington Borough Council - - -	Finchley Cemetery	Draining - -	13	6·5
Shoreditch Borough Council - - -	Churchyard - -	Laying out as open space.	23	5·0
St. Pancras Borough Council - -	Highgate Road -	Widening - -	36	10·0

Do. - - - - -	Kingston Road -	Piping - - -		
Do. - - - - -	Wimbledon Park -	Ditching - -		
Total men employed - -			4,084	

The Rev.
J. H.
Anderson.
28 Jan. 1908.

5. In the winter of 1906-7 my Committee carried out the following works :—

Authority Providing.	Place.	Work.	Number of Men.	Average Number of Weeks' Work per Man.
London County Council- - -	Parks - - -	Ground work- -	2,022	7·7
Do. - - -	Abbey Mills - -	Banking river -	21	4·47
Do. - - -	Wandle River -	Cleaning river -	33	4·0
H.M. Office of Works - - -	Hyde Park - -	Ground work -	96	5·2
Do. - - -	Richmond Park -	Road widening -	136	5·4
Camberwell Borough Council - -	Brunswick Square-	Laying out Recrea- tion Grounds -	72	4·3
Total men employed - - -			2,380	

Rates
of pay.

6. *Rates of Pay.*—The rates of pay varied according to the nature of the work and the conditions obtaining under the authority for whom the work was done, from 20s. to 25s. per week. The latter sum was paid for exceptionally heavy work in 1905-6, the men being specially selected. As a general rule, a fixed rate of 6d. per hour for a day of 8 or 8½ hours, or of 4s. per day for a week of five days was the standard.

Conditions
of employ-
ment.

7. *Conditions of Employment* :—

(a) *L.C.C. and Royal Parks, etc.* :—

The conditions of employment, specimens of which are attached, covered generally the following heads :—

1. An 8 (or, in the later months, 8½) hours' day and a five days' week.
2. Rates of pay (varying as stated above).
3. Travelling expenses in excess of 2d. per day, where previously sanctioned by the Committee.
4. Time lost through bad weather (deducted as a rule).
5. Identification cards, properly filled and signed, and given up as and when arranged,
6. Arrangements for payment of wages, whether on works or at the Distress Committee Offices, etc.
7. Nature of work (in some cases).
8. Special rules of the authority for whom the work was done.

(b) *Borough Schemes* :—

The conditions of employment for borough schemes of work will be found in the attached specimen agreement form (see *App. No. VII.*). The main conditions are rigidly enforced. Small matters of detail were in special instances slightly varied to meet the exigencies of the particular case. Principles are unvarying.

Borough
schemes.

Character
of men
employed.

8. *Character of Men Employed.*—Generally it might be said that the standard of the men employed in 1905-6 was somewhat inferior to that of the men employed in 1904-5. But a great improvement was apparent in the results of the season 1905-6, when, with the experience of former years to guide those responsible for carrying out the work, better supervision was maintained and the standard of conduct and efficiency was accordingly raised.

The following extracts from (a) the Preliminary Report to May 12th, 1906, contrasting the men employed in 1905-6 with those of the previous season; and (b) the Report of the Superintendent of Works, Mr. W. W. Scotland, on the London County Council Parks Works of 1906-7 will fully bear this out :—

(a) Extract from Preliminary Report to May 12th, 1906 :—

Character of Men Employed.

“As the various parks schemes, taken together, represent the largest total of men employed on similar work, the evidence afforded by them as to the character and qualifications of the men selected may perhaps be

regarded as typical of the kind of men who were offered and accepted work comparatively near their own homes.

Character
of men
unemployed.

“The conclusion drawn from the first observation of the gangs was that physically the men selected were inferior to the first drafts of unemployed dealt with the previous year, and their general appearance and the character of their work seemed to suggest that in a large number of cases the apparent needs of the applicants, rather than their industrial records and qualifications, had been the basis of the selection. The tendency to assert a claim to a share of the Queen's Fund, irrespective of industry or output, also affected the quality of the work. The dismissal of the worst offenders had, however, a salutary effect, and a general improvement in conduct was afterwards maintained. But at no time was a high standard of ability obtainable or, indeed, expected.

“It is estimated as a result of constant observation that perhaps about 20 per cent. of the men employed may at one time have been efficient workmen. These could properly be classed as general labourers, who, having lost touch with regular employment, had become more and more casual in habit and aptitude. To these the work meant physical recuperation and a means of tiding over a time of trade depression. But to the majority who had had no previous experience of this kind of work the whole period of employment was an instructional course in the elements of field labour.”

(b) Report on the London County Council Parks Works, 24th September, 1907 :—

“The Superintendent of Works, Mr. W. W. Scotland, reports that the conduct and ability of the men employed were, on the whole, very good, considering that they were of all trades and descriptions, a good many never having done any work of the kind before.”

He also found that the majority of the men commencing were unable to do a fair day's work owing to weakness, and time had to be given them to pull themselves together; although several were discharged after the first few days, the foreman in charge being convinced that they were not genuine workmen. The others showed a great improvement as time went on both at their work and in their general appearance.

The work done was principally general ground work levelling, returfing, clearing out ponds and river beds; and, although it took longer to do, it was on completion as good as that done by skilled workmen.

9. *General Remarks* :—

(a) The men employed did not prove unworthy of assistance. Under adequate supervision 70 per cent. of the men arriving on the works quickly became able to maintain a standard very little inferior to that of ordinary workmen of their class, and on discharge were fit for labour under normal conditions.

Men
employed
not un-
worthy of
assistance.

It is well to note that only about 3 per cent. of the men employed have had to be forthwith discharged. In experience I find that approximately 25 per cent. leave for no real reason, 7 per cent. for either misconduct or laziness and unfitness, and 14 per cent. leave for other employment, and 54 per cent. leave owing to the work being completed.

(b) The work provided was insufficient to meet the demand. For the period from November, 1906, to April, 1907, nearly 30,000 men and women made application to the Distress Committees, 20,480 cases were investigated. I believe the necessity is greater than the demand. 3,571 (men and women) were provided with work, 841 were offered work, but did not accept for various reasons, nearly 2,000 cases (single men, married men, and families) were emigrated.

(c) While it is well that some investigation should be made so as to eliminate obviously undeserving and impossible cases, the fact that under the most advantageous circumstances a deserving case is not as a rule ready for assistance under the Act until several weeks from the date of application even in the season when some work is forthcoming must be considered unsatisfactory. The most effective test is to be had on the works and under the foreman's eye.

(d) The value of the men's work is not represented by the recoupment received. Over £17,500 was paid in wages alone in respect of L.C.C. Parks Works last year; £3,271 9s. 1d. was received from the L.C.C. as the "value of the work done." As the standard of the men engaged on this work, compared with ordinary labour, may be safely estimated at 75 per cent., the recoupment did not fairly represent its value but was obviously written down. H.M. Office of Works pay no recoupment at all.

(e) The amendment of the Act can only be by way of extension; there must be larger scope and fewer limitations to the obtaining of work. It is practically impossible under present conditions to obtain work of "public and substantial utility" from municipal authorities without in some way, directly or indirectly, "subsidising the rates."

(f) Increasing difficulty has been experienced by my Committee in obtaining winter by winter work of "public and substantial utility" (Art. V. 1a) without in a measure subsidising the ordinary work of the Borough Councils or other public authorities. By the foregoing schedules it will be seen that during the first season 4,084 men were employed on relief works in or around London, but in the second season (1906-7) only 2,380 men could be found employment, and this present season yet more difficulty is experienced in placing even a still small number of men.

(g) The machinery of the Central Unemployed Body is a cumbrous system for the employment of labour. When work comes men are not speedily got upon the job—works are generally run about 10 per cent. short; the administration of foremen is rendered difficult when every man on the job has his cause championed by a Distress Committee.

(h) The provision of a Government Department to deal with the question of unemployment is the only possible road to solution. Wherever exceptional works of a municipal character are insufficient, national works should supplement them.

(i) The able-bodied unemployed who are unwilling to work should be compelled to work, and legislative powers to secure this should be introduced. A clear distinction should be drawn between the three classes of unemployed—i.e. (1) Willing to work, and, under satisfactory conditions, physically fit; (2) Willing to work, but physically unable to reach the standard of fitness for heavy labour; and (3) Physically fit, but unwilling to work. Separate methods should be provided for dealing with each.

(j) The limitation of sixteen weeks for unemployed work is harmful. It involves the ultimate discharge of at least 50 per cent. of the men for whom the work has been provided, and who have been thereby temporarily rehabilitated and invigorated, back to idleness at the street corners. Our efforts lead to nothing. Four years' work show no permanent betterment.

(k) In estimating the quality of the men upon the work under my Committee, it is to be borne in mind that they have run the gauntlet of the local Distress Committee and of the Classification Committee of the Central (Unemployed) Body, and they are, therefore, presumably cases preferred on grounds of moral character, thrift, steadiness, claims of dependents. Industrial capacity is not such a factor in selection as it certainly is in discharge. From the point of view of industrial capacity, much of the investigation is worthless—incapables may get on, while capable men are kept off.

(l) Much of the work carried out by my Committee could be, and ought to be, done by the local authorities themselves by the direct employment of normal labour. During the winter of 1905-6 there was a great demoralising competition amongst local authorities to get from external sources funds for carrying out work which was properly chargeable to local rates and really obligatory upon the local authority.

92405. (Chairman.) The character of the men employed by your body seems to have varied; it went down a little and then went up again? Now I suppose it is practically much the same as it was at first, except that you see indications of improvement in the men taken on the second time?—Yes; but we are getting a fresh batch, which may possibly have a fresh character; those that are excluded by the two years system are now ruled out, and we have a very large body of sturdy malcontents who can get nothing on the one side and then we have a fresh invasion of new labourers on the other; and so the total magnitude of the unemployed is rather increased.

92406. Should you say that there are many of the class for whom the Act was ostensibly brought in, namely, persons in permanent employ temporarily out of employment?—I do.

92407. They are not casual labourers?—There are a great number of those men out of employment; some of them avail themselves of the privileges of the Act, but the majority of them will not look at the provisions of the Act.

92408. As I understand it, a great many of these persons who come up are persons who are habitually in casual employment?—I do not quite agree with that, in so far as it means that they are the casuals, as it were, but rather as it seems that the state of employment is such that they cannot get the labour which they desire, and which they are only too anxious to desire. Labour is casual, not the labourer.

92409. 20 per cent. are efficient workmen. I see you state 20 per cent. may at one time have been efficient workmen. The remaining 80 per cent., I suppose, would consequently be inferior workmen?—Yes, that is a fair inference.

92410. Apparently under supervision the majority of the men work well; I see about 70 per cent. apparently soon attained to a standard very little inferior to that of ordinary workmen?—That is so. I have been told by foremen when the works had been closed down that the men leaving were then physically fit and industrially fit for work in any contractor's yard on normal terms; they had been rehabilitated; they were very low when they started, and feeble; but they had increased in strength, they were invigorated; the work set them up.

92411. From November, 1906, to April, 1907, nearly 30,000 persons made application to the distress committee?—Yes.

92412. Is that about the average in the six months of the winter?—I think that is during the time that the registers were open.

92413. Then you closed them?—Yes, the registers were then closed.

92414. You were able to provide work for 3,500 out of that number?—Roughly speaking, we have never been able to provide for more than a tithe of the applicants.

92415. You say that the return of the value of the recoupment of the men's work is not quite accurate, or is misleading?—Yes, it is not so much as it ought to be. We never have been paid what independent valuers would hold to be the fair value of the work actually done. We have always been in the hands of the employing body, who have given us what they thought fit.

92416. The preceding witness laid stress on, what I think other witnesses have also laid stress upon, namely, the increasing difficulties of obtaining employment?—The difficulty of finding work of the character defined by the Act.

92417. I suppose the advantage if you can find work locally, is that the men live at home?—That is a great moral advantage.

Comparative
cost of
men at
Hollersley
Bay and in
London.

Labour
Colonies—
difficulty as
to married
women.

Labour
colonies and
family life.

Effect of
limitation
to 16 weeks'
work.

Permanent
provision
for un-
employment.

Inutility of
labour
colonies.

State control
of un-
employment.

92418. For instance, would the cost of every person who was employed at Hollersley Bay be much in excess of what the persons would receive who worked in London, assuming they got the same rate per day?—I should say Hollersley Bay was much more expensive to manage. People at home seem to jog along on very, very little money in a wonderful way. If they get a guinea a week for work in London they are more satisfied than when they go away from home. Then there is the demoralising influence of the husband being away from home, which shows itself very often in a decreased sense of responsibility on the part of the wife in the home, and sometimes she goes out, and on the quiet (that is, without the knowledge of our committee), gets work herself; so the Hollersley Bay scheme sometimes proves doubly lucrative.

92419. With your experience there would be very considerable difficulty from that point of view in working labour colonies, particularly with regard to married women?—Especially with the wives. You would have all the difficulty you had with the women when the men went out to the Boer War.

92420. You are of opinion that the only way of dealing with this question on the lines of finding employment, is for there to be some general scheme of the Government to take it in hand?—I am. I have before my mind the family difficulty.

92421. Which is a very serious difficulty?—Immensely serious.

92422. Labour colonies on a large scale entail not only a large cost, but the separation of the heads of the family?—It is the break-up of the family life, unless you are going to have a colony of families, which might be as evil as the present system.

92423. Then the limitation of 16 weeks, of course, does some good to the individual for the time being, but otherwise I gather it simply puts the man back in the same position he was before?—I think it puts him back in a worse position.

92424. Do you really?—Yes.

92425. Why?—I say that these men are rehabilitated and reinstated physically; they come back to the corner of the street with their passions increased and the last state is worse than the first. There is no reason why you should discharge that man in my opinion, unless you are discharging him back to honest labour. Unless you find that the real remedy for unemployment—namely for work is forthcoming, it seems to me almost something amounting to cruelty to discharge a man to do nothing; the man is strong and vigorous and full of passion with an increased appetite and all the rest of it.

92426. I suppose the idea that underlay this limitation was that he would be able to get employment?—Yes; if I may say so, I think it is a complete fallacy. My opinion is that unemployment is a state that has come to stay and is going to grow under the present social and commercial system of competition, and you will have to make something like a really permanent provision for those who fail either from moral or competitive economic causes in the battle of life.

92427. I suppose I may almost sum up your experience by saying that your work for the last three or four years has not tended to solve this difficulty, but only to show the difficulties that attend the question?—It serves to accentuate it. I cannot put my finger on any one remedy. I think there are many factors. I think all these colonies, with the exception of what has been called the penal colony for the man who is unwilling to work, the man of the vagrant or loafer type, are futile. They lead to nothing.

92428. Yet, on the other hand, the idea of the State stepping in means putting into operation a machine that may become a very big and a very difficult one to work?—It has been the experience of years past in France that it was difficult, but I do not know. The work must be found for these men. There must be somebody profiting by the present state of affairs, and the burden must be placed upon them; these people cannot be allowed to starve. They have a right to live; they have the obligation to work; you may assume in a large number of cases the willingness to work and the absence of any adequate provision for work.

92429. I suppose you would agree the test of a man's Test of sincerity in asking for work is whether he does the work sincerely of which is given him to do?—My idea is, the best test is applicants the test of the jobs themselves; the man's industrial capacity is gauged under the foreman's eye. At the present time I would agree with Mrs. Dunn Gardiner that men are sent to these works more on the ground of mercy, pity and compassion for the number of children. Industrial capacity is not taken into account, but when we get him on the job we have to take it into consideration. At the same time, when I say that, I must say that the general result of the discrimination used by the various distress committees is fairly satisfactory, because we had to dismiss only about 3 per cent. of the men.

92430. If it were possible to establish some system of working colonies by which a man was tested by the job it would make a man self-reliant, and he would learn to increase rely on himself?—It is no good his relying on himself if in employment there is no work for the poor fellow to do. That is the great thing. It is what is commonly called "shortage of work," which I think is rather an inaccurate term. It is the shortage on the part of the willingness of society to provide the necessary work, and the unwillingness of public bodies to spend. A very great deal of the increase (at the present time) of unemployment is caused by the reign of parsimony under which we live in London at the present time. The public bodies will not spend the money they ought to spend.

92431. We have had evidence to show there is a considerable class of persons in London who are not very keen about permanent employment?—I agree, and I have said that for such persons there should be, what is more or less correctly called the penal colony; send him there and make him work, let his food be in proportion to his work if you please. Penal colonies.

92432. With regard to the Act itself, would you wish it to be continued?—It must be continued, unless something else can be put in its place.

92433. Is it much use continuing it unless you extend its provisions?—No, there must be increased scope for work. At the present time we can only get or beg work from a limited number of public bodies. Extension of scope of work.

92434. Your difficulties are enormously increasing?—Already they are prominent, and they are, in my opinion, continually increasing.

92435. (Bishop of Ross.) You said in your opinion unemployment has come to stay, and it is necessary to increase the scope of work?—Yes.

92436. Have you any scheme before your mind, any class of work by which this scope could be permanently, or at least for a period of some years to come, increased?—No, no Government scheme have I in my mind, but I do think the local bodies might spend a great deal more money on local work than they do. Rates might be spent in providing labour which in its turn I think would tend to save the rates in another direction, by making provision for what is called the able-bodied. Increased local expenditure as a remedy for unemployment.

92437. These works could scarcely be reproductive in the ordinary sense?—I think they would be reproductive; they would increase the comfort of the town in the same way that a gentleman's garden differs in comfort from that of a poor man's back yard. For instance, at this time we have four boroughs in London planting trees. There is a great deal of terrible monotony in the streets of London, one after another, just alike, and all straight, and nothing in them. It is a great thing I think to have got four boroughs to beautify themselves, if I may say so, by trees.

92438. In that way you would increase the health?—Yes. A great many streets in London are not channelled, the gutters are simply macadam, when they might have granite setts. There is a very poor municipal standard in London, I think, except in the City.

92439. Therefore your idea is that the works would be indirectly reproductive, yet not reproductive in the mere arithmetical sense of the word, in giving a percentage on the money?—Yes, they would employ a much larger amount of labour, than is being employed under the system which is far too much in vogue in the municipalities in London, that is, putting all the works out to contractors; the labour is sweated down to its very lowest ebb, and the men who introduce that sort

of thing are largely contractors themselves, architects, landowners and the like. They sit on these bodies. They are interested parties.

92440. The municipalities in that way could do a great deal in your opinion?—Yes.

92441. You also suggest the provision of a Government Department?—Yes, I should like to emphasise what I have said. I know of one borough in London where, since the new council came in, over 100 men have been dismissed because the work has been let out now to contractors which work used to be done by men in the Works Department of the council, and done quite as efficiently as it will be done by the contractors. These contractors generally have their own men; they import them into the locality, and they cause a great deal of ill-feeling between the men who are displaced and the men who are imported.

92442. Have the contractors got the same total amount of money from the municipalities, do you think, as the municipalities spent when they employed their own people?—I do not think they have got the money from the municipalities. The work that such men do is done in new streets, the cost of which is paid for by the frontagers abutting. It is collected from the frontagers, and paid over to whoever does it.

92443. The municipality has no profit out of this money collected I suppose?—They are not supposed to make any profit; there would be a small charge for supervision.

92444. They would be able to let the house at a somewhat lower rate if the frontage money was less?—Yes, no doubt, but I do not think a small capital addition of that sort makes a very great addition to the rent; not so much as 1d. increase in the rates, which would be an excuse for the landlord to put up the rent 6d.

92445. I gathered your main idea was that the Act should be so strengthened, as that the central Government would take up the question of unemployment?—Yes, I say that because the unemployment difficulty to my mind is not a mere local difficulty, it is a national difficulty, and therefore should be dealt with, as financially it is already being done, out of national money. I go a step further and say that there ought to be, if possible, national works, because the local works are insufficient.

92446. What class of works in your mind could be taken up by the nation at large?—It is exceedingly difficult to say. Reclamation is one that seems to suggest itself most as likely to be most productive, after the style of the Dutch on the coast of Holland, and the Belgians on the coast from Ostend past Blankenberg. A great deal of land has been reclaimed there, and more may be reclaimed.

92447. The class of work that has been done in Belgium in the last fifty or 100 years was done in England 300 or 400 years ago?—But there is more of it to be done, is there not?

92448. I suppose there would be, but England is pretty well reclaimed, compared to Belgium?—Then there is protection as well as aggression in this work.

92449. I saw by this morning's paper that the Small Holdings Act was working well, that they had already received 3,000 applications. Would that relieve the difficulty, in your opinion?—No, I am afraid not. I do not think that the man who has been about London on the pavements for a certain number of years, after a period of some sixteen weeks, or even more—even three years—at Hollesley Bay, is going to turn out the practical fellow that is necessary to make a small holding pay. The agricultural labourer in my opinion is really a skilled artisan. He knows a great many things besides turning over clods. He can drain, and he can ditch, and thatch. He understands stock, and times, and seasons.

92450. Agriculture in your view is not quite so simple a process as townspeople regard it, I suppose?—It is not.

92451. Though you may not be able to successfully put the Londoner out into small holdings, would it be a future advantage if you prevented many of the agricultural labourers from coming into the cities?—I agree it would.

92452. So that though you may not relieve the immediate difficulty you check the trouble in the future? I agree.

92453. Would you agree that would be a better method, so far as the future is concerned, than by transferring the Londoner?—I would.

92454. So far you think the successful working of that Act will have some influence for betterment in the future—If it retains the men on the land, and the population increases, and the amenities and the social joys of country life get back to something like the days of Merry England, then there will be a happy life in the country, but I do not think you are going to get it by the mere "Back-to-the-land" system of taking these men who are here in London, and planting them there in the country.

92455. I think we agree so far it is not so much "back-to-the-land," as "remain on the land"?—That is it.

92456. (Mr. Bentham.) I notice in one of these paragraphs you complain that the proper amount of recoupment has not been received from the London County Council for work done by the distress committee?—I do.

92457. Who values that work?—The people by whom the work is provided, the people who have asked for it; they are their own judges of the value.

92458. Do they put the value on before the work is commenced?—No.

92459. Would that not be a proper stipulation to make?—We cannot make a stipulation of that sort, because we are absolutely and entirely in their hands. They give us the work, and we must trust to them for recoupment. For instance, the Royal Parks made no recoupment at all. We are doing much work there for which there is to be no recoupment, and financially if you get to the bottom of the business, I do not think the recoupment matters much at all. It is only taking it out of one pocket and putting it into another, because all the money belongs to the nation. It comes from the Treasury.

92460. A great deal depends on arriving at the proper value of the work done by this class of men?—Yes, but at the same time the body who is paying the value of this work to us, who said the value of this work to them was only one-tenth of the wages we expended on it, will tell you that the labour reached a standard little short of the normal labour of contractors, but what they do say in addition is: "that is the value of the work to us." Let me give you an example. There is an asylum under the management of the London County Council Asylums Committee at Long Grove, near Epsom, surrounded by a great tract of land—derelict farms really. We undertook to bring it into cultivation. We treble trenched it, we grubbed up all the hedges which had outgrown and extended far into the land, and recovered a great area of the land in that way. The time came to consider recoupment. The Asylum Committee took the view that all this work could have been left until the Asylum was filled with lunatics, who could have done that work without any cost whatever. This was work which was anticipated, it was brought into use earlier than it otherwise would have been, more promptly; and the measure of the value of that work to them was the measure of the earliness with which it came into their possession, not the wages expended. They never would have spent the money on it, and we were asked, (and I thought to a large extent rightly so) to be grateful to them for having given us the work at all. That was a matter that was not very well understood by a commercial gentleman, whose name is a name of weight in the City of London. He was so much annoyed about the recoupment (it was in the days when there was a subscription to a voluntary fund), that he came and offered at his own expense to pay for an independent valuation of the value of the work by any one man out of ten names of the most eminent firms of valuers in the City of London. I had to tell him if I went with a proposal like that to the London County Council, it would simply end in our getting no more work at all. We had better take the recoupment and be content to let the public understand that the recoupment we receive is by no means the money value of the labour expended. No contractor would have done that work for the amount we have been recouped.

The Rev.
J. H.
Anderson.

28 Jan. 1908.

- The Rev. J. H. Anderson.* 92461. Have any of the workmen been put on piece-work at all?—No.
- 28 Jan. 1908. 92462. In none of your works?—No, none on piece-work, time work only, 6d. an hour the lowest.
- Piece-work. 92463. Do you not approve of piece-work?—No, not for that class of labour. You must deal very gently with these men who come to you in a very feeble run-down state of health. The only way is to get some good man to set the pace. Most of the work we do is levelling and returfing, and you set out a line of men, and a good discreet foreman can size up his men. He says: "That looks a good fellow; I will put him there, that looks another likely man, I will put him there," and they all begin, and you see the line become more and more serpent-like as they go along, and then you shift your men accordingly, and try to get the work up in a straight line, and you jockey the men a little bit that are lagging behind, but not with severity. If you find a man very feeble you find the best remedy is to fall the man out and give him a basin of soup. That is the real remedy—find out whether the man is willing. If he is willing, put up with it. He will improve. To put these men on piece-work at the outset would be cruel. Piece-work is all very well for an expert man when his fingers are deft and he has a temptation to be lazy. It is not the right method with these men.
- Subsidising rates. 92464. What you claim is that the work you have done is to a certain extent directly or indirectly subsidising the rates?—All the work we have done is subsidising the rates.
92465. No; some of the work you have done is for the municipal authorities?—I agree. It is difficult to find work which does not to some extent subsidise the rates. A very great deal of the work which public bodies offer us is work which, in my opinion and in the opinion of many men, they ought to do for themselves. At the time we had the Queen's Fund to administer there was a demoralising and disgraceful snatching among the municipalities, each trying to get the most money for the benefit of their own borough, thinking of that much more than the benefit of the unemployed.
- Interference with normal employment. 92466. If any of this work which they offered to your committee is work which they ought to have done themselves, it would mean that the men who would have been employed in a normal way, would be unemployed while your men did the work?—It would mean, I understand, that if the work ought to be done at all, it would be done in the municipality, and by employing normal labour in the ordinary way, but as things go on in the municipalities there is a great deal of under-employment. May I give an example? A little while ago we had from a southern borough here a large proposal for extending sewers. If the sewers of that neighbourhood require extension for the sewerage, if it is needed, it ought to be paid for out of the rates, and paid for by the locality. If it is necessary it ought to be done; if it is not necessary it should be left alone.
92467. The whole scheme of this provision has had this tendency. But this apparently necessary work is still left undone; the work that is necessary work is being pushed on to your committee to be done by the unemployed?—Yes.
92468. In order that the municipality may reap some advantage by this Unemployed Workmen Act?—My committee has pushed that work off; the municipalities push it on, but we push it off.
- Municipalities and the Works Committee of the central body. 92469. You have not done it?—No. This one case came up before us yesterday, and it is before the Local Government Board at this present moment, the case alluded to by Mrs. Dunn Gardiner, the case at Camberwell, where work ought to be done by the municipality, we think, but, however, there are very great difficulties, the municipality has a very great burden, so I think the Local Government Board are going to make a grant of a half; probably the borough will refuse it. In another case, the case of Lambeth, they have bought some ground which, in some fifteen years time, will be a depot for that borough for the ordinary surveyors' work of sweeping, slopping, and the like. This ground has to be cleared and to a large extent excavated. They ask for the total value of the money to be expended in wages in doing that. They say they will not do it themselves now; it is work which could be done in fifteen years time, but they will put it forward. We rejected it, but it is sent to the Local Government Board under the exceptional circumstances of acute distress in Lambeth, and the President will make a grant of a half of the cost of the labour, not the whole cost. It ought to be borne, in my opinion, entirely by the municipality. The municipality are going to bear half, and the other half is coming out of the Treasury grant. Why the Treasury grant should be expended on providing depots for the borough of Lambeth I do not know. Why the national funds should be employed on such an absolutely local effort I do not know.
92470. You rather suggest that an extension of powers might be given to the distress committees, or that in some other way something permanent should be done for these men rather than give them sixteen weeks work; they should be retained until they could get suitable employment?—Yes. I maintain that unemployment is acute even in the summer time, and if these men are to be unemployed when they are discharged I do not think we ought to discharge them.
92471. If that were so would not a man feel, when he got into occupation of what is considered work for the unemployed, that he had got a permanent job?—I daresay some would.
92472. How do you get over that difficulty?—The partial way in which it is got over is that you are giving him less money than he might be getting under a normal state of employment; he is working a five days week instead of a six-days week. I know there are lots of men who would like that. I know also there are lots of men about who have said: "I only want two days," or "I only want three days." They say: "If I can get 12s. a week, Mr. Anderson, I can jog along perfectly well; I do not want any more." I would admire, to some extent, that man if I thought it was done out of brotherly love to his neighbour, in order that he might get a share and be able to jog along too; but I am bound to say I believe it is done from motives of laziness; that man has a low idea of his duty and self-respect.
92473. Would you preclude those men, on the other hand, from earning a little in other ways?—My impression is that at these colonies—
92474. I do not mean in the colonies?—At those works we should take pains to inform ourselves as to the state of labour, and we ought to be in a position to go and say to these men: "Now at this contractor's yard there is a job for twenty men; who will volunteer?" or we may sift them out and draft them on.
92475. First of all you want to get the offer from the contractor that he would take twenty men?—Yes.
92476. That is getting rather away from the point?—No, I think not, because we have constructed our labour bureau to get at the contractor and get the contractor to come to us, so that the information we get there we might pass on to our relief works.
92477. The bureau is a different branch of the work to the unemployed department?—I agree.
92478. I am speaking more particularly of the men who are unemployed. If you give them almost a guarantee that they will be kept on there until they have either found another job for themselves or you have found it for them, it might become a very serious burden?—I do not know. What I look at is the higher ground. If it be true that there is no work for that man, then I must hold that it is the duty of society to keep that man. We did not ask him to come into society, and he must stay in society until he is sent for.
92479. Of course, men usually are expected to make their own way in the world?—I am afraid the case can be put more strongly in favour of these men by saying that at present society is rather organised against them. They do not get a fair chance. The work is not there for them. They are not wanted.
92480. That rather changes round, it is not the same men all the time, or we should say it is the man's fault; surely the men get a chance of work sometimes, or they likely to are unemployable?—I think that the same men, when remain once they drop into the condition of unemployment, unemployed.
- Permanent provision for unemployment.
- Duty of society to provide for man without work.
- Men who drop into the condition of unemployment.

are likely to remain unemployed. I think any training provision is useless. We see that this year. We have the men who were on three years ago standing out as stalwart malcontents, angry with the newcomers taking their place, and those men have remained out of work the whole summer, or depended on such casual jobs as they could get.

92481. You do not attribute that at all to the fault of the men?—Not at all.

92482. Is it not likely that in some cases it might be that the men feeling that a provision is there lessens the incentive for the men to find work for themselves?—I do not believe it. I believe they love liberty so much that they would rather go their own way than be nursed along by anybody. I believe in the independence of the British working man.

92483. You do not think any suggestion you are making will sap it?—Our scheme does not create, nor does it accentuate, the unemployed problem.

92484. There is another point of view. If these men are to be employed economically, which you admit is the only way they can be employed, it means someone else is providing that money?—Certainly.

92485. Does it not withdraw that from the employment of other people in other directions?—I cannot look at it from that point of view. There is somebody in society profiting by the present state of affairs. There are a lot of people getting very rich, and at the same time there is an increasing number of men getting very poor. Those that profit must provide for those that lose.

92486. You cannot say that those who are profiting are profiting at the expense of those that you are seeking to benefit. Do you say that?—I do, I believe that the present system of industrial organisation is largely the cause of the present lack of employment.

92487. Put it in this way: In order to enable these people to get rich a lot of people must be employed?—I do not think so.

92488. They cannot get rich without people working for them, can they?—Some people do. I know a man who has a good lot in Consols, and never does any work at all; and he is piling up a nice lot of dollars; but he he lives like a pauper.

92489. He will have to get something to invest in Consols. He has to get rich before he gets his Consols?—There are a lot of people like that; some people are born rich.

92490. What I want to stick to is the method of getting rich. It is urged against people who are in business that they make their money by dealing unjustly with or by exploiting the worker. That pre-supposes that there are people working for them, and those people are getting wages. Those who are not employed, who are left unemployed, that is who cannot find a place in the social machine, are left out for some reason?—I think they are left out without any reasoning. They do not take the trouble to reason.

92491. Is it not usually because no one can employ them at a profit?—I do not know. It is the old cry.

92492. That is really the economic reason?—No, it is not really. There is the old cry: "No man hath hired us." The Good man gives them a job; and if there are a lot of men in this country who can cry honestly: "No man hath hired us" it is the duty of a Christian man to find them a job.

92493. It is the duty also of those who have the management of public affairs and power to take money compulsorily from those who are employed to see that these people are not dealt with in such a way as to make it more eligible to be so called unemployed than it is to be employed?—I agree that corresponding with the right to live there is the obligation to work; and society has as much right to enforce that obligation as there is a duty on society to acknowledge the right to live.

92494. An obligation to work?—Yes.

92495. Why should you concern yourself about obliging a man to work if he does not need assistance; it is no business of society if he asks nothing of society whether he works or not. What injury does he do to anybody?—Every man is his brother's keeper. Every man has

on him by the obligation of his birth a duty to his fellows; a man cannot wrap himself up in his own selfishness.

92496. If a man does not need your assistance why should you concern yourself about him?—Such a man would need the assistance of the highest moralists in the country to teach him moral righteousness. 28 Jan. 1908.

92497. I agree. Burke once said "Patience, labour, frugality, sobriety and religion should be recommended, but all the rest is downright fraud?"—Immorality does not account for want of employment. Only 3 per cent. of our men had to be dismissed, that is for lack of industrial capacity, and only some 7 per cent. for other disabilities. It was 7 per cent. for misconduct, laziness or unfitness.

92498. That is according to the standard that is set up by the committee that is dealing with them?—It was the standard that would prevail in any ordinary contractor's yard. It is the standard set up by Mr. Scotland with the approval of myself and my Committee; and the testimonial of the London County Council last year as to the work done by the men acting under that standard is that they were worth quite 90 per cent. of the ordinary contractor's labourer. Standard of capacity.

92499. You leave out altogether, in your proposals for dealing with this problem, any economic consideration?—Do you mean by an economic consideration the question of profit?

92500. No, I mean economic consideration as to whether these people can be employed in such a way as to earn what they consume?—I want them to earn what they consume. I want a man to have the facility to earn the bread that he may live. I am not concerned that there should be a profit in the sense of lucre or dividend. I am concerned that there should be profit for the human being himself, and also in this sense to the society into which he has been born.

92501. Do you consider it possible to deal with the unemployed on that basis? Supposing you had to say: Now we will employ those who can be so engaged as to earn what they consume, and all the rest shall be dealt with in some other way, that would be in a sense selecting those who could be normally employed? Would you draw the line there?—I have classified them in one of the paragraphs of my statement; the able-bodied who are unwilling to work should be compelled to work; and legislative power to secure this should be introduced; in other words I would have power to take the idler, the loafer, the man who shows no will to work, more especially if he were neglecting his dependents, before a magistrate and have him committed for a certain period to a working colony. Treatment of unemployed by separate methods according to classification.

92502. That is rather a different class?—And then a clear distinction should be drawn between the three classes willing to work and under satisfactory conditions physically fit, the willing to work but physically unable to reach the standard of fitness, and the physically fit but unwilling to work; and separate methods should be provided for dealing with each.

92503. This class is rather different to the one that is able and willing to work; and if you cannot find sufficient work for the willing why should you attempt to compel the man who is willing to work to do the work which the other man ought to do; because you agree there is a difficulty in finding work for him to do?—I put it the other way, that our present social or commercial system finds difficulty in providing the work. There is a lot of work to be done; but side by side with that there is the will on the part of those in whose possession that work is not to have it done. In other words, there is what Mr. Hobson would call under-consumption. "Under-consumption."

92504. You could not say that would apply to a public body could you?—From what point of view of the public body? The public body shunts most of the work; that is my present complaint in London. I can go round and say this ought to be done but they do not do it.

92505. Mr. Hobson's reference to under-consumption was meant to apply to the individual, not public bodies; it was under-consumption on the part of the people generally?—Yes.

The Rev. J. H. Anderson.
28 Jan. 1903.
"Under-consumption" by municipality.

92506. It does not apply really to a municipality?—I think it can. They have means of getting public money which they ought to spend for the public good, and they do not do it from an inferior sense of what is for the public good. In other words, there is not a high and proper moral spirit dominating.

92507. What I am afraid of is that what you are advocating unintentionally is that as they have power to get money they should get it by taxing the people for it, and spending it for the public good; that is what you would advocate, but you also advocate the supplying of it for the individual good of a certain class, and it may be doubtful whether it is for the public good?—I only go so far as to say this, it is good for a man who is born to live till he is sent for. If you have to convince yourself, as I have convinced myself, that there are people in this land that are only starving, or living on the generosity of the philanthropic, then I say there is an obligation on the community which the community must discharge, and economics in this particular respect must go to the wind.

Poor Law provision.

92508. The public has accepted that obligation for hundreds of years, and there has been a legal system for dealing with all people who are in distress and want. No person need want?—No.

92509. That may have answered its purpose, or may not, according to the individual who is considering it, but it is hedged round with conditions, and all its conditions are supposed to have grown round it in order to protect it from becoming abused?—Yes.

92510. What you mean now is that it is unnecessary for these conditions to be attached, and a more generous spirit altogether should prevail with regard to the treatment of those who are in want?—If they are really in want and are incapable of providing for themselves.

Provision of Poor Law and relief work compared.

92511. Why should not the Poor Law suffice for that purpose?—It is far better to pay men to work to occupy their minds than to shut them up in a house, a so-called workhouse, an absolute misnomer.

92512. The intention of the workhouse was to find work?—Yes.

92513. But through all the hundreds of years that it has passed it has been unable to do it satisfactorily?—Yes.

Greater provision of work possible.

92514. Do you mean to say now that it can be done satisfactorily by some other body?—Yes, I think work can be provided to a greater extent than it is at present.

92515. Without doing injury to the persons getting relief, and doing injustice to the people who find the money?—No, I will give you an example. I had an interview with the Conservators of the River Thames with a view to making an embankment the other side of Putney Bridge. It would do no harm to anybody, but the money to do it is not forthcoming. There is the work; it would be a great benefit to the community; it would be something like another embankment, like you have here, but it cannot be done. There is the difficulty and the hitch. The Government out of the Treasury grant, will without the slightest doubt find the money, but there is no other body to find the material, and for the sake of a few bags of cement, 160 men will go idle all this winter.

92516. You do not take into account at all the money so far as I can see that might be expended in that way is employing someone somewhere. You cannot withdraw unlimited money from the public without reducing the employment somewhere?—There is a great deal of money amongst the public that can be very well spared for the poorer classes.

92517. That would not interfere at all with employment?—I do not think so.

92518. That would depend on whom you got it from, would it not?—Yes, I think it would. A graduated system might very righteously be applied.

92519. We need not go into the methods of taxation. Do you think money will be got that will not interfere with employment in other directions, which will provide

employment for these people, and also will confer a national benefit?—Yes, a lot of English money is invested abroad, and all that sort of thing—plenty of it.

92520. I do not see how we are going to get at that. I have sympathy with the English unemployed, but I do not want to see any system that will not bear the strictest examination, in suggesting that a certain class shall be employed it should be in a direction that will not cause other persons to be unemployed?—I agree.

92521. And one has to look very carefully round a question like that.—I agree.

92522. It is no use to say there is plenty of money in the country and it can be employed this way or that, and it would do no harm to the persons from whom we are taking it, nor would it do harm to the persons you are employing, it is an easy way to say that, but it is not so simple as it looks, and it may create difficulties in other directions.—That has been said beforehand in olden times, and it has been said again, but it may come off.

92523. (*Mrs. Bosanquet.*) You heard, I think, Mrs. National Dunn Gardiner's plan that the State should open some large works at times of special distress and throw them open to everybody. Do you think that would apply?—I do not think that is the remedy. I hold that unemployment is permanent and increasing. I think Mrs. Dunn Gardiner would hold that it is temporary and occasionally acute.

92524. Supposing it is permanent and increasing in England, would not emigration be a better way of meeting it?—I am afraid not. There is a tendency at the present time to over-accentuate emigration. It had a temporary success at the first blush, but the difficulties in Canada now are beginning to increase. I do not think we shall be able to send many to Canada this summer. I find that unemployment is great in the States; and unemployment is great in Germany. The Berlin police are going for the unemployed at the point of the bayonet.

92525. So long as Canada really wants our men you would see no objection to their going there?—No; I am not over much in favour of emigration: but it is all under one flag, and it is not like going to a foreign land. I am very glad for them to go there; at the same time I do hold that there is an enormous amount of derelict land in our own country that might very well be put into cultivation.

92526. Suppose we got that thrown into the market, as it were, would that be a better way of doing it than by special devices for unemployed?—If you can get it in the ordinary normal way well and good; but my impression is that the present state of things has produced the unemployment; and as long as the present state of things continues the law, you will have this product, which is now permanently increasing. As wealth increases on one side you will have poverty increasing on the other, that form of poverty called "unemployment," or "under-employment," if you will.

92527. Is there any state of things to which you can point us which does not produce this evil in any country in any age in the past?—I am afraid not. All I call attention to is that selfishness of an extreme portion of the community that does not in my opinion do its duty adequately.

92528. Really your remedy would be a moral one. —A moral one, yes; but not based upon the immorality of the one class so much as upon the lack of morals of the other.

92529. (*Mr. Bentham.*) You do not attach so much importance, do you, to training these people for a higher occupation?—Not much. There is plenty of that. There is an educational ladder from the gutter to the Woollack, almost.

92530. You only mean, do you, that if there were they would not find employment?—I think they would not find employment. The great thing is to employ them. The remedy for mischief or sin or crime is employment. When people get into mischief then wise men send them to work.

works in time of stress no remedy, as unemployment permanent and increasing.

Emigration.

Derelict land.

Selfishness of portion of the community.

Remedy for unemployment a moral one. Small importance of training of unemployed.

ONE HUNDRED AND FORTY-FIFTH DAY.

Monday, 3rd February, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
Dr. A. H. DOWNES.
The Rev. T. GAGE GARDINER.
Mr. J. PATTEN-MACDOUGALL, C.B.
Mr. T. HANCOCK NUNN.
The Rev. L. R. PHELPS.

Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.
The Right Rev. The LORD BISHOP of ROSS.

Mr. R. H. A. G. DUFF (*Secretary*).Mr. J. JEFFREY (*Assistant Secretary*).

Dr. ARTHUR NEWSHOLME, M.D., F.R.C.P., called; and Examined.

92531. (*Bishop of Ross*.) You are Medical Officer of Health for Brighton, I think?—That is so.

92532. And you have come to give evidence in that capacity as Medical Officer of Health for Brighton?—Entirely so.

92533. You do not wish that any official importance should attach to that evidence, except in so far as you are Medical Officer of Health for Brighton?—No importance can attach to it beyond what attaches to my appointment in Brighton.

92534. You have kindly prepared for us a Paper, a very full and informed Paper, and that, with your permission, will be printed in the Minutes of Evidence; is that your wish?—Certainly. (*The Witness handed in the following Statement.*)

1. I am a Doctor of Medicine, and a Fellow of the Royal College of Physicians. For the last nineteen years I have been medical officer of health of Brighton and physician to the Municipal Isolation Hospital; for four years I was medical officer of health of Clapham, and at the same time physician to the City Dispensary and medical officer to the Westminster and Southlands Training Colleges for Teachers. I am a member of the Statistical Committee of the Imperial Cancer Research Fund, and have been President of the Incorporated Society of Medical Officers of Health, and Milroy Lecturer to the Royal College of Physicians. In addition to routine official enquiries involving consequent administrative action, to some part of which I shall have to refer in the course of my evidence, I have at various times made special enquiry, principally from the standpoint of public health, into school attendance (1890), overcrowding (1891), cancer (1893), industrial occupation (1893), rheumatic fever (1896), epidemic diphtheria (1898), epidemic diarrhoea (1899), notification of consumption (1899), isolation hospitals and scarlet fever (1901), the spread of tuberculosis (1901), sanatoria for consumption (1902), epidemiology of small-pox (1902), physical degeneration (1903), "missed" cases (1904), and alcoholism (1904). The dates given are those of my first publication of original work on the respective subjects; in most cases these publications have been followed by further work continued at intervals up to the present time. Most of these enquiries were undertaken in the hope of clearing up for my own guidance points on which published evidence at the time was inconclusive, and so far as the circumstances of my council have allowed, administrative action has been taken in Brighton on the lines indicated by their results.

The subjects on which I am asked to give evidence before the Commissioners have engaged my close attention for many years. So far as concerns medical assistance in general, the views to which they have led me were published in 1899 and 1900 in papers read before medical societies. I first gave definite

form to those relating to the reduction of the phthisis death-rate in my Report to the International Congress of Hygiene and Demography, held at Brussels in 1903; and the results of further enquiry were stated at greater length in a paper in the *Journal of Hygiene* in July, 1906. This summary of work will indicate that the main conclusions which I shall submit have not been prepared for the Commissioners at short notice, but represent the best inferences which I have been able to draw from a somewhat protracted experience and study of the matters in question.

2. I am asked (i.) to give some account of agencies in Brighton for assisting the poor with medicine or medical advice, and (ii.) to discuss (a) the manner in which they co-operate or overlap; (b) the possibility (in which I understand to be included the expediency) of unifying their administration; and (c) their general sufficiency for the health of the community, especially in relation to phthisis.

3. I am able to state the leading facts regarding the agencies in Brighton; though as to the majority of those not administered by the town council the information at my disposal is not materially greater than that which I have obtained from time to time in regard to other districts. In regard to the inferences which I am asked to draw from my knowledge of these facts, I should feel considerably more hesitation in defining the alterations which I should recommend, if I had to rely only on my knowledge of the experience of Brighton, for grave fallacy is apt to arise from considering merely parochial or local experience. After making the required statement as to the Brighton agencies, I propose, therefore, to consider the remaining questions in the light of such wider experience and information as I have obtained from all sources.

MEDICAL AID IN BRIGHTON.

4. The principal agencies in Brighton for providing medicine and medical advice for the poor are as follows:—

I.—OFFICIAL.

A.—Municipal.

- (i.) Municipal Isolation Hospital.
- (ii.) Bacteriological Laboratory.
- (iii.) Phthisis, including sanatorium treatment.
- (iv.) Municipal Home Nursing.
- (v.) School Nurse.
- (vi.) Municipal medical visits.

B.—Poor Law Medical Relief.

stay and
number
treated.

Disinfection
of phthisical
patients'
houses, and
inspection of
notified cases
by sanitary
authority.

(i.) *The Municipal Isolation Hospital* (Sanatorium) for infectious diseases serves a population of about 128,000. This hospital is free to ratepayers and their children; as between the municipality and the guardians a charge is made for parochial patients. For 1906 the number treated was: Scarlet fever, 217; enteric fever, 12; measles, 4; German measles, 1; diphtheria, 194; erysipelas, 8; chicken-pox, 1; other diseases, 2; phthisis, 229. Total, 668. Small-pox is treated in a separate small hospital. Children suffering from scabies (itch) and from body-lice are admitted occasionally until they and their clothing can be disinfected.

(ii.) There is a *bacteriological laboratory* in which, in addition to work done for the hospital and the Public Health Department, free bacteriological diagnosis is given to private practitioners, to whom the necessary outfits are supplied without charge. This service has been of considerable help in defining both the nature of the disease and the duration of infection, and is used freely. In 1906 fifty-seven specimens of blood were examined for typhoid fever, 2,388 specimens from throats for diphtheria (in this disease several specimens often being sent from one patient), and 720 specimens of sputum for tuberculosis.

(iii.) *Phth'sis*.—A limited amount of accommodation is provided for the treatment of phthisis, and a short account of the history of this branch of the service and of the details of its working is necessary for the purpose of a later part of my evidence. The free bacteriological diagnosis of phthisis began in December, 1897, and was followed by the introduction of a system of voluntary notification in January, 1899. In August, 1899, the Corporation undertook to pay for such notifications on the same basis as for those under the Infectious Diseases (Notification) Act. In the course of 1902 first four, and then ten beds were set aside in the Isolation Hospital for the treatment of phthisis. Most of the patients admitted had extensive lung disease; but it was more convenient both to them and to the hospital that they should be treated only for a month. This limit was extended sometimes to five or even six weeks; the total number so treated to the end of 1906 is 567, the weeks of treatment 2,828, giving an average of about five weeks per case. The patients chosen for admission were for the most part still able to work. No prospect was held out of recovery before discharge. The hope under which they were admitted, as was explained to them, was that the month's rest and treatment would enable them to recover a stock of strength and to acquire in their personal habits a training which would improve their chances of ultimate recovery, and greatly reduce the risk of infecting their families. Their stay was also expected to give their families valuable relief from anxiety. It was especially noteworthy that, while directions given at home as to disposal of sputum and similar precautions were commonly disregarded, the habits acquired in the short stay at the sanatorium were in most cases kept up at home. During the patient's absence the house was cleansed and disinfected. Pocket spit-bottles and Japanese handkerchiefs were provided without charge for every notified case requiring them, whether admitted into the sanatorium or not. An inspector of special tact was detailed to visit about once every three months each family from which a notification had been received. His mission was:—

(a) To persuade the patient, if desirable, to apply for admission or readmission into the sanatorium, or to take other means for obtaining suitable treatment.

(b) To secure the examination of any other ailing members of the family, either by supplying a "letter" for the County Hospital if he was satisfied that the patient could not afford a doctor's fee, or by arranging for the medical officer of health to communicate with the usual medical attendant.

(c) To see that the spit-bottles, handkerchiefs, etc., were being used properly, to renew breakages, and to do what was possible to secure observance of the rules for avoiding infection.

(d) To observe generally the condition of the home in respect of cleanliness, overcrowding, and general sanitary arrangements, to use the influence which he had obtained from his sympathetic relationship

with the household to induce the occupants to take such action as was desirable, and to initiate the necessary steps where there was any sanitary defect curable by administrative action.

The medical officer of health or his medical assistant sees each notified patient in the first instance, and the action taken at this interview and by the inspector under (b) and (d) ensures relatively early diagnosis of fresh disease and valuable information as to insanitary conditions. The system has greatly helped in preventing substantial delay in diagnosis of fresh cases of phthisis in the patient's family. As an indication of the particulars which are secured automatically in this way I append a copy of the form of report used by the inspector and filed at the office, with any clinical details furnished by the doctor on notification (*see Appendix No. VIII. (A).*) It will be observed that the submission of sputum for examination, the notification of each case, and all the steps following on notification are voluntary, and that each step asked of the patient is coupled with some inducement in the shape of improved treatment. The information as to general sanitary conditions and as to disease in other members of the family, though of great importance to the public health department apart from the individual case, is obtained incidentally, and without the appearance of special inquisition.

The ratio of notifications to deaths from phthisis is considerably higher in Brighton than in any other town in the country, including one in which notification is compulsory. I entertain no doubt that this is due largely to the provision of treatment, and that no such result could have been obtained from any system of visitation and inspection limited to diagnosis and advice.

In April, 1906, the number of beds appropriated to phthisis was increased to twenty-five, a large part of the extra expenditure coming from the interest of £20,000 out of a bequest left by Mr. Hedgecock to the town council. This interest covers approximately the out-of-pocket cost of maintenance of twelve extra beds, exclusive of their proportion of standing charges. Of the extra fifteen beds three are reserved for paying-patients, and the remaining twelve are selected for more prolonged treatment than is given in the ten municipal beds.

The annual deaths from phthisis in Brighton are about 170, and at present there are about 700 notified cases under observation, giving four consumptives, mostly in working life, under supervision for every annual death. About fifty per cent. of these cases have been through the sanatorium.

(iv.) *Municipal Home Nursing*.—A certain amount of medical assistance is given by the Public Health Department apart from its hospital. A municipal nurse is provided under a local Act in a few cases in which home treatment is desirable. This Act authorises the provision of a nurse at the patient's home in certain diseases (enteric fever, puerperal fever, etc.), when, for instance, the patient's state does not allow of removal. This service has sometimes been of extreme value to the patient.

(v.) *School Nurse*.—A school nurse under the joint supervision of the medical officer of health and the clerk to the Education Committee attended, in 1906, ringworm, 206 cases; itch, 36; verminous heads, 770 (including 180 of body lice) eczema, 144; and other conditions, 746. A large proportion of these cases were visited and advice given at the parents' homes.

(vi.) *Municipal Medical Visits*.—"Contact" cases, especially children, are brought systematically to the office of the medical officer of health for examination, which includes the taking of throat swabs, examination for ringworm, and decision as to return to school; and houses are visited as occasion may require for investigation of doubtful cases of disease and similar purposes. In addition, 4,759 visits were made in 1906 by lay inspectors for special minor inspections in relation to phthisis and other infections, and 1,496 visits for disinfection. The total number of medical attendances, though not recorded separately, is very large. They occupy a considerable part of the medical officer of health's time, and that of the medical assistant, and are undertaken with a view to extended diagnosis and preventive measures. They do not involve the provision of direct medical assistance, and their usefulness is restricted accordingly.

Advantage

health.

In cases of doubtful diagnosis the medical officer of health is also called into gratuitous consultation by private practitioners whenever they wish it.

Cost of Municipal Services.

The total cost of the Public Health Department to the rates is 1·02d. in the £; and of the Isolation Hospital, including debt charges, is 2·28d. The municipal measures of medical help which I have described have been accompanied by vigorous action directed towards the reduction of overcrowding. In the last fifteen years one person out of every twenty of the working classes in Brighton has, as the result of condemnation of houses, been rehoused under improved conditions. The cost of the areas cleared under Part I. of the Housing of the Working Classes Act represents a debt of about 1·1d. in the £ for the next twenty years. It may serve to fix a rough scale to these expenses if I mention that the education rate in Brighton is 15·7d. and the police rate 5·6d., and that locally these rates are not considered excessive.

B.—Poor Law Medical Relief.

The medical relief given by the Poor Law is adminis-

tered in two parishes, that of Brighton having an estimated population at the middle of 1906 of 102,320, while that of Preston (in the Steyning Union) has an estimated population of 25,775. The poor rate in Brighton parish 1906-7 is 1s. 7½d., for Preston parish, 10d. The figures of relief for Brighton parish are as follows:—The average weekly number of inmates of the workhouse (including the infirmary) in the half-year ending Michaelmas, 1905, was 1,207 as compared with 1,361 in the previous half-year. The weekly average cost per inmate was 4s. 2½d. About 400 of the inmates are sick persons, and about thirty of these known to be consumptives. With the phthisis beds at the sanatorium this gives about one phthisis bed per 2,000 of population. The number in receipt of outdoor relief during the half-year ending Michaelmas, 1905, averaged 1,589, as compared with 1,666 in the previous year, the average weekly cost per head being 2s. 4½d. The above cost for in-maintenance does not include repairs and furniture, salaries and other remuneration, rations and superannuation allowances of the officers and servants. The cost for outdoor relief does not include salaries of officers.

Dr. Arthur Newsholme, M.D., F.R.C.P.

Statistics and Law relief in Brighton.

II.—VOLUNTARY AGENCIES.

	Patients in 1905:		
	In-patients.	Out-patients.	
Sussex County Hospital - - - - -	1,986	6,839	Attendances, 39,625.
Children's Hospital - - - - -	690	3,418	
Throat and Ear Hospital - - - - -	331	1,457	Attendances, 7,101.
Sussex Eye Hospital - - - - -	247	3,249	
Hospital for Women and Lying-in Institution -	138	725	Also 861 midwifery cases attended at home.
	Total Patients. 9,832		Number attended at home, 3,485 (17,400 visits made).
Brighton, Hove and Preston Dispensary - -			
Provident Dispensary - - - - -	275 admissions during the year.		

1906.	New Cases.		Patients visited at home.	
	Dispensary.	Consultations.	Number.	Number of Visits.
Sussex County Homoeopathic Dispensary -	1,846	11,166	1,535	6,658
Brighton Homoeopathic Dispensary - -	1,215	5,514	210	1,050
Dental Hospital- - - - -	Total patients in 1905 was 4,236.			

Some of the above institutions serve a wider district than the Municipal Borough of Brighton. The rules admitting to treatment at these different institutions vary, the usual plan being by subscribers' letters, which are often very difficult to obtain. Serious casualties and emergencies are treated at the county and children's hospital without letters. At several of the institutions charges are made. In 1906 the provident dispensary received from members' payments, £276 0s. 9d. and from confinement fees, £16 4s., subscriptions, donations and dividends amounting to about £128. In 1905 the Brighton and Hove Dispensary received from workmen's boxes £501, from registration fees £160, from friendly and similar societies about £174. Its total expenditure that year was about £3,380, coming, except for the above amounts, from subscriptions and bequests. At the Throat and Ear Hospital small payments are made by patients, and the same remark applies to the Homoeopathic Dispensaries. (ii.) The Queen's nurses in the year 1905-6 paid 56,994 visits to 1,774 cases of non-communicable illness. (iii.) Confinements.—The hospital for women has a large lying-in branch, patients being attended at home by trained midwives at a fee of 6s. for each confinement

(primiparae, 10s.), and attendance afterwards. In 1906, 749 or 26·3 per cent. of the total births in the municipal borough were attended from this institution. The administration of the Midwives Act has been found to involve considerable practical difficulties. Under this Act the midwife is bound to call in medical aid when required, and in particular if her patient's temperature rises over 100°F. But the practitioner called in refuses not infrequently to examine the patient on account of the danger to his other patients. The point being new, I may instance a case which came recently under my notice. Two doctors were called successively to a patient in an acute febrile condition after confinement. Neither made the necessary examination, but the second doctor without a complete examination formed the opinion at the end of thirty-six hours that the patient had rheumatic fever. On the strength of this opinion the patient was admitted to the general hospital, where she died of virulent puerperal fever, for which she had received only the most belated treatment. The majority of women employing midwives cannot afford the cost of a doctor's attendance. A great mass of preventable suffering is due to this fact, which also largely influences the midwives in neglecting to discharge their duty to summon medical aid when needed. Apart from general considerations, the following facts have led me to the conclusion that this neglect occurs.

Provision by voluntary agency for maternity cases. Effect of Midwives Act on assistance by medical practitioner.

Dr. Arthur
Newsholme,

Need for
voluntary
notification
of births by
midwives.

Quality of
medical aid
through
friendly
societies.

Unsatisfac-
tory arrange-
ments of
private
medical
clubs.

Comparative
merits of
medical aid
in Brighton
and other
towns.

Extent to
which medi-
cal agencies
co-operate
and overlap.

In addition to the obligation to call in the doctor in certain events, midwives are also bound to send to the medical officer of health an immediate notification of the circumstances which have necessitated this action. They are under no obligation to notify births, and the disadvantage to the public health service arising from the absence of notification has led me recently to recommend that midwives should be invited to give the notification voluntarily in return for a small sum—two pence per case—to cover postage, etc.

In the absence of complete information I am unable to state accurately the number of cases attended by private midwives in Brighton as compared with those attended by the midwives of the lying-in institution. Probably, however, the private midwives attend at least as many cases as do the midwives of the institution. Yet in 1906 I received ninety-two notifications from the midwives of the lying-in institution of cases in which they had called in the house-surgeon, as against five from the whole of the private midwives of cases in which they had called in medical practitioners.

(iv.) *Co-operative and Private Medical Treatment.*—In addition to the above agencies, friendly societies supply a considerable amount of medical aid, which is usually somewhat better in quality than that in the poorer forms of private practice, though the payment made per member is nearly always too little to admit of uniformly good work.

Many of the poor join private adventure medical aid associations by the payment of small weekly sums. A still larger number pay 6d. and 1s. fees to private doctors at their dispensaries. The arrangements under these last two headings are particularly unsatisfactory, and it is seldom that efficient medical aid is given under such circumstances. At a later stage I shall refer to the question of the sufficiency of treatment in general as obtained in these ways. For the moment I will merely mention as a practical illustration that it is no uncommon experience to find patients suffering from phthisis who have been treated at intervals for several years for cough and expectoration without either the chest having been examined, the sputum submitted for examination, or the disease diagnosed.

MEDICAL AID THROUGHOUT THE COUNTRY.

5. As the Brighton arrangements and practice have been described in some detail, it will be convenient to use them as a rough syllabus of the practice all over the country. In view of the peculiar position of Brighton, it is possible that this will somewhat over-estimate the extent and quality of the provision of medical aid. It must be remembered that Brighton has a special interest in its character as a health resort, and for long has depended largely for its prosperity on the attraction which it offers in respect of health to families coming to the town to visit or reside permanently. There is, therefore, in the municipal traditions of Brighton an amount of enlightenment which is probably well above the average; and the measures taken by a corporation so equipped for its duties will necessarily be somewhat in advance of those taken in the average of other towns. Experience has shown, however, that differences of this kind are not permanent, and it will be quite safe to assume that an institution not determined by strictly local considerations which a given town has adopted and found to its advantage will find its way ultimately into the practice of other towns. The error made by including it in the measures adopted throughout the country will therefore be only an error of date. My further observations will accordingly be understood to relate to the country as a whole, except when confined expressly to a given town.

CO-OPERATION OF MEDICAL SERVICES.

6. Even in Brighton, then, where medical aid is relatively good, arrangements for the co-operation which is necessary if the greatest good is to be derived from medical aid are almost absent, except in regard to phthisis.

The agencies at work have been classified above as official and voluntary. In both of these there is little co-operation, much overlapping, and in some instances unserviceable rivalry in the giving of medical aid.

(i.) *Official Medical Aid.*—Here there is both costly duplication of machinery and waste of sanitary information and control. Thus the Poor Law medical officers are daily in possession of information—at present wasted—respecting overcrowding, uncleanness, and the like, which

if the work of these officers were controlled and regulated from the standpoint of preventive medicine would be of great service to the common health. When we remember how greatly sickness among the poor is due to conditions of housing, this inco-ordination of official effort is eminently unsatisfactory.

(ii.) *Voluntary Medical Aid.*—The same remarks apply with even greater force to the knowledge obtained by the medical officers of dispensaries and hospitals and by private practitioners during their visits to patients' homes or their consultations with these patients. The treatment given by these doctors under present conditions is necessarily one-sided and partial, as in very many instances it cannot deal with the environmental conditions which have provoked disease.

The overlapping and consequent wastefulness of voluntary medical charities is too well known to need detailed discussion. Conversely, I may illustrate by a single example how co-operation may help the services which employ it. The public health department includes medical and sanitary branches, the work of which is done independently. Owing to the fact that they are conducted by the same department, their work is co-ordinated in every detail, and the example to which I wish to draw attention is that of the inspector who visits notified cases of phthisis (page 986, col. i.).

Through him the mere notification of a case of phthisis by the private practitioner sets in motion as far as it is required the entire machinery—prophylactic, curative and sanitary—of the public health department. His visit directs the patient into the avenues of medical relief. If he were the officer of a club or dispensary, his mission would end there. Representing as he does the other interests of the public health, he is able to exercise the necessary educational influence, to obtain early diagnosis of fresh cases in a nest in which one has already been hatched, and to give information as to matters, such as overcrowding, of which otherwise the public health department would be quite likely to receive no notice. Instead of visits being multiplied, one visit serves several ends; and automatically and without expense the information obtained is distributed to the department really concerned. An economy of time, energy and money is secured by this co-ordinated arrangement which would be impracticable if the departments concerned were administered by separate authorities.

7. Before considering whether the present medical aid is sufficient for the needs of the public health in general and the control of phthisis in particular, we must consider the extent of the relationship between preventive and curative medicine.

THE SCOPE OF PREVENTIVE MEDICINE.

8. The nature and extent of the medical aid required by the public health can be decided safely only on the basis that prevention is better than cure. I am very deliberately of opinion that the present medical aid is insufficient for the needs of the public health; for the majority of the cases of disease are such that either their occurrence could have been prevented or their duration and severity reduced by previous medical precautions. Medical aid will continue to be defective so long as medicine is regarded as chiefly curative rather than chiefly preventive. The doctrine that medicine should be chiefly preventive is now recognised as true for acute infectious diseases, and is the basis of the administration by which they are controlled. The restriction of the scope of preventive medicine to acute or even to chronic infectious disease is obviously arbitrary; and although this does not condemn the restriction as necessarily unsound, I have no doubt whatever that it is so, and that it is responsible for an enormous mass of avoidable sickness.

9. (a) *General Sanitation and Control of Acute Infectious Diseases.*—The scope of preventive medicine was confined not long since to measures for abating nuisances and introducing sanitary improvements such as drainage, water supply, open spaces, better house construction, and general cleanliness. With the development of knowledge as to the channels of infection, preventive medicine was required to devise measures for the control of acute infectious disease. The adoption of such measures is now recognised as no less a part of the duty of the community than the adoption of measures of general sanitation. Unfortunately at the present time the practical scope of preventive medicine in most parts of this country is limited to measures of these two classes; and although

Inco-ordination of sanitary Poor Law medical authorities

Inco-ordination of voluntary and official medical agencies

Example benefits advantage of co-operation of medical agencies

Insufficiency of medical aid.

Avoidable sickness due to restriction of preventive medicine.

General sanitation and control of acute infectious diseases.

mechanism already exists in public health legislation by which preventive medicine could be extended to some extent to non-infectious diseases, the interest which the community has in applying preventive measures to disease in general has not yet become evident in local administration.

10. (b) *Non-infectious Diseases*.—Nevertheless, of the common diseases there are few of which the severity may not vary according to the delay which occurs, before they are treated and the extent to which the treatment is insufficient. A non-infectious disease in its early stage may often be regarded for practical purposes as the cause of a more severe later stage, which the proper treatment of the early stage would prevent. Much medical aid is now given as a palliative measure after the disease has been allowed to grow to maturity; and the very magnitude of the disease which it seeks to palliate and of the resulting invalidity and expense is often due to the omission to apply medical aid at an earlier stage as a preventive measure. Thus rickets, when neglected, is not only the cause of much deformity and of difficult childbirth in women in later life, but also determines a very large proportion of the fatal respiratory diseases of children. Bronchitis is the registered cause of as many deaths as tuberculosis; and a large proportion of these deaths occurring before old age would be prevented by early treatment, especially directed to removing industrial or other conditions which have provoked it. Cancer in operable parts of the body is to a large extent a curable disease if diagnosed and removed at a sufficiently early stage. It is pitiable, for instance, that so many avoidable deaths from cancer of the cervix uteri should occur as do occur under the present conditions of medical attendance. Convulsions are the registered cause of 24,870 and diarrhoea of 39,071 out of every million total death from all causes. These deaths are chiefly due to errors of feeding of babies, which could be avoided were early medical attendance and health-visiting always available. These instances might be continued indefinitely. Thus mental diseases, constipation, appendicitis, bad teeth are obvious examples of conditions the early treatment of which would prevent serious consequences.

11. (c) *Preventable and Non-Preventable Diseases*.—In the following Table I have attempted a rough classification of the proportional mortality from each of the chief groups of diseases:—

Out of 100 Total Deaths from all Causes.		
Caused by:—		Per cent.
Acute notifiable infectious diseases	-	2·39
Acute non-notifiable infectious diseases, including pneumonia and rheumatic fever	- - -	18·58
Chronic infective diseases, including tuberculosis	- - -	11·21
Accident	- - -	2·69
Preventable non-infective diseases*	-	3·31
Partially preventable non-infective diseases†	- - -	17·63
All other diseases	- - -	43·89
		100·00

There can be little doubt that the list of preventable diseases will receive extension rapidly, and that a much larger proportion of total diseases than is indicated above would be prevented by early and efficient treatment.

12. The above table probably understates the relative mischief due to non-infectious disease. In acute infectious diseases the period of impaired activity or disablement is relatively short, both before treatment and after recovery. In the non-infectious diseases the onset may be far more protracted and the cure far less complete, the period of impaired activity or disablement being on the average considerably longer than is the case with acute infectious diseases. This protracted onset is not a difficulty but a direct assistance to preventive medicine. In a very large number of cases the disease would be cured quickly, often even while it was in the state of a slight ailment, if by the mechanism of preventive medicine it were recognised at the stage at which it could be treated most easily, effectively and economically. In some cases the cure effected is incomplete only because treatment has been too long postponed. In other cases the incompleteness of cure and the persistence of after-effects are the direct result of the imperfect treatment which alone was at the disposal of the patient. It is, in fact, beyond reasonable doubt that a very large part of non-infectious disease occurs or becomes inveterate by reason of the absence of early diagnosis and proper treatment. Such disease therefore comes within the scope of preventive medicine; and in Germany, for example, it has already begun to be treated by preventive measures.

(d) *Saving of Lives and Sickness to be Effected.*

13. A system which ensured early recognition and proper treatment not only of acute but of chronic infectious and of non-infectious disease would, in my opinion, yield a larger saving of lives and sickness than that which has been obtained up to now in the control of acute infectious diseases. The table given in paragraph 11 gives some rough support for this opinion; and a very large margin for administrative difficulties could be allowed on figures of sickness and life to be saved before the prospect of such a saving as I venture to forecast would become doubtful. I should like, however, to draw more detailed attention to two chronic infectious diseases the extent of which deserves special consideration. I refer to phthisis and syphilis.

(e) *The Phthisis Bill.*

14. The clearest view of the burden imposed on the community by phthisis is perhaps obtained by considering its incidence among men and women of working ages. The following table gives the death-rate at each age-period per 100,000 living at that period, and the deaths per 100 deaths from all causes at the same age-period, the figures for the chief working years of life being given in italics:—

Dr. Arthur Newsholme,
M.D.,
F.R.C.P.
3 Feb. 1908.
Necessity for early diagnosis and preventive treatment of non-infectious diseases as in Germany.

Benefits accruing from early recognition and proper treatment of disease.

Incidence of phthisis among men and women of working ages.

ENGLAND AND WALES, 1904.

		Ages.	0—	5—	10—	15—	20—	25—	35—	45—	55—	65—	All ages.

† Including bronchitis, cancer, convulsions, chronic Bright's disease.

Dr. Arthur
Newsholme,
M.D.,
F.R.C.P.

3 Feb. 1908.

Comparative
averages of
invalidity
and mortality
from
phthisis.

15. The average period of disablement is probably higher in phthisis than in most other diseases, and the proportion of invalidity due to phthisis must be correspondingly higher than the share of phthisis in the general death-rate. It may, therefore, be said with certainty that the total loss through phthisis of lives is not less than one-fourth and of time is not less than one-third of the total lives and time lost through all causes in the most vigorous working ages. I select the figures of working ages for the present purpose, because the further measures required in the interest of the health of the community must be considered ultimately from the economic standpoint; and although this is not an aspect on which I am entitled to trouble the Commissioners in any detail, it is important that where possible the loss sustained by the community through preventable disease should be exhibited in some terms sufficient to indicate its order of magnitude.

Syphilis a
cause of
racial
pollution.

16. (f) *Venereal Disease*.—The terribly serious character of many of the forms which syphilis assumes is well known. It is apt in some cases to be far more refractory to treatment than is phthisis; when it has once got a thorough hold on the patient before treatment it is one of the most relentless agents of destruction both to the nervous system and to other parts of the body; and whereas phthisis is rarely, if ever, congenital, syphilis is notoriously and eminently so, and from this point of view is far more to be dreaded as a persistent source of racial pollution. It is one of the diseases, like rheumatic fever, in which the sufficiently grave primary attack is apt to leave the patient with sequelae of an even more serious character, and it is under the name of the particular sequela which proves fatal that the case is recorded. For this, as well as for another obvious reason, the amount of the disease recorded in published figures is grossly below the truth. It is one of the diseases in which early recognition and treatment is particularly essential to cure and to the prevention of spread. Were it not for its etiological associations it would receive much more administrative attention than it has had; and so far as the public health is concerned, not the least of the advantages of a system ensuring prompt diagnosis and treatment of all diseases would be that it would for the first time begin to give some effective control over syphilis without singling it out for exceptional treatment to which many people would object.

THE PROPER STANDARD OF MEDICAL AID.

Proper stan-
dard of
medical aid
and need of
measures to
combat
preventable
disease.

17. Putting together all the facts which I have outlined, the standard of medical aid which I regard as required by the health of the community is such a system as will assure effectively the early recognition and the proper treatment of all disease; and measures which fall short of that standard will leave in the community an amount of preventable disease varying with the imperfection of the system.

With the help of this standard I will now consider the sufficiency of the present arrangements for medical treatment.

THE SUFFICIENCY OF THE PRESENT MEDICAL SERVICES.

(a) *Treatment of Acute Disease.*

Need of
better
accommoda-
tion and
treatment for
puerperal
fever, erysi-
pelas, and
acute vener-
eal diseases.

Danger of
treating
erysipelas
and puerper-
al fever in
workhouse
infirmary.

18. The treatment of most forms of acute disease, when once diagnosed, is relatively satisfactory, whether the disease be infectious or not. The chief exceptions to this statement are to be found in the treatment of puerperal fever, erysipelas and acute venereal diseases. General hospitals as a rule will not admit puerperal fever, erysipelas, gonorrhoea or syphilis because of the risk to other patients. A few municipalities admit the first two diseases to their isolation hospitals; and there can be no doubt that this is the proper course to adopt. Meanwhile, in most districts the only available institution is the Poor Law infirmary, admission to which is beset with difficulties. The admission of erysipelas to the workhouse infirmary, unless in a special ward, is not free from danger to patients with ulcerated legs, etc. In the case of puerperal fever it is doubtful whether, when admission has been obtained, it is really conducive, under conditions now common, to successful treatment; and unless special precautions are taken it involves risks to the patients in the lying-in department of the workhouse.

The control of midwives at the present time is unsatisfactory, and with some notable exceptions there is insufficient or no supervision of their work, and no arrangements for providing them with medical aid when they require it.

In non-infectious diseases the patient may not be treated properly until his condition is grave enough to drive him into hospital, and there may be much difficulty in obtaining admission.

(b) *Diagnosis and Domiciliary Treatment.*

19. In every branch of practice among the poor the arrangements for diagnosis are wholly insufficient. This deficiency is verified in the daily experience of medical officers of health as to infections, and of hospital physicians and surgeons as to non-infectious disease. In the households of the masses of the population whose health determines that of the community, the normal condition is to shirk medical advice, often even when the health of the occupants has already been affected. In respect of infectious disease this results in reducing considerably the benefit of the measures taken by the public health service, notably of isolation hospitals. The accommodation which they provide is devoted in substantial part to clearing up the leakage of infection which has occurred in missed or late notified cases instead of being devoted wholly to the treatment of cases notified immediately after onset of the disease. I propose for my present purpose to assume that this state of things is admitted on all hands, and that the Commissioners will have satisfied themselves already of its existence. If any doubt, however, were entertained on the point, I could give such particulars of experience within my knowledge, as in my judgment would amount to demonstration. Meanwhile I will express my personal opinion, with which I think most medical officers of health would agree as being that probably more cases of epidemic disease occur through delay in diagnosis than through any other single cause. In regard to chronic infectious diseases, including phthisis and syphilis, the difficulty of obtaining early recognition is nearly as great as with non-infectious diseases, and the consequences to the patient and to those associated with him are no less serious.

(c) *The Causes of Delayed Diagnosis.*

20. Apart from the indifference born of ignorance, which is gradually being dispelled, the chief reason preventing early recognition of disease is expense. The payment made by the patient in the case of friendly societies and provident dispensaries secures more attendance than in the case of private doctors; but it secures it at rates so low as to make it almost impossible for the medical attendant to make proper examination of each case if he is to earn his living from his practice. It is not probably through failing to see the doctor that the diseases of patients who belong to such clubs fail to be recognised; the reason is simply that at the rates of remuneration that are paid, the doctor has not time to make sure of recognising them. The patients who go to private doctors charging fees from sixpence upwards are as a rule still worse off; for, with no better chance of a sufficient examination, they have a direct inducement for postponing the chance of it in the hope of saving the fee, which they can as ill afford to pay as the doctor can to give a proper examination for it. Doubtless there are in the profession men of exceptional mental and physical capacity who, unhappily for themselves, have to conduct their practices under such conditions, and manage nevertheless to do justice to their patients. I am certain that few doctors would scamp a case if time allowed them to examine it properly; and the reason that the number of those who examine all their patients properly in practices of this kind is small is that no ordinary man can do it in any practicable working hours. If the case is unusual or difficult the services of a consultant can seldom be secured unless the patient goes to a hospital.

21. In public dispensaries and the out-patient departments of hospitals the same difficulties arise. The expense in such cases is not direct, consisting as it does in the time that has to be spent in waiting to receive attention; but probably this would amount in money to almost as much as the cost of private attendance. The patient also runs some substantial risk of acquiring or giving infection in the waiting-rooms, particularly of children's hospitals, and is subjected to the humiliating questions

which under the existing system are very properly asked as to his qualifying indigence or destitution. These circumstances undoubtedly act on patients as motives for postponing application to the hospital until the illness becomes unbearable, and serve in the majority of cases to delay the decision to go to a general hospital until the disease has already made headway. Further delay after the decision has been reached occurs because a "letter" has to be obtained. In this process a delay of twenty-four or forty-eight hours or even longer may very likely occur; and in some acute diseases, this may not only serve to disseminate infection, but may reduce or even abolish the chance of cure. When the patient ultimately has obtained admission, the examination which is made in dispensaries and out-patient rooms is open to precisely the same objection as that given by the clubs and private doctors in practice among the poor; that the number of patients attended in a day exceeds largely the number that can be examined properly. Thus an enormous amount of disease unquestionably slips unrecognised through the fingers of the over-burdened doctors, and is left to mature into a graver condition without proper treatment.

THE DECREASE OF PHTHISIS.

22. Of preventable diseases the most important and one of the most tractable to administrative measures is phthisis. In considering practical measures for its further reduction it is necessary to assign the order of importance of the various causes of the reduction of the disease which in this country has already occurred. The public health service would be prepared to attack the disease along all lines simultaneously; but the cost of doing so effectively would be beyond any sum that there would be reasonable hope of obtaining from the national or municipal treasuries. It is therefore a matter of great importance to the public health to determine if possible which, if any, of the agencies in question has played the predominant part in causing the reduction, so that whatever funds can be obtained may be used to the greatest advantage.

(a) Phthisis and Poverty.

23. The most obvious explanation of a reduced phthisis rate occurring in a period of increased prosperity is to suggest that the reduction is due to diminishing poverty. No assistance, however, can be obtained from such a suggestion. Though the closeness of the relation of poverty to phthisis and certain other diseases is unquestionable,

poverty is a phenomenon more complex even than disease; and an explanation of a phenomenon in terms of others more complex than that which has to be explained is obviously illusory. It is recognised generally that deficient nutrition, lowered vitality, dirt, overcrowding, and the other incidents of poverty tend to favour disease and in particular phthisis. Poverty is however not the sole influence affecting this disease. Norway, the country with the lowest general death-rate in Europe, is almost the poorest. In phthisis its death-rate, though much less than the highest in Europe, is excessive in relation to its general death-rate; and this excess has occurred in the last twenty years, during which there has been considerable increase of wages throughout the country. In France there has been great decline of poverty without any material effect on the phthisis death-rate; in Ireland, with many indications of somewhat greater prosperity, there has been a rise in the phthisis death-rate. It is evident in fact that, much as the phenomena have in common, they are not exclusively interdependent; and the direct reduction of poverty is therefore not an indispensable condition for the reduction of phthisis, although ultimately it would contribute much to that end. I speak intentionally of direct reduction, because a consideration of the amount of working time now sacrificed to disease shows that the reduction of disease will in itself cause an inevitable, if indirect, reduction of poverty. That poverty and disease work on each other in a vicious circle is deplored often and justly. It may be remembered, however, that this circle may have the quality of its defect; that it may permit the amount of both evils to be decreased by measures directed against disease alone, even in a community which regards its existing amount of poverty as the inevitable result of causes beyond its control, or which is not prepared to make the much greater economic sacrifice involved in dealing with both simultaneously to the utmost practicable extent.

(b) Increase in Institutional Treatment.

24. I propose therefore next to submit the facts which are available for determining the most important cause of the reduction of phthisis and the conclusions to which they lead. Of late years there has been a marked increase in the ratio of the number of cases of sickness, including phthisis, which are treated in institutions in England and Wales to those which are treated at home. The following tables exhibit the gradual transfer of the treatment of disease to institutions:—

Dr. Arthur Newsholme,
M.D.,
F.R.C.P.

It would go further into detail than would be desirable if I were to submit the local figures which show that the transfer of treatment to institutions has particularly affected phthisis. They are to be found elsewhere*, together with those relating to the principal other statements made in this part of my evidence.

(c) Other Influences.

Increased institutional treatment, and consequent reduction of death-rate from phthisis.

25. It will be observed that with increased institutional treatment there has been considerable reduction of the death-rate from phthisis. During the period of this reduction there have also been changes in other social agencies affecting phthisis. There has been steady increase of urbanisation, and the urban populations in this and other countries of which I have examined the figures invariably have suffered from phthisis more than have rural populations. The powerful influence of increased urbanisation has therefore been working against the decrease of the phthisis death-rate, and the net decrease which has occurred shows that the influence of urbanisation must have been outbalanced by other more powerful influences. There has however been a reduction in the urban as well as in the rural death-rate from phthisis; and in both urban and rural rates this reduction, like that which has occurred in the country as a whole, has been greater than the reduction in the corresponding general death-rate. The reduction in the death-rate from phthisis cannot therefore be regarded as due merely to the improvement in the general death-rate. The discovery of the tubercle bacillus in 1882 and the more complete results published by Dr. Koch in 1884 were followed by the adoption of measures in the treatment of phthisis directed against its infectivity. Prior to that date no suspicion of infectivity in this disease had affected general medical practice. The rate of decline has not increased in this country since that date, and in several other countries has slackened perceptibly. The progress of sanitary education cannot therefore have been the cause of the decline which began before it and did not increase with its advent. The same observation applies to the adoption of measures for repressing dust and improving ventilation in factories and workshops. The use of special sanatoria for consumption has been too recent and too slight to have affected the gross figures appreciably. There is good reason for attributing to improvement in subsoil drainage and in milk-supply only a subsidiary importance in the control of phthisis, especially at working ages. On the other hand there has been improvement in housing, as measured by decreased overcrowding, and in well-being, as measured by the prices of wheat, the cost of total food, the total cost of living, the course of wages, the total amount of food consumed, and the course of pauperism. No circumstance offers any *prima facie* reason against one of these

Difficulty of locating predominant cause of decreased phthisis.

factors having been the predominant cause of the reduction; and the improvement in nutrition has been regarded strongly as standing in that relation to the decreased phthisis rate. So far as British experience goes, it appears therefore that among the social phenomena which have been regarded as influencing phthisis, the predominant cause, if there is one, of the reduction of the death rate from phthisis must be increased institutional treatment, improved housing, or in one or more ways improved well-being. So far as action is to be based upon past experience, it is, therefore, to further improvement in one or more of these respects that we must look at present for further reduction of the invalidity and death-rate from phthisis.

Need for increased institutional treatment of phthisis.

(d) The Predominant Influence of Institutional Treatment.

26. The only way in which I have found it possible to decide which of these several variants has been the predominant factor has been the comparative examination of foreign and British experience, in which the same influences have been traced and their relation to the phthisis death rate observed. Increase of phthisis has occurred in Norway, simultaneously with nearly the largest decrease in the general death-rate. In national experience the decline in the phthisis death-rate, where it has occurred, has exceeded constantly and largely the decline in the general mortality, as I have already pointed out has been the case with British urban and British rural experience. This experience confirms the view that the general reduction of phthisis observable in most countries has occurred under the operation of some influence other than, or operating in a markedly different degree from, those to which the decline of the general death rate is due. Improved housing has not served to prevent increase of phthisis in Ireland, nor heavily and continuously congested housing to prevent great decrease of phthisis in Germany, Berlin and New York. The course of the costs of wheat, total food and total living shows only slight correspondence with that of the phthisis rate in Germany and Paris, and in Ireland moves in the inverse direction. Massachusetts has higher wages than Great Britain, and a much higher phthisis rate; considerable rise of wages has been accompanied in Ireland and in Norway by a rise in phthisis. The consumption of food per head shows no correspondence with the extent of prevalence of phthisis; England with twice the meat consumption of Belgium per head of population has no appreciably lower phthisis rate, and no more rapid decrease in prevalence; Paris with high food consumption has by far the highest phthisis rate, and with increasing food consumption shows no certain decrease in phthisis. The factors, therefore, of housing and nutrition have not exerted on the prevalence phthisis such an influence as constantly to counteract of the other factors of its prevalence. On the other hand,

Relation of death-rate from phthisis to general death-rate.

Incidence of sanitary and industrial conditions on phthisis.

* *Journal of Hygiene*, July, 1906.

institutional treatment of phthisis, measured by the ratio of deaths or cases in institutions to deaths or cases in the whole community, shows moderate to close co-variations in all the experiences which have been examined (United Kingdom, London, Norway, Sweden, Copenhagen, Prussia, Berlin, Brussels, and New York; the character of the hospital treatment in Paris does not allow comparison to be made). Measured by the ratio of indoor to total pauperism or of indoor pauperism to total deaths from phthisis, the extent of treatment of phthisis in workhouse infirmaries shows in each of the three countries of the United Kingdom a close co-variation with the reduction of the phthisis rate. Individual examination of the experience of workhouses and workhouse infirmaries in various parts of the United Kingdom shows a constantly increasing use of these institutions for the treatment of phthisis; their total present use for that purpose is very high. In each of the four towns (Brighton, Sheffield, Salford and Newport, Mon.) into which I have been able to make minute examination, increasing use has been accompanied by decreasing phthisis. In addition, in England and Wales a large and increasing amount of phthisis has been treated in institutions such as lunatic asylums, other than workhouses and workhouse infirmaries. In chronic infectious disease, institutional treatment has the advantage of segregating the infective patient from his surroundings, and might *a priori* be expected to have an important effect on the control of infection. The removal of an infectious patient from an unhealthy dwelling in which his disease is specially likely to spread is obviously a measure which limits the spread of infection, while improvement of the dwelling without such removal may, though with less certainty, prevent the infection from taking root. In actual practice both steps should be taken.

No *a priori* expectation could justify a comparison as to the relative magnitude of the influence of institutional segregation and that of the several other factors of the phthisis rate. Indeed, until recently, institutional treatment has been suspected by some of having done more harm by aggregating infection into dangerous foci than it has done good by segregating it from domestic life. The results which I have described in outline show, however, that in all countries in which the two have been compared, the extent of institutional treatment of phthisis has varied inversely with the extent of the disease, and that it is the only factor which has done so. The possibility of coincidences on both the negative and positive side carried thus over so many different countries may be practically ignored, and we are therefore compelled to the conclusion that of all the influences that have affected the prevalence of phthisis in the last forty years the institutional treatment of the disease has been the most powerful.

(e) *The amount of Institutional Treatment.*

27. This conclusion gives the strongest reason for confidence in the effect of institutional treatment. It gives no evidence however that such treatment has been applied to the full extent of its medical or economic possibilities. The figures of the table on p. 991-2 show undoubtedly that the amount has been considerable and an examination of the details on which they are made up confirms this view. In London one-third, in Salford and Sheffield one-fourth, and in Brighton one-fifth of the total deaths from phthisis now occur in workhouse infirmaries. In the Kensington Infirmary each patient spends 95 or 144 days (in two different years), in the Brighton Infirmary 175 days, and in Sheffield Infirmary 311 days before discharge or death. A large number of the most advanced and most dangerous patients are thus kept segregated from their crowded homes, and their susceptible relatives are saved the consequent danger of infection. It may be added that consumptive patients in infirmaries are generally warded together, and that even when this is not done, the conditions of cleanliness, ventilation and freedom from risk of infection are greatly superior to those of the ordinary poverty-stricken home from which the patients come. There has been in fact an immense increase in the extent to which institutional treatment is applied to phthisis, and considerable improvement in the conditions under which it is given. At the same time the difficulty of obtaining early diagnosis is usually even greater than with acute infectious diseases, and a large number of patients reach

an advanced stage, when cure becomes more protracted or impossible, whose disease, if recognised earlier, might have been arrested with relative ease. Workhouse infirmaries are used in advanced cases less than they might be, owing both to the parochial taint and to the unattractive character of the treatment. Consumptives require a diet that is not only nourishing but appetising; in workhouse infirmaries they commonly receive the routine diet for invalids, which is deficient in nutriment, or the routine diet for the able-bodied, which is coarse and unappetising.

28. Special municipal facilities for treatment of phthisis have not yet been provided to any large extent. In Manchester a certain number of advanced cases of consumption have been treated in its small-pox hospital when empty of other patients, and its corporation subsidises a certain number of beds at a sanatorium. In Edinburgh, Leith, and Leicester, and I believe in a few other towns, similar treatment of consumptives in isolation hospitals has already been or is about to be begun. The arrangements at Brighton have been already described. The Local Government Board several years ago approved a scheme for municipal sanatorium for consumption at Sheffield, but this has not yet been erected.

MISCELLANEOUS MUNICIPAL SERVICES.

29. Various measures tending to improve the treatment both of acute and chronic infectious disease, and to assist in giving early diagnosis, have been adopted by some municipalities. Bacteriological laboratories have been started in a considerable number of towns for the free diagnosis of certain diseases, notable diphtheria, enteric fever and phthisis. Thus in Brighton, in 1906, 289 specimens of sputum, in Manchester in 1905, 122, in Sheffield in 1905, 205, and in Liverpool about 108 per 100,000 of population were examined in municipal laboratories. The aid thus given to early diagnosis must have had a considerable effect in restricting the spread of disease. Among minor ailments, the disinfection and cleansing of verminous persons can now be undertaken without parochial restrictions. In various towns school nurses are provided by the Education Committees. In some towns treatment of minor cases of eczema, chilblains, etc., has been undertaken in connection with the school nurses' work; in Croydon the Educational Committee treats chronic inveterate ringworm, and no doubt saves considerably more than the cost of treatment by avoiding prolonged absence from school. The provision of nurses, as allowed by the Brighton Local Act, to which I have referred, is exceptional.

The municipal treatment of other chronic infectious diseases, notably of venereal disease, and of chronic non-infectious diseases is much less advanced than that of phthisis, and leaves very much to be desired. In particular, the absence of an efficient mechanism for the early diagnosis of venereal disease is responsible largely both for its enormous prevalence and for the extreme gravity of a large proportion of the cases.

AGGREGATE MEDICAL SERVICES.

30. I have now finally to deal with the possibility of handing over to one authority the whole medical attendance on the poor; and the facts which I have described furnish a sufficient basis for forming a judgment as to the nature and amount of such work that would have to be done, and the possibility of its being discharged by a single authority. Roughly the work that is being done at present consists, so far as the municipality is concerned, in the free treatment of acute infectious disease, including payment of fees for notification; in some cases free bacteriological diagnosis; and in some cases a certain amount of special provision for phthisis, in connection with which are made inspections serviceable to the general work of the Public Health Department. The provision for erysipelas, puerperal fever, and venereal disease as a rule is very bad. School nurses for contagious complaints are provided in some cases; and in the immediate future there is prospect of an immense increase in the amount of medical inspection of schools. Many municipalities employ health visitors. The treatment in parochial institutions, both indoor and outdoor, is usually belated, the qualifying conditions indeed making it necessary for the patient to exhaust his means, and frequently allow considerable progress in the disease, before he can be treated. The treatment in clubs and

able medical
assistance.

dispensaries, in out-patient departments of hospitals, and in private practice is in greater or less measure belated and insufficient. The treatment of acute disease in general voluntary hospitals is excellent; and they provide the only consultants available generally to the poor in unusual or difficult cases.

THE MEDICAL SERVICE REQUIRED FOR THE PUBLIC HEALTH.

Having described some of the details in which the present arrangements for medical aid are insufficient for the health of the community, I have to suggest finally the measures by which the public health seems to me to demand that they should be supplemented or superseded, considering in particular the possibility and expediency of placing the administration of all measures of medical aid in the hands of a single authority.

Possibility of
extension
and co-opera-
tion of exist-
ing medical
systems.

These questions are to be distinguished sharply from those that have to be considered by administrators, whose immediate and special province is to obtain the best results out of whatever mechanism may be at their disposal. In submitting the following suggestions I do not wish to be understood as implying that the possibilities of the existing mechanism have been exhausted. On the contrary, I have given illustrations of ways in which better use could be made of it than is made generally. I am satisfied that neither these illustrations nor the best existing practice represents all that may be done under the present system or rather bundle of systems, as we learn by increasing experience to turn them to better account. In particular, I think that much is to be done in the direction of eking out compulsory powers by securing voluntary co-operation between co-interested authorities and from the public. While the present systems remain in force, every possible encouragement should be given to efforts made towards such advances in their administration. In my present evidence I am, however, asked to discuss, not merely what is the best use that can be made of the existing systems, but also the extent to which they are sufficient for the requirements of the public health. In other words, I have to consider how far these systems prevent such disease as is preventable, and whether any other system would be more effective to that end. I have therefore to speak not only as a medical officer charged with administrative duties, but as a critic of the system under which my administration is conducted. From that standpoint it is now my duty to summarise the effect of the facts which I have related, and of the personal and official experience of which they form a part. For some twenty years it has been my constant and sometimes anxious duty to consider the uses to which existing mechanisms could be put. In the following paragraphs I have made the fullest allowance which I can conceive reasonable for the further work that can be done under these mechanisms and under any variants of them that seem to me practicable while the scope of the public health service is restricted approximately within its present limits. The conclusion at which I have arrived is that.

Possibility of
efficient co-
operation of
existing
medical
systems.

(a) It is impossible under any practicable or conceivable application of the existing systems to secure complete co-operation, to prevent overlapping, and to provide medical aid which shall be "generally sufficient for the health of the community";

(b) The wider application of the principles of preventive medicine would enable this to be done.

Desirability
of one author-
ity function-
ing medical
assistance.

31. It is, I think, not only practicable but also in the highest degree desirable that the existing medical services, together with such additions as may be made to them, should be placed under one control. No other method can avoid duplication of staff, or secure so completely the information necessary for the earliest recognition of disease and of the conditions likely to produce or aggravate it.

Need of
efficient free
medical
assistance.

32. In view of the enormous wastage of life and health through avoidance of treatment, imperfect diagnosis, and insufficient attention which seem to be inevitable under the present system, I believe that mechanism of a purely diagnostic character would work at a far less economy as measured by the ratio of money spent to effect produced than if this mechanism were coupled with facilities for treatment. It seems to me necessary for the maximum economy, as well as efficiency, that every man should have the right to call for gratuitous diagnosis, treatment, and provision of medicine.

33. Such a medical service would secure on the large scale the advantages which on the small scale have been illustrated in the phthisis inspection at Brighton. I select the following as the principal immediate advantages to be expected from such service.

(a) A patient would summon the doctor without waiting for the aggravation of his symptoms, would receive proper instead of perfunctory examination, and in a considerable number of instances would recover without prolonged or permanent disablement, and with a large saving both in health and in money.

(b) A medical officer obtaining entrance on one or other of the inevitable occasions of sickness would be able to exercise the most salutary influence, a real and continuing influence, over the general habits of families, whereas it is common experience that the unsolicited irruption of health visitors upon no special occasion and offering nothing but advice frequently does not lead to permanent improvement.

(c) The extremely important medical inspection of school children would be undertaken where it is chiefly required, that is, in their homes, and absentees would not be left to develop dangerous disease and spread infection until they had become sufficiently ill to compel their parents to incur expense.

(d) By abolishing the out-patient departments of hospitals the physicians and surgeons of these institutions would be free to act as honorary consultants for cases requiring special advice, instead of being occupied as at present with routine attendance on commonplace cases. The municipality would look to the voluntary hospitals for all the assistance that they were willing to provide, and in their own hospital would relieve them of the classes of cases which they dislike receiving.

34. The real difference between this system and that towards which our institutions seem trending of their own accord at the present time is the provision of gratuitous treatment; and from the standpoint of preventive medicine that provision is an essential part of the needs of the public health. It could be reckoned with certainty that although in the first instance the number of medical consultations occurring in the community would be increased, the occasions for such consultation would ultimately dwindle; and I think it quite reasonable to hope that the decrease would be of such an order as to demand for the proper performance of the work a not much greater number of doctors distributed among the population in its healthier condition than are occupied at present in unsatisfactory work in a population impostsomated with undiagnosed and untreated disease.

35. The saving of sickness would be felt not only by the individual patients, but by their friendly societies and clubs. They would be able to devote to their provident arrangements the funds that are devoted at present to the tardy and insufficient treatment of sickness; and they would have better protection against the malingering associated with the present system in which doctors are elected by and dependent for the retention of their posts on the votes of the members.

36. For the system of free medical attendance to work satisfactorily it would be indispensable to remove from it the parochial stigma. In order to do this the provision of medical attendance must be in the hands of a department separate from that which is concerned with the administration of other relief. I will not say that even from the standpoint of medicine it is a matter of indifference to find patients whose health is undermined by insufficient nutrition, nor that it would not be a matter of the utmost satisfaction from this point of view to know that the means for providing such nutrition could always be had. I have considered this question however upon the assumption that medical aid is to be regarded as entirely separate from other aid, and that the only relief of poverty on which preventive medicine is to count is that which comes from improvement in health. By adhering to this assumption the possible demoralising effect of gratuitous relief will, I believe, be avoided altogether. The form in which medical aid would be given would be such as constantly to enforce on the minds of the patients their duty to the community and to themselves in matters of health. Though they would pay nothing, they would not be merely passive recipients of advice and attention. The influence of the doctor would demand

Need for
domiciliary

medical
assistance on
personal re-
sponsibility.

from them habits of life and even sacrifices of personal taste in the interest of the health of the community, their families and themselves, which would leave them conscious of a sensible discharge of duty in return for the attention which they received. The discipline of responsibility into which the system would educate them should, in my judgment, suffice to avoid the loss of self-respect liable to arise from the merely passive receipt of gifts; and it would introduce into the national life an attitude towards matters of personal health that would have an indirect influence upon conduct, while directly restricting disease.

37. Such a system would require the medical aid to be in the hands of the public health department, while the Poor Law function of the board of guardians might be taken over by a committee of the municipality, perhaps with co-opted members as in the case of the Education Committee. The public health department would take over the present parochial medical officers, the number of district medical officers thus created being increased as circumstances required. All new district medical officers should be required to be trained in public health as well as in clinical medicine. In small districts the district medical officer would likewise be the medical inspector of scholars, and follow up absentees from sickness without waiting to be called; in larger districts the district and the scholars' medical officers would be separate; but their work would be co-ordinated by the medical officer of health, and the information obtained by either would be at the disposal of the other. The workhouse infirmary buildings would be utilised in most cases as municipal hospitals.

I need not follow into greater detail the manner in which the preventive work of the medical officer of health would be assisted by a system of this character, as it will be sufficiently apparent from the instances that I have given.

92535. (*Bishop of Ross.*) I notice that you have carried out several investigations with regard to disease?—Yes.

92536. And you also have written a number of papers in medical journals and delivered addresses to medical societies?—Yes.

92537. You have made a very particular study of disease, especially of infectious disease in relation to public health?—That is so.

92538. The first portion of your Paper gives a very interesting account of the agencies at work in Brighton to deal with the public health, and the second part of your Paper deals with the more general questions as affecting the whole country?—That is so.

92539. You point out that in Brighton you have municipal agencies, Poor Law agencies, and voluntary agencies?—Yes.

92540. And amongst the municipal agencies you regard, I think, as most important the isolation hospital including the sanatorium branch?—That is so.

92541. For four or five years past you have had some beds in the isolation hospital for phthisis, I see?—Yes.

92542. You began with ten beds?—Yes.

92543. And then afterwards the number was increased to twenty-five?—That is so.

92544. I see that you warn the patients when entering that you do not take them in with a view of procuring an immediate cure?—That is so; but more with the view of guiding them in the management of their illness.

92545. And also, I presume, with the view of guiding them so as to prevent the infection of their families?—Yes.

92546. I understand that the greatest danger of infection comes from the sputum of these patients?—Yes.

92547. The bacillus seems to infect the sputum and thus to get into the air?—Yes.

92548. What proportion would you think exists between the infection coming from the sputum, and the infection coming from all the other causes?—I should say that a very much higher proportion comes from the sputum than from any other sources.

92549. Do you go so far as to say that as high a proportion comes from the sputum as from all the other sources?—The proportion in my opinion is much higher.

92550. Much higher from the sputum than from all the other sources combined?—Yes.

92551. Consequently, in the fight against phthisis, the main object would be to regulate the sputum, I presume?—The sputum and the coughing, because occasionally spray is emitted when coughing.

92552. That is so when the cough is violent, and particularly, I presume, in the more advanced stages?—Yes.

92553. Then the bacillus may be ejected in the coughing?—Yes.

92554. In addition to taking those cases into the sanatorium, you have external agencies for looking after these persons, have you not?—Yes. Each case is visited once by myself or by the assistant medical officer of health, and then quarterly by a skilled sanitary inspector; and aid is given to the patients at those visits as required—advice, the provision of sputum bottles and handkerchiefs, hospital letters and tickets, and their admission to the sanatorium when needed. At the same time, disinfection is done when required, the room is cleansed, and any sanitary defects are remedied.

92555. You attach considerable importance, I presume, to those household visits, do you not?—Very great importance.

92556. Do you think the treatment in the sanatorium itself would be ineffective without following the cases up in this way in their own homes?—The two together complement each other, and make a much more complete arrangement. The sanatorium has the great advantage that you train the patients how to manage without being a source of infection to others.

92557. Do you regard it as more valuable as an educational institution, than as a curative institution?—Yes. At the same time it is only right to add that a large proportion of the cases get better for several years, and undoubtedly their working life is prolonged, even though the average treatment does not exceed five or six weeks.

92558. Something will depend, will it not, on the conditions of life that those patients have when they go home?—Yes.

92559. If the conditions of life were very bad, very insanitary, and very poor before the patient entered, and then after he has spent the five or six weeks in the sanatorium, he returns to the same conditions, both as to housing and as to food, would you expect much benefit from treatment in that case?—No doubt, he would relapse more quickly than in other cases; but the public would have got the very great advantage that they would be protected, assuming the man were intelligent and able to follow out the instructions as to his sputum which had been given him, and in the following out of which he had been accurately and persistently trained.

92560. There would be two advantages therefore—first, that the man would have been removed for the period of five or six weeks?—Yes.

92561. And secondly, that after he returned he would be able to so regulate his conduct as to protect others?—That is so.

92562. But personally, do you think he might relapse even more quickly than if he had not gone at all?—No, I should not say that. He would relapse more quickly than another patient who returned to a fairly comfortable home or to fairly comfortable work.

92563. But he would not be in a worse condition than if he had never gone?—He would be in a better condition.

92564. Of course, the number of permanent cures cannot form a very large percentage, but the permanent cures are effected mainly, I should think, by a change of climate and a change of conditions altogether.—A permanent cure depends very largely on the stage at which the disease is discovered and treated. Unfortunately, in the majority of cases among the working-classes the previous medical treatment has been unsatisfactory, and the disease is already too far advanced for permanent cure.

92565. If a case were taken in its very earliest stages, would you think a permanent cure would then be possible?—A very large proportion of those cases are permanently cured.

Dr. Arthur Newsholme, M.D., F.R.C.P.

Advice and domiciliary visitations by sanitary officers to consumptives

Educative value of sanatorium treatment.

Effect of insanitary surroundings on ex-sanatorium patient.

Unsatisfactory treatment of working-classes.

Cure of incipient phthisis, and period of incubation.

*Dr. Arthur
Newsholme,
M.D.,
F.R.C.P.*

3 Feb. 1908.

Cure of
incipient
phthisis, and
period of
incubation.

92566. The period of cure takes a long time, does it not?—Yes, I think at least six months in a sanatorium. Even with a good class of patients, it is reckoned that you cannot guarantee a cure in less than six months.

92567. At the end of six months would you be able to certify that the patient had got rid of the bacilli, and that he was back to his normal health?—No, you could never say that. A man who has had consumption, though he probably will remain well for the rest of his life, may be sitting, so to speak, on an inactive volcano which may flare up again.

92568. The disease, of course, is very slow?—Yes.

92569. What would you say is the period of incubation of the disease?—That is a moot point. I believe it is often very much longer than is usually recognised, and that it is as long as five, ten or even fifteen years. Children are often infected in childhood, and the disease does not develop until adult life.

92570. Taking your own figures, you say that in Brighton there are about 170 deaths annually from phthisis and about 700 notified cases?—Yes.

92571. Taking those two figures, the period of the disease would be at least four years?—It comes out on an average at four years at least.

92572. That is taking those figures alone?—Yes.

92573. Although you have brought notification to considerable perfection, still I presume you would admit that all the cases are not notified?—They are not.

92574. Of course, the cases of those children you have just mentioned would not be suspected by anybody?—That is so.

92575. Therefore, even on those figures the course of the disease would be longer than the four years?—I think there is no doubt it is.

92576. That it is longer than four years?—Yes, taking the average.

92577. And that constitutes the great difficulty of the disease as compared with other diseases?—Yes that is so; and it emphasises the importance of so training them that they will not, during the prolonged course of the disease, be a source of danger to others.

92578. During the greater part of the time the people are at work?—Yes.

92579. And if they are withdrawn from work very often you have got to deal with the family too?—Yes.

92580. I met a gentleman the other day who told me that his ploughman had developed the disease; the employer sent his ploughman to a sanatorium and was paying for him there, and while the ploughman was away he had to pay his full wages to the ploughman's wife, otherwise the wife and family would starve?—That is a practical difficulty we have found in Brighton. That was one of the reasons which led us to select the shorter term of treatment, during which a man has to leave his work, rather than a longer period, because though the latter would give a better chance of cure, it would enable you to treat only a smaller number of patients. Under the present system, we have passed over 50 per cent. of our known cases through our sanatorium.

Statistics of
death-rate
from phthisis.

92581. I see you have stated that. I presume your machinery has been far too short a time at work for you to be able to draw any conclusion; but up to this date, do you think you have affected the disease substantially in Brighton?—I do not think you can show anything by the statistics of the death rate, as the interval is too short. One must look ahead ten or fifteen years before one can hope to be able to show satisfactory statistical returns.

92582. I quite agree with you that the time is too short; but so far you have made no impression on it statistically, have you?—There is no evidence of that.

92583. The population of Brighton I see is 128,000?—Yes.

92584. And the deaths from phthisis on that population are 170?—Yes.

92585. That works out to 1·33 per 1,000, I think?—Yes.

92586. That is slightly higher than what you state in another portion of your paper as being the general death-rate for all England, that figure in the table given in Paragraph 24 being 1·23?—Yes, it is rather higher, and the reason I should like to mention, as it is of importance locally. People who become consumptive, not only well-to-do people but carpenters, joiners, plumbers and working-men generally, leave their occupation in London and other big towns and come down to Brighton.

92587. As a health resort?—Yes. They try and get work there, and so we have a large imported consumptive population.

92588. So the ratio of consumption on your 128,000 inhabitants is beyond the normal?—That is so.

92589. And consequently if your death rate is also beyond the normal, that is what you would naturally expect?—Yes.

92590. You have already told me, I think, that you attach a good deal of importance to following people up in their own homes, and to home treatment?—Yes.

92591. If that same education which you give during the five weeks in the sanatorium could be brought about in the home itself—I quite understand that I am making an assumption which you probably will not admit—then you would say, would you not, that that home treatment would have the same effect as the sanatorium treatment?—In the first place, I do not agree, even if you could bring about the same education at home, that the home treatment would have the same effect; and secondly, you cannot train them in the same way at home as you can in five weeks in the sanatorium.

92592. I assumed that you would not agree with that portion of the proposition; but if you could bring about the same education, why should it not have the same effect?—Because the proper hygienic and medical treatment of consumption involves specialised education, and that the patient cannot get under home conditions. A doctor comes in hurriedly for three minutes, and he has not time to give it, and if he gives it without the object-lesson which a man gets by residence in a well-ordered sanatorium, it would not have the same effect on the man's mind.

92593. I admit that a mere hurried visit on the part of the doctor would not have that effect?—It is the difference between an object-lesson and a mere discourse.

92594. Certainly. I have before my mind a scattered population such as we have in Ireland. The suggestion has been made to set up a rather elaborate system of public health administration with regard to phthisis. The proposal is that there should be a county officer of health with a number of subordinate medical officers of health under him, that these officers would have to settle down in the midst of the people—the population, you remember, are all scattered in Ireland—and that each doctor should spend his entire time and go from house to house to instruct the people, not merely with regard to phthisis, but in all sanitary matters—that he should spend his whole days at that and do nothing else. The idea is that he would deal with perhaps two or three families each day, then go on the next two or three houses and return again to the first houses, and in that way that he would deal in the course of twelve months with, it was thought, a population of 9,000 or 10,000 people, which would be about 2,000 houses in twelve months. He would be doing a great deal more than a doctor paying a hurried visit, because he would instruct the people in the houses, and he would return to them again and again. He would supply these sputum bottles, and insist that they should be used. Also as part of the idea, he should have at his control a certain amount of money by which he would be enabled to give additional nourishment where nourishment was required, but where the people were far too poor to secure the nourishment for themselves. He also would have to arrange the place domestically with regard to ventilation and with regard to sleeping accommodation and all that. Would you think that that system would be reasonably effective?—I do not assume for a moment that that system would be as effective as taking all these people into a sanatorium and keeping them there for twelve months, but do you think that system would be as effective as keeping the people for five weeks in a sanatorium?—We have tried it in Brighton, and it has been a relative failure.

Superiority
of
sanatorium
over home
treatment of
phthisis.

92595. Have you tried it in the fashion which I have stated?—I, as the medical officer of health, and my medical assistants have gone to these homes.

92596. Have you sat down in the house for hours together?—Not for hours together. We have given detailed definite instructions, and we have gone again in a month or two months and found that these instructions had not impressed themselves on the minds of the people. Really, in a chronic disease like consumption, in which the hygienic method of spitting is so contrary to their usual habits, you have to impress them with what other people are doing in a well-ordered institution, and to show them the need for it, and to teach them how to do it for four or five weeks before they will actually follow it out. That has been our local experience.

92597. There is this difficulty, I presume—that some of those who have gone to a sanatorium and who have been taught how to manage their sputum, owing to the spirit of shame and self-consciousness and so on, when they return amongst their neighbours are ashamed to take out the spit-bottle and use that?—Yes.

92598. If those persons were instructed in their own family and in their own neighbourhood, all the other members of the family would know the necessity of using this spit-bottle, the neighbours would also be aware of the necessity of using it, and all would know that a particular person in the district was affected with the disease; would that not consequently prepare the way for the person using that bottle and using the other personally defensive methods?—I do not wish to argue against the proposal. Both proposals are good, and they supplement each other. If you cannot adopt one, adopt the other, but it would be much better to adopt both.

92599. But, of course, the question of money comes in?—Yes.

92600. By the method I have been suggesting to you, a certain sum of money would go a great deal farther than if it were spent in sanatorium work?—I suppose that would be so.

92601. I have to deal with the county of Cork, and they have agreed to strike a 1d. rate over the county, which 1d. rate will bring in £5,360. According to the method I suggest, they will be able to have a medical officer of health for the county and eight young medical officers under him, and it is hoped that in the course of a few years they would be able to make a house-to-house visitation of the population, consisting of 400,000 people scattered over an enormous area, whereas if the money were spent in a sanatorium, they could only expect to treat 200 persons in a year?—I think the answer to that would be that you need not build expensive sanatoriums. You can use a detached wing of your workhouse infirmary and get very good results there, as long as you have proper nursing and instruction.

92602. The capital money spent in building does not count much; it is really the expense of feeding, the expense of attendants, and the expense from day to day, that is the important thing, though of course the capital sums should be protected also. The real difficulty is the attendance on those people in the sanatorium?—Yes, it is.

92603. By the other method, they maintain themselves in their own houses, except that you might give them a few additional medical comforts, and 2s., 3s., or 4s. a week would go a long way in that, would it not?—Yes.

92604. Whereas 2s. or 3s. or 4s. a week would have no effect on their treatment in the sanatorium?—Relatively little.

92605. Therefore, the idea is that you could get at the population much faster and cover the whole county in the course of a few years—about three years, and so get at the whole of the people, whereas if we were to take them into a sanatorium we would never see the end of it. Do you think if we could not afford the sanatorium treatment for all these sufferers, that that would be a good method?—It would be doing good work.

92606. As regards the cost of the municipal services in Brighton I see that the total cost of the Public Health Department is a little over 1d. in the £., about 2½d. in

the £ for the isolation hospital, and about 1d. in the £ for the housing of the working-classes?—Yes.

92607. That is about 4d. in the £ altogether for these public works?—Yes.

92608. You point out that is a small sum as compared with what is spent upon educational and other purposes?—That is so.

92609. I suppose we need not go into your figures as to the number of patients in the hospitals, as they seem clear enough. On the question of confinements, you point out that there is a difficulty in dealing with midwives?—Yes; there is considerable difficulty in that. We have no arrangement for paying the fees of the doctors who need to be called upon for operative midwifery, and the result is that the private midwives do not call in doctors when they ought to do, whereas the midwives who attend in connection with the lying-in institution do. That is a serious hardship which is not met under present arrangements. I believe that as a matter of fact the Corporations of Liverpool and Manchester and of one or two other places have already undertaken to pay those fees.

92610. It is a question of the fees, of course?—That is so.

92611. You make a remark in your Statement that the practitioner is sometimes unwilling to examine the patient, because he is afraid of carrying infection to his paying patients?—That introduces another difficulty—the question of septic poisoning. When a midwife has a case which, as they say, goes wrong, she calls in a doctor to help, and he is afraid to help lest he should injure his own patients. In Brighton, at any rate, there is no definite arrangement at present for taking those cases of puerperal fever either into the workhouse or into the isolation hospital. They take them into the Monsall Fever Hospital at Manchester, but that is not generally done all over the country and it is an arrangement which needs developing.

92612. With regard to infection, does not the same difficulty arise amongst the doctor's paying patients?—It does arise.

92613. If he treats amongst his paying patients a case exactly similar, is there not exactly the same danger of his carrying the infection to his other patients?—The money difficulty does not arise there.

92614. That is what I want to get at—how?—He gives up the rest of his midwifery practice, and gets a qualified assistant or deputy to attend to that whilst he attends to this case only.

92615. And so he confines himself to the one case during that time?—Yes.

92616. Therefore, it comes back to being a monetary difficulty, in other words, he must be paid for confining his whole attention to that individual case?—Yes.

92617. You complain that there is a good deal of overlap between the municipal work, the Poor Law work, and the private work?—Yes, there is.

92618. You suggest that the service should be under one authority?—I do.

92619. I do not know whether I have understood you rightly, but there seem to be two views running through your Paper—one view being to get the services under one authority, who, I presume, would be the Public Health Authority?—Yes.

92620. And then towards the end of your Paper you go farther still, and say you would give free medical relief, the relief to everybody that asks for it. I do not know whether I have understood you rightly that there are two views before your mind, or is there only one view?—Free medical relief is the medical ideal. I was asked to give evidence from the medical point of view, and that is, undoubtedly, the ideal from the point of view of the utmost medical efficiency.

92621. I suppose that politically that is not practical. That being so, would you think it an improvement to get the services as far as possible under one head?—It would be a very great improvement, I should say.

92622. Would you think it worth while to discuss that side of the question for a moment?—Undoubtedly.

Dr. Arthur Newsholme,
M.D.,
F.R.C.P.

3 Feb. 1908.

Payment of doctors called in by midwives.

Overlapping of various medical agencies.

One authority for medical agencies.

Free medical ideal.

Unification of medical services.

Dr. Arthur Newsholme, M.D., F.R.C.P. 92623. Free medical treatment may or may not be a long way off—I do not know; in the meantime, I suppose you would greatly prefer to have all the services under one head?—All the medical services should be unified.

3 Feb. 1908.

92624. And, I presume, should be under the municipal medical officer of health, or in counties under the county medical officer of health?—That would be so.

Administra-
tion under
suggested
reform.

92625. How could you fit together the Poor Law men and the public health men?—I take it that under any such arrangements, the district medical officers who now attend the poor medically would come under the sanitary or public health committee instead of being under the board of guardians as at present. In that way, they would be at once correlated to the superintendent medical officer, who would direct their efforts from the preventive medicine point of view, and who would receive from them valuable information as to the domestic conditions under which the sick poor are living, which would enable him to prevent the recurrence of those conditions, or the continuance of them.

92626. At present, the public health service is under the authority of the municipality, is it not?—Yes.

92627. And the district or parish medical officers are under the Poor Law authority?—Yes.

92628. The public health officers are paid, I presume, out of the county funds or out of the municipal funds?—In boroughs they are paid out of the municipal funds, and in the counties, I believe, the county council pays half the salary and the local sanitary authority pays the other half.

92629. The parish doctors are paid out of the poor rates by the board of guardians, are they not?—Yes.

92630. And as a sort of corollary the board of guardians has the selection or the appointment of the parish officers?—Yes.

92631. Under the new arrangement who would have the appointment of the parish officers, and by whom would they be paid?—They would clearly be paid by those under whom they worked, that is, by the sanitary authority.

92632. We have a county sanitary authority, and we also have another sanitary authority which is either the municipality or the urban district council, or the rural district council?—Yes.

92633. In the municipalities, the thing works out smoothly, because of course, the municipality covers the whole town or borough; but in the counties you have the county council, which is the sanitary authority, and then you have a number of rural district councils and a number of urban district councils within the area of the county, and those are also sanitary authorities?—Yes.

92634. Under the proposed arrangement, the parish doctors would be the officers of the sanitary authority?—Yes.

92635. And, therefore, presumably would be appointed and paid by them. Then we come to this: Would you have them appointed by the county sanitary authorities and paid out of the funds of the county at large, or would you have them appointed by the urban sanitary authority or the rural sanitary authority?—I am not prepared to give an opinion on that point. I have not worked that out in detail; it is a matter for consultation. The point of principle is the unification of the public health and the Poor Law medical service; the working out of the details need not give any great difficulty.

92636. I quite see the ideal, but, of course, when you come to work it out there are always obstacles in the way of working things out?—Yes.

Adminis-
trative value
of larger
authorities
for Poor Law
and Public
Health.

92637. You would not undertake, I gather, to express a preference for the county system rather than the local system, as you have not considered the matter sufficiently. I will just put it in this way: The present Poor Law union does not correspond exactly with, say, a rural district or an urban district?—That is so. May I put it shortly, as I see your point? I think larger authorities are very much to be preferred either for public health or for Poor Law administration. That is the general principle, I think; and it would mean greater efficiency and greater economy. As to details I am not prepared at the present moment to express any opinion.

92638. That is quite sufficient. As far as you have made up your mind, you incline towards the county authority rather than the local authority?—I am strongly in favour of larger authorities.

92639. So far now for the public health medical service and the Poor Law medical service. Have you any suggestion to offer how you could work in the private practice in any way—apart, that is, from the general question of free medical relief, have you any suggestion to make as to how you would bring the private medical practitioner into co-ordination or harmony with the public medical service?—In what respects? He would remain a private practitioner, and he would be chosen by those who preferred not to come within the public system.

92640. But you complain of the want of co-ordination?—Yes.

92641. And also of the valuable information that cannot be availed of?—Yes.

92642. Now, under your proposal we shall get together two of the agencies, namely the public health medical agency and the Poor Law medical agency; but outside of those two you still leave the very extensive agency of the private practitioner?—Yes.

92643. If you had a free medical service, I presume the private practitioner would practically disappear?—I do not think so. I think very many people would always prefer to have their own private practitioner.

92644. Apart from the free medical service, would you in any way suggest how you might get more information from the private practitioner in order to help on your general work?—At the present time we have a large amount of information from private practitioners in connection with the notification of infectious cases, and I should suggest increasing the number of notifiable diseases. In the second place, it has to be remembered that the private practitioner, apart from this system, would deal chiefly with well-to-do people, concerning whom it is not so important to the health of the community to have accurate information about domestic cleanliness, over-crowding, and so on, as defects do not occur in their houses to the same extent as in poorer houses. In regard to those matters of course you would be getting the most important part of the information from the district medical officers and those who are concerned in this new system—if it were carried out.

92645. Later on we will come to the question of the free medical service. You think that what you have been just describing would be a substantial improvement on the present condition of things, do you?—It would bring into co-operation means for the prevention of disease which at present are lying dormant and unutilised.

92646. But what you have described is not the medical ideal?—No, it is not the absolute ideal, but it is a large step towards it.

92647. In your Statement you discuss the influence of poverty on phthisis and of housing on phthisis, and poverty on various other causes; of course you admit that poverty and phthisis are connected with each other?—Undoubtedly.

92648. But you think that poverty is regarded as too important a factor in the production of phthisis?—Yes. It is a complex including a number of factors and poverty is only a symptom. To get at the real relation between poverty and consumption, you must separate poverty as far as you can into its different elements. As a matter of fact when that is done, it is found that in the different countries where the poorer consumptives are treated to a large extent in institutions, there you have got a much larger decline in the mortality from consumption than you have in the other countries where there is practically no institutional treatment of the disease. International experience shows that to be the case.

92649. In your paper you go on to show that institutional treatment is perhaps the most important factor in the reduction of the disease?—The word I use is "predominant" factor—I think it goes as far as that. At the same time, I realise to the fullest extent the influence of domestic over-crowding, of uncleanness, and of insufficient nutrition, which are undoubtedly important factors.

Effect of free medical service on private practitioners

Need of increasing number of notifiable diseases.

Advantages of unification of medical services.

Incidence of phthisis.

Effect of institutional treatment on mortality from phthisis

92650. You point out that there has been a considerable increase in the ratio of the number of cases treated in institutions in England and Wales in later years?—That is so—the increase has been enormous. As a matter of fact, one out of every three consumptives in London dies in a workhouse infirmary; in Brighton one out of every five; and in Sheffield one out of every four.

92651. That increase in the institutional treatment is only for the cases of the sick?—Yes, and more particularly the more advanced cases of consumption.

92652. And there is no increase in the ratio of general institutional treatment in England and Wales?—Yes—as you will see—taking all diseases together in the table in Paragraph 24.

92653. I am not talking of disease now; I am talking of people in institutions and of institutional treatment apart from disease?—Very few people, I take it, are in institutions unless they are sick, if you include those in asylums under “sickness.” Institutional treatment means sickness—chiefly.

92654. You talk about “Workhouses and workhouse infirmaries” and “lunatic asylums”?—They are either sick or infirm. I think institutional treatment means sickness.

92655. (*Mrs. Webb.*) There may be children?—Yes; the children come in.

92656. And there may be able-bodied people in the workhouses?—Yes. I am not in a position to say what proportion of those there are; but of course the deaths occur amongst sick people, at any rate, and, as a matter of fact, 16 per cent. of the deaths in England occur in public institutions, and 35 per cent. of the deaths in London occur in public institutions.

92657. (*Bishop of Ross.*) I have before my mind an article of yours which I had the pleasure of reading about poverty and disease, particularly in relation to Ireland. There, it seemed to me, you dealt not merely with the treatment of the sick in institutions, but with all institutional treatment, that is, with indoor relief, as against outdoor relief?—Yes.

92658. The point I want to make is this—are you aware that there has been no increase in England and Wales in the ratio of people treated in institutions?—That is so; the figures are approximately stationary. The ratio of paupers treated in institutions to total paupers in England, has however, increased from $\frac{100}{441}$ in 1866–70, to $\frac{392}{392}$ in 1901–03.

92659. I have been looking into the Local Government Board Reports, and I see the figures go back to 1849. In 1849, 7·7 per 1,000 were treated in institutions, and the figures are exactly the same now?—I have here a diagram which shows the in-door and outdoor pauperism over a long series of years, from which you will see that the proportion of the total pauperism which is treated in institutions has greatly increased.

92660. That does not affect the case at all. Away back in the year 1849, 55 per 1,000 of the population in England were on outdoor relief and now the proportion has fallen, or it did fall a few years ago, to 15 per 1,000 though for the last five or six years unfortunately the figure has climbed up and it is now a little over 16 per 1,000. But I suggest that does not affect the question at all, because all these people are outside the institutions?—I suggest to you that it affects it very markedly indeed.

92661. How does it affect it?—The real proportion that you want is, out of a given mass of poverty, what percentage of that mass is treated away from the crowded homes? If the total mass of poverty has gone down and the amount of it treated in-doors remains the same, then you have more segregation of that poverty at the present day than you had twenty years ago; so the proportion between the two is a very important factor indeed.

92662. That brings us back to the intimate connection between poverty and sickness?—Yes.

92663. And therefore poverty is one of the main factors in sickness?—Yes.

92664. Consequently, the reduction of poverty would be one of the chief factors in the reduction of phthisis?—Undoubtedly.

92665. I thought you were going rather on the opposite line?—The reduction of poverty will undoubtedly produce a reduction of consumption. How it produces it is another question.

92666. But it will be one of the chief factors in the reduction?—Yes.

92667. In your table in Paragraph 24 you give the number of deaths in institutions; do you wish the inference to be drawn that the number of cases treated is proportional to the number of deaths?—I got the nearest approximation to the facts bearing on that that I could. I think it is practically certain that if the percentage of total deaths in these institutions has doubled, the proportion of cases treated in these institutions has greatly increased—even if it has not doubled.

92668. You would not say it has doubled, would you?—I would not say it has doubled, but it must have increased, evidently; and I think it is highly probable it has more than doubled, judging by the duration of treatment in these institutions, which has increased; for instance, in the Brighton workhouse the consumptive cases now stop a longer time there than they did five years ago.

92669. Of course, the number of people that die of consumption in all the institutions is a very small proportion of the total deaths?—It is one-third in London.

92670. Your table deals with all England and Wales?—That is so.

92671. And the number of deaths from phthisis in the institutions is a very small proportion of the total deaths for all England and Wales?—Yes, but it is a very large proportion indeed of the total deaths from phthisis in all England and Wales.

92672. In order that we should draw a sure deduction from this table we should know the ratio of deaths to cases treated, should we not?—Yes, if we are in any doubt as to whether a decrease in phthisis has really occurred.

92673. And whether that ratio has gone up or gone down in recent times?—Yes, but as no doubt has been suggested as to a real decrease having occurred in phthisis, the ratio is not material to the concurrence of these figures in the general result which you are questioning.

92674. But you would not give us that ratio?—I am not able to give that.

92675. As the Commission went round England there was evidence given to us that would show that this table is not very safe ground to go upon. The number of deaths in workhouses and workhouse infirmaries, your table shows, has increased from 5·7 in 1869–70 to 8·5 in 1901–03. We learn that the number of able-bodied paupers in the workhouses is constantly on the decrease, and the number of deaths amongst the able-bodied would, of course, be fewer than amongst the others. Again, the children and the grown-up youngsters have to be moved to a larger and larger extent out of the workhouse, and the workhouses are becoming more and more places (as you yourself said a while ago) for the aged, the sick, and the infirm?—Yes, that is so.

92676. If you took a workhouse away back in 1849, which had 500 people in it, you would find that it included a large number of able-bodied and of all the various classes; but if you take a workhouse at the present day with 500 people in it, you will find that they will be consisting mainly of the old and the infirm; would not the number of deaths naturally go up under those circumstances?—Undoubtedly.

92677. Without any reference to the additional sickness, because you would have a number of deaths from old age, for instance?—The evidence of the Poor Law inspectors of the Local Government Board—is very emphatic to the effect that workhouse infirmaries have become more and more places for the sick and less and less places for the able-bodied.

92678. Are they not becoming more and more places for the old?—That might be so also; but I am merely quoting from the official reports when I give expression to that view. At the same time if the workhouses and infirmaries contain a higher proportion of aged persons than formerly, inasmuch as there is much less phthisis among the old than among the middle-aged and young, the increase of phthisis cases treated in these institutions becomes the more significant,

*Dr. Arthur Newsholme,

3 Feb. 1908.

Workhouse
statistics as
basis for
evidence.

92679. We have received evidence constantly, and we have heard constant complaints, that the tendency is growing rapidly of children and friends being tired of the old people and sending them into the workhouse to die, and getting rid of them in that way; whereas fifty years ago they kept those old people at home and they died in their own homes or in their children's homes. That tendency would destroy the figures very much, would it not?—That would be so if they stood alone. The age incidence of phthisis, however, and the other considerations to which I have drawn attention prevent this tendency in fact from having any such effect. Unfortunately there are no age statistics in the returns of the Local Government Board on the Poor Law; but it is perfectly clear, I think, that the workhouses and workhouse infirmaries are much more used for sickness than formerly.

92680. Would you not be able to send in the figures of the total number of cases treated institutionally and of the deaths?—Not for the whole country; I do not think those are published.

92681. They would be more reliable than the figures we have, would they not?—Yes.

92682. All that the figures we have will show us is that no doubt the number of cases of sickness treated will have increased, but in what proportion they have increased these figures do not give us any evidence?—There is some side-light thrown on it by the column referring to hospitals, which means voluntary hospitals. You will notice that the percentage for the whole country has gone up from 2·4 in 1876–80, to 5·9 in 1901–03, showing that this tendency towards adopting hospital treatment instead of home treatment is a national phenomenon applying to all forms of institutions.

92683. I have no doubt whatever that the tendency is there, but the point I want to make is that these figures do not supply a sure basis?—They must be taken for what they are worth.

92684. Exactly?—And they are worth a good deal in my opinion.

92685. They show an increase there is no doubt, but if you wish us to infer that the number of cases treated is double, I do not know that we would be on safe grounds? On Saturday I prepared a rough *aide mémoire* of the arrangements for the different forms of treatment which I thought might help my examination, and perhaps I might hand it round now, (*Handing in same.*) (See *Appendix No. VIII (B)*). It is simply a scheme which classifies the different forms of medical aid.

92686. Thank you. Now go to the increase of inmates in lunatic asylums; does that affect your present argument?—Oddly enough, it shows just the same doubling, the same multiplication by two, which has occurred in the case of the workhouse infirmaries.

92687. People are sent into lunatic asylums not because they are physically sick, but because they are insane? That is so.

92688. And if the number of deaths has increased in the asylums, does that not show that unfortunately insanity has gone up in about the same proportion?—The total insanity in the country?

92689. Yes?—There is no certain evidence of that.

92690. We know the number of people treated in asylums fifty years ago, and we know the total population then, so that we know the ratio between the people treated and the population?—That is so.

92691. We know the number treated now and the population now?—Yes.

92692. Has not the ratio more than doubled in the fifty years?—In institutions undoubtedly, but whether the total amount is greater or not is another question.

92693. If the number of people committed to institutions has more than doubled, naturally the number of deaths in those institutions would have more than doubled?—Certainly.

92694. I do not quite follow how that affects the question of public health, except when we come to deal with insanity?—Take the question of asylums; I think a very much higher proportion of those are consumptive than is the case in the general population.

92695. Certainly; but why are they consumptive—because they are insane? Does not insanity lower the vital power of resistance to disease?—No doubt, but it leaves the patients infectious, and their withdrawal reduces the number of sources of infection which threaten the public.

92696. And as a result of insanity are there not two things developed—first, consumption, which is the great cause of death in our Irish asylums, and, secondly, in certain cases paralysis of the insane, of which we have practically none in Ireland, and of which you have a great deal in England?—I must quote against you, Dr. Mott, the distinguished pathologist of the London County Council, who shows by his post-mortem results that in more than half the cases of consumption in these asylums the consumptive disease existed before their admission.

92697. Would you say the insanity arose from the consumption?—No. I simply point out that the asylums were not responsible for it. Probably the consumption existed before they were insane.

92698. Suppose a person is free from phthisis and becomes insane; is not he, as an insane man, much more liable to get phthisis than if he had remained in his sound senses?—Yes, I think that is very likely.

92699. Does not the insanity lower the vital force?—It may be so.

92700. Is he not more liable to get consumption therefore?—On the average, yes.

92701. I do not know whether I might ask you some questions about this article of yours on Ireland?—I have no objection, if it is not spending too much time of the Commission.*

92702. The article has been a good deal quoted latterly in Ireland. The general effect of the article on the mind of its readers has been that phthisis in Ireland has not decreased because there is not sufficient institutional treatment in Ireland, and there is too much outdoor relief. Is that not the general effect of the argument?—Yes; poverty has decreased, but phthisis has increased.

92703. It has increased slightly?—Yes.

92704. It has not decreased as it has done in England and Scotland?—That is so.

92705. The institutional treatment in England of paupers is only 7·7 per 1,000, and in Ireland, as you are aware from your own table, it is 10 per 1,000?—That is so.

92706. Therefore there is a good deal more institutional treatment in Ireland than there is in England and Wales?—Yes, speaking in the gross, so to say.

92707. Again, outdoor relief in Ireland is only 13 per 1,000, and outdoor relief in England is at the present moment 16 per 1,000?—Yes.

92708. Therefore we have less outdoor relief and more indoor relief than in England?—Those figures need to be analysed for this reason: you have a vast dispensary system in Ireland, by which you treat cases of sickness at home who ought not to be treated at home—infectious cases amongst the rest. The gross figures you give need to be analysed into their constituent elements.

92709. We will come to the dispensary system in a minute. So far for the gross figures. Then in Scotland, where consumption has decreased more than even in England—in all Scotland, where you have a larger population than in Ireland, there were only 13,000 people in poorhouses and poorhouse infirmaries, as against the 42,000 that we had in Ireland, and they had 80,000 people on outdoor relief in Scotland as against the 55,000 we had in Ireland?—You attach no importance to the proportion, on which I lay great stress in my two papers, between total pauperism and the amount of that which is segregated. You persistently decline to admit that ratio, which is the fundamental point in the whole subject.

* POVERTY AND DISEASE as illustrated by the Course of Typhus Fever and Phthisis in Ireland, by ARTHUR NEWSHOLME, M.D., F.R.C.P., *Medical Officer of Health, Brighton*. A presidential address delivered on October 25th, 1907, at the first meeting of the Epidemiological Section of the Royal Society of Medicine (*Journal Royal Society Medicine, November, 1907*).

Increase of
inmates in
lunatic
asylums.

Ratio
between
admissions to
lunatic
asylums and

therein.

Effect on
phthisis of
segregation
of insane.

Pre-existent
consumption
insane.

Extent of
phthisis in
Ireland.

Comparative
statistics of
institutional
treatment in
United
Kingdom.

92710. Take the ratio in Scotland. There you have 7 paupers wandering round for every one segregated; in Ireland you have 42,000 shut up and 55,000 wandering about, and in England you have 263,000 shut up and 550,000 wandering about. So that taking that proportion to which you attach so much importance, the ratio in Ireland is 4 to 5, while the ratio in England is 2 to 5, and the ratio in Scotland is 1 to 7; therefore we have in Ireland far the highest number of segregated of any of the three countries?—Yes, but such segregation!—it is commonly of an abominable kind.

92711. Now we come to the dispensary system. You remark in a portion of your paper that there were so many persons who were treated in their own homes by the dispensary system in Ireland in the year 1903. In order, in my opinion, that the figure which you give should have any effect, you should also have stated whether that figure was greater or less than the number of those who used to be treated in the homes of the people?—If you look at Fig. 4 in my address given to the Epidemiological Society in Oct., 1907, you will see that that shows the increase in the outdoor relief of Ireland.

92712. But that, I think, gives outdoor relief in money, not outdoor dispensary relief? That gives the outdoor relief in number of persons relieved.

92713. But not relieved medically?—It is according to the official statistics supplied by Mr. Courtney.

92714. This is the difficulty in writing about a country that one does not understand; that does not include medical relief at all?—If there is any mistake in that the mistake is that of Mr. Courtney and not my own. I do not think there is a mistake.

92715. Excuse me, doctor, but the medical relief in Ireland is taken altogether apart from the outdoor relief, and the total in your table is the total for outdoor relief in money or in food, the daily number of people relieved by money or food being, as I have said, 55,000 in the year, while the number of people treated in the workhouses and workhouse hospitals was 42,000 in the year. Over and above those figures, you have a number of people treated medically in their own homes by the dispensary doctors. It is not pauperism in Ireland to take medical relief from the dispensary doctor—that does not pauperise anybody, and a number of people are medically treated in their own houses by the dispensary doctors, free of charge, who would not dream of taking monetary relief, or food relief, or indoor relief. I point out to you that unless you can show that the number of people treated in their own homes has been increasing, there is no force in your argument?—I cannot agree with you, but I submit with respect that we are wasting the time of the rest of the Commission in discussing a statistical point which neither you nor I can settle without having the documents in front of us.

92716. I am quite sure of what I am saying. Of course, I quite understand how you fell into the mistake?—I do not admit I have fallen into a mistake, and I do not believe I have. But may I put it in this way: apart from statistics you have in Ireland an enormous excess of home treatment of consumption, which does not occur in England; and in England you have, on the contrary an enormous increase of institutional treatment of this disease. In one country where you have got this increase of institutional treatment you have got a diminution of consumption; in Ireland you have the opposite. It is not simply a case of England versus Ireland; the same conclusion is confirmed by international experience in other countries. Norway, for instance, which has practically no institutional treatment of phthisis, has had an increasing death rate from that disease; but Germany, which has a big institutional treatment quite apart from sanatoria, has a big decline.

92717. I submit that the ratio of the institutional treatment of sickness has increased quite as much in Ireland as it has done in England?—On the contrary, speaking of phthisis, it has approximately doubled in England and halved in Ireland. That brings me to my second point, which is that in Ireland the institutional treatment of disease, judging by the evidence recently given before the Viceregal Commission, is disgusting—the people are allowed to spit on the floors there, and it is the exact antithesis of what occurs in our cleanly English infirmaries and workhouses.

92718. It is not worse now, is it, in your opinion, than it was fifty years ago?—That I am not able to say, but the evidence given by some of the workhouse doctors before that Commission was appalling.

92719. In my opinion, in order that the argument could have any effect, you should show that things were getting worse in Ireland?—That is so.

92720. Do you suggest that they are?—I adhere to the accuracy of that diagram until I have documentary evidence to the contrary.

92721. Here are the documents for you—the Report of the Irish Local Government Board?—May I suggest that, if necessary, I could alter my evidence in proof rather than we should spend the time of the Commission on this one point?

92722. Will you look at the figures? Here are the numbers medically treated in Ireland at the dispensaries, 463,440, and at the patients' homes, 159,871, so that there are 623,311 people medically treated in Ireland, and we have only 97,000 paupers, including those on indoor as well as outdoor relief?—There is a very large number treated in the homes and at the dispensaries; that is clear.

92723. And that number is not included in the statistics of pauperism, as you will see if you look at your own table in your own article, which contains altogether only 97,000 people. Of the 42,000 in the workhouses over 14,000 of those were sick; and in your own workhouse at Brighton, which you regard as a model institution, there were in one half-year 1,207 people as compared with 1,361 in the previous half-year, and the number of sick persons was 400; so that in the workhouse at Brighton you had less than a third of the people treated who were sick people, while in our Irish workhouses, taken altogether, more than a third of the whole of the inmates are sick people?—Yes, that is so.

92724. Then we have a far higher proportion of indoor treatment in Ireland, than you have either in England or in Scotland?—That indoor treatment must be taken in proportion to the total amount of sickness.

92725. In proportion to the amount of poverty we have a far larger proportion of indoor treatment in Ireland than you have in England and in Scotland; and when we come to deal with our indoor treatment we have a higher proportion of sick than you have in England or Scotland. Therefore in a compound proportion we treat more sick in our workhouses than you do in England?—That point I will look into, and, if necessary I will, with the permission of the Commission, alter the proof of my evidence. (*The witness subsequently added the following*): Exact details to the above effect are given in my contributions on Phthisis in the *Journal of Hygiene* and in the *Journal of the Royal Society of Medicine*; but no inference can be drawn from comparing the ratio of admissions to sick in Ireland with the same ratio for England. In the period under consideration the treatment which followed admission was much longer and more effective in England than in Ireland, and a given number of admissions in England represented therefore a much larger curative and preventive effect than the same number in Ireland.

92726. There are some other of your arguments about emigration, for instance, that I would like to discuss with you, but I will not introduce that subject now. I will go to the system of free medical relief: Will you kindly say what you wish to say on that point? We have discussed already what would be the amelioration, but this would be your ideal?—I have stated in Paragraph 17 what I regard as ideal—such a system of medical aid “as will assure effectively the early recognition and the proper treatment of all disease”; that is the ideal. The conclusions at which I have arrived in respect to the present state of things are stated in the last portion of Paragraph 30. The present system does not give medical aid sufficient for the health of the community, and such system to be sufficient for the health of the community can only be provided by introducing the principles of preventive medicine and by making it under one control. The ultimate idea is that every man should have available, and within his reach, immediate, sufficient, and efficient medical treatment.

Dr. Arthur Newsholme, M.D., F.R.C.P.

3 Feb. 1908.

Effect of
free medical
relief on
private
practitioners.

92727. You have told me already that you do not think that system will abolish the private practitioner?—I do not see why it should. There are a large proportion of people who would always prefer to have their own private medical practitioner, just as now there are a large number of people who prefer to have their own private schools for their children.

92728. I suppose it would reduce the amount of practice?—Eventually the total amount of practice, both official and non-official, will be enormously reduced if the principle of treating disease from the preventive side is adopted. All doctors in that sense will eventually suffer.

92729. What view do you think the profession would take if a recommendation of this sort were made?—That I cannot say, but for some years I believe they would have more work.

92730. At the present moment you do not know whether they would accept such a proposal or be opposed to it, do you?—I have no means of judging generally, except that I read a paper on this subject at a meeting of the State Medicine Section of the British Medical Association at Exeter last July, and to my surprise, with, I think, only one or two exceptions, out of about fourteen speakers, everyone favoured the principle. That is the only indication I have at the present moment.

92731. That is rather a strong indication. Do you think the system would be in any way abused by people who really do not want medical treatment applying for it, or by people who do not want free medicine asking for it, and perhaps injuring themselves by taking it?—I do not think so. Castor oil is not a favourite beverage; if it were whisky it would be a different matter. I think the medical attendance would be so disciplinary that it would be prohibitive of abuse.

92732. I merely put what is, of course, a *prima facie* objection in order to get an answer on the minutes?—I think it would have the opposite effect, and that ultimately the amount of medicine taken would diminish very much. The reduction in medical attendance would occur through improvement in general health, especially due to its earlier availability. It would not be feared and postponed if the taint of pauperism were removed.

92733. Of course, you quite see that that is an obvious objection, and that it is well to get your explanation on the minutes. You suggest that such treatment should be altogether free from the taint of pauperism?

92734. And so far you wish to follow out to some extent our dispensary system in Ireland of free medical relief without any taint of pauperism?—Undoubtedly. It is admirable in that respect.

92735. Is there any other point you wish to make?—I think not. I think the main points are stated in my proof.

92736. (Mr. Nunn.) There are one or two general questions I should like to ask your opinion upon before coming to your paper. To what extent, to take up what the Bishop has been dealing with, do you propose that the municipal authority, through its public health department, should control the dispensaries or hospitals or club doctors? You propose that it should take in hand the district medical officer of the poor, and you give excellent reasons for that; do not the same reasons apply to a certain extent to the hospitals, the club doctors, and the dispensary doctors, who are almost of equal strength?—I think it would be a grave mistake to tackle them all until you had settled the rest of the problem. Taking over the medical aid of the poor is quite enough to begin with.

92737. But there is a good deal of overlapping at present between the dispensaries and the Poor Law authorities in the matter of medical relief. My point is that the classes are not very different in regard to the poverty and uncleanness of their homes. Any argument that applies to persons who come under the Poor Law, would apply, would it not, with almost equal force to a very large proportion of the people who go to the hospitals, dispensaries, and a certain number of the clubs?—Would that not be met by the fact that freer medical aid to be obtained in connection with the municipal system would drain away the people from the out-patient departments of the hospitals and dispensaries, and so the question would solve itself?

92738. You do not wish for any control of the in-patients' departments of the hospitals, do you?—Speaking generally and broadly, I think it would be a mistake to attempt to deal with that problem. The in-patient departments in the general hospitals, speaking generally, are very well managed, and the treatment of disease is very good. I think it would be a great mistake to interfere with them.

92739. Is that a matter of expediency at all, or what is it?—The problem is too large, and it may never be necessary to interfere with them; at any rate, at the present moment if I were administering the matter, I should regard it as a mistake to have anything to do with the general hospitals.

92740. Take a concrete point: The medical men who are connected with the dispensaries probably come across a considerable percentage of the amount of unsanitary conditions that would be found in the homes of actual paupers; is it not equally desirable to co-ordinate their work under the purview of the municipal body?—I imagine that any scheme for freer medical aid would almost certainly, as a matter of course, bring the dispensaries in. The dispensaries would almost cease to exist in their present form, because the people would go where they can get efficient treatment without having the bother of going for letters and so on.

92741. I thought your point just now was that there was a considerable proportion of patients who preferred to pay their own doctor?—Yes—above the dispensary class.

92742. I see the dispensary in Brighton, for instance, is more largely supported by voluntary contribution than by the workmen themselves?—Yes.

92743. I am speaking now of voluntary dispensaries, and not of Poor Law dispensaries, of course?—That is so; and I am speaking of the same voluntary dispensaries.

92744. The Brighton dispensary is partly provident and partly supported by voluntary contributions?—Yes. The provident element is relatively small.

92745. Would your remarks apply equally to provident dispensaries and to dispensaries voluntarily supported?—At the present moment I do not see how the provident dispensaries would continue to live unless it was decided to give State aid through them by subsidising them. The district medical officers would take their place.

92746. That would produce a very great dislocation, would it not, in the medical profession, and also in the provident habits of the people?—It is a matter of machinery. It might be decided to subsidise the provident dispensaries and aid them to continue.

92747. Under your supervision?—Yes; that would give the right of supervision to the local authority.

92748. That is my point—the extent to which this leads us to the supervision of public practitioners by the various departments of the local authority?—I take it the local authority would have no right to supervise unless it provided some of the funds.

92749. Then with regard to the club doctor, you think that your system would tend to prevent malingering, by club because the doctor would not be in fear of becoming unpopular amongst the members of the club?—That would be so, I think.

92750. I suppose primarily he looks to the committee of the club, does he not, and the committee of the club looks to him to prevent malingering?—Yes; but the committee of the club is elected by the club, and the doctor is subject to re-election annually, and if he has made himself unpopular by restricting the medical aid he does not get re-elected. I have been a doctor of a friendly society myself.

92751. Is there not some doubt whether the doctor does get turned out? We know how conservative club members are, and he rarely loses his post?—I have known cases where they have lost their posts, and, at any rate, the tendency is for the doctor to be lenient with the members who elect him.

92752. Before we leave that subject, what relation do you propose should exist between the prescription of medical aid and of preventive measures, and the provision of medical nourishment and necessities? At present, of course, the district medical officer practically orders what he likes, does he not?—Yes.

92753. Your district medical officers would not have that power, would they?—I think it would be a mistake to let them have it.

92754. What I wanted to arrive at was what machinery, or what provision you would propose, or have you not considered that?—I have not considered that in any detail. I take it that the Poor Law organisation would remain in some form, and that they would give the relief as at present where it was absolutely needed; but, at any rate, the patient and his family, being relieved of one important source of expense, would be in a better position for getting nourishment than they were before.

92755. I think the assumption is that a pauper family is not at all relieved of any expense by this medical aid, as it is so very seldom that it is recovered?—At any rate, I think the two should be absolutely separate, otherwise the doctor would find himself in a very awkward position with regard to the giving of material aid.

92756. You are assuming that there would be some committee or body sufficiently representative to be in immediate touch both with your district medical officers and with whatever person is responsible for providing the relief?—Yes.

92757. Then to take up the question of phthisis, your cases are kept for about five weeks in your sanatorium at Brighton, are they not?—Yes.

92758. That is time for them to learn a good deal, I suppose, but is it time for them to form habits?—On that point I can speak with great confidence, because it is very rare indeed in visiting consumptives after they have left the sanatorium that we find they have gone back to dirty habits. I can only point to two cases of that kind out of some hundred cases treated, and those were cases of laryngeal phthisis where we had unfortunately not been able to do the patients any good, and the patients were rather resentful.

92759. For what cause do you keep a certain number of them for long treatment?—That is under a special charity.

92760. I understand how it happens that you can do it; but I want to know on what ground do you select them?—On two grounds. We have two classes; if they are early cases we think we may get a cure; and then there are other cases, quite advanced cases, who have a wife and a large family, and we think the longer they are kept away from their homes the better.

92761. You are acting there as the relieving agency practically?—That is so.

92762. May I ask when that Act was passed by which you receive the help of a municipal nurse?—I do not remember, but I think it was about 1900.

92763. Lately, in fact?—Not quite lately.

92764. Have you only one municipal nurse?—We send out nurses from the sanatorium as required to a case of puerperal fever, or a case of erysipelas.

92765. It is municipal nursing then in fact?—Yes.

92766. I see you speak of the sanitary inspector as "he"; do you not employ lady inspectors?—No, we have no lady inspector at present.

92767. Which do you prefer?—If I had to choose between the two, a man undoubtedly.

92768. You do prefer a man?—Yes, but I would rather have both.

92769. Is there an open-air ward in the infirmary at Brighton?—They have a large balcony, and some of the patients are wheeled out there.

92770. I do not think you state in your paper that you are in favour of compulsory notification of consumption?—No, I have not said that.

92771. You are in favour of it though, are you not?—With modifications and with safeguards, which I will give if you like.

92772. I should like to hear them?—I think it would be unwise to give compulsory notification of consumption as a general enactment all over the country. I would limit it to those communities which had shown beforehand that they had arrangements for benefiting patients. Consumption is altogether different from an acute infectious disease, and if I ever had the power of regulating it, I would regulate it in such a way that only those who show they had arrangements for inspecting the cases, and visiting them, and helping them, both at home and in sanatoria, should have the option of having compulsory notification.

92773. Would not compulsory notification produce the machinery to a very large extent which would give an impetus to getting rid of the disease?—There is much force in that argument, but I think in a case of a disease like consumption, which has such a chronic course, it is better to go slowly and to educate the people up to it, rather than to run a risk of making martyrs of the patients by persecuting them with visits in connection with which you can do little good.

92774. Have you any corrections to make on your table in Paragraph 11, or is my extreme ignorance the reason why I cannot understand it? In your list of the 100 total deaths from all causes you say: "Acute non-notifiable infectious diseases, including pneumonia and rheumatic fever"—is rheumatic fever infectious?—The germ of it has not been discovered, but the cumulative evidence and analogy are so strong that there is no doubt that it is infectious. As a matter of fact, it has recently been transferred by the Registrar-General from the non-infective to the infective list.

92775. I do not understand what is meant by non-infective diseases?—They are what are commonly called local or constitutional diseases—diseases like cirrhosis of the liver or peritonitis. They are not communicable from one person to another. It means non-infectious; it is almost the same thing as that.

92776. (Mrs. Webb.) Supposing you take medical relief from the Boards of Guardians, would it not be better to transfer all their other functions to other bodies, for instance, the children to the education authority, and so on?—I have not thought that matter out.

92777. Your proposal of transferring the medical relief is not part of any larger plan in your mind, is it?—I think I have mentioned it is likely that this will come within the work of the local authority in the same sense as the school boards came in. To that extent it is part of a larger plan; but that is a matter of administration which I do not pretend to be prepared to give a final opinion upon.

92778. With regard to the number of doctors who might be required if you curtail disease by preventive measures, surely our standard of health might so rise that we should require just as many doctors to raise it still higher?—I think that might be so; but when I gave my answer a little while ago I was thinking of it from the present standpoint. From that standpoint undoubtedly after a few years fewer doctors will be required. But from a progressive standpoint I think that the same number, or even an increasing number, might be needed to raise the standard of health of the community steadily.

92779. Many things which are not considered as diseases now might presently come to be considered diseases?—Yes.

92780. I mean to say, we may have an increase of hygienic knowledge, we may realise what constitutes health, and therefore raise the standard of hygiene?—Yes.

92781. With regard to teaching people good habits, it is not only in phthisis that you require good habits, good habits but there are other diseases where you require them just as much, are there not?—Yes.

92782. Take, for instance, diabetes; is that not largely a matter of good habits?—A diabetic person who would be persistent in taking sugar, for instance, would get steadily worse; whereas if he could be induced to let it be he would get fairly well, probably.

92783. Therefore any system of medical treatment like the present Poor Law treatment, which does not go

Increase of
personal
responsibility
by free
medical aid.

in for insisting on a regimen, must necessarily be very little good—mere bottles of medicine would not do much good to diabetes, would they?—No. There is an enormous waste of the means of diminishing sickness, which prevents good health at the present time, which might be utilised even if nothing were done to put the present officers under the preventive machinery.

92784. With regard to the individual patients, would you not be increasing the personal responsibility and the personal effort of the individual patient by treating his disease?—That has been my experience in all the diseases which I have had to deal with. From my point of view the giving of aid to the patient has undoubtedly increased the patient's duties and responsibilities.

92785. You mean by increasing personal obligation instead of decreasing it?—That has been the result.

92786. And that would be the result about a very large number of diseases?—I think the same argument would apply generally. Take bronchitis, for instance; a person who has a dusty occupation must take certain precautions; he must wear a respirator or adopt certain means of getting rid of the dust. That is a great nuisance, and the workpeople do not like it, and they would almost rather have the bronchitis. Under a system of preventive medicine, pressure will be brought to bear upon them to use the respirators or other means that were needed.

92787. You might have a body of public opinion growing up against the person who was persistently ill through bad habits?—That would be so.

92788. Has it been brought to your notice that in Germany by giving a greater amount of medical assistance provided for by State insurance you actually increase the obligation to be healthy?—That I do not know.

Possibility
of efficient co-
operation
between
existing
medical
systems.

92789. (*Mr. Bentham.*) I notice that the conclusions you come to after going through the whole of the statement in your paper are: "(a) It is impossible under any practicable or conceivable application of the existing systems to secure complete co-operation, to prevent overlapping, and to provide medical aid which shall be generally sufficient for the health of the community;" and that "(b) the wider application of the principles of preventive medicine would enable this to be done." Really your whole suggestions hang upon this conclusion, I understand?—That is the summing-up of my impressions from what I have said before.

Lack of
co-operation
between
Poor Law
and public
health
authorities.

92790. There is very little attempt now at co-operation between the public health authorities and the Poor Law authorities with regard to medical treatment?—That is so.

92791. That line, I think, has never been adopted by either of those two authorities?—That is so, I believe.

92792. Can you fairly come to the conclusion that no such useful co-operation as could effect the desired results could be brought about provided that were attempted and enforced?—If you will do me the favour of looking higher up in the same column you will see I state that I do not wish to be understood as implying that the possibilities of the existing mechanism have been exhausted.

Need of
unification
of medical
services, and
analogy of
Education.

92793. I have that in mind. Yet although you do not think the possibilities have been exhausted you come to a definite conclusion?—I do not think that you can possibly get such complete and good results if the two sets of officers were working under two different authorities as you would if they were working under one authority. I think it would not be so easy, for instance, for the district medical officer to report over-crowding and dirtiness of houses as it would be if he were working under the same department.

92794. If it became part of his stipulated duty to do so, one would think that he would attend to his duties?—I can speak more definitely from the analogy of education. In past years there has been very great difficulty in getting school attendance officers to report suspicious cases of illness to the medical officer of health—in fact such great difficulty that it was impossible to obtain it although I made various endeavours with the school board, and they agreed on paper, but it did not come off. But since the education committee took over the work of the school board that has come about and we can get it done

now because it is only a question of going from one committee to another of the same town council. That is an illustration which appears to me to point to what I said.

Need of
unification
of medical
services, and
analogy of
Education.

92795. As the committee which has education to deal with is a statutory committee of the county council, in like manner if the whole of the Poor Law arrangements were in the hands of a statutory committee of the county council would not the same result be achieved?—Would you mind giving me that again; I did not quite follow it.

92796. You say your object has been achieved now?—Yes, to a much greater extent, not completely yet.

92797. That is rather a qualification of the original statement?—It is not completely achieved; it is in course of development.

92798. That has been brought about by education being placed in the hands of a statutory committee of the town council?—Yes.

92799. If the whole of the Poor Law arrangements were placed in the hands of a statutory committee of the town council, in like manner you would be able to get close co-operation in the way you desire between medical treatment and the prevention of disease?—That would be a step in advance, but I think it would be a much more important and more successful step in advance if you transferred all the medical functions to one set of men and one committee.

92800. There would still be an item left, would there not, which it is very important to have co-operation upon and that is the provision of medical extras, which I understand you to say you would not give power to the medical officer to give. As they are practically needed in nearly all cases which come under the Poor Law (in my experience a very large percentage of such cases need something in addition) it would mean that those cases would have to be referred to the Poor Law authority in order to get those necessities in addition and to ensure recovery?—Yes.

Need and
provision of
medical
extras.

92801. That would mean a very close co-operation between the two?—Quite so.

92802. And a great deal of the success would depend upon the co-operation, would it not?—Yes.

92803. Would not that be as difficult to get as the co-operation you want now between the treatment and the prevention?—I am not able to say, but speaking from a medical point of view, I think it would help very greatly to have all the medical help given from one headquarters and not from two head-quarters. That is the opinion I have. I cannot speak from experience, of course. I can only speak from the standpoint of an experience of the defects of the present arrangements; what would be the best substitute I cannot say for certain.

92804. You suggest a substitute, do you not?—Yes, Medical that is so; I give my opinion as to the substitute, and there again I speak on the analogy of what has just been done with regard to medical aid in schools. The medical inspection of schools has been brought into organic relationship with the medical officer of health, and I anticipate immensely good results from that.

Medical
inspection
of schools.

92805. In almost a similar way that result could be brought about, could it not, by each district medical officer being also at the same time an assistant under the medical officer of health for other purposes than the mere treatment of disease?—That would be very helpful. It is a matter of machinery really, and it is a question as to which would be the best machinery. If he were made an assistant to the medical officer of health, so far as nuisances and insanitary conditions generally were concerned, that would be very valuable.

District
medical
officer as
assistant to
medical
officer of
health.

92806. There would be one other advantage by an arrangement of that kind, would there not, that you would be in a position, without any reference to any other authority, to order these medical extras which in many cases are absolutely necessary for recovery?—That I am not prepared to give an opinion upon.

92807. In the interests of public health you place a very great amount of reliance upon an earlier cognizance of the diseases?—It is of overwhelming importance.

Need of earl
diagnosis
of disease.

92808. I suppose that leads you to the suggestion that medical treatment ought to be gratuitous so that people would have no diffidence whatever in making their ailments known?—That is so.

92809. And you think that that would be to a certain extent confined to the lower class of people—those who are not in the habit of paying for a medical practitioner and who are not likely to do so?—I think undoubtedly it would be for many years to come. May I add that when I speak of gratuitous medical treatment I state that as the ideal? It might be partially gratuitous or completely; it might be a grant-in-aid or a complete grant. That is a matter on which I have no final opinion.

92810. Really, what you want is increased facilities for getting medical treatment?—I want exactly the opposite principle to what characterises other Poor Law relief. Poor Law medical relief must not, I think, be such as to prevent people availing themselves of it at an opportune and early moment.

92811. The object in passing the Act to take away the disabilities attaching to outdoor medical relief has been of course to make it so that the people would avail themselves of it more freely; has it been your experience that in Brighton people object to go to the Poor Law for medical relief?—The people have objected very greatly and the relieving officers have objected very greatly to having them. It cuts both ways.

92812. In administration the Poor Law unduly restricted the applications of that class—was that it?—I do not know what the regulations are and therefore I cannot say that they have unduly done it; but as a matter of fact, the arrangements are made as nearly prohibitive as they can be.

92813. What you can say is that they have not encouraged people to apply?—They have very much discouraged them.

92814. That may be to a certain extent local, may it not?—I cannot speak with authority on that point because my experience in regard to it is chiefly local; but from what is common knowledge I should say not.

92815. In this paper which you have circulated (*See Appendix No. VIII. (B)*) you put under the head of Poor Law Guardians, “advanced cases of consumption (pauper only) treated by the guardians.” Is it not difficult to say who is a pauper, and who is not among those who happen to be suffering from consumption?—I believe the definition of “pauper” is very difficult, but in actual practice it comes to this, that consumptive patients do not become paupers until they are unfit to work; and then wives may not become paupers because their husbands are in work, and the result is that these wives cannot be treated in the infirmary until they are almost dying.

92816. So long as the husband is able to provide them food they cannot?—So long as he is able to work.

92817. Speaking generally, it is very difficult to define the pauper cases when they are being treated under the guardians?—Yes.

92818. As to what class of case should be admitted for treatment is left very largely to the discretion of the particular board of guardians?—I suppose that is so.

92819. So that board of guardians might treat cases other than those who are advanced if they thought fit?—Yes.

92820. Even when there may be wages being earned in the family?—I suppose that may be so, but in actual practice it only so in one or two places like Bradford where they have a special sanatorium, and Liverpool, I believe.

92821. Encouragement is given at Bradford—I do not know whether it is at Liverpool—to people to make application for treatment in every stage. Every medical man in the town has been circularised asking him to send in cases which have come to his notice which would profit by treatment in the sanatorium and who are unable to pay for treatment in a private sanatorium; and, in that way, all cases are received at once. I am only pointing this out to show what possibilities there are in the present arrangements which have not been universally adopted, but which might have been. Now take as an opposite example of that, where a public authority like Sheffield has had the power of compulsory notification and the power to provide sanatoria, but has done nothing—these consumptive cases are all left to the Poor Law, although the public health authority have undertaken the duty. Therefore it depends very largely whatever scheme you

might have as to what the opinion of the local administrators may be on its worth?—Undoubtedly, that would be so; but still a large proportion of people do not like being treated under the Poor Law, and that seems an insuperable difficulty in getting prompt and satisfactory treatment under the present régime.

92822. But where there is a will there is a way; and pointing out to these people that they can be treated without difficulty—there is practically no disability attached to it; they are removed direct from their own homes, although it is under the Poor Law—has this effect in Bradford, that no one hesitates for a moment, and artisans, labourers, teachers, clerks, cashiers, and anyone else who cannot possibly pay, go there with the greatest possible freedom. I only point this out to show that the stigma very soon rectifies itself, and that it is a matter which is not attached to the body, but is more or less attached to the system?—It has practically ceased to be a pauper hospital there.

92823. No, I do not think so. It is still a pauper sanatorium, because every person there is destitute of the means of providing for his particular disease, and in that sense technically they are all paupers, at least they technically have a right to treatment under the Poor Law?—It is an excellent piece of work anyhow.

92824. You have no guarantee that if all this work were to be handed over to the public health authority, that public health authority would rise to its possibilities any more than the guardians to-day; Sheffield is a case in point?—Except this, that people are governed very largely by sentiment. Although you have managed in Bradford to overcome that sentiment in that one respect, yet sentiment is dead against early treatment under parochial conditions, and prevents it to a very large extent.

92825. I was only thinking that probably regulations which would leave more scope and would give more encouragement to boards of guardians to deal with cases of this character, might have the desired effect without running the risk of giving gratuitous relief to everybody, which might have great dangers?—It need not be gratuitous to everybody necessarily. I have stated the ideal. But there are many stages up towards such an ideal, without going the whole way at once.

92826. If I understand you aright, you do not advocate the municipalisation of the present voluntary hospitals but you would leave them alone, I think you said, in answer to a previous question?—Absolutely.

92827. It would necessarily follow, I think you state, that workhouse infirmary buildings would be utilised as municipal hospitals?—Yes.

92828. As they would be utilised as municipal hospitals with public funds behind them, the probabilities are that that would put an end to the establishment of voluntary hospitals in future?—I do not think so, because, at any rate for a long time to come, you would keep on treating the same class of cases as are being treated—the acute cases and accidents would still go to the voluntary hospitals where they exist, but the more chronic cases like consumption and ulcerated leg or chronic rheumatism would go into the municipal hospital. That would be met, I take it, by regulations.

92829. But experience has taught us, I think, that where a provision of this kind is made, the voluntary contributions begin to dry up when State provision is made, as was found with regard to the provision for unemployment; people will not subscribe to the distress committees because they are already recognised as part of the proper machinery of local government. If that were so is there not a danger that these hospitals would certainly decay, because their subscriptions would fall off and they would be begging for the municipality to take them over?—I can see that danger might arise in the absence of definite regulations as to the class of diseases which would be treated.

92830. Then your suggestion would scarcely be possible to apply all over the country, would it, without enormous expense? For instance, most of these workhouse infirmaries are part and parcel of the Poor Law institution; they may be separate buildings on the same site or they may be wards in a building which may be used for other purposes, but there are only something

Possibility of utilising Poor Law buildings as municipal infirmaries.

like sixteen in the whole of the country outside London which have a separately-administered infirmary. Therefore it would only be applicable in those sixteen cases without going to the expense of providing municipal buildings?—I do not see why the present buildings should not continue to be utilised as municipal infirmaries instead of Poor Law infirmaries.

92831. Even when they are part and parcel of the same buildings?—Of the same curtilage, yes.

92832. You see they are not separately administered within that curtilage, there is the over-lapping of lighting and heating and washing—usually in one laundry—and the work of the hospital is done partly by the inmates of the other part of the house, so that it would be impossible to separate the expenses. The only thing that could possibly be done, as it seems to me from my brief experience from administering an institution of this kind, would be to give the municipal authority power to send their cases without any option on the part of the guardians; but so far as joint management is concerned, it seems to me to be out of the question?—If the boards of guardians and the hospital authority were two committees of the same body, that is undoubtedly I think capable of fairly easy adjustment.

92833. If what?—If you imagine that the board of guardians were done away with, and that the Poor Law functions of the board of guardians were carried out by one of the committees of the local authority like the Education Committee, and another committee carried out the medical duties, the adjustment between them as to these two buildings would be quite easy, I should think.

92834. I can understand a system of that kind, but you would not really say the hospitals were under municipal treatment, though they would be managed by a special statutory committee of the council which would have the whole of the other classes probably or many other classes of the nation to deal with? It would lead to closer co-operation, would it not?—Undoubtedly.

92835. But not to a transference of management?—Yes.

92836. Is that what you think would happen?—As I have suggested, I think it would end possibly in the two committees taking it over—one taking over the medical part, and the other the non-medical part.

92837. Two committees?—Yes, one of which would take the place of the present board of guardians.

92838. I do not see how that would work at all unless the duties of the two committees could be very clearly defined. I could understand one committee, a statutory committee of the council, having the management of all the present institutions which now come under the Poor Law and the medical officer of health, having a great deal to do with the outside medical treatment of all cases and with regard to the admissions into the hospitals which were managed by the statutory committee. In that way you would get a close co-operation, probably closer than you would get now between the education authority and the medical officer of health?—I do not wish to commit myself to any point of new administrative detail, but I do want to lay down again the general principle that Poor Law administration so far as the relief of paupers is concerned, should, I take it, be prohibitive or as nearly prohibitive as possible, as at present; but that medical aid must be prompt, and there must be no prohibition in regard to that, if the health of the people is to be maintained and improved. To have one committee or one body doing these two almost incompatible things necessarily means a compromise between the two.

92839. When you suggest administrative changes one must be excused for criticising the changes suggested?—Just so.

92840. I suppose you have in mind a considerable change in the area of the public health authorities?—In smaller districts undoubtedly, I should say.

92841. In small urban districts and in rural districts?—Yes, I should think that would be necessary.

92842. For instance, you could not say that it would be better as they remain at present to transfer the medical treatment of cases in a district like Huddersfield, where there are practically sixteen or seventeen medical officers

of health in the Poor Law area, all of which are working under the several committees of their own urban district councils, so that what is now done by one body in Huddersfield would be done by practically sixteen separate bodies each working independently of the other in the medical treatment of cases now treated by the guardians?—I certainly think, both in regard to Poor Law relief and in regard to public health administration, that the larger bodies are much more desirable and much more efficient. Efficiency of administration by large bodies.

92843. Your suggestion for a transference of medical treatment to the medical officers of health will depend upon an alteration in that respect, will it not? As they stand at present, taking the country as a whole, it would be rather a serious step to take, would it not?—I have not much experience of the smaller local authorities, but I should say that even now the smaller sanitary authorities would do the work of medical aid better than the boards of guardians do it, because it would fit in so well with the public health functions which are enumerated on that scheme, and would at once involve the principle of the preventive treatment of disease rather than the belated treatment of disease.

92844. Of course, you will be familiar with the suggestions that were made by the British Medical Association for a public medical service and a provident medical service; have you any observations to offer on their suggestions?—I am sorry to say that at the moment I have not their suggestions in my mind. I read them through at the time but I cannot recall them sufficiently clearly to answer questions on them without hearing more of the details. Suggestions of British Medical Association.

92845. Are you satisfied with the present powers of medical men with regard to the certification of death?—No, I think that there are many certificates of death and given on insufficient examination. Need of examination and supervision of medical practitioners.

92846. In the interests of public health, is it not necessary that practically every practitioner at least should be subject to examination as to the treatment of particular cases?—Yes, I think that any man, and any doctor does more efficient work through being supervised.

92847. For instance, even with the best possible arrangement of public medical officers, such cases as this might occur—that a death takes place which is certified as ptomaine poisoning and a few days after there are found to be half-a-dozen people with small-pox in the same house, and then they discover after the death that it was small-pox, and not ptomaine poisoning. It is a very serious matter from the public health point of view that a medical man should get so far wrong in his diagnosis, is it not?—Quite.

92848. But there is no remedy for that, is there?—I submit there is a remedy.

92849. That is what I would like to hear?—There is no remedy in that particular instance, but there is a remedy to prevent its recurring in the experience of the same man. You cannot call a private doctor to book for a thing like that, but a doctor who is affiliated to an official system would be under superior officers, and would have to appear before a committee, probably, for having been so careless. I have an instance of the same thing that I can quote. A doctor wrote to me that he had seen that day a boy with a hard constant laryngeal cough, hoarseness, commencing stridor, which means difficulty of breathing; and that his symptoms were suggestive of laryngeal diphtheria. That was sent throughout the ordinary post, and meanwhile the child was kept at home for twenty-four hours, with difficulty of breathing and almost needing the operation of tracheotomy, without the doctor doing anything more. My correspondent was a private practitioner. If I had written an indignant letter to him, I should have made an enemy in my official life, but if he were affiliated to an official service he would be amenable to discipline. There are a number of instances like that.

92850. You do not suggest that a private practitioner who might treat a private patient in that way should be a public officer, do you?—No, this happened to be a dispensary case. I admit that it would not cover the whole ground, but it would go far to cover it. It would only be a gradual reform. Every doctor will do better work through being supervised, but under the present

Applicability of ineligibility of non-medical relief.

Administrative difficulties of existing areas.

arrangements you dare not find fault with the doctors, except very mildly indeed for such things as that.

92851. Would you suggest that after death the treatment of a case should be investigated so as to ascertain whether the diagnosis and treatment had been in accordance with the real cause of death?—Do you mean under a public system?

92852. I mean should the private practitioner be subject to that examination?—I do not think that is a practical suggestion, but I have not thought of it before.

92853. So long as there are private practitioners, it is open for people to be treated altogether wrongly, and to be certified wrongly after death, and no one to be any the wiser?—Yes, but I take it that the field for that would become gradually more and more limited, as the municipal system became more and more extensive.

92854. You lay great stress upon the influence the doctor would have over the habits of the people who are under his treatment; if these people were persistent in their habits, would you resort to any compulsion at all? My own experience at Brighton is that compulsion is very rarely needed. If you take time to get into sympathetic touch with the patients and spend time over it, you can exercise discipline without compulsion. I think that in exceptional cases compulsion will undoubtedly be needed, and that power should be given to local authorities to regulate by by-laws or otherwise, these very exceptional cases.

92855. (*Mr. Nunn.*) Do you apply that to the segregation of acute cases of phthisis?—I would apply the principle of compulsion in phthisis in very few cases—very few indeed. I should be very careful to safeguard that. I do not think we want compulsion yet, unless in very exceptional cases—where a man is in a common lodging-house for instance, very bad, and will not go to any institution at all; or again where he is in an infirmary well treated and well attended to but insists on going out into a crowded house. I think that all those cases should be very carefully safeguarded, although the same thing is being done in New York extensively now.

92856. (*Mr. Bentham.*) Where the people will not take precautions and the subject is a danger to the other members of the household, would you go so far as to ask for compulsory powers to remove such a person?—I do not think at the present time that the public opinion of this country will justify compulsion in such cases except to a very limited extent, and I should proceed warily and cautiously on that point.

92857. (*Mr. Phelps.*) Are you familiar with workhouses and infirmaries to any extent?—Yes, in a general way.

92858. In London as well as in the provinces?—Yes, to some extent in London also.

92859. Have you considered the question whether they could be used in medical education?—I think that the present non-use of them is a very serious calamity to the country. It is extremely desirable that they should be utilised to a very much greater extent than they have been in the past.

92860. You do not see any difficulties in the way of that?—No; my own experience is that any hospital to which medical students are attached is always better administered than one to which medical students are not attached. There is a general uplifting of the whole of the administration.

92861. So in the interests of the institution, as well as the subject, you would urge it?—Yes, I would urge it.

92862. (*Dr. Downes.*) I see with regard to your arrangements at Brighton you lay stress on the importance of tact on the part of the inspector who visits the families?—Yes.

92863. You mention sympathetic relationship lower down?—Yes, I do.

92864. I suppose you would attach great importance to those qualities?—Undoubtedly.

92865. Have you tried any voluntary associations in this work?—In connection with consumption?

92866. Yes, and in visiting the homes?—Not to any large extent. The only voluntary arrangement we have tried is by having health addresses to the mothers' meetings throughout the town. We have a Women's

Health Society; and they pay for addresses to be given by skilled ladies, to fifty and one hundred mothers at a time, right through the winter at all the mothers' meetings in the town.

92867. Do you employ female inspectors for this home visitation?—No; at the present time I have not one.

92868. In a large city where I made enquiry into this point the physicians of the dispensary laid a good deal of importance on the visits being made by others than the ordinary type of sanitary inspector—that the uniformed official who was too much of an official was not always successful.—It is absolutely imperative that the official must not be uniformed. It would damn his effort at once if he went in uniform; but short of that, a great deal depends on the tact of the men you employ. I happen to have an excellent man for the purpose. I should prefer to have a lady inspector for visiting female phthisical cases.

92869. You need individual contact with them?—Yes.

92870. In the scheme for medical arrangements which you have favoured us with you have in C.: "the sanitary authority and education committee." By sanitary authority do you mean the county council?—When saying sanitary authority and education committee I was thinking more particularly of my own arrangements.

92871. You have a county borough?—Yes.

92872. And that, of course, is the sanitary authority?—Yes.

92873. But in the case of a county council it is not necessarily a sanitary authority, I think?—Only very partially.

92874. I only wanted to clear that matter. In that column you state that the sanitary authority should pay the doctor's fees when called in by midwives?—Yes.

92875. Under what statutory power would they do that?—That is not completely Brighton. We have not done that at all in Brighton. I know it is done in some large cities, but under what statutory powers I do not know.

92876. You do not bring it under the head of B., the Poor Law guardians. Are you aware of the powers of guardians under the Poor Law Amendment Act, 1848?—I am not familiar with that Act.

92877. There was a circular of the Local Government Board issued lately drawing attention to them?—I am not familiar with that.

92878. In Paragraph 6 (i.) you state that there is a waste of information. "The Poor Law medical officers are daily in possession of information—at present wasted"—That is so.

92879. Have you ever utilised the Order of the Local Government Board of February, 1879?—What does that relate to?

92880. It relates to the giving of information by district medical officers to sanitary authorities?—I utilised it in my London experience, but I have not utilised it in Brighton. That relates to giving lists of cases of sickness, does it not?

92881. It was before the days of the Notification Act; but it also went on to say: "He shall also furnish from time to time to the medical officer of health to such sanitary authority such information with respect to the cases of sickness and the deaths amongst the pauper patients under his care as the Local Government Board may direct." That is extending it to all kinds of sickness?—Yes.

92882. But I cannot ascertain whether it has been made use of?—I take it the Local Government Board has not directed it.

92883. Has any application been made?—I do not know the machinery.

92884. At any rate you have made no application?—We have made no application from Brighton for such a regulation.

92885. Are you aware of any reason why such application has not been made?—No.

Dr. Arthur Newsholme, M.D., F.R.C.P.

3 Feb. 1908.

Lack of female health visitors.

Arrangements as to sanitary authority.

Payment of doctors called in by midwives.

Extent to which Order of L.G.B., Feb., 1879, is utilised.

*Dr. Arthur
Newsholme,
M.D.,
F.R.C.P.*

3 Feb. 1908.

Dietary for
consump-
tives in
workhouse
infirmaries.

92886. In Paragraph 27 you say: "In workhouse infirmaries consumptives commonly receive the routine diet for invalids, which is deficient in nutriment"?—Yes.

92887. Have you any concrete instances you could give us as an example of that?—Yes, I have; but I am a little averse to quoting them because they are local instances.

92888. The dietary for the sick you are no doubt aware is prescribed by the medical officer?—Yes; and recently in Brighton I have got a pint of milk added to that dietary in order to induce the consumptive patients in the infirmary to stop there. After they have been in our sanatorium, and subsequently, at a more advanced stage, go into the infirmary, they sometimes refuse to stay, because they are not suitably and sufficiently fed.

92889. How did you get that milk added?—By interviewing the medical officer personally. I do not think it is a general order, but he adds it on to the dietary of individual patients.

92890. As you are aware, he has a free hand in dieting each sick patient according to the needs of the case?—That is so.

92891. Then you say that they receive the routine diet for the able-bodied, which is coarse and unappetising?—Yes, in many cases.

92892. Do you find that consumptives are put on the able-bodied diet to a large extent?—I will give you an instance which I investigated. A man about thirty years of age had been an out-patient at the local general hospital suffering from consumption. The physician in attendance had promised to notify the case to me but had not done so; he forgot. In the meantime the man was so ill that he asked for and obtained admission to the infirmary. After he had arrived there and been there about a month, owing to distress in Brighton there was a deficiency of accommodation in the beds of the infirmary; and they sent him across to the able-bodied ward, and then he was put on the diet which is named here. After eating that dietary for a few days he felt so ill that he went back to bed. He was kept in bed two days. At the end of that time he was told that he would have to do the work of the able-bodied, and stone-breaking was mentioned to him, not actually ordered. Then he took his discharge from the workhouse. He came down to the town hall and saw me; and I admitted him to the sanatorium. He is undoubtedly consumptive.

92893. Do you say this on his statement, or have you verified it?—I am glad you asked me that question. I have not verified the allegations made by him. I have only verified the fact that he was at the county hospital suffering from consumption; that he was transferred from the sick ward to the able-bodied ward; and that he subsequently took his discharge and came to me. The other details I do not know, except from the patient's own information.

92894. What workhouse was he in?—In the Brighton Workhouse.

92895. The infirmary there is part of the same curtilage, is it not?—They are in different blocks, I think.

92896. But within the same curtilage?—Yes, within the same boundary.

92897. Was any representation made to the guardians on the point?—That only happened on Saturday, and as I left Brighton on Sunday evening I left it to my successor.

92898. Have you come across many cases of that sort?—No, not many. I have come across odd cases, and I have come across a very considerable number of cases in which the patients have left the workhouse infirmary because they did not like it.

92899. Did not like what, the place generally?—Did not like the conditions under which they were treated; it is not so sympathetic and not so good as it ought to be for invalids.

92900. It is not necessarily a question of dietary in those cases?—Not altogether diet. I should like to add I believe that our local arrangements are above the average in workhouses or infirmaries in efficiency and kindness.

92901. In your suggestion that every man should have the right to call for gratuitous diagnosis, treatment

and provision of medicine, I think you told us that you were treating the matter rather from the ideal point of view as a physician?—I began that sentence by saying: "It seems to me necessary for the maximum economy as well as efficiency." The maximum is the ultimate goal towards which we are approaching. It may be considerably remote from the present time, but improvement should tend in that direction.

92902. Do you regard such a system as immediately practicable?—That is a question which I have not enquired into. I have dealt with the matter in this evidence from a medical point of view, and approximation towards it is practicable; the whole thing would be economical in the interests of the community if it could be carried out.

92903. Can you give any examples of such a system in operation that would lead to that conclusion?—I am not sufficiently familiar with the systems adopted in Germany or Scandinavia to speak in detail about them; aid. but in both those parts of Europe there is approximation towards such a system.

92904. How would you raise the funds to supply the cost of this gratuitous service?—That is an economic question which at the present time I am not prepared to go into.

92905. Have you considered any of the details of such a system?—Only from a medical point of view, from the point of view of what is desirable in the interests of public health, and with the knowledge of the fact that whatever improves the public health conduces to economy and efficiency, and must, in the end, save money.

92906. Do you contemplate that there should be formed a service of medical men?—Yes.

92907. Whose officers should they be?—The officers, in my opinion, of the local sanitary authority.

92908. (Chairman.) A whole-time service?—That I do not say.

92909. Would it not necessarily have to be a whole-time service?—I take it that it would grow out of the present district medical officers; and whether they would become at once whole-time medical officers or not would depend on the size of the districts which would be added to them. It would be impossible to make it a logically complete system at once; it would have to be a matter of evolution.

92910. (Dr. Downes.) Would you retain the sanitary authorities as they are at present?—I have already expressed my general opinion that larger sanitary authorities than the non-county boroughs and the rural districts are desirable.

92911. Could you give any opinion as to the size of such a district as you would like to see?—I am not prepared to go into any details except the general principle that within certain limits the larger the sanitary area the less likely it is to be venial, and the more efficient it is likely to be.

92912. I think I understood you to say that you thought smaller sanitary authorities would do the work better than the present board of guardians?—It is my opinion that wider responsibilities would mean more efficient authorities.

92913. Even taking them as they are?—The unification of the medical service would be an unstinted gain.

92914. You are aware, I dare say, of the number of sanitary authorities in this country at the present time?—May I modify my statement to this extent, if the number of sanitary authorities is larger than the number of boards of guardians—do I understand you to imply that?

92915. Quite so.—Then that would be an urgent reason for the amalgamation of the sanitary authorities.

92916. I believe as a matter of fact, the number of sanitary authorities approaches 2,000, and the number of boards of guardians is between 600 and 700?—That I was not aware of, and to that extent I should like to modify my answer.

92917. Are you aware of the reference that was made in the Report of the medical officer of the Local Government Board for 1904-5 as to the administration by authorities.

Deterrence of
workhouse
infirmaries.

service.

Efficiency
of adminis-
tration by
large
bodies.

Advantage
of unification
of medical
service.

Report of
L. G. B., of
administra-
tion by
sanitary
authorities.

sanitary authorities?—I do not know the reference to which you refer.

92918. It is on p. 12, and it is headed "Mal-administration."—"Mal-administration by Sanitary Authorities": I quite believe that. In fact there is abundant evidence of the medical inspectors of the Local Government Board to prove that.

92919. Is it not the fact that many sanitary authorities at the present time are, as regards their personal members, almost identical with the board of guardians?—Yes.

92920. And the same would apply to some of the smaller town councils I suppose?—No, I think only to a small extent to the town councils.

92921. You have been asked some questions as to the working of such a form of medical relief as you contemplate with regard to the provision of food and nourishment. I am not quite sure what your position is with regard to that. Do you consider that the medical man should order the food and the nourishment?—The view I stated was that the giving of non-medical material relief should be in the hands of a different committee to that which gives the medical aid; in other words that medical aid should be given freely and liberally; as to the other kind of aid, the same Poor Law principles as at present should apply.

92922. That is to say another body should give what the officer of a different body orders?—Using the word "body" in the sense probably of a committee of the same great body.

92923. An administrative committee if you like?—Yes.

92924. Do you think that would work?—I think it would work very well.

92925. What control would the body that has to give the nourishment have over the officer ordering it?—The necessity for that kind of relief would have to be certified.

92926. One can imagine a medical officer with liberal ideas as to whisky, and the body supplying may object to giving whisky so freely?—I should not blame them.

92927. What would they do?—They would stint the whisky.

92928. Then if we go from whisky to something else it might not be so clear?—I do not think the difficulty in that arrangement would be as great as under the present conditions. The family at any rate would be relieved as far as the most urgent need *i.e.*, for medical aid was concerned. The other would remain as before.

92929. In medical treatment is it not difficult to draw a distinction between treatment by drugs and treatment by food?—Yes.

92930. Take the disease of diabetes, which was mentioned a little time ago, there the treatment becomes almost entirely one of diet, does it not?—It might be put differently, it becomes almost entirely a question of depriving a patient of most of his food and leaving only the nitrogenous food.

92931. He might have to have special provisions substituted, such as gluten bread?—Yes, he might.

92932. With regard to diabetes, you draw attention to the importance of the food there. Do you think any competent medical man would omit to advise his patient as to such a *régime* as you mention?—I am very much afraid under the present conditions of Poor Law medical relief diabetes is very commonly not discovered at all. The diagnosis is very poor in a very large number of the cases on outdoor medical relief.

92933. In what way should you expect the efficiency to be secured by an official system of medical attendance?—Because the doctor who is not competent is under supervision by a superintendent. At present he is under supervision only by a committee who do not know so much as he does.

92934. It is the check of the supervision which you would rely upon?—Yes, the supervision and the fact that sooner or later the lack of competence is discovered. I will take an example. I have had cases of consumption sent to me at my Brighton sanatorium which have been treated for a couple of years by a doctor for chronic bronchitis; the chest has never been examined and the

sputum has never been examined. Under a system such as I advocate the doctor who had gone on for three months, not to say two years, doing that sort of thing, would certainly get his knuckles rapped.

92935. Could not that kind of authority be instituted without a regular break up of the medical system?—I have no right to rap other people's knuckles at the present time. If a private practitioner grossly mis-treats a case at the present moment, and I have to rap him on the knuckles, my future relations with him are much more difficult than they would be if he were acting under my general supervision.

92936. I thought I understood you to say that you did not anticipate that everyone would go to the official service?—No, the people that most need it would have it, and those are the poor.

92937. You say that it should be devoid of parochial stigma?—Yes.

92938. Have you ever analysed what you meant by parochial stigma. What is it in its essence?—It is certainly a deterrent treatment; that is the primary element in it. It seems to me that the people resort to it only at a very late date, whilst the slowness of the illness depends on having early treatment.

92939. What is this thing which is deterrent in its essence?—I am not prepared to analyse it any further, except that in actual experience the poor do not have parochial medical treatment if they can possibly avoid it.

92940. Is it not a thing which can grow up under any system quite apart from the Poor Law. I will explain my meaning; free distribution of soup and bread goes on; there is no Poor Law stigma attached there, but it is not regarded as a stigma for an independent labouring-man to avail himself of the free distribution of soup and bread?—That I submit is not an analogous case. Free distributions of soup and bread are given out of the free gifts of the charitable. Free medical aid is given out of the common funds of the community.

92941. If you have a free medical service, different grades of people will resort to it, and some of those will be undesirable?—Yes.

92942. Will not the tendency be for the undesirables to resort to that source of medical relief?—I hope they would.

92943. Is there not something in the association in the shadow of relief with undesirables, which is at the bottom of this stigma?—I suppose that might be so, but the same thing applies in hospitals and dispensary practice; you get a mixture of decent people, and people who are very undesirable, and yet the in-patient work is on the whole efficient. You get in the next beds in a consumption ward a vagrant and a clerk, I had that last week in Brighton myself; there is no difficulty in that at all, it works perfectly well.

92944. Should you anticipate any objection on the part of the public to the medical supervision which you seem to anticipate would follow on your official system. Let me take an example, you suggest that the use of respirators should be compulsory. How would the public like a regime which compelled them to use respirators, if they did not wish to?—I think I rather over-stated the matter, or you misunderstood me. What I suggested was that the preventive treatment of bronchitis due to industrial dust, would imply pressing the people to use respirators. As to compulsion I do not think that would come in, except through some general Factory and Workshops Regulations. In fact, that is applied at the present time in certain occupations. My own belief is that the compulsion would be very little indeed, but the pressure of medical treatment would be directed in the direction of preventive measures rather than drugs.

92945. You recognise that it might defeat its own object if compulsion were resorted to?—I think compulsion should be used to a very limited extent indeed, and would not be resorted to except in very rare cases.

92946. You said in another answer that the medicine given should be of a disciplinary character?—I was not thinking so much of the medicine given (I do not believe in making medicines unnecessarily nasty), but more of the general arrangements, so as not to tempt people to keep on with them, or begin them unnecessarily. That was the point I think.

Value of
statistics of
tuberculosis.

Provision for
families of
phthisical
patients.

Class of in-
mates in
workhouse
infirmaries.

Adequacy
of doctors
under pro-
posed scheme
for gratuitous
medical aid.

92947. As to the valuable statistics which you have given in reference to tuberculosis in this country and elsewhere, I suppose you do not say that your views are conclusive or accepted on all sides?—No, I only speak for myself, but up to now I have seen no controversion of either the facts or the body of reasoning based upon them.

92948. You put it forward as a piece of evidence without pressing it as a generally accepted conclusion?—It is absolutely personal.

92949. You mention Dr. Mott's statistics of post-mortems in the London County Asylums?—Yes.

92950. And in a large proportion he found old tuberculosis?—Yes.

92951. Is it not the fact that old tuberculosis is found in a very large number of post-mortems, quite apart from inmates of asylums?—That is so.

92952. In fact there is a very strong statement of Professor Osler which is quoted by Dr. Bulstrode. He says: "The germ of tuberculosis is ubiquitous; few reach maturity without infection; none reach old age without a focus somewhere." Would you accept Professor Osler as a very high authority?—Certainly, but the point in connection with the asylum matter was as to whether these lunatics became consumptive after going to the asylum or not, and I was quoting Dr. Mott's statement as bearing on that, and it still bears on that; your quotation does not affect the point. Moreover Professor Osler is referring to the results of post-mortem examinations in persons dying of diseases other than tuberculosis, and disclosing tuberculosis usually healed. Outside the laboratory a tuberculous focus does not become necessarily or probably a source of infection until a condition of "open" tuberculosis has been induced. The quotation is therefore not relevant to the general question of the control of tuberculous infection in the community.

92953. May I ask how you arrange for the maintenance of men who are withdrawn from work under your sanatorium treatment? I think you told us something about those men?—Inasmuch as the average stay is only about five weeks, the point quite seldom arises, and when it does arise aid has been given out of the friendly society funds, or by means of the Charity Organisation Society (which has done admirable service in that respect), or occasionally by clergymen and ministers, who subscribe. In the vast majority of cases the working man is quite prepared to come away from home for a month or six weeks, but he cannot afford to come for longer than that.

92954. You quote a Local Government Board Poor Law Inspector; who said that workhouse infirmaries were more and more places for the sick, and less and less places for able-bodied?—Yes.

92955. Is that correct? They never were places for the able-bodied, were they?—I think I can find the exact quotation. Are you referring to workhouses or infirmaries?

92956. The words used were, "workhouse infirmaries." That is why I took a note of it?—I meant workhouses more generally. I think I can give you the exact quotation. Mr. Fleming in the Report of the Local Government Board for 1902-3 speaks of the general change in the character of workhouse inmates: "during recent years the able-bodied inmates have gone, and the sick inmates have come."

92957. (Mrs. Bosanquet.) I think you were careful to say that in advocating free medical relief, it was from your point of view as a medical man?—That is so.

92958. Could you divest yourself of that point of view for a few moments?—I do not think I could.

92959. Then I must turn to another point. I gather you think that imperfect diagnosis is generally the result of medical men trying to deal with too many cases?—That is a very common cause of it.

92960. I am a little puzzled to think how you are going to meet the enormously increased demand which I suppose you hope for under a system of free medical relief. You cannot increase your staff of medical men very largely at once, can you?—No, but early treatment will shorten the duration of the sickness in a very large proportion of the sicknesses; and although you are

giving more help with one hand, you will be diminishing the necessity for the help with the other hand.

92961. But that is to come in the future. For the immediate effect you want an immediate staff to meet it?—It will come in the immediate future, because in a case of rheumatic fever treated in the first day or two, the illness can be cut short in a week, but if it is allowed to go on longer, it may be an illness of two or three months.

92962. That can only be subsequent to this desire, that you have to get all the cases in; the immediate result will be that a given number of doctors, now very much overworked and unable to diagnose their cases properly, will have still more work to do? Would not that question assume that the system will grow up at once? It will not grow up all in a minute, it will surely be a very gradual and slow growth.

92963. I should have thought if you passed a law to give free medical relief to-morrow you would get them at once; is not that what you hope for?—I have no hope for that; whatever is passed will be very gradual.

92964. You cannot get your improved result until you have increased your number of cases?—You will get the improved results by the improvement in methods, and the improved methods I take it, will come gradually.

92965. Then pressing a little further what Dr. Downes has already mentioned, I can quite understand that your health authority works well in places like Brighton and Finsbury, and half-a-dozen other places that have been brought before our notice, but one has been about the country where the sanitary administration is abominable, where the authorities are corrupt, neglectful and ignorant; I cannot see how you are going to improve anything by putting the medical administration under such authorities as those?—You will get single instead of dual control at once; though I quite agree that the small sanitary authorities, mentioned by Dr. Downes, should be amalgamated and made larger, in order to get the best results.

92966. You think that in these cases where the boards of guardians are doing much better work, you would be prepared to put the sanitary authority under the board of guardians, and get your control in that way?—I think it might be possible, until you can arrange for a fusion of sanitary authorities.

92967. Then as to the question of free treatment; it has been tried in Ireland has it not, for many years?—Yes, the dispensary system.

92968. Is there any result in diminishing disease; is it any lower there than in England?—It has been tried in Ireland under the very worst possible conditions, both indoor and outdoor, and without an element of preventive medicine in it.

92969. Then it is not merely the freedom of it so much, as the better organisation that you anticipate?—Yes, if it were centred round a system of preventive medicine, it would make all the difference in the world.

92970. Do you think it would make all the difference in the world without making it gratuitous?—It must be gratuitous so far as you give it. The parochial medical service now is gratuitous, so far as the patients themselves are concerned. If you keep on the present arrangement, simply adding the parochial medical aid to the sanitary authority's functions, it will be gratuitous.

92971. You are not prepared to attempt to institute any provident system?—I should welcome any such system if it could be made applicable. I do not see how it could be made applicable, unless it were compulsory, as in Germany.

92972. Under your system, are the people to have a choice of doctor?—That is a point on which I cannot see my way clear; it is a point of detail on which one may reserve one's judgment.

92973. You are not tied to having only the one paid officer?—That is a matter which I think might be left to the local authority to decide. My own impression is that at any rate so far as those who have absolutely gratuitous treatment are concerned, it would be necessary not to allow a choice of doctor.

Choice of
own doctor
by poor.

92974. That would at once have a deterrent effect, would it not?—I do not think so to any great extent, if at all, probably not at all.

92975. That is the chief objection that is made to the Poor Law doctor now: that is, that he is the doctor for the poor, and they do not believe in him.—I submit it is not the chief objection. The objection first of all is that the relieving officer wards them off as long as possible, and secondly they get, under the present conditions, unsatisfactory treatment, when they actually get it.

92976. (*Miss Hill.*) If you do not establish at present an entirely free system, do you think it would be possible to transfer to an authority, which has no machinery for investigating, the medical attendance of the poor?—Might I ask what investigation you are referring to?

92977. I meant with regard to means?—If the medical aid were free, what investigation would you require?

92978. I thought you agreed that it would not be possible immediately to establish an entirely free system, but you said, or at least I gathered that you meant, that you thought it would be a step in the right direction if the medical attendance on the poor was transferred to the present public health authority?—Yes.

92979. Then I understand that the public health authority has no machinery for investigating the circumstances of the poor. Do you see how that difficulty is to be got over?—Assuming that the local sanitary authority take over all the functions of the board of guardians it simply means using the officers of another committee of the same local authority to investigate.

92980. Your plan of any improvement of the medical attendance on the poor is dependent on the same authority taking over the whole of the Poor Law work, is it?—I think there is very little doubt that if one part, viz., free medical aid were taken over there would be a taking over of the other functions just as has happened with the education authority.

92981. Only free medical aid at present depends on the circumstances of the applicant?—That is so.

92982. Would you propose to retain that or only retain it until you get your entirely free ideal system?—I should remove the prohibitive conditions under which medical aid is given at the present time.

92983. That means you would immediately make it all free?—In practice I do not think it would come to that, because for some years to come a very large proportion of the population would not avail themselves of it.

92984. They would have a right to free medical service, whatever their circumstances were?—You could limit it by some wage limit.

92985. In answer to Mrs. Bosanquet I think you said you did not think it was a great deterrent to the poor in places where they had no choice of a medical man, where they had compulsorily one and only one?—I think the main difficulty is first of all that they do not like the idea of going to get Poor Law relief, and secondly the relieving officer wards them off as long as possible.

92986. Have you any experience of the poor who belong to clubs? Having no choice of a medical man is a very great difficulty to them, is it not within your experience? That is one very great objection made by many people to joining provident clubs?—Yes, that they can only have one doctor.

92987. And that wherever the provident society puts on their list a considerable number of doctors and the people have their choice, the system is very much more welcomed?—That may be so. I have no experience on that point.

92988. You consider that a good number of people would continue to employ general practitioners; they might prefer to pay and have their own choice of a doctor?—I think that would be so.

92989. In that case they would pay doubly, in rates and fees?—I suppose that would be so, just as in school matters now.

92990. You see no objection to that?—No, if they wish to pay twice over I should give them an opportunity. They are doing that at the present time in education

matters, and in vaccination, so I see no objection to the extension of that practice.

92991. You say you find five weeks' training in a sanatorium very effectual in educating patients?—That has been our experience.

92992. I wonder why you despair of people under proper instruction learning in their homes?—That is simply based, as regards consumptives, on actual experience. It was that actual difficulty of training these people that led us to use our fever hospital for phthisis.

92993. You think it worth while to incur what I suppose would be the enormous cost of sanatoria all over the country rather than wait till the people themselves develop more intelligence and knowledge, even in spite of the way that knowledge is spreading in various directions all over the world?—I think that that question presupposes no difference between general knowledge and specialised knowledge: a knowledge of how to prevent the spread of consumption is specialised knowledge, and however intelligent the population may be they would still need training in respect of that particular disease.

92994. Do you not think they get a good deal of special knowledge?—It is not effectual in actual life in my experience, even amongst the fairly educated people, unless they have received the training personally.

92995. You do not see a considerable tendency to sleep with open windows now which did not exist before?—Yes.

92996. Does not that help at all?—That helps immensely.

92997. In the same way would there not be several other directions which were more or less known amongst the people—would not they spread amongst the people? Does not that seem the natural way to develop it?—It is a very natural way of developing it, but it is very slow, and in the meantime people are being infected.

92998. (*Mr. Patten-MacDougal.*) Do I understand you rightly that you do not advocate the compulsory notification of phthisis in all cases?—I do not.

92999. You, I think, would determine it in this way, if there were effective measures provided for curative treatment by the authority applying for the compulsory notification, then you would have it compulsorily notified; is that so?—Those are the circumstances under which, if I had a voice, I would at present sanction it, but, as a matter of fact, when you get institutional treatment notification becomes a success without compulsion. We have in Brighton a higher proportion of cases notified under a voluntary system than they have in Sheffield under a compulsory system.

93000. By whom are these measures to be taken; by the Poor Law authority or by the public health authority?—The public health authority.

93001. They are to provide the sanatoria?—Or some means of treating the disease, but it need not necessarily be in a separate building.

93002. Does that mean you would support the removal of all phthisis cases from the Poor Law to the public health authority?—They could remain in the same buildings. I do not think it would be necessary to build new infirmary buildings. The same buildings may be utilised.

93003. Assuming the conditions remain as they are, apart from the large scheme which you advocate?—I would not remove them.

93004. Would you have two different authorities treating cases within the same building, the Poor Law authority treating cases other than phthisis, and the local authority treating phthisis?—In Brighton we have twenty-five cases being treated at the present moment in the borough sanatorium or fever hospital; there are about thirty cases of consumption being treated in the workhouse infirmary a couple of stones' throw away.

93005. By whom?—By separate doctors and separate administration completely. It is a waste of effort, and is not so good as if they were all under one doctor, but under present conditions it cannot be altered.

Treatment of
phthi-ical
paupers by
sanitary
authority.

93006. Would you not think it would be an improvement on that system if all cases of phthisis were moved from the Poor Law authority and handed over to the public health authority?—I think it would, but I do not think it can be done under the present conditions; the board of guardians would not be willing to pay the sanitary authority for their thirty patients.

93007. That involves a payment to the sanitary authority by the board of guardians?—Under present conditions.

93008. If there is a duty upon the local authority to treat all cases of infectious diseases themselves, the cost being paid out of the rates, then that difficulty would be removed, would it not?—I am not prepared to say at the present moment there is that duty upon them.

Immigration
of consump-
tives to
Brighton.

93009. You said in answer to the Bishop of Ross, I think, that there was a considerable importation to Brighton at present of cases of people suffering from phthisis?—A steady stream every year.

93010. Is that because of the health conditions of Brighton, or is it because there you have special facilities for the treatment of phthisis?—It is because of the health conditions of Brighton, and because doctors in London and elsewhere say: You are gradually breaking down in health; you had better go and get a job at Brighton or some place like that. With regard to the municipal facilities for treatment, we have had to protect ourselves in Brighton against importation. We have a rigid rule that no patient can be treated in our borough sanatorium until he has lived two years consecutively in Brighton, so the consumptive coming down with the intention of being treated by us has to live there two years.

93011. Is that under your Act?—It is not compulsory under the Act, but we are not taking any case under two years. This is not compulsory treatment.

Notification
of phthisis.

93012. (*Sir Samuel Provis.*) You found your voluntary system of notification successful in Brighton?—That is so.

93013. It has been objected sometimes to notification of phthisis being made compulsory, I think, that it would be feared that phthisis would then be thought to be a dangerous infectious disease within the Public Health Act, and therefore persons would be subject to the penalties which attach to a dangerous infectious disease?—That is so.

93014. Have you had any difficulty of that sort in Brighton?—Not at all. We have found that notification has not led to any friction whatever, and the whole thing has been private. We have had practically no trouble in carrying out the proceedings following on notification. I think eventually we shall in Brighton go in for a system of compulsion, if we get the consent of Parliament, but at present we are better off without compulsion than some towns with.

Deterrence
of Poor Law
medical
relief.

93015. (*Chairman.*) You have given us a most interesting and able paper, and it is a subject upon which you have written and thought a great deal, as we all know, for some years past. I want to ask a question in regard to the scheme you put forward being on a gratuitous basis. I understand that you are much impressed with the deterrent effect which the attachment of medical relief to the Poor Law has upon the applicants?—That is so.

Overlapping
of various
medical
agencies.

93016. Also, as your paper shows, you are very much impressed with the overlapping or the want of co-operation there is between the different medical authorities?—Yes.

Mr. Sidney
Webb,
LL.B.

3 Feb. 1908.

93030. (*Chairman.*) You are a Member of the London County Council, and Chairman of the Board of Studies in Economics and Political Science of the University of London?—I am.

93031. You have been good enough to prepare answer to questions submitted to you by this Commission, and if you will kindly hand them in, we will treat them as your evidence-in-chief?—Very well. (*The Witness handed in the following Questions and Answers.*)

93017. And the third, though perhaps not the least of Evils of the evils, is that the system of gratuitous out-patient patient relief which is given by the hospital results in your judgment in perfunctory diagnosis?—Yes.

93018. It being dissociated from domiciliary visits is not calculated to do the patients anything like the amount of good that would be done if they were attended on domiciliary visits?—Yes.

93019. I gather from your evidence that, to get over these evils, you make certain suggestions, and gratuitous relief treatment is put forward because you do not think that the suggestions you make could be effectively put in operation unless the system of relief were gratuitous?—That is so.

93020. But, assuming that it was possible to give effect, I do not say in their entirety, but to a very considerable number of your suggestions without making a system of free medical relief, you would not object to such a course being taken as adopting a scheme which would go in a considerable direction with your views, though not based on purely gratuitous relief?—My idea was, when I said that, that any step in that direction is so far to the good.

93021. You suggested this because it seemed to be the easiest and most practicable way of getting over some of the difficulties?—I was asked to state from a medical point of view what, in my opinion, was the best, and I stated the best.

93022. Have you a mortuary at Brighton?—Yes.

Public
mortuaries.

93023. Is not a public mortuary rather a necessity in a very crowded district?—That is so, but unfortunately there is a great difficulty in getting the working classes to use it.

93024. There is a dislike to it, is there?—Yes, they object very strongly in many cases.

93025. I suppose there is no doubt that the largely increased number of deaths in the workhouse infirmary is due to people being removed there in order that they may not die in their own houses?—I had not thought of that before, but there is another influence acting at the same time, that many people take their relatives out of the infirmary so that it shall not be said that they died in the poor house. That acts to a very large extent.

93026. Still the number of deaths has very largely increased?—Yes, it has doubled in the last twenty or thirty years. In London 18 per cent. of all the deaths occur in workhouses and workhouse infirmaries.

93027. You are afraid that with the prejudice there is against mortuaries their universal establishment would not be very beneficial?—What would be more beneficial and "rest places" would be compulsion to make them used, or some adoption of the German system of rest-places in the cemetery itself before burial. That is an excellent plan. For several days before burial they are in the cemetery.

93028. That is a less repugnant process than to lay the body out in a mortuary?—Yes.

93029. (*Mr. Gardiner.*) You were asked what you thought of the British Medical Association's scheme; would it be asking you too much to add to your evidence a criticism of this scheme? It would be very valuable to us?—I do not think I am at liberty to do so. I am taking on other official duties, and I can only discharge those official duties.

Mr. SIDNEY WEBB, LL.B., called; and Examined.

PART I.

Question I.—What is the general effect:—

- (a) Of the spread of machinery;
- (b) Of more highly organised processes; and
- (c) Of industrial legislation

on the demand for labour?

Question II.—In particular, do modern developments tend to displace:—

- (a) Middle-aged by younger persons;
- (b) "All-round" skill by specialised mechanical skill;
- (c) Skilled labour by unskilled; and
- (d) Adult men by women and young persons?

Question III.—Do modern developments tend to reduce temporarily or permanently the total demand for labour within the trade where such developments occur?

Question IV.—Are the changes indicated in Questions I. and II. fully compensated for by new demands in other directions for the labour displaced?

Question V.—Do such changes call for greater mobility of labour:—

- (a) As between different trades, and
- (b) As between different branches of the same trade?

Question VI.—If so, in what way is the mobility being, or should it be, provided for?

In reply to questions I. to VI. inclusive I am afraid that I have no information or suggestions likely to be of use. I am not aware of any statistical investigations that would enable these questions to be answered with any assurance. I see no reason to doubt the ordinary conclusion that there has been, in the past half-century, a considerable substitution of intelligent machine-minding for mere mechanical effort, with a corresponding transformation of part of the labouring class; quite possibly to the serious detriment of another part of that class. There has also been a considerable decrease in the industrial employment of children and, apparently also, of women; whilst there has been a greatly increased withdrawal from industry also of the mentally and physically afflicted, who are now segregated in institutions to a much greater extent than used to be the case. In this sense the proportion of "skilled" labour in employment has risen relatively to "unskilled." All this must have meant a rise both in the average capacity of the wage-earners employed, and a still greater rise in the minimum capacity considered worth employing. This rise appears likely to continue. It may have a bearing on the problem of how we ought to educate our future workers. It may also (though of this we cannot be sure) afford some explanation of the apparent surplus of common unskilled labour in the great towns. It certainly promises no hope of any automatic absorption of this surplus.

Question VII.—If the demands on the adult worker are now more exacting and if the apprenticeship system is falling into disuse, how would you suggest that youth be trained?

Answer VII.—A Proposal for Industrial Training.—I regard the growing up of hundreds of thousands of boys without obtaining any sort of industrial training, specialised or unspecialised, as a perpetual creating of future pauperism, and a grave social menace. Mr. Reginald Bray, L.C.C., and Mr. Cyril Jackson, L.C.C., will have explained to the Commission the enormous extent to which this is happening in London. Similar conditions prevail, I believe, in Liverpool, Manchester, Glasgow, and other large towns. Without going into detail, I may be permitted to draw attention to the four-fold evil aspect of this phenomenon. There is, first of all, the evil, through the multiplication of van boys, errand boys, messenger boys, etc., of recruiting a chronically excessive army of unskilled, casually-employed, merely brute labour. There is, further, the illegitimate use, by employers, of successive relays of boys, not as persons to whom a skilled trade has to be taught, but, by ignoring that responsibility, as cheap substitutes for adult workers, who are thereby deprived of employment. There is, as the other aspect of this, the failure to provide for the healthy physical development of the town boy, whose long hours of monotonous and uneducational work leave him a "weedy," narrow-chested, stunted weakling, whom even the recruiting sergeant rejects, and who succumbs prematurely to disease. Finally, there is the creation of the "hooligan"—the undisciplined youth, precocious

in evil, earning at 17 or 18 more wages than suffice to keep him, independent of home control, and yet unsteadied by a man's responsibilities.

I regard it as essential, if there is to be any effective grappling with what may be termed the pauperism of casual employment or of unskilled labour, that this four-fold evil should be remedied. At present it is scarcely too much to say we re-create every eight or ten years our whole army of paupers. If, by some miracle, we could get rid of the present million or paupers, we should, if we made no other change, simply have an equal number on our hands within a decade. Nothing is of any real use that does not stop the sources of pauperism. And one of these sources is our present failure in London to turn our boys into physically strong and industrially trained men.

HOW WE AT PRESENT RECRUIT THE ARMY OF UNSKILLED LABOUR.

What stares in the face the exceptionally careful parent of the poorer class who tries to start his son well is, in London, the difficulty of discovering any situation in which his boy can become a skilled worker of any kind, or even enter the service of an employer who can offer him advancement. We have, on the one hand, a great development of employment for boys of a thoroughly bad type, yielding high wages and no training. We have, on the other hand, a positive shrinkage—almost a disappearance—of places for boys in which they are trained to become competent men. London employers not only refuse to teach apprentices, even for premiums—they often refuse to have boys on those parts of their establishments in which anything can be learnt. Many employers won't have boys at all, and take adult recruits from the country. In 1899, when I was a member of the Technical Education Board, I found that London building firms employing over 12,000 men had in their service, not 2,000 or 2,500 boys, as would have been the proportion necessary to recruit the trade, but a few score only. All the skilled grades of the building trade—that most typical London industry—are almost wholly recruited by adults from the country. Enquiries of a large number of builders' foremen show that they were nearly all born and brought up outside London. Corresponding with this must be put the investigations of Mr. Wilson Fox (of the Board of Trade), which show that various large employers of labour, such as breweries, railway companies, etc., employ predominantly country-born workmen, in the proportion of 40, 50, and sometimes even of 65 per cent. of the whole. The Metropolitan Police Force, the Metropolitan Fire Brigade, the teachers in London elementary schools, the porters in City warehouses, the junior clerks in the "entering desk" of the great wholesale firms, the subordinate officers of the Excise and Customs services, all include a quite surprisingly small percentage of Londoners. What happens to the London boy? The answer is given in the grim statistical facts, that the district having the highest percentage of born Londoners is Bethnal Green, which is practically the poorest; and that, so far as we can make out, the London industry in which there is the highest percentage of born Londoners is that of unskilled general labour. This section must now comprise something like half a million of population in the Administrative County of London alone. Its social condition may be judged from the fact that not less than half of it lives in an "overcrowded" condition (*i.e.*, more than two persons to a room). It may be added that Poplar has a larger amount of it than any other London Union, nearly one-tenth of the whole class being herded together in this one district. It is an ominous fact that this particular class, if we may rely on the statistics, seems to have doubled in numbers in London in the last forty years, and to have increased at a greater rate than the population as a whole. It is impossible not to feel that this may have something to do with those other grim facts ascertained by Mr. Wilson Fox, namely, that the applicants to the London Distress Committees, the inmates of the Salvation Army and Church Army shelters, and the inhabitants of some large common lodging-houses are to the extent of 86 to 93 per cent. London-born.

This army of general labourers it is—numbering, with their families, half a million persons—that we are, this year, recruiting (notwithstanding that it is demonstrably already far in excess of all social or

Mr. Sidney Webb,
LL.B.

3 Feb. 1908.

Casual labour conditions in London and lack of skilled employment for London boys.

Mr. Sidney
Webb,
LL.B.

3 Feb. 1908.

industrial requirements) by some tens of thousands of boys now leaving school, who are starting as van boys, errand boys, messengers, yard boys, etc. It may interest the Commission to note that something like a thousand among those who will thus so unsatisfactorily start their industrial life each year are actually paupers, maintained by the Guardians' doles of outdoor relief. I cannot ascertain that any one Board of Guardians in London ever does anything to ensure that its outdoor pauper children shall receive any sort of industrial training whatsoever, or shall be helped or directed to start in some branch of industrial wage earning which may be expected to keep them from reverting to pauperism.

THE FAILURE OF APPRENTICESHIP AND EVENING CLASSES.

What must we do to remedy this continuous and progressive evil? We cannot restore the old apprenticeship system, even if that had anything like its commonly-supposed advantages. At no time did it provide trade teaching for more than a small minority of the population, and then by a method which Adam Smith denounced as extravagantly costly to the community.

There is now no method by which the great mass of London boys can be technically educated—whether we mean by this the teaching of manual crafts or merely a wider education of hand, eye, and brain into all-round industrial capacity—other than that of trade schools. I see no other way of turning the London boy into a trained and fully developed man than that of providing the necessary training between 14 and 21 by the community itself. The parent demonstrably cannot do it. The employer will not, and (under the present industrial conditions) is really not in a position to do so.

London is, I believe, now far better supplied with evening classes, and with a more varied array of opportunities for evening instruction, than any other city in the world. But useful as these are to individuals, they are of advantage chiefly to classes above the half a million of whom we are speaking. Even if we could make it compulsory for every youth to be enrolled at some evening school—useful though such a law would be—we should not have touched the spot. My fifteen years' experience in the administration of education in London makes me quite convinced that it is hopeless to expect to convert boys of the unskilled labour class into competent trained handicraftsmen by evening classes alone. The hours of wage-labour are too long, and the possible duration of the evening lesson is too short, for this kind of instruction to be ever really technologically effective.

HALF-TIME TRADE SCHOOLS.

I have come to the conclusion that, if we want to turn into trained and competent workmen the fifty thousand boys who now annually start wage-earning at something or another there is only one practicable plan; and I think I have satisfied myself that this plan is an effective one. *We must shorten the legally permissible hours of employment for boys, and we must require them to spend the hours so set free in physical and technological training.*

There might be, for instance, an extension of the present "half-time" clauses of the Factory Act, so as to prohibit the employment of any boy between 14 and 18 (or even 21) for more than 30 hours a week, and so as to require the youth to attend for 30 (or even 40) hours per week at the local polytechnic or similar institution.

Such a law would have the following results:—

(1) The employer would find it less advantageous to employ boys, even if he took them in double shifts and paid them no more per hour than he did before, and he would consequently not be so anxious so to alter his processes as to substitute them for adult men. But (as the supply of boy labour would be halved) there would be a positive scarcity of boys, and their rate of wages per hour would probably rise, so that the employer would tend to employ, instead of boys, actually more adult men than at present.

(2) The youth, who now has even too much pocket-money, and gets therefore too soon independent of home, and too easily led into evil courses, would find his earnings reduced, perhaps not by half, but probably by one-third, and his leisure absorbed under discipline.

(3) At the Polytechnic it would be possible, in 30 hours a week, from 14 to 18 (or 21) to put the youth through a course of physical training, under medical supervision, under which he would learn to swim, to row, to box, to ride, etc.; and it could be ensured that the adverse hygienic conditions of town life would be rectified.

(4) There would be possible, in the course of four or seven years' half-time at the trade school, an education of hand, eye, and brain; a practical ability to use competently the ordinary tools; a knowledge of drawing, practical geometry, and workshop arithmetic; and even a groundwork of training in particular handicrafts, such as few even of duly indentured apprentices get. We need not try, or even desire, to convert every boy into a skilled engineer, cabinet-maker, or compositor. But we could make every boy, whatever his occupation, into a man of trained hand, eye, and brain; disciplined and good mannered; of sound muscle and fully developed lungs; with a general knowledge of common tools and simple machines; able to read a plan and make a drawing to scale; ready to undertake any kind of unspecialised work; and competent, even if he does unskilled labour, to do it "with his head."

I may add that, if it should ever be deemed necessary to introduce universal military training into England, it would be possible under such an extension of the "half-time" system as I have described, carried on until 21, to devote the school half-time of the last three years to military drill and rifle shooting. In this way it would be possible to get the entire male population trained to arms (provided that the instruction was undertaken by competent teachers) without a single day's interruption of industrial life and wage-earning, and without any of the demoralising barrack life.

Such an extension of the half-time system, at least to 18, is, I believe, absolutely necessary to save London, and probably many another great city, from producing an ever-increasing crowd of stunted, half-grown, and degenerate weaklings, who grow to such manhood as they attain undisciplined, untaught, untrained, and unskilled; to be gathered, in growing numbers, in the stagnant pools of casually employed general labour, and in the common lodging-houses, the casual wards, and the Salvation Army shelters. It is within the power of the community to stop this evil. The only question is whether it cares to take the necessary steps.

THE TRAINING OF GIRLS.

I have so far said nothing about the girls. But Training of their problem is an analogous one. They all need girls. the training of body and brain, hand and eye; they all need the instruction in the use of the household implements and tools; they all need the technical education that is necessary to produce competent housewives and mothers. If girls, in any social class, ever got this effectively from their own mothers, they do not get it now in the London working class. They do not, and cannot, get such training before they leave the elementary school at 13 or 14. An extension of the half-time clauses of the Factory Acts up to 18 would benefit girls no less than boys.

PART II.

Question VIII.—In view of the greater complexity of economic conditions, do you consider that some public organisation (such as, e.g., distress committees, labour exchanges, and the like) is necessary?

Answer VIII.—A proposal for dealing with unemployment.

I regard it as of quite vital importance to social health and in particular, as absolutely indispensable to the prevention of pauperism, that there should be a public authority dealing with "unemployment." The Unemployed Workmen Act of 1905 is of importance only as explicitly recognising the need and the public

responsibility in the matter. It is plain that the principle is destined to be greatly developed. It is, of course, politically quite impossible, even if it were conceivably desirable, simply to repeal that Act, and relegate the unemployed once more to the soul-destroying mixed general workhouse and the demoralising stoneyard. If it is desired simply to revert to "the principles of 1834" for the unemployed, it is clear that there must be established in all the great towns a series of "test workhouses" strictly confined to the able-bodied, and under entirely separate administration from the institutions for the children, the sick, and the aged. Whether or not this is politically possible is another question. In my opinion, it is the only conceivable alternative to a positive and comprehensive scheme.

WHAT THE PROBLEM OF UNEMPLOYMENT REALLY AMOUNTS TO.

I will first state the problem as it appears to me. Any day we find, in every large city, almost at all times, a considerable number of men actually without wage-earning employment for that day, or for many days in succession. At particular seasons of each year this number is greatly augmented. In some years it is greater than in others. These men are occasionally skilled mechanics, or men who have held responsible posts at thirty shillings a week or more, but to the extent of 80 per cent. at least they belong either to the great army of general labourers, or else to that slightly specialised section of it which calls itself painter or "builders' labourer." They are predominantly men in the prime of life, mostly between 20 and 50, with wife and children. They have practically no savings beyond the scanty contents of a one or a two-roomed home. Whether or not they ought to have saved may be matter for argument; but it is to be noted that the vast majority of them have never in their lives earned as much as £60 in any consecutive twelve months—a sum which would not, at best, leave much margin after providing the housing, food, clothing, and other daily necessities of the family group. There is, in their occupations, hardly ever a trade union giving unemployment benefit to which they could have belonged; in fact, no such trade union has ever been able to collect from so poverty-stricken a class the shilling or eighteenpence a week which any adequate unemployment benefit requires. The fact that we have to face is that they do not have savings adequate to tide them over periods of unemployment.

If the community arranges nothing better for these men than the "test workhouse" or even the stoneyard, the vast majority of them do as the Poor Law administrators wish and intend them to do, namely, struggle on outside—pawning one bit of furniture after another, picking up odd jobs, living on the scanty earnings of the women, making a shilling or two out of the children's labour, begging here and there, getting help from churches and chapels, children's dinner funds, and so on. Every now and then there are "demonstrations of the unemployed," and "Mansion House Funds." The total result is (a) the rapid demoralisation in *physique* and *morale* of a large proportion of the men; (b) chronic semi-starvation for the women and children, with the most frightful results in preventable mortality, disease, and permanent physical impoverishment; (c) the reduction of wages to the barest minimum for all the unskilled labour class; and (d) the annual recruiting of the army of permanent paupers to such a degree as to nullify all attempts to reduce its total by the wisest curative treatment. I believe this to be one main reason why the number of paupers does not decrease. These results, which are always going on, are alike so patent and so invariable, at once so costly and so injurious to the community as a whole, that it is, in my opinion, worth spending almost any sum, and taking any amount of trouble, to remedy the evil.

HOW TO APPROACH THE PROBLEM.

We may agree that the work of the Distress Committees has so far resulted in very little. But the last five years have taught the public a great deal, and in my judgment it is now politically possible, if we really wish to cure the evil, for a statesman to do so. Of course, we may not really wish to remedy the evil, or we may prefer the evil to the remedy. But I do not

think it is now possible to say with honesty that we do not know how to remedy the evil, or that there is no remedy.

I think we can get little help from the various suggestions that are made for "classifying" the unemployed. I believe that classification is necessary for any form of charitable relief. Classification of individuals in this case corresponds with diagnosis in medicine. It is indispensable to the selection of the proper method of treatment of the individual. It ought never to be used as a means of refusing all treatment. Moreover, it in no way contributes to a solution of the social problem. For this we need a diagnosis of the social disease, which is not the disease of any individual.

The salient fact that emerges from the experience and studies of the problem during the last twenty years is the comparative unimportance, from a statistical standpoint, of the popular figure of the skilled artisan thrown out of work by the introduction of new machinery or other industrial changes, or the man dismissed because of his grey hairs. The conditions with which we have to deal are not spasmodic or exceptional, but chronic. They concern, not individuals alone, but a whole class. The evil is not even measured by the extent to which the aggregate volume of employment—the total demand for wage-labour—waxes and wanes from month to month or from year to year. Even in the best times there are tens of thousands of men in the conditions that I have described. The total number exposed to these conditions can scarcely be estimated, but it is plainly many times larger than the difference between the aggregate totals employed at the best of times and at the worst of times.

The evil to be grappled with is, in fact, not the loss of permanent situations by the particular men who are found to be out of work, for the vast majority of them have never held such situations. It is the casual nature of the employment that, even at the best of times, is afforded to the whole class, of whom they are only an accidentally selected sample. Though there are among the crowd some men who are really suffering from being thrown out of regular and continuous employment, and who quite reasonably aspire to get back again into durable situations, these can at present neither be accurately distinguished nor effectively helped, because of the crowding of the others, who are immeasurably more numerous. What is depressing and destroying the lives of these others is not unemployment in the ordinary sense. The social problem which is presented, for instance, by the Liverpool dock labourers, is as grave on the days when they get work as it is on the days when they get none—that is to say, we have to take into account not only the particular 10 per cent. who may be starving to-day, but also the other 90 per cent. who will quite certainly be equally destitute some other week in the year, or some other year of the trade cycle. No scheme dealing only with the sample of the whole that happens to-day to be without work can ever be of any real use. It is the chronically intermittent character of the employment of the whole class for which we must find some remedy. What we have primarily to deal with is, as Mr. Beveridge puts it, not so much unemployment as "under-employment."

CASUAL LABOUR.

It is the existence of this large class of men living on casual employment—getting a day's work here and a day's work there, occasionally working four or five days in a week, and then perhaps only four or five days in a month—that both intensifies the evil of unemployment and renders nugatory all kinds of "relief works." It intensifies the evil, because (as Mr. Beveridge has shown) reliance by individual employers on casual labour creates little crowds of surplus labour at each dock gate, by each wharf, even around each builder's foreman—each crowd waiting wholly or mainly for jobs from that particular source. It is to the interest of each such employer to have waiting for his jobs a crowd large enough to get through the maximum amount of work at any moment that he is ever likely to need to get done. Thus there are now collected on the Thames and the Mersey, at Bristol and at Newcastle, at Glasgow and at Hull, not merely enough casual labourers to supply the maximum needs of the

labour.

busiest day of the port as a whole, if all the needs were combined, but enough to supply the aggregate total of the separate maxima that the several employers may, on many different days, individually require. And what is true of dock and wharf labour is true to a greater or less extent of the slightly specialised manual labour employed by the builders and the contractors for engineering works, of the workers in practically all the seasonal trades, of the outworkers in the clothing and furniture trades, and, in fact, in all industries in which there is not a definite regular staff, filling permanent situations, but in which labour is "casually" employed. The result of this excess is that the casual employment is rendered even more intermittent and "casual" than it need be. Moreover, so long as there exists this huge army of labourers who never are "employed" (in any regular situation), every attempt to provide for the comparatively few skilled mechanics displaced by machinery, etc., the steady man who has lost a situation at 25s. or 30s. a week, through the bankruptcy of his employer, and the other meritorious cases that turn up occasionally at the Distress Committees, is doomed to failure. The practically inexhaustible flood of casual labourers flows in and swamps the register, swamps the relief works, and swamps everything else that a despairing Distress Committee attempts. And this series of stagnant crowds of casual labour is apparently getting larger and more casual in its character.

THE ORGANISATION OF CASUAL EMPLOYMENT.

Decasualisa-
tion.

Thus it is a necessary preliminary to any useful action for "the unemployed" (in the strict sense) that there should be some organisation of casual employment. After much consideration of the problem and of the various suggestions made, I have come to the conclusion that the following plan offers a practicable remedy, and, as far as I can see, the only practicable remedy. I owe this plan mainly to the discoveries and the stimulating suggestions of Mr. Beveridge; but he has, I believe, not yet worked out his own ideas to the extent that I am now taking them; and in any case he has no responsibility for my proposals.

We must postulate, to begin with, the great desirability, from the standpoint of the community, of putting an end to all "casual" or intermittent employment of wage labour if we could do so, because of its social effects. No housekeeping can stand a demoralising uncertainty as to whether the week's income will be five shillings or five and twenty. I do not believe that, if industry were at all deliberately organised on a large scale, an abolition of casual employment would be impossible. But stopping short of a legal prohibition of a method of hiring labour which is demonstrably quite as injurious to the community as was the Truck System, we may reasonably ask those employers who continue to adopt it, to submit to some restrictions calculated to reduce the social evil that they undoubtedly cause. I propose that it should be made legally compulsory on employers, being persons carrying on industrial or commercial operations for profit, either to guarantee a minimum period of employment—which might be put at a month—(subject, of course, to the power of dismissal of any particular individual for misconduct, and even to the arbitrary replacement of one man by another if desired); or, in the alternative, in so far as they are unable or unwilling to offer employment for a month, then to hire such labour as they want, whether for a job, a day, or a week, exclusively through the public Labour Exchange.

Proposal to
put compul-
sion on
employers to
guarantee
minimum
length of
engagement,
or to use
public labour
exchange.

National
labour
exchange
system.

I propose the development of the existing Labour Exchanges of the Distress Committees into a complete national system; with offices opened exactly where most convenient to employers (for instance, actually inside the dock gates, or at the principal wharves, or at any other places where sudden demands for labour occur); keeping whatever office hours were required (ready, for instance, to supply labourers at five in the morning); and, of course, telephonically interconnected, and organised up to the maximum efficiency. As there would be no other opportunity of getting casual employment at all (with the possible exception of the odd jobs offered by private persons, not engaged in business; and even these we may hope to diminish), it would not be necessary to make it legally compulsory on the labourers to enrol themselves at the Labour Exchanges, except under circumstances to be hereafter described. Nor would it be necessary legally to

prohibit the existence of other agencies for filling situations. As employers would be forbidden to use them for casual labour, such agencies would automatically cease to compete with the public Labour Exchanges, and would have, perforce, to confine themselves to filling such situations of at least a month's duration as might be offered to them.

This plan, it will be seen, reduces to a minimum, the proposed restriction on the employer, or the interference with his business. It would cause him absolutely no increase of expense. In so far as he can offer regular employment of a month's duration, he is not affected at all. Even for casual labour, he remains as free as before to hire it by the job or by the day only, for as short a period as he chooses. He will have at his disposal all the men in the whole town who are not already engaged. He may have his own choice of men (assuming that they are momentarily disengaged). He may ask for this man or that; he may keep his own list of "preference men"; he may send for ten or a hundred men in order of his preference, or send merely for so many men without naming them. He may even bargain privately with the man of his choice, and virtually secure him beforehand, provided that he lets the formal hiring take place through the Labour Exchange. All that he is forbidden to do is, at any time or under any circumstances, to take on casual labour otherwise than through the Labour Exchange.

Results of the
scheme to
employers
and to
labourers.

The result to the labourer living by casual employment will be that he will find effectively open to him, not merely the particular demand for labour of this or that wharf, or this or that foreman, on which he has been in the habit of waiting, but the whole aggregate demand of the town. We may assume that the policy of the Labour Exchange would be, subject to any preferences expressed by employers, so to distribute the available men, and so to dovetail the engagements offered to each of them, as to secure to each man who was employed at all five or six days' work in every week. In so far as this was achieved, we should have done for casual labour what has been done for skilled nurses in most large towns by the various nurses' institutes, etc., and for the members of the Corps of Commissionaires in London, namely, combined freedom to the employer to hire only for a job, with practical continuity of work to the person employed.

THE ASCERTAINMENT OF THE SURPLUS.

There will remain, after the Labour Exchange has met all the demands upon it, a residuum of men, who are demonstrably not wanted at that moment, in that place. This "surplus labour" will be a varying amount from day to day. Some of it will be needed to meet the periods of increased demand for labour—the "wools" and the "teas" at the docks, the pressure on the railway companies at the holiday seasons, the extra postmen at Christmas, the "glut men" at the Custom House, the curiously regular irregularities of the printing and bookbinding trades, the increased demand in winter of the gas companies on the one hand and the theatrical industry on the other, the spring rush on painters and builders' labourers, on dressmakers, and trouser-finishers, and so on. But we shall be surprised to find how easy it will prove after a year or two's experience to forecast these requirements for the town as a whole; and, very possibly, how comparatively small is the variation in the aggregate volume of employment for unskilled and casual labour of one day or of one month, or of one season of the year, compared with another. What remains to be discovered is how far the different sporadic demands can be satisfied interchangeably by the undifferentiated labour that is available. Complete interchangeability of labour, and complete dovetailing of situations may, of course, not be possible. But probably it would become every year more practicable; and it will obviously be part of the educational training, to be now described, to promote a more complete interchangeability.

Residuum of
work-
people after
decasualisa-
tion

The Labour Exchange would, of course, not confine itself to filling situations in the ranks of casual employment, or from among those whom it had to support. It would receive, and in every way encourage, voluntary applications from employers for labour of better grades, for durable situations; which it would do its best to fill from the best of those whom it had on its register.

Scope of
labour
exchange.

When the whole of the anticipated requirements of each town are provided for—and, of course, at all times as regards individual cases—it should be the duty of the various Labour Exchanges to communicate with each other as to the actual or anticipated requirements of other towns. Just as all the Labour Exchanges in one town would report, day by day, and even, telephonically, hour by hour, to a central office in that town, from which they would all be advised as to the localities where additional men were required, so the Labour Exchanges of all the different towns in the United Kingdom would report, at least once a day, to the Ministry of Labour stating (a) what surplus labour they had, and (b) how much of it was not needed for the proximate local requirements; or, on the other hand, (c) what shortage of labour they had, or expected to have. Particular Labour Exchanges could then be put telephonically in direct communication with each other, either with a view to filling particular situations or with a view to an offer, to those labourers who were disengaged, of the chance of migration to the town in which additional labour of any particular sort was required. It might well be part of the help afforded by the State to make this mobility possible by advancing any necessary railway fares.

THE TREATMENT OF THE SURPLUS.

Theoretically, as Mr. Beveridge quite logically insists, it is not necessary for the Labour Exchange to do anything more than organise, for the common benefit of employers and men, just whatever private demand for casual labour happens at the moment to exist. But it is, in my opinion, politically impossible to stop at this point. The hundreds of thousands of casual labourers would in that case bitterly resent being deprived of their present gambling chance of getting situations for themselves. They would still more resent the dovetailing of chances which, whilst securing practical continuity of work to some men, left others without any at all. Public opinion would support them in this resentment. It is therefore, in my judgment, an essential part of the plan that there should be full and frank public provision for the residuum for whom the Labour Exchange can find no employment. The men and their families have to be fed somehow. Nothing can be more costly to the State than the way in which they are now fed, nothing more destructive of character and health, nothing more demoralising to the community. We are already driven—first, in the form of "Labour Test" relief by the Boards of Guardians during the whole of the last 70 years, and now in the various activities of the Distress Committees—to provide for these men and their families out of the public funds. Instead of doing this unscientifically and wastefully, because on no well-thought-out and deliberate plan, it would be far better for the community, and less demoralising for the men, and possibly, in the long run, even less costly to the State, to put the matter on a systematic basis.

I propose that the disposable residuum of labour—the labourers for whom no employer can be found by the Labour Exchanges—should be given, without stigma of pauperism, or any attempt to prevent them from applying, *full maintenance in return for training*. It is necessary to keep them; it is necessary that they should not have their time on their hands; it is necessary to make these days of waiting less pleasant to them than days of employment. It follows, from the nature of the case, that there is no room here for any sort of "relief works" or "labour test." We shall know that they cannot secure private employment. Moreover, the residuum of labourers, whom all the employers in the town have preferred to leave to the last, will inevitably be men of relatively inferior physique, relatively bad physical condition, relatively unsatisfactory habits, and relative lack of skill, for whom it would be absurdly extravagant and ridiculous to engage to do public work at wages. To create artificial work at wages for them would, in fact, be to defeat the whole object of the proposed organisation. These particular men—the residuum, be it remembered, of a far stricter selective process than any one Distress Committee can now apply—must be regarded as temporarily "out of condition" for useful work. They would, in fact, almost invariably be found eminently suitable subjects for physical, mental, and technological "remedial drill," with a view to bringing them up to a higher

standard of productive efficiency. Any improvement which it may be found possible to effect in them must not be expected in itself to prevent their future "unemployment" or "underemployment"—that will not be the object of the training, and it will only mislead the public to advocate it on that ground. Whilst the training will be useful in itself to the community, as well as to the men themselves, its real object in the scheme is (a) to occupy the men's time, in order to prevent the demoralisation of idleness; (b) to supply the necessary deterrent element, so that the men may find their periods of unemployment less "pleasurable" than their periods of employment at wages. This deterrent element would be found in taking from them, for the whole day, not only all indulgence in alcohol, but also all leisure for idle gossip. They would sacrifice rather more of their liberty whilst they were in training than if they were in employment at wages, and they would get no beer.

THE TRAINING OF THE SURPLUS LABOURER.

I propose, therefore, that there should be attached to the Labour Exchange organisation a series of graduated training establishments of different kinds, partly day and partly residential, to which all those men should be relegated for whom no employment could be found, other than those who had insured themselves (as hereinafter described) against this contingency, or who possessed other means of subsistence for themselves and their families. If they refused to submit to this training they would get no relief of any kind; they would be liable to be proceeded against as rogues and vagabonds; and they could be committed to the penal settlement or to prison. In return for putting in their whole time at the training establishments, and submitting to the necessary regimen and discipline, the men would be fully fed (and adequately clothed when necessary), but would be paid no wages or pocket money, whilst adequate home aliment would be granted for the support of their families under suitable conditions.

I visualise these training establishments for the unemployed as graduated and specialised in various ways, as experience may dictate. There will be (1) Central Labour Depôts, in close propinquity with the principal Labour Exchanges, for what I may call the first class reserve of the industrial army; (2) day industrial schools of various kinds, for the second class reserve; (3) farm colonies, of at least three different grades, adapted to the needs of the real surplus, which may be found not to be wanted in the towns at all; and (4) a penal settlement, to which the recalcitrant and the incorrigibly idle would find themselves committed by the magistrates.

(a) The Central Labour Depôt.

Let us consider these somewhat more in detail. It might well be the best of the surplus labourers, selected for physique, regularity of conduct, and intelligence, who would each day be kept within call, ready to meet not only the already notified demands of employers, but also unexpected sudden requirements. For this section, who may be regarded as the first class reserve, we may imagine the utilisation of the existing trade schools within the town; the provision, near at hand, of lecture rooms, gymnasia, and reading rooms; and the organisation of suitably alternated technical classes, physical exercises, plain meals without alcohol, lectures, and drill, so as to absorb the whole day. This constant attendance and continuous mental occupation is essential. From these centres would be fetched, hour by hour, such labour as was demanded from any part of the town. At present it stands about at street corners, loafs in and out of the beerhouses, and, in an atmosphere of congenial gossip, goes rapidly to seed.

(b) The Day Industrial School.

But there would be another contingent of men for whose services there would be no probable demand that day, or even that week or that month—men who would be demonstrably inferior in physique or qualifications to the selected first class, and who needed more improving in body or mind. Some of these might be sent to specific day industrial schools for particular forms of training, expected to extend over a few weeks, or even a few months, but liable always to be interrupted

Mr. Sidney
Webb,
LL.B.

3 Feb. 1908.

Mr. Sidney
Webb,
LL.B.

3 Feb. 1908.

if there came an abnormal demand for labour, when the Labour Exchange would send for them. At these day industrial schools they would have to attend from 6 a.m. to 9 p.m.—the object being to absorb their leisure and organise their whole waking life—for a properly varied curriculum of gymnastics and drill, trade classes and stimulating lectures, swimming, and organised games, interspersed with good, plain meals, and no alcohol—the whole dictated by a consideration of what is calculated most to increase their physical and mental efficiency. This absorption in varied mental and physical occupations of the entire day is essential. Their wives and families (to whom they would return at night) would receive home aliment.

(c) *The Farm Colony.*

Farm
colonies.

Possibly, at some future time, we should find that there was no further surplus labour in the towns than what could advantageously be relegated for the slack season to these Day Industrial Schools. But for the present, at any rate, as the result of any success in "dovetailing" various forms of intermittent employment, we should undoubtedly have a clear surplus for which the town had no use. Moreover, there would always be particular men to be prepared for country work, or for emigration. Thus, though the farm colony on a large scale may be only a temporary need, there will probably always be room for a certain amount of training accommodation of this kind. But this, too, should be organised and regarded strictly as educational training and discipline, not as providing employment. The choice of work should be dictated by its educational effect on the men, not by its profitability; maintenance should be given, together with home aliment for the family, but no wages. There might be grades of farm colonies; some very rough and physically laborious, others specialising in fruit culture and the finer sorts of market gardening. Men could be moved upwards or downwards, as their conduct and character required, and there might have to be provision for "incurables"—men found really incapable of satisfying any employer, but neither physically ill nor morally vicious—for whom, as for the *sane epileptics*, who constitute an exactly analogous class, we can do no better than keep them in segregation in the country at such light and easy jobs as they can perform.

(d) *The Scope for Religion and Philanthropy.*

Scope for
religion and
philanthropy.

In this connection there would be great opportunity for making use of the fervour and zeal of philanthropy and religion. The greatest results in the way of the reclamation and training of individuals have always been achieved by religious organisations. It may well be wise for the State to make a greatly increased use (with proper inspection) of farm colonies and similar settlements and homes, conducted by religious and philanthropic committees, for such of the residuum as may be willing to be sent to them in preference to the Government establishment. It may well be that for all that important side of training that is implied in the strengthening of moral character, the building up of the will, the power to resist temptation, and the formation of regular habits, the most effective instruments are a degree of love and of religious faith that a Government establishment with a Civil Service staff may not always be able to secure. The Ministry of Labour would therefore be well advised to let the denominations and the philanthropists have all the scope that they can take, and only to establish such additional Government farm colonies as are found needful to supplement the private effort. This private effort could be subsidised by payments for each case, as has long been done for a whole generation in the reformatory schools, and as is now being done in inebriate homes.

(e) *The Penal Settlement.*

Penal
colonies.

At the base there must evidently be a Penal Settlement, with whatever drastic disciplinary treatment may be found most curative. But I suggest that the object must always be to raise and stimulate, never to depress; and the principle adopted ought to be that of the Indeterminate Sentence (subject, if desired, to a fixed extreme maximum). Every person committed should be committed for as long a period as may prove necessary. He should stay there until he had given to the authorities of the Settlement reason-

able assurance of being reformed in body and mind; he should always know that he could emerge just as soon as he was able to give that reasonable assurance, when he would rise to the farm colony, and through the various grades of farm colony to the Day Industrial School, and so back to the Central Labour Depot, and the chance of a regular situation—subject, of course, to being degraded and again committed every time he lapsed. There would be great advantages in transferring all prisoners to the Penal Settlement for the latter portions of their sentences, instead of merely discharging them on ticket of leave or otherwise, in order that they, too, may have, first of all, a secure provision of subsistence in return for labour, some industrial training, and then a real opportunity of rising to the ranks of honest employment. An analogous working arrangement between prison and Labour Exchange is apparently acting well in Illinois.

A MINISTRY OF LABOUR.

It will be evident that such a scheme as is here contemplated must necessarily be organised on a national basis. The necessary series of institutions could not be provided by any one local authority. Moreover, as any local authority would always try to exclude outsiders from its district, it would be impossible to secure the necessary geographical mobility of labour unless all the Labour Exchanges were intimately connected together, and freed from the influence of local jealousies and local exclusiveness. I propose, therefore, that it should be the work of a Minister of Labour (or of the Board of Trade) to organise (a) a complete system of Labour Exchanges in every town; (b) the utilisation as far as possible of philanthropic training establishments; (c) to provide the necessary series of institutions for the common use of all the Exchanges, extending from the Central Labour Depot for the first class reserve through the various kinds of Day Industrial Schools and Farm Colonies for the second and third class reserves, down to the Penal Settlement. This national Department of Labour would take over the duties and the offices and institutions of the hundred or two Distress Committees and other organisations of the Unemployed Workmen Act. I propose that the expenses, including the maintenance provided for the men for whom work was not found, should become a charge upon national funds. On the other hand, the home aliment awarded to their wives and families had better remain a charge upon local funds. It would, in fact, be dealt with as out-door relief by the Superintendent of Relief, or other officer who seems to form a necessary part of any reform of the Poor Law.

STATE-AID TO PROVIDENT INSURANCE
AGAINST UNEMPLOYMENT.

It might be undesirable, even if it were politically possible, to propose a national organisation of Labour Exchanges, with maintenance to the unemployed in return only for further training, except side by side with an offer of encouragement to the workmen to make themselves, by provident insurance, independent of the whole machinery. Such insurance against unemployment is at present provided by some of the trade unions, and scarcely at all by any other institutions. At present, however, only about a third of the total of two million trade unionists (and none of the ten or twelve million non-unionists) are insured against unemployment, this "out-of-work benefit" being provided only by the trade unions in the more skilled and better paid trades, which alone are able to afford the necessary premium. For instance, neither the bricklayers nor the stonemasons, though very skilled workmen, have ever been able to get beyond the very objectionable "tramping pay." It would be a good investment for the community to aid and develop this trade union insurance against unemployment by a grant-in-aid, calculated, perhaps, at one half what the trade union paid. It would be very desirable to make it a condition of the State-subsidised "out-of-work pay" that (a) that all tramping pay should be abolished, and (b) the recipient should be required to spend some of his idle hours at a technical institute, where he could be given instruction in his own trade. The unemployed compositors, for instance, who daily "sign the book" at the trade union office in London and draw two shillings, now usually loaf about Ludgate Circus on the chance of a job. They are generally men of not the highest skill—mostly, in fact, men of very inadequate

training and range of work. They had far better be required to spend some hours a day at the neighbouring St. Bride's Institute, in technical classes, at work on those parts of their craft in which they are not proficient. With such State subsidy the provision of "out-of-work benefit" would be made possible in many of the poorer trade unions; a greatly increased number of workmen would be induced to insure against unemployment; a corresponding relief would be afforded to the public organisation that had to provide for the unemployed; the last excuse for vagrancy would be removed; and it would be put within the capacity of every provident artisan (but still only of the men above the grade of casual labourer) to provide against the contingency of unemployment in the method most congenial to himself. But there is no need to attempt to force this subsidy on the workmen's organisations. The thrifty workman may, in fact, be left to do as he likes. So long as he fulfilled all his social obligations whilst out of work, whether by means of insurance or otherwise, the State need not interfere with him. If he did not beg, did not commit a nuisance, and did not let his wife and children suffer from inanition, he might, if he chose, abstain from enrolling himself at the Labour Exchange; but if he was found begging, or tramping without means of subsistence, if his home became unsanitary or his children were reported to be unfed, the first question would be, why are you not at the Labour Exchange? And commission of any of these offences, by a man who was not taking this obvious means of fulfilling his social obligations, would, of course be a serious crime. If a man made no provision for the future when the State had made this possible for him, he could hardly complain of the way in which the State dealt with him *for his good* when he became destitute. Government subsidies of trade-union insurance against unemployment will not rashly be declared—by any educated person—to be impossible, because the system actually exists, Germany, with the assent of both employers and trade unions.

TRADE UNION LABOUR EXCHANGES.

A further encouragement might well be afforded to the provident workman. As the great majority of the situations in the skilled trades are not of the nature of casual employment, but do, as a matter of fact, last for a month or more (or could easily be so arranged as to do so), it would be in no way necessary for these to be filled through the Labour Exchange. It might even be desirable to make arrangements also for the shorter engagements and "casual" jobs of the skilled mechanics in such trades to be independently organised. It might be well to provide that where a trade union, giving out of work benefit, desired, perhaps in conjunction with an organisation of employers, to manage its own register of men unemployed and situations vacant, it would be permitted to do so in close connection with the public Labour Exchange, which would transfer to it at once any applications from employers in that trade, and not fill any such situations unless and until the special office for the trade failed to do so. In this way there would be secured, to those workers in any trade who had been provident enough to insure themselves against unemployment, a practical preference for all the employment that might be offered in that trade. This conjunction of the trade union register of unemployed workmen with the public Labour Exchange cannot be summarily dismissed as impracticable or as ruinous to the employer—by anyone who knows what he is talking about—for it is in full force in some parts of Germany, and is apparently working well.

THE VOLUNTARY ORGANISATION OF CASUAL LABOUR.

Moreover, it would be open to the employers in any particular trade to undertake, if they preferred, the organisation of their own casual employment. The Liverpool shipowners, who now refuse to take any trouble to avoid creating a quite unnecessary congestion of surplus labour at the Liverpool docks, with the gravest social consequences, might elect (rather than submit to a public Labour Exchange) to establish such an organisation for themselves. Provided that they offered continuous employment of not less than a month to their men—as a very little organisation and a small insurance premium would enable them to do—they would be free to make their own arrangements. They might, for instance, establish a mutual

society, which itself engaged the labourers by the month, and supplied them to the shipowners as required. They might even combine both advantages, the mutual society engaging and supplying the regular corps of men, of the number up to which constant employment could be guaranteed, and also drawing on the Labour Exchange in any temporary emergency (as any individual shipowner could also do).

TRANSITIONAL ARRANGEMENTS.

In any comprehensive scheme for dealing with the unemployed there are, I believe, two conditions that must be satisfied before it will be adopted. One is that the humane public, no less than the unfortunate labourers themselves, must have assurance that there will be no cessation or interruption, whilst the new and comprehensive scheme is getting under way, of the provision already made for the relief of the unemployed workmen and their families. The other is that the scheme shall afford, at its other end, some prospect of eventually providing, in some permanent way, for the ultimate residuum of the unemployed. Both these conditions must be met. The first is fully met by the fact that nothing now existing will be abolished by my proposals until a larger and more satisfactory provision is made. The present Labour Exchanges of the Distress Committees will go on until they are absorbed in the local offices of a National Labour Exchange. The present relief works of the Distress Committees will go on until the National Labour Exchange can undertake to provide, somewhere, for all the men whom it is unable to place in situations. The existing farm colonies will continue until they are actually merged in the national system. The existing Poor Law arrangements for relief to the able-bodied need not be interfered with. It is a positive advantage of the proposal that it need not necessarily be put in force simultaneously all over the kingdom. A beginning could be made with London, every other place continuing as at present, and the operations being gradually extended from town to town.

THE DISPOSAL OF THE ULTIMATE RESIDUUM.

The second condition, that the scheme shall afford a prospect of eventually providing in some permanent way for the ultimate residuum of the unemployed, must now claim attention. At present we can do nothing effective for them, because (a) we are not convinced that there is any such residuum; or, at any rate, (b) we have no idea how large it is; and (c) we cannot distinguish it amid the crowd of merely "underemployed" casual labourers. But once a National Labour Exchange had filled all the demands of employers from one end of the kingdom to the other, and had estimated the probable total of their demands in the approaching busy season, or the ensuing busy years of the trade cycle, the number of the residual unemployed would be demonstrated and their personal identity established. The ten or twenty thousand men who might then be under training in the various farm colonies would be an unmistakable object lesson. The nation would have to make up its mind what to do with them.

It would, for instance, be open to the Government, at the instance of the Minister of Labour, to decide upon any schemes of afforestation, or land reclamation, or road making, or, for that matter, the calling out of the Militia or Army Reserve for extra training, the building of additional battleships or Militia barracks—being socially desirable, but not commercially profitable undertakings, which would not otherwise have been started, but which it might be worth while undertaking in order to increase the aggregate demand for wage-labour.*

* It is, I believe, an economic blunder, still current among people otherwise "enlightened," that any such increase in the aggregate demand for labour is, without an increase of capital, logically impossible. But, as a matter of fact, the actual demand for wage-labour visibly fluctuates considerably in amount without any alteration in the momentary amount of capital; and is, in fact, determined largely by states of mind, and made effective by all the machinery of credit, both of which can be altered by Government action. It is then sometimes objected that the cost of any Government action, being levied as taxes, necessarily causes as great a diminution of private employment as the Government can cause increase. This is to assume—an assumption for which there is no sort of economic warrant—that a restriction of the individual consumption of luxuries necessarily causes a decrease in the volume of employment equal to the amount of the retrenchment of personal expenditure.

Mr. Sidney Webb,
LL.B.

3 Feb. 1908.

Necessity of continuing present means of relief pending reorganisation.

Disposal of residuum of unemployed after de-casualisation.

Mr. Sidney
Webb,
LL.B.

3 Feb. 1908.

Disposal of
residuum of
unemployed
after de-
casualisation.

The Government might well resolve, rather than maintain 20,000 men in idleness, to give out contracts for such works as have been mentioned, with the view of getting that number more men into situations. The Government would do well not to employ the particular 20,000 men who were on its hands, and not even in any way to fetter its contractors in their choice of men. All that it need do to achieve its object is to put its orders on the market or let its manufacturing departments take on more hands, in the usual way, so as to increase the aggregate volume of demand for wage-labour. Then, with all the safeguards of each employer selecting the best men, the residuum on the hands of the National Labour Exchange would be indirectly drawn upon, and might be practically absorbed.

On the other hand, we might come to the conclusion that the 20,000 men whom we might find on our hands—or many of them—could be best disposed of by settling them on the land that they had reclaimed, either as small holders or as co-operative colonies, in order that they might produce their own subsistence.

Or, again, we might find that these 20,000, or many of them, could be best disposed of by being settled on the land in new countries; or, for that matter, merely enabled to emigrate to Canada.

Or, again, we might decide that, if there were 20,000 men standing idle, the time had come for a reduction of the general hours of labour by a fraction—say, half an hour a week—sufficient to absorb the surplus labour.

Probably the nation would use a combination of all these methods, for particular individuals, at particular dates. But not until we have got the existence of a residual surplus actually demonstrated by a National Labour Exchange shall we be in a position to make the necessary decision.

"UTOPIAN."

Such a plan for dealing with unemployment by the organisation of casual labour will, of course, be dismissed as "Utopian." Experience shows that this may mean nothing more than that the plan will take some years to come about. I will conclude by mentioning two instances in which schemes of remedying social evils, that seemed wildly "Utopian," have, even within our own lifetimes, come about. Less than a century ago the problem of dealing with the sewage of London seemed insoluble. Half a million separate private cesspools accumulated each its own putrefaction. To combine these festering heaps into a single main drainage system seemed, to the Statesmen and social reformers of 1820 or 1830, beyond the bounds of possibility. We now take for granted that only by such a concentration is it possible to get rid of the festering heaps and scientifically render innocuous the ultimate residuum. And, to take an even larger problem, less than half a century ago, when millions of children in the land were growing up untaught, undisciplined, and uncared for, it would have sounded wildly visionary to have suggested that the remedy was national organisation. Could there have been anything more "Utopian" in 1850 than a picture of what to-day we take as a matter of course, the seven million children emerging every morning, washed and brushed, from five or six million homes in every part of the kingdom, traversing street and road and lonely woodland, going o'er fell and moor, to present themselves at a given hour at their thirty thousand schools, where each of the seven millions finds his or her own individual place, with books and blackboard and teacher provided ready for him—surely a triumph of the "regimentation" in which there is the truest freedom? What has been done with the London cesspools and the English children can be done, if we like, with the casual labourers, and probably in much less time.

93032. (Chairman.) I gather that with regard to Questions 1 to 6 you think that there are influences at work which would tend to rather increase this surplus of common unskilled labour in towns?—I think that is so. I think perhaps what is most influential in that is not so much the introduction of machinery and new processes as such, but the constant changes which are always going on, which are incidental, of course, to the introduction of machinery. I think any changes in industry tend to increase the number of men who fall out and sink down.

93033. The people so displaced would add themselves on to the common unskilled labour that was under employed?—Yes, a large number of them do.

93034. As to whether it is possible to revive the apprenticeship system, I see both from your answer there and from subsequent answers, you are very much impressed by the large number of boys that are annually turned out of schools in London who go into an unskilled and very uncertain means of occupation?—Yes, that is, I believe, almost the greatest of all evils in London.

93035. That is an evil that is not on the decrease, is it?—No, it is apparently increasing, because it has relation to the substitution of large firms and large works for individual employers. The village blacksmith can take an apprentice, but a large engineering firm does not take anything like a proportionate number of apprentices.

93036. The occupation to which these boys go does not in your opinion tend to properly develop them physically?—That is so. I do not quite understand why, but you do have the result that the boy at nineteen or twenty is not properly developed. It is not because he is indoors, because mainly these occupations are out of doors, but apparently there is not sufficient muscular exercise.

93037. Then I suppose he is what I may call a very irregular feeder?—He is an irregular feeder, and his hours are very irregular, especially his hours of going to bed, I am afraid.

93038. You think so seriously of it that you use these strong words: That it is not too much to say we are creating every eight or ten years a whole army of paupers?—Yes, excluding the aged, I think it is clear that if you could get rid of all the paupers now existing in some drastic way and leave everything else unchanged, you would in a very few years, ten or twelve, have practically as many paupers on your hands, apart from the aged.

93039. This process of breeding or creating paupers is perhaps more rampant in London than in the big provincial towns?—I know it more in London, but I am not sure that it is not just as bad in places like Glasgow, Manchester and Liverpool and perhaps other ports.

93040. The result therefore is that the great bulk of the London boys in your judgment get pushed out, or do not go into trades of a skilled organised character which would give them permanent employment and the chance of a rise?—That is so: demonstrably so.

93041. You have no doubt whatever in your own mind about that?—The great example is the building of country trade, which is the largest London trade; I think an enormous proportion of the building trade of London is recruited by young men from the country districts.

93042. If that is so, I assume it must be that the London boy is physically inferior, because he would be quicker than the country boy?—I do not admit that he is inferior: I think it is that at the age of nineteen or twenty when the little builder is taking on a bricklayer's improver the London boy has not acquired any art of bricklaying: the little builder can get the country man and he cannot get a London boy.

93043. I rather read your paper as arguing that they got pushed out because they were physically less strong?—I do not think that is so at nineteen or twenty: I think it is so later on in life, when the country man who has come to London, on his superior physique and perhaps his superior regularity, is preferred for situations like that of a draper's porter, for instance, but I do not think that applies to the Londoner of nineteen. It is sheer lack of instruction which keeps the Londoner of nineteen from entering the building trade.

93044. Lack of instruction of the proper kind?—Yes.

93045. You make certain suggestions, you think the evil is so serious that we ought to enact a law by which a period of half time should be very much extended and made general?—Yes.

Evils of un-
skilled boy

Advantage
country
boys over
Londoners.

Practical-
bility of
"labour ex-
change and
training"
scheme.

Industrial
changes
tending to
increase un-
skilled labour
surplus.

93046. Would you make any exception for certain trades: take for example agriculture?—I think I should not make exceptions, but special arrangements. It ought to be possible, I should think, in agriculture to divide the year rather than the day or the week. Half time need not necessarily mean half the hours of each day. It may be the year that is divided.

93047. So far as health is concerned, occupation in the open air would be much less detrimental?—Yes.

93048. (*Mr. Nunn.*) It is the year that is divided in some cases, is it not?—I do not think there is anywhere any division of the year.

93049. There is the Swiss exemption of children during the summer?—Yes, for school children, but not for youths.

93050. (*Bishop of Ross.*) The agricultural schools are very commonly winter schools?—That is so.

93051. (*Chairman.*) Would you put these boys or young persons through a continuous course of schooling up to eighteen? Was that the idea?—I would take what I could get, but I should not object to see it extended to twenty-one. It would be a great advantage to get it even up to eighteen.

93052. Would special schools have to be built for them or is there enough accommodation, should you say, in London now?—There would have to be additional accommodation. In London part of the accommodation in the Polytechnics is not so fully occupied during the day as it is in the evening, but it would be quite insufficient for any general measure.

93053. Would it be possible to associate this training assuming there is rather a tendency to physical degeneration in towns, with physical training?—I think so with great advantage. I believe the earlier years had better be very largely occupied with systematic physical training of all kinds, which would include games, because it would be possible with great advantage to organise some of the leisure of the boys; in fact, the physical training would come in as a substitute for the present amusement of their evening hours to some extent.

93054. Assuming it was ever thought advisable to give some sort of general training to the youth of this country, I gather you think that industrially and physically, putting all military considerations on one side it would be a great benefit?—I think it would be a great advantage if you could get it without the drawback of barracks and barrack life, as you could by some such plan as I suggest. I am not prepared to weigh the incidental drawbacks of barrack life against the undoubted advantage of universal military training from an educational point of view.

93055. But supposing you put them through a system of training which, for the limited time which would be available, would be a tolerably stiff system, you would probably have to feed them too?—I think there would be a great advantage in giving them the evening meal, for instance, which would be comparatively inexpensive, which would teach them to some extent how to eat and what to eat.

93056. If you did bring it in, this sort of training must be universal?—Yes.

93057. You could not confine it to any one particular class?—No, it ought to be universal.

93058. You are looking at it much more from the economical and physical side than the purely military side?—I may say entirely from the economical and physical side: I make the military suggestion just by the way.

93059. Assuming there was a general feeling in the country that some military training of this kind was necessary, it could easily be fitted in to what you suggest?—Yes.

93060. Now we come to the question in the second part of your Statement, namely, unemployment. Your contention is, I think, in the first paragraph, that one of two things must be done in the future, either you must push back all these unemployed and able-bodied on to the Poor Law, in which case some much more efficient test must be provided than that which now exists in the workhouse, or else you must go in the other

direction, and take up more seriously the question of registration or of trying to find employment for them?—Yes.

93061. In your judgment there is no alternative between the two; you cannot go on as you are now?—I think there is no alternative. I am not even sure that the policy of relegation to the Poor Law is an alternative, because you are face to face with the dilemma that if you make your test efficient you keep your people out, and if they are out they are not provided for.

93062. Your judgment is that the spasmodic efforts periodically made to raise the funds, tend to increase the evil and demoralise both mentally and physically a great many of those who participate in them?—That is so. I feel that very confidently, but at the same time I do not think it is possible to prevent those funds being collected and free food and so on being given so long as you have any large class of persons who are in absolute distress. However bad they may be, it does not seem possible to in any way prevent them.

93063. Going on, you endorse very much what Mr. Beveridge put before us, that the great evil at the present day of our industrial system is the under-employment of so large a body of men?—Yes.

93064. Do you think the number of those who are under-employed has increased relatively to the rest of the population in recent years?—That is a point on which I have been able to find very little statistical assurance, but taking short views, comparing the present day with merely twenty years ago, I think that in cities like London it is increasing; that there is more tendency to take on and dismiss people at short notice than there used to be and much less employment of men for long periods and, apparently, from such inferences as I can draw from the census, the classes of men who are so employed are increasing relatively to the rest of the population.

93065. What are the causes at work which are tending to diminish the duration of the actual engagement. Is it that the nature of the business is now changed, or is it because both master and employee like to have a free hand for the future?—It is very difficult to say, but you can see some of the causes; if you take, for instance, a small country village, the employer has to put up in the main with the men who are in the village, and he tends to employ them permanently; if you get to a large city like London, a builder will have a job at one end of London this week, and a month hence, he may have a job the other end of London, twenty miles away, where he will take on by preference the labourers of the locality therefore, the larger the cities get the more tendency there is for the men to be taken on and dropped when the job is over. That, I think, is one cause, and that ramifies very largely. The mere increase in the size of the unit in which industry is carried on, tends, as it seems to me, in the building trade especially, to cause men to be taken on and dropped as required.

93066. The building trade apparently provides more unemployed than almost any large trade?—I put it in this way, that of the applicants to distress committees, 50 per cent. of the men are of the general labourer type, and 25 per cent. belong to the building trades.

93067. The term of engagement in London is by the hour is it not, or it can be broken at an hour?—That is only nominal. The men are not in practice taken on and dismissed hour by hour. It is only a way of calculating the wages, and dispensing with any sort of notice on either side. If a man is taken on, I think he usually works for at least a day, generally for several days, and frequently for the whole job.

93068. You think it is more a convenient method of calculating the wages?—A convenient method of calculating the wages, and a convenient way of being free to dismiss men at a moment's notice, but it is not a guide to the actual period of the men's engagement.

93069. We have had it in evidence from persons connected with the dockers and that kind of work, that the strong man reveals a good deal of desire to be able to break his engagement or his work, and not lose it?—I do not know how that may be. I have been very much impressed, generally speaking, with the eagerness and anxiety of men of the lowest grade of labour to get permanent employment. They will take any wage,

Mr. Sidney Webb, LL.B.

3 Feb. 1908.

Demoralising effects of relief funds, etc.

Increase of under-employment.

Unemployment among general and builders' labourers.

Term of engagement in London building trade.

General eagerness of labourers to get permanent work.

Mr. Sidney Webb, LL.B. however low, for a weekly employment of permanence, compared with higher earnings by the day.

3 Feb. 1908. 93070. That is your experience?—Yes. The demand, for instance, of men to get into permanent service of any kind, on the tramways, or on railways, or in any place where they can rely on running on for years, is such that they will take 17s., 18s., or 20s. a week, whereas they could earn 4s. or 5s. a day.

General eagerness of labourers to get permanent work.

93071. To put it in another way, it is the regularity of wage, more than the actual wage per hour which prevents people becoming paupers?—That is so, very strikingly. I think if you could ascertain what occupations supplied the paupers, you would find that they did vary very much in proportion to the regularity of the employment; and if you could change the unskilled labour into a regular disciplined service, however low the wage, you would find that the paupers from that class would decrease enormously.

Surplus labour at docks.

93072. Coming to the question of casual labour at the docks, you estimate that the amount of labour there is not only in excess of the maximum needs of the busiest day, but practically of all needs combined, that is to say, if the aggregate total of all the separate maxima were taken, there would be still a surplus?—Yes, that I think is the new fact which has been discovered principally by Mr. Beveridge in the last ten years; that you have created separate pools of stagnant labour, so as to have in the town more labour than the town requires even at the busiest time.

93073. So that the reservoir, so to say, is in excess of what any employer or any number of employers can want?—Yes, because each employer tries to keep a reservoir big enough for his maximum, which is not, of course, the day of maximum of any other employer.

Uselessness of local and of voluntary labour exchange system.

93074. Then you put forward certain suggestions with regard to casual employment. You have taken the idea from certain writings of Mr. Beveridge, but your scheme goes very much further than Mr. Beveridge?—Yes, because I come to the conclusion that this is a matter in which a small cheap proceeding is no use at all; that it must be done, if it is to be of any use, on a large scale, and, in fact, I think it can only be done by compulsion. I do not think that a local labour exchange, or even a voluntary national labour exchange would be really effective. It must be a national system depending upon compulsion somewhere.

93075. That is to say on compulsion so far as the establishment of the exchange is concerned, and being linked up with others?—No, further, I think you must make it compulsory upon all employers who want to engage labour which you would define as casual, to make their engagements through the labour exchange. I think that is essential. Unless the employers are compelled to go there for their casual labour, I do not think it will be effective.

Casual labour and the labour exchanges.

93076. Taking your proposal, you would begin by describing all work as casual which was for a less period than a month?—Yes.

93077. Would that not enormously increase, or put casual labour into a different category to that which it now occupies?—Yes, it would, but then I want to do that.

93078. Let us follow up what would be the result. Would not the result be that you would have an enormous number of people at every one of your exchanges, who could not get employment except through that exchange?—That is so. That is the object.

Treatment of those squeezed out by decasualisation.

93079. Let us see what it entails. If the Government say you shall not get employment except through this exchange, and the man is able and willing to work, and the exchange cannot find him work, the Government must find him work?—The Government must provide for him. I do not think it need find him work, but I do think it is essential to every system of organising casual labour that there should be an undertaking to provide fully and freely in the wisest possible way for those who are absolutely squeezed out of work altogether

93080. You see the obligation would be rather a direct obligation under your scheme. If you preclude a man getting work elsewhere, and he is willing to work, then I think logically you must find him work through the only channel you allow him?—You must find him maintenance I quite agree; I think that is essential.

93081. Many of these men could not live say for a week without employment?—Without wages.

93082. Without some monetary assistance?—I think it is inevitable in any better organisation of casual labour that a certain percentage of the men who now scramble for work should get none at all, and therefore it is essential that in such a system, those men should be guaranteed complete provision in some way which we can discuss later.

93083. Have you any idea what the surplus would amount to?—No, it is impossible even to form any estimate. It will be remembered by this Commission that in 1834 there was said to be a surplus in all the agricultural villages and it was found after things had settled down that there was practically no surplus at all, or very little. It is quite conceivable that if you had organised casual labour in this way you would find the actual residual surplus in a place like London much smaller than you expected, but leaving that contingency out of account, I think you would have to estimate the surplus for the Kingdom in tens of thousands. Places like London, Glasgow and Liverpool would perhaps leave on your hands some tens of thousands of men who for the moment were squeezed out of employment, but that can only be a speculation. We do not know how many there are.

93084. Let us deal for a moment with the labour exchanges. You would not confine the labour exchanges to dealing only with casual labour?—No, I would have them dealing as far as possible with all applications for labour or employment. I think there is an enormous loss of time and energy at present in looking for work in all trades.

93085. To be really effective it must be associated with labour above the grade of the lowest unskilled?—I do not think it is essential, but I think it is very desirable.

93086. You think also that something might be done through the labour exchanges to promote thrift?—I think you could in connection with a scheme like this give a great deal of encouragement and stimulus to forms of insurance against unemployment.

93087. Supposing you did that the man who would insure himself against unemployment ought to have priority of employment?—Yes, I think that would be quite desirable. I would give him priority. The tendency would be the other way; the labour exchange feeling that the man who did not get employment would be on their hands to be kept, would rather want to give the un-insured priority, but I think from the beginning they should be told to give the insured priority, in order to encourage insurance.

93088. Naturally there would be no inducement to insure if the un-insured got priority of the insured?—That is so.

93089. (*Mr. Nunn.*) In compelling the employer to use the exchange you said you were going to give him as much freedom to select his men, as possible?—Yes, I would give him absolute freedom; therefore anything I say as to giving one man priority over the other, must be taken subject to the employer's right to pick his own men, which should be absolute.

93090. He might not always choose those men?—He might not.

93091. (*Chairman.*) Your labour exchanges you would have under the Government, and not under the Municipalities?—I think they must be national in their scope, and for that reason I think it must be a Government Department. I do not see otherwise how you could get any sort of mobility; just as all the Boards of Guardians are forbidden by law to pay the travelling expenses of paupers to another town, because the other town objects, so if your labour exchanges be on a local basis they would

Probably amount to?—No, it is impossible even to form any estimate. It will be remembered by this Commission that in 1834 there was said to be a surplus in all the agricultural villages and it was found after things had settled down that there was practically no surplus at all, or very little. It is quite conceivable that if you had organised casual labour in this way you would find the actual residual surplus in a place like London much smaller than you expected, but leaving that contingency out of account, I think you would have to estimate the surplus for the Kingdom in tens of thousands. Places like London, Glasgow and Liverpool would perhaps leave on your hands some tens of thousands of men who for the moment were squeezed out of employment, but that can only be a speculation. We do not know how many there are.

Scope of labour exchanges.

Encouragement of thrift by labour exchanges.

Necessity of Government Department over labour exchanges.

never get rid of their men to another locality. Only by a Government system can you get real mobility, as between different parts of the country.

93092. Coming back to the surplus, would you propose to treat the surplus by two methods. You would try and train them by schools, and so on, and you would also in certain cases send certain of them to farm colonies? —Yes. May I say that I do not propose training for the sake of the results that I expect to get from the training. I should propose this exactly the same if I was convinced that the men were absolutely unimprovable. The dilemma is that you have to keep the men. You cannot, in my judgment, give them work at wages; you cannot let them be idle; and you must make it more disagreeable to them to be kept out of work than to obtain employment; therefore I propose the training simply as an occupation and a deterrent. It is a good and useful thing in itself; but the advantage of it does not depend on whether it makes them better or not. It would be necessary even if it did not make them better.

93093. That is an important point: that you would make (we will use the old word) the condition of the persons under training less eligible than those who could get employment?—I would make it less pleasurable even if it were more advantageous. The word "eligible" is, of course, ambiguous, but it must be less pleasurable.

93094. Does the feasibility of your scheme very much depend on the numbers with whom you have to deal?—Yes; but on the other hand, if the numbers are large it means that the necessity for such a scheme is all the more pressing. I admit the difficulty if the numbers are large.

93095. Have you ever thought at all of what number you could train in the way you suggest? Could you train several thousands in London without much difficulty?—Yes, without difficulty. It would depend on how they were distributed between what I call the central labour depot, the industrial school and the farm colony. For instance, we should find that in London there was a large number of men, perhaps several thousands, who although they were not wanted to-day would be wanted to-morrow or this week. Those must be kept at hand in the middle of London. On the other hand there would be other people whom we should ascertain to be not wanted this season, but they would be wanted next quarter. Those you could send away to what I call the day industrial school.

93096. If labour exchanges are established on anything like the dimensions or with the thoroughness you suggest, a system of registration would be necessary?—Yes, the registration of all casual labour. I should be very glad to see the registration extend further than that.

93097. Does it not really come to this: that if we want to deal with this question of casual labour it is absolutely essential there should be more or less an ideal system of registration?—Yes, I think that is essential for this as well as other reasons.

93098. Is there a great dislike on the part of the individual to register?—I do not think there is such a great dislike. For instance, there are 2,000,000 trade unionists, they are most of them registered; and their whereabouts should or could be known to their trade union general secretary, if the trade union cared to take the trouble of book-keeping. A trade unionist never objects to being registered by his trade union.

93099. There is no registration of his periods of service, is there?—There is a register of the period during which he has reported himself as unemployed, so that in that sense there is a register of service.

93100. I suppose the tendency of a trade unionist is always to report himself when unemployed?—Yes.

93101. Otherwise he cannot get his out-of-work pay?—No. This applies, I ought to say, only to the best third of the trade unions. It is a mistake to suppose that all trade unions give out-of-work benefit. It is only one-third of the numbers who are entitled to out-of-work benefit; it is that third only that is registered to the extent that I am speaking of.

93102. One idea occurs to me about this training or schooling of this man. Supposing he goes to this school and improves, and he comes back to the labour exchange and cannot get employment, what would you do with him then?—I would never let him come back until the labour exchange sent for him, as requiring more men. He would go to the farm colony or the day industrial school, and he would stay there until he was wanted, not necessarily wanted individually, but until more men were wanted.

93103. I think somewhere in your paper you have said that if you had organised labour exchanges the fluctuation in the number of people employed through-out a big area would be comparatively not very great?—That is one of the facts that we do not know; but what is clear is that there is a very large amount of compensation, that one trade is busy while another one is idle; and that goes on to an extent which is greater than the knowledge of anyone to say. If we all made an investigation and put our knowledge together we should be astonished at the amount of compensatory action which exists; although it is compensatory in a statistical sense it does not at present compensate, because the men who are slack in one season in one trade do not very frequently go and work at another trade which is busy at that season; but if we had them all organised in a labour exchange I think the variation in the total would be found to be comparatively small. It is true that many seasonal trades are busy in the summer and slack in the winter, but the gas works and the theatrical industry and the Post Office are all busiest in the winter.

93104. Would it be possible to do anything through the labour exchanges in the way of insurance for the casual labourer who was seasonally unemployed?—No, I think that is financially impossible. It has hitherto been found impossible by those trade unions which have a large number of their men out of work every winter to institute any out-of-work benefit. For instance, the stone masons and the bricklayers, although they are highly organised trades, earning good wages, have never yet been able to institute out-of-work benefit; the plumbers, who have lately instituted out-of-work benefit, are feeling it a very severe drain upon them indeed. If it is not possible for the bricklayers and stone masons it is quite out of the question for the bricklayers' labourers and the stone masons' labourers. I think the premium might very possibly have to be something like 5s. a week, or a sum quite out of the range of an unskilled labourer.

93105. As regards the farm colony, one of your difficulties and a difficulty which is common to all forms of employment at a distance is that it separates the married man from the family. How would you get over that?—That is a difficulty which I am not sure that I want to get over. It is one of the elements of deterrence. I do not think you can always afford to keep a man out of work living with his family. It would be outdoor relief on a large scale, and I do not think you can always afford to do that. A certain number who are sent away to farm colonies at present away from their wives and families do find that a very large element of deterrence. I admit there are objections, but I should have to appeal to the experience of the Poor Law that it is one of the necessities of relieving the men.

93106. You think separation acts as a deterrent?—Yes, I think it is a deterrent. I will not attempt to analyse exactly what is deterrent.

93107. Coming to these farm colonies or labour colonies, your suggestion, of course, entails their being organised on a considerable scale?—Yes, but you will notice that I only suggest the farm colony for the men who need to be sent away from the large towns. I assume there is a surplus which we shall have to send away from the large towns, and it is for that surplus that I suggest a country life.

93108. We will come back to the towns. You do not believe it is possible through these distress committees or in any other way to create work inside the towns on any large scale which is useful in itself, which does not anticipate public works or does not interfere with private enterprise?—Speaking generally, I think it is quite impossible.

Mr. Sidney Webb, LL.B.

decasualisa-
tion by
employers.

93109. Not on any scale ?—Not on any but the smallest scale, and under exceptional circumstances.

93110. If your ideas were at all carried out, it would be necessary by consultation, somewhat on the Indian plan, with the engineers of the Local Government Board to prepare in advance big schemes in anticipation of famine : these farm colonies would have to be on that sort of scale and worked out in that way ?—I am not sure that I would suggest that. I would rather regard the farm colony mainly as a place of training. I would subordinate the question of what the men do there to the fact that you must keep them employed. I think the aim should be the training, mental and physical, and not the utility of their work. I think the Indian Famine Organisation would come in at the end, when you had ascertained that there were 10,000 men for whom the cities had no use ; then the Government might, as one possible thing, undertake large works with a view to absorbing that amount of men by adding that amount of demand to the labour market.

93111. Ultimately there is the penal settlement. What I suppose is at the bottom of all your proposal is that you think the real test of whether a man is unemployed or not is whether he complies with the test imposed upon him of working when work is found for him ?—I do not think you must regard that as a test. I think it is our business through the labour exchange to know what opportunities there are for the man and if the superintendent of the labour exchange had no situation at all on his books he would know that this man could not get employment, therefore you need not test the man in any way. I disbelieve in any way of testing whether a man can get employment or not.

93112. It was not so much testing whether he could get employment but his *bona fide* willingness to work. The penal settlement comes at the end, because that would be applied to persons who would not conform to what you call the rules or tests you impose under easier conditions ?—I should visualise sending all the men to No. 2 settlement, from which they could rise to No. 1, if they were very good, or from which they could be degraded ultimately to the penal settlement if they did not work and obey the rules.

93113. These proposals would entail a Central Government Department ?—Yes. I venture to suggest as one of the small advantages that it at last finds something to do for a Minister of Labour.

93114. You also suggest that there should be State aid to provident insurance, but that I think, as you pointed out before, would mainly apply to skilled labour ?—Yes, I think that should be offered to the trade unions : it need not be pressed upon them. If they would prefer not to have State aid we need not trouble them, but it would be a great advantage, because, as I have mentioned, only about one-third of the trade unions are at present able to provide out-of-work benefits at all. There is a large field below the skilled and regularly employed mechanic and above the casual labourer where they could be induced by a little encouragement to provide insurance against unemployment.

93115. You go on and make an interesting suggestion as to the particular organisation of casual labour, that if shipowners or owners did not approve of your suggestion, that they might be allowed to establish an organisation themselves. Would you amplify that a little ?—If I may point out that is merely carrying a step further what actually was done by the London and India Docks after the dock strike. They did arrange by means of their preference lists to give practically continuous employment to a large proportion of the dockers, leaving those who were not on the preference lists still more discontinuous than before. It seems to me quite clear that on any such system as Mr. Charles Booth of Liverpool worked out, it would be quite possible for the Liverpool shipowners to arrange to give permanent employment to 10,000 men while depending for their whole surplus upon the casual labour of Liverpool. I think it would be all to the good if they would so organise as to give permanent employment to 10,000 men even if they then came on the surplus of casual labour for all their emergencies.

93116. You say they would take casual labourers on for a period of more than a month. It would be rather difficult, would it not, to manage, because assuming they only took the man on the next time for a fortnight, he would drop out of the category of this organisation and become a casual labourer who had to be registered at the labour exchange ?—Yes, there would be marginal cases of that sort, but I should assume they would give continuous employment throughout the year to their nucleus crew, their 10,000 men.

93117. But even without the organisation, under your scheme every shipowner who engaged a man by the month would keep that man so engaged outside the labour exchange ?—Yes, I should hope that that would be a great encouragement to employers to make their period of employment extend over at least a month.

93118. Do you think that what you have proposed would make short periods of employment less agreeable to the employer of labour ?—I think I should so word the regulations as to make them less agreeable. I should try to induce the employer only to resort to casual employment when the conditions of his industry made it really necessary. I should try to prevent him wantonly having casual labour.

93119. You would put pressure on to try and regularise as far as possible the great mass of the employment which he could give ?—I believe it might be regularised by employers taking thought to a very much larger extent than it is.

93120. What is your idea about the changes that were made in the docks. Do you think that has tended to regularise dock labour much ?—I think it did at first very much for the men who were on the preference lists, with the corresponding disadvantage which I do not in the least mind, of making things very much worse for the men who were not on the preference lists. But I am informed that that has very largely silently fallen away : that, whether by an increase in numbers or otherwise, the regularity of work at the docks is not now so great as it was immediately after the dock strike, and that you may see to-day the same sort of fighting for work that shocked London so much twenty years ago.

93121. Has it got worse in the last two or three years ?—I cannot say with any certainty, but my impression is that it has.

93122. I am afraid the result of regularising labour so far has not diminished the number ?—It was not the regularising that failed to diminish it. The regularisation while it lasted had in my opinion a good effect. It is rather the falling away from regularisation which has reproduced the old conditions.

93123. You think looking at this question from a broad public point of view, that two conditions must be satisfied in any scheme ?—Yes.

93124. The first is that during the transition stage everything should be done to mitigate the suffering of those who would be in a worse position from the change ?—Yes.

93125. The other is that there should be some prospect of providing for the ascertained residuum afterwards ?—Yes, that is essential.

93126. I understand what you would argue would be that assuming the residuum is very big, it is just as well the community should know it ?—Yes, there is all the more necessity it should know it.

93127. It may be a very difficult problem, and a very costly problem to solve, but you would contend that it is better for the nation that it should be probed ?—Yes, I think however costly it is, it is bound to be far more economical than the present chaos is. We are losing more every day by not solving it than what it would cost.

93128. Assuming you are right in your sort of general contention that this class of unemployment is rather on the increase, that the boys and young persons in the big centres like London, Glasgow, and so on, are tending more and more rather to swell the ranks of the unemployed, this evil of under-employment must be growing ?—Yes,

Possibility
voluntary
decasualisa-
tion by
employers.

Failure of
casualisation
scheme at
London
Docks.

Two
necessary
conditions
in any
scheme for
dealing with
unemploy-
ment.

Increase of
under-employment.

I am afraid that is so. It is not a matter on which you can get statistical evidence, but I am afraid that the under-employment in London covers a larger area than it did twenty years ago, and apparently the increase is still more marked in Glasgow, Liverpool and Manchester.

93129. Would you say it produces an inferior race?—It produces an inferior character in those who are subject to it without doubt. None but the very strongest and finest characters can stand up against this paralysing uncertainty.

93130. And the disposition of those it affects would be to try and get through life with as little difficulty to themselves, and put as little obligation upon themselves as possible?—Yes, it breeds a state of mind and body in which regular employment presently becomes almost impossible.

93131. And after a certain time there is a great reluctance on their part to submit to restrictions?—Yes, almost a physical impossibility to submit.

93132. (*Mr. Nunn.*) With regard to the three principles of 1834, you drop the principle of the test altogether, do you not?—As regards able-bodied men saying that they are unemployed, yes, I think the test is illusory, and I think it is time that the fact was otherwise ascertained.

93133. Because it has not really tested?—That it has not really tested, and we can ascertain otherwise whether there is employment to be had.

93134. You still retain the principle in a milder form of deterrence?—Yes.

93135. And a much stronger form of detention?—I would introduce for a certain proportion of the men the principle of compulsory detention.

93136. Of course, that exists under the present Poor Law, but you would introduce it under a very much wider range?—Yes, very much.

93137. In addition to that, quite a new feature of the administration you would introduce is the principle of the training which would develop the men for their own sakes?—Yes, as I said I put in the training chiefly in order that the men may have something to do and something to which they object. It happens also to be useful for them more or less.

93138. In order to get the men into this machine you propose to introduce a series of sets of machinery; at the top of the scale you are going to compel the employer to employ him for a certain length of time, if he employs casual labour?—To compel the employer if he employs casual labour to come to the labour exchange, and, if he wishes to be free, to employ for a certain length of time.

93139. Then you have a series of institutions for catching different grades of workmen, practically classifying them according to their industrial efficiency?—Yes.

93140. The first difficulty that appears to me is whether you will catch all the unemployed. A good many of them are employed, not so much for wages as for tips, are they not? The people who loaf about the street corners and who earn the scantiest livelihood going of the honest livelihoods, practically earn it by tips?—I have not seen my way at present to deal with that class. I should be very glad to do so, but I do not know how to do it at present.

93141. There is a suggestion in one part of your paper, by introducing some system of economic test, such as Mr. Charles Booth suggested some time ago at the end of his "Life and Labour of the People," by which certain persons who did not come up to a certain standard of sanitation should come under the tutelage?—That would be the effect of the system I propose. At present it is not possible really to punish a man for falling below what we call the national minimum of sanitation, or not providing for his children, but if you could always say to the man: "Why are you not at the labour exchange, where you will be provided for?" then you could be absolutely strict. With regard, for instance, to all the children who are at

school unfed, there would be no need for feeding children at school, because any child who was at school without food would be revealing that his father was not at the labour exchange, and you could instantly punish the man severely for neglecting any one of his obligations, if you offered him that alternative.

93142. Send him to one of your penal settlements?—I should send him to prison. Failure to provide for your family is already a penal offence.

93143. Do you propose to give aliment to the wife of the man in prison?—Certainly, you do at present. You may not give outdoor relief, but you undertake the obligation to keep the wife and children.

93144. In what way?—By the Poor Law.

93145. That is not connected with the criminal law at all. The Criminal Code does not undertake to care for the wife and children?—The Prison Department does not, but it sends a man to prison knowing the board of guardians will care for the wife and children. You would find the magistrates would not send the man to prison as freely as they do now if they did not know the wife and children would not starve. If they were assured the wives and children would be well provided for they would send men to prison much more freely than they do now.

93146. That would not come into your scheme for dealing with the unemployed at all?—It is an incidental consequence.

93147. The people who slip through the meshes which you have described would not come into your machinery at all; you would leave them to the Criminal Code?—I should leave them alone so long as they fulfilled all their social obligations, but I should watch them very strictly, and when they failed to fulfil any one of their social obligations, such as maintaining their children or maintaining sanitation, then they would be at once proceeded against, because you would know they were wilfully neglecting an opportunity.

93148. To begin at the top with the employer, it would be exceedingly difficult to prevent the employer from avoiding this obligation; he would have ample opportunity of turning men off before a month, would he not?—I do not think it would be so difficult; to begin with, the employer would not particularly want to avoid it. Of course, there is no objection to an employer dismissing a man, but it would be a comparatively easy thing to ascertain whether the employer really had as many men in employment during the month as he said he was going to have. They need not be the same individuals, but if you found that his staff was reduced in numbers, it would be an inference that he had been using his power of dismissal to reduce his staff. You would not necessarily put him in prison for doing that, you would only warn him.

93149. One of the things which you abandon with regard to the unemployed, is any previous inquiry into their circumstances?—I do not abandon inquiry in the sense of knowing as much about them as you can, in order to enable you to find them work, but I do not think any inquiry ought to be made the means of refusing to deal with them at all, any more than the doctor's diagnosis is a means of the doctor refusing to treat the patient.

93150. On the other hand, would it not almost necessitate the introduction of some dossier system, especially if the men were sent to different parts of the country?—My suggestion about that is that it should be optional; that either you would have men on your register about whom you knew nothing, or you would have a supplementary column in which the man could give such particulars as he chose, which could be verified, so that you could either supply to an employer who asked for a man, an individual man with a character, or you could supply the undifferentiated man. Some employers, the dock companies, for instance, would send for 500 men, and then you could send undifferentiated men, but an employer who came and said: "I want a particularly good man," could be allowed to look at the list of available men with such particulars about themselves as had been ascertained.

Mr. Sidney Webb, L.L.B.

3 Feb. 1903.

Method of dealing with men below sanitation standard or who neglect children.

Difficulties in regard to employers under proposed decasualisation system.

Question of inquiry into circumstances of workmen.

Optional registration of character etc. at labour exchange.

Mr. Sidney Webb, LL.B.

3 Feb. 1908.

Objections of higher class of workmen to labour exchanges.

93151. The employment exchange would come to be used mainly by this casual class would it not?—I hope it would be found to be the most convenient means of finding other situations as well.

93152. Would not the presence of persons of this class, with a possible descent to a penal settlement, rather deter the better class of worker from using it?—I do not think so, so long as they were able to distinguish themselves from the others.

93153. You have not touched in this paper upon another difficulty which the upper-class workmen feel, that is the difficulty of affording facilities to employers who are locking out their workmen, or whose workmen are striking?—Yes, it would be absolutely necessary for a labour exchange to be prompt to refuse to supply men to employers who had any dispute with their workmen.

93154. Instead of disregarding disputes, you would make it the duty of the superintendent to ascertain exactly what disputes were going on, and have absolutely nothing to do with them?—I would make it his duty to have nothing to do with them, when he was aware of them. I would leave it to the workmen's organisations to make him aware of them.

93155. Would there not be a danger, to turn to your third class, of men getting on the farm colony, and staying there for the sake of the rather easy life it would afford them in the country?—There would be the danger of what you may call moral malingering. I think you would have to deal with that in analogous ways to that in which the hospital superintendent deals with physical malingering. You would have to find out that man and pin-prick him out in one way or the other.

93156. He would go down to the penal settlement?—Yes, eventually.

93157. Then with regard to the administration of these depôts, the school, the colony and the penal settlement, you said a series of graduated training establishments should be attached to the labour exchange?—Yes.

93158. It is really better that it should be attached to what is a purely industrial organisation, rather than to be administered by some such body as would look after relief and public assistance generally?—Yes, I should agree if I thought that the treatment of the unemployed could ever be made a part of the relief of public assistance generally. I regard it as essential that all the able-bodied should be dealt with by one organisation, which as I have indicated, must be national, and that being so, I cannot have anything to do with boards of guardians as we know them now. You would take the able-bodied completely out of the Poor Law.

93159. But the consideration of a man's case and a man's character would be quite alien to the duties of the superintendent of a bureau which was simply dovetailing employment would it not?—No, I think not, because he would not be able to ascertain for which employment this man was suitable, or what opening he could find for him without ascertaining what his character and capacity was. I visualise the superintendent of the labour exchange as racking his brains to think: Now, how can I find a place for John Jones? and for that purpose he would have to know as much as he possibly could about John Jones, but even if John Jones were a convicted criminal or loafer, he would still have to deal with him somehow, therefore his enquiries would never be for the purpose of excluding anybody, but only for the purpose of knowing how best to deal with him.

93160. Then whose decision would it be that he should go to the central labour depot or the day industrial school, for instance?—I would vest that in the superintendent of the labour exchange of the City.

93161. Without any committee of any kind?—We might perhaps have a supervising committee, but in effect it would have to be vested in the superintendent.

93162. He is not the superintendent who racks his brains surely, to dovetail the men's employment?—Yes, I think you will not get any committee to rack its brains, it must be the superintendent.

93163. You could get the individuals to rack their brains, who work in connection with the committees, but surely you are not allowing a man to have the magisterial power of sending a man to a penal settlement who would be the man who was finding out what Tom, Dick or Harry could do for the next two or three days?—I do not think you could commit a man to a penal settlement except by going before a police magistrate. The penal settlement where you have the power of detention, it seems to me, must be entered through the portals of a police court.

93164. If he refused the depot, the school or the colony what would you do with him? Would you not be in the same position with regard to the test? You would say to the public who wanted to feed him: "This man applied to us for employment; we could not find it for him; we offered him a series of modulated tests, but he has not accepted them." Would you give the advice to the public not to feed him?—I should let that man alone for twenty-four hours, having in the meantime telephoned to the agent of the Society for the Prevention of Cruelty to Children, the sanitary inspector, and the inspector of police for his district. In forty-eight hours that man would be had up before the magistrate, either for not feeding his children or letting his house be in an insanitary condition, or something of that sort, and his case would be removed from off your books.

93165. A number of these men have already deserted their families?—Then they will be imprisoned. I think you are not reckoning on the very drastic tightening up there could be in the existing laws once you had this opportunity opened to every man.

93166. I was only trying to find out how you could get them all into your meshes; it seemed to me some might escape in this way?—Yes, for twenty-four hours as they do in Belgium, but only for twenty-four hours.

93167. Does it not seem to you that it would demand a system of dossier, if you are to do it at all?—"Dossier" is a French word which carries an injurious connotation. I think there would be a record of every man as there is of every trade unionist.

93168. Then you would have one body to send a man to a home, and another body to decide what his wife shall have?—I think the case of the wife and children had better be dealt with by the superintendent of relief, if a superintendent of relief is established.

93169. By whatever local authority we have for public assistance?—Yes, that is my suggestion.

93170. You say under the heading of "A Ministry of Labour" "On the other hand the home aliment awarded to their wives and families had better remain a charge upon local funds"?—That is my suggestion. It is not essential, but for convenience of administration it seemed preferable.

93171. That would be rather distantly connected with the body that first sent the man to the settlement and afterwards kept him there?—Yes, I think it would. There would be some advantage in their not being too closely connected.

93172. What advantage?—The advantage would be that you would keep the provisions for the unemployed men entirely free from the encumbrances of Poor Law relief, which is a very important consideration if you want the men to come willingly and voluntarily to you.

93173. With regard to the universality of your proposal, you say it is a positive advantage of the proposal that it need not necessarily be put in force simultaneously all over the kingdom. I should have thought that it was almost of the essence of it that it should be put into force all at once?—I think it would be a great advantage that it should be national; but I can quite imagine, for instance, that very great gain would come to Liverpool if Liverpool were dealt with even alone by the organisation of this casual labour at the docks, and elsewhere in Liverpool, even if you could not send it out of Liverpool; and similarly in London, you could get very great gain by the organisation of casual labour in London even if you could not send it to any other town. I do not think there would be so much necessity for sending men from town to town as you may suppose. The variation of demand in towns, in London or in any other town, is not, in my opinion, in the aggregate very great.

Penal methods certain ca

Malingering at farm colony.

Proper authority to deal with all able-bodied.

Duties of superin- tendent of labour exchange.

93174. Then as to this person who is going to send the men off either to the dépôt, the industrial school or the penal colony without any resort to a magistrate, what type of man would you propose for that?—The ablest man you can get in the market for the task. The mere organisation of the casual labour for London would be a gigantic task; and you would want the very best man you could hear of.

93175. He is not the man who would know Tom, Dick and Harry and send them off to the colony?—No; but he would see that all the separate subordinates were acting under his own orders. He would settle the principle. He would have a very close knowledge of what each of his subordinate labour exchanges was doing. There would have, of course, to be a considerable number of separate offices for London, each of them under its own head; but probably the decisions would be taken by the superintendent for London on information supplied to him from all these offices.

93176. How many do you think he would have to deal with? Perhaps that is rather a difficult question; it may be a great number. ?—I have been thinking whether I could give any kind of rough forecast; it seems to me that for London you might want something like 100 separate offices, if you were going to be in a position to supply labour conveniently to employers all over London. That is, roughly speaking, not quite two to each Parliamentary constituency, which does not seem to me too many.

93177. (Chairman.) What sort of staff would they want?—That is almost impossible to ascertain.

93178. But, taking these branches, they would want a large staff?—They would want a very competent superintendent, who would have to be paid a quite substantial salary of, say, £300 a year, and then they would want a number of mere clerks, from two up to half a dozen.

93179. (Mr. Chandler.) There is one point I would like you to clear up. You spoke of the reluctance of London employers to teach apprentices, or even to have them on their premises, where anything can be learned. Is that not general throughout the country in the works of large employers of labour?—Yes, I think it is general, but I think it is accentuated in London by the high rents. The governing economic reason in London is that an employer does not want his workshop room taken up by a mere boy because of the high rent, consequently that cause operates more strongly in London than in any other town.

93180. You do not think it is that the specialising of the work and the introduction of machinery has rendered the opportunities for boys' services less desirable?—Less desirable to the boy; from the point of view of the boy, yes, I think that this also operates, but that is not particularly the case in London as compared with other towns.

93181. It has been asserted that the trade unions are largely responsible for this restriction of apprentices. What is your experience? You know pretty nearly all there is to be known in respect of trade unionism?—The trade union rules are old fashioned survivals, which have mostly been given up. Where they still exist, they exist in an almost entirely nominal state, and they certainly are not responsible for the restriction of apprentices, as a rule, because the limit imposed by the rules is far in excess of the actual number of apprentices. For instance, in London no employer in the building trade has anything like as many apprentices as the trade union would be quite glad that he should have. It is only in certain trades, usually a few small old-fashioned trades, that the restriction of apprentices is at all effective. There is one exception to that, perhaps, the compositors, where they have a restriction which seems to me an unwise one, but it is not a universal one.

93182. In Ireland the trade unions are rather fond of restricting?—Yes, I think the Irish trade unions, amongst their other qualities, are on the whole rather old-fashioned.

93183. What are your views on the subject of trade union responsibility for the unemployment of men advancing in years, in consequence of the desire to uphold a minimum wage?—I do not think that that is at all true. In the first place, the trade unions, as far as I know, are always willing to allow their older members to work at a lower rate if their older members come and ask them for permission to do so, and that frequently happens, but also I would point out that the employers' desire for a young man instead of an old man does not have any effect upon the total volume of employment. It may be that the employer takes a young man instead of an old man, but that only means that an old man is out of employment instead of a young man being out of employment, and as the large majority of applicants to the distress committee are young men, it is clear they have not been excluded by any preference of the employer for young men over old.

93184. (Dr. Downes.) You conclude your paper with a picture of the children who now attend the public elementary schools of the country. Is not the first part of your paper rather an indictment of the results of the present system of education?—No, I do not think so, because the mere fact that we are only able at present to teach elementary reading and writing to these children does not, I think, have any bearing at all upon their being out of employment. If you could have all these children admirably well educated, I think there would still be fluctuations in employment, and therefore still men out of employment. They must be more adaptable and better equipped, if they were better educated; but it would not prevent them being thrown out of employment.

93185. What do you mean by better educated?—I should say not receiving less literary education than they have at present, but receiving in addition to that a great deal of what we call for short, technical education.

93186. By that, do you mean thorough technical education?—I do not think you can make a man a good carpenter in any school, but you may teach him the use of tools, you may teach him accuracy of hand and eye, and so on.

93187. There is an impression among the public, it may be rightly or wrongly founded, that a certain portion of the elementary education at the present day is not altogether useful in its results?—I have obtained a memorandum which I think would be of interest to this Commission about the industrial schools of the London County Council, where a great deal of technical training is given and rather less literary education than is given in the ordinary schools. This memorandum gives very elaborately the facts about those schools, but does not deal with any question of policy, as to which a witness will come from the London County Council. I shall be very glad to hand in this memorandum if the Commission wishes, because it has a bearing upon the possibility of the use of these industrial schools for Poor Law children. (See Appendix No. IX. (A).)

93188. The point to which I was leading up was whether you would consider there was any possible saving of cost on the present system of elementary education which might assist towards the cost of the scheme which you outline to us?—I am afraid not. I am afraid you must look forward not to a diminution of the present school-leaving age, but to a raising of it from thirteen or fourteen to fifteen; and I think your technical instruction must come after that age. I do not believe that you can give a boy or a girl of twelve or thirteen any effective technical instruction which will affect him in after life; and what we find in the industrial schools which attempt to do that is that the boys do not follow the trade which we have taught at school, therefore their training in the industrial school cannot have been of any use to them in the trade. It has been of great use to them as a method of education, and they do very well; but you may employ a boy at shoe-making or carpentering at school and you will find that he does not become a shoe-maker or a carpenter, but something entirely different; though the training at shoe-making and carpentering has been of great use to him educationally, I do not think you can get real trade teaching in school years.

Mr. Sidney Webb, LL.B.

3 Feb. 1908.

Effects of trade unionism in employment of old men.

Mr. Sidney
Webb,
LL.B.

3 Feb. 1908.

93189. I am afraid from a remark you make with regard to the training of girls, you have not a very high estimate of the result of family training. You doubt if girls of any social class ever get any training from their own mothers such as to make them competent housewives; but have you considered this, that the evil of the unemployed in the class which you depict to us in your paper is more accentuated in London and in the great towns than in the smaller towns and country districts?—That is so.

93190. Is there not a tendency in the great towns for a loosening of home life and family ties as compared with the country districts?—That may be so.

Cause of
greater
under-
employment
in large
towns.

93191. Have you considered to what extent that may have a bearing on the problem we have to deal with?—I am afraid I do not see very much connection. I think the reason why problems of under-employment are so much greater in the large towns is that it is due to the necessary conditions of a large centre of employment as compared with a small one, and I am not prepared to admit that they have any relation to the loosening of family ties which may go on in the large centres.

Permanent
physical im-
poverishment
traceable to
under-
employment.

93192. My next question is rather a scientific one. You speak on the first page of the second part of your paper of the frightful results of chronic semi-starvation, amongst those you mention permanent physical impoverishment. Do you mean by permanent physical impoverishment permanent deterioration of the racial stock?—I would prefer not to express an opinion as to what deteriorates the racial stock, because I suspect that scientists know very little about it at the present moment. I do not know; I meant permanent in the individual. I will give an instance of what I mean. I am convinced that a large part of the low standard of health which perhaps goes along with chronic dyspepsia in a large section of the wage-earning class has reference to occasional under-feeding in early life; I suggest that.

Aliment to
families of
men sent to
training
establish-
ments.

93193. In the paragraph with regard to the training of the surplus labour you say you would give them no wages or pocket money, but you would supply home aliment to support the family. In what form would you give that home aliment?—I have no particular form. If the wife could be trusted with the 10s. or 15s. a week you would probably give it in money. In those cases in which she could not be trusted for some reason or another, the case would have to be dealt with like that of the widow with children; very likely you would have to take some of the children into a day industrial school.

Question of
sale of
products of
farm colonies

93194. In regard to the farm colonies, have you considered the possible difficulty of competition with existing industries? Take the case of market gardening. If this was carried out on a large scale in farm colonies, such as you contemplate, what would be your view with regard to that point?—I doubt whether there is any economic objection to that competition except only in

its psychological aspect on the mind of producers, employers and workmen. I think it is analogous to the case of prison-made goods. I object very much to the sale of prison-made goods in the market, not because I have any notion that they displace other labour, but because by their psychological effect they depress the market, and make it easier for the employer to reduce the wages of labour. So I prefer that the product of these colonies should not be sold in the market except where necessary, and in those cases sold at a distance, not obviously, therefore, in the district. I see no objection to sending farm products from the farm colony to London because this has no psychological effect upon the producer, because it is not seen; but I might have an objection to selling it in the market town where it is seen.

93195. Although it is produced by subsidised labour?—I should have no objection to its being sold although produced by subsidised labour except for the possible psychological effect on the minds of employers and working, leading to a depression of wages.

93196. (*Professor Smart.*) You do not mention price. Do you mean you would have no objection to these things being under-sold?—I would not sell any goods lower than the market price. Assuming they were all sold by auction in Covent Garden, they would fetch the price which similar produce from elsewhere would fetch.

93197. (*Dr. Downes.*) Should you anticipate any Alien danger from alien influx under such a system as yours?—I think it is an interesting feature of this plan that it has at once made me see that you cannot afford to allow unrestricted alien immigration. I had hitherto taken the view that it was not necessary to exclude aliens provided you laid down a standard and compelled them to come up to that standard; that is to say, that if you insisted upon the payment of the trade union rate of wages in any trade there was no objection to alien workmen coming in if they got that trade union rate; but I now see that you cannot afford to find employment for alien workmen if you have a surplus of labour in London; and just as you would not allow men to come from Liverpool to London if London had a surplus, so you could not allow them to come from Rotterdam to London if London had a surplus. I think it is one of the great features of a plan like this that it would bring into sight the real interests in such a matter.

93198. You say that the existing Poor Law arrangement for the relief of the able-bodied need not be interfered with; but why should the able-bodied men be allowed to go to the Poor Law if a machinery of this kind were set up?—I think I must have said that only in relation to a transitional period. In my view the whole of the able-bodied, whether they be called unemployed or able-bodied paupers, or vagrants, or as in Scotland "ordinaries," must all be dealt with by one and the same authority. There are no lines to be drawn between them.

London

Principles
and
labour

ONE HUNDRED AND FORTY-SIXTH DAY.

Tuesday, 4th February, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc., (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
The Rev. T. GAGE GARDINER.
Mr. J. PATTEN-MACDOUGALL, C.B.
The Rev. L. R. PHELPS.

Professor WILLIAM SMART.
Mrs. BERNARD BOSANQUET.
Mrs. SIDNEY WEBB.
Miss OCTAVIA HILL.
The Right Rev. The LORD BISHOP of ROSS.
Mr. R. H. A. G. DUFF (*Secretary*).
Mr. J. JEFFREY (*Assistant Secretary*).

Mr. SIDNEY WEBB, LL.B., further Examined.

Statistics of
unskilled
labour in
London.

93199. (*Mrs. Bosanquet.*) On the second page of the first part of your Statement you refer to some statistics by which you think it is possible to measure unskilled labour in London—the casual labour. You say here: “That this particular class, if we may rely upon the statistics, seems to have doubled in numbers in London in the last forty years.” Could you refer us to those statistics?—I cannot quite remember; but I was alluding to the census returns of general labourers. I have forgotten the exact years of the census. As you know, it is extremely difficult to be quite sure of your comparative totals; but comparing two censuses (I think it must have been 1851 and 1891, because I think I found it in Mr. Charles Booth’s analysis of the general labour classes in his great work), I inferred that the increase had been as stated. I gave the figures with a certain amount of hesitation, because it is so very difficult, with regard to the census classifications, to be quite sure that they are including the same heads.

93200. That would not necessarily be the casual labour; that would only give us the measure of whether the general labour is more or less?—Surely we may assume that all the general labourers and all the building trade labourers are intermittently employed. I should think it is very rare that a general labourer can be said to be engaged for months on end.

Pauper boys
unskilled
labour.

93201. Passing on to the next paragraph, there is an interesting statistic there; you say something like 1,000 among the boys who will start unsatisfactorily as now paupers. Could you refer me to that?—No. For that I think there is no statistical evidence. I estimate that taking the outdoor pauper boys in proportion to the total number of boys leaving school, that at least this number of them would enter the unskilled labour class. My own opinion is that it is much larger, because in all probability these boys go to the unskilled labour occupations to a greater extent than the average of the population, but I am not taking that into account; assuming that as large a proportion of them get apprenticed as the average population there would be about 1,000 going to unskilled labour annually.

93202. (*Miss Hill.*) Does that mean boys from the schools or the children of widows in receipt of outdoor relief?—I am now speaking entirely of the Poor Law children who are maintained on outdoor relief.

93203. (*Chairman.*) I notice that the suggestion is that out of the children whose parents get out-relief you rather made an estimate that about 1,000 a year drift into pauperism?—Into casual labour occupations, yes; that is quite a rough guess. I do not pretend that it has any statistical accuracy.

93204. Might I take your estimate of the true figures. You calculate about 10,000 for the whole population of London that drift. Could you say, taking the figures of those who drift into unskilled labour, what would be the number?—I have not formulated that in my own mind. We have no statistics. I think that one-fifth of the boys leaving school would be an under-estimate, and I am

afraid it might very likely amount to a half; but we have no statistical basis whatever for that.

93205. (*Miss Hill.*) The children of people in receipt of outdoor relief need not necessarily go to unskilled labour?—No, they need not necessarily, and I hope that some of them do not; but I am only assuming that a similar proportion of those take to unskilled labour as of the whole population; I am afraid it is a larger proportion.

93206. (*Mrs. Bosanquet.*) Passing to the half-time trade schools, with which I am very thoroughly in sympathy, would you apply them necessarily to boys who could be shown to be learning a trade properly, or would you leave that as an alternative if the parent could show he had put his boy to a proper trade?—I think you must consider the necessity of having some sort of general rule; but I should be quite prepared to make the general rule along those lines. For instance, supposing that a boy were really apprenticed to an engineering works, it might very properly be arranged that he should have sufficient time off to pursue the theoretical part of his calling, and not necessarily anything strictly in the nature of half time. You could adapt the rules to those cases.

93207. If the employer, as often happens in the North, has his own technical classes, you would accept those?—Yes. You would have to consider, in fairness to all employers, making the obligation somewhat uniform on all; but subject to that consideration, I can imagine a great deal of adaptation.

93208. I think the question was raised yesterday as to whether there might be a difficulty in finding room for all these prolonged students; but I suppose the board schools would be available in the evening; you are not confined to the technical schools?—I am afraid that they would not be at all adequate. To begin with, a very large proportion of the elementary schools in London are already used in the evening for the evening classes; and then I do not contemplate that this half-time trade school should be carried on literally in the evenings, because we find that the boys and girls are too tired in the evening, and it is the essence of the proposal of half-time that they should not be required to put in a full factory day before they come to the trade school; therefore I am afraid you must assume that additional premises would be wanted, though not necessarily to the full extent numerically.

93209. These suggestions chiefly apply to towns. What would you do with country boys?—I have not considered in detail how it would be adapted to the country; but I suggest there is just as much need for technical education of the agriculturalist, and probably even greater opportunities in the way of seasonal schools: schools in the winter, not necessarily half the day.

93210. Unless it was adapted to the country also there would be a danger, would there not, of increasing the drift to the towns?—If you think the training is so attractive; I am afraid that the boys would not so much like the training that they would want to come in; but in any case it ought to be done in the country also.

Mr. Sidney
Webb,
LL.B.

4 Feb. 1908.

Mr. Sidney Webb, LL.B.

4 Feb. 1908.

"The stigma of pauperism." Question of deterrent element in labour exchange scheme.

93211. Passing to Part 2 of your paper, under the treatment of the surplus, would you tell us what you mean by "the stigma of pauperism" in the second paragraph?—I mean the attaching of a certain amount of public disgrace and opprobrium to the reception of relief from a Poor Law authority, which is given an outward and visible sign in the refusal of the franchise.

93212. I see that though you say here that there should be no attempt to prevent them from applying, you afterwards lay stress on making the treatment deterrent?—Yes; that is an apparent inconsistency, but it is not really an inconsistency because I hold that it is vital that everyone in this position should actually be on the labour exchange, and if need be, I should be prepared to compel him to go there; I do not think compulsion is necessary under the arrangements I suggest, but he ought to be there. On the other hand, I want to make his condition while he is there rather less pleasant to him than his condition would be if he were in employment, not less pleasant than if he were out of employment and remaining outside starving. The principle of less eligibility relates to a comparison between his being in work and not in work, not to a comparison between his being at the labour exchange and not at the labour exchange.

93213. I am afraid I still do not see how a thing can be deterrent and yet not deter one from applying?—What I want to do is to make the treatment less pleasurable than their condition would be if they were in full employment, but not necessarily less pleasurable than their condition whilst they are out of employment and not under treatment. I would tempt them to come in, but I would also tempt them to go out and resume work as soon as possible.

93214. Does that assume that their condition as unemployed would be more pleasurable than when at work?—It assumes that life at the labour exchange might easily be more pleasurable, and it is a danger against which you have to guard. I am fully alive to the danger, and I want to guard against it.

93215. Really, perhaps a summary of this sentence is that they are to retain their franchise?—Not at all. That I think is quite a small element, but the theory would be that their condition is not to be regarded as in any way necessarily disgraceful to themselves, or open to public opprobrium.

Question of the franchise in case of persons maintained by the State. 93216. Do you think that a man who shows himself quite incapable of managing his own life, and has to be taken and amused and fed and employed the whole day long for fear he should get into mischief, is a suitable man to exercise the franchise?—Heaven forbid that I should decide as to who is suitable to exercise the franchise. That is hardly the point, as you will see when you remember that with the woman who is unemployed the question does not arise at all; there is still the stigma of pauperism on the woman who is a pauper, and yet it is not embodied in any loss of the franchise.

93217. You would see no objection to depriving the man of the franchise?—Yes, I should see an objection, because I do not in any way want to deter him from coming under the treatment. I wish him to come under the treatment; I would compel him to come under treatment if it were politically possible.

93218. Do you see no danger in having a large body of men maintained by the State with liberty to vote and give their votes to the people who promise them the best maintenance?—That is a danger that I should be quite prepared to consider. I do not as a matter of fact think that it is any danger, as things are at present, or are likely to be; but if you extend your view in to the future, and consider the possibility of there being a large body of persons maintained by the State, then I should be prepared to meet that case rather on the lines of what is called the segregated vote which was introduced in Victoria for a short time, and has been introduced for other reasons in Cyprus and New Zealand. For instance, the Maoris in New Zealand are allowed to vote, but they vote only for four Maori members; and the civil servants in Victoria were allowed to vote, but they were allowed to vote only for so many civil service members. I could quite imagine that if you had a large State-dependent class you would do well to allow them to vote, but you might segregate them in one constituency, and say they must vote for one or two members only.

93219. Would they be maintained by the State?—That is not at all necessary to the argument. You could allow them freedom of choice as to whom they elected; but they would have no influence on the other constituencies, which is, after all, what is the danger.

93220. Taking still this class which is to be State-maintained, a large number of the unemployed register themselves as single men; would you allow them to marry while they are in this condition of privilege?—I think that is a matter for consideration. It would, perhaps, depend upon in what grade they were. I obviously should not allow them to marry if they were in the penal settlement. I do not think I should allow them to marry if they were in one or other of the farm colonies, which are places where the men are separated from their families; but on the other hand I do not know that I should object to their marrying if they were in the central labour depôt, which means they would be normally in continuous employment.

93221. But in the middle class in the industrial school, which is to be maintained whenever it is out of work, the marriage rate would go up very rapidly, would it not?—I am not sure that it would, but that is quite an administrative question, upon which I have no view one way or the other. I would do whatever was found to be administratively convenient.

93222. You think it would be possible to prohibit them from marrying, when they were in this class, until they were independent labourers again?—Yes, I think it would be possible.

93223. Then as to those people who are being partly maintained, and who partly work, I believe when they work they earn very high money for two or three days and are then out of work. Have you got any system of impounding their earnings and maintaining their family as long as they last, or may they come to you the day after they fall out of work and receive their state maintenance?—I do not think we ought quite to say they earn very high wages when they are at work. It is only a matter of a few shillings more or less in the day; and you could quite well adapt your maintenance to what you considered a unit of employment; you would clearly not supply maintenance for an hour, you must have some sort of practicable unit. Probably you would not dream of maintaining a man during any part of the day who was at work during that day, if only for a part of the day. You must in practice have some sort of unit of time.

93224. We hear that they earn 6s. a day sometimes at the docks. Supposing a man had three days' work and that a man earned 18s., if he came to you on the fourth day with his family for the rest of the week, would you maintain the family for the rest of the week?—I have not gone into the question of how much the home aliment would have to be. You could take that into consideration in fixing the rates; but I would certainly insist on the man putting in an attendance for the other three days, because I do not want him to stay in bed, which he might be apt to do. When I say I would insist on his coming, I mean it would be a case of degrading him from the first class to the second, and from the second class to the third, if he did not come.

93225. Then there is a difficulty about the principle of maintaining this extra casual labour. I should like to see the central labour bureau depôt to the extent that the men there were ready for employment under different employers through your scheme of the labour depôt, but why should we, after seeing all the bad effects of casual labour, maintain a reservoir of surplus labour for the employers if we disapprove of that system?—Because in my judgment it is the only practicable alternative to a total prohibition of casual labour. If it were economically and politically possible totally to prohibit casual labour, or intermittent labour, that would be far preferable; but supposing it is not practicable to do that, and I do not think it is practicable, if I may say so, economically any more than politically, then you are face to face with this difficulty, that every step that you take for making employment more continuous for those men who are employed makes the conditions harder for those men who do not get employment at all; and if you merely propose to improve the organisation by a labour exchange you are met by the opposition

Questions whether men in training establishments should be allowed to marry.

Relation of earnings to maintenance.

Impossibility of total prohibition of casual labour.

of the whole casual labour class, because each man thinks that he is going to be left out; and it is that which has prevented the voluntary adoption of organisation, for instance, at the Liverpool docks.

93226. Supposing you have discovered through your exchange how many could get fairly regular employment, would it not be possible to omit your day industrial school, which seems to me simply to bristle with difficulties, and pass on to your farm colonies combined with an energetic emigration scheme?—Yes, I think that would be possible, if we find that there is no very great seasonal fluctuation. It is quite possible that we may find that, taking all employments together, the aggregate volume of employment in London was very much the same month by month all through the year. If that were found to be the case, then I can imagine that you would be able to dispense with the day industrial school stage; but you must consider that we have some reason to believe that seasonal fluctuations do exist, and possibly more labour is required in London in June than is required in London in October or January. If that is so you cannot propose to reduce the amount of available labour in London to the January standard, because that would leave unsupplied the necessities of June; and yet you must do something with that surplus which is wanted in June but is not wanted in January.

93227. Is it not possible to take the line that if employers want more labour in June than in January they must be prepared to strengthen their present staff and re-organise their work, rather than encourage them by maintaining for them, which is what the Poor Law does with women now, a reservoir from which they can withdraw them when they like?—I quite agree with that as a preferable theory; but you have to face, I think, in thought, the fact that it is impossible; and I do not think it would be economically reasonable to expect that employers, or that a trade, or that a Government Department, should have to maintain throughout the year such a staff as it needs at its busiest time. To take an extreme case, if you take hop-picking or fruit-picking, it is manifestly inequitable, and I think impossible, to ask that a hop farm or fruit farm should give permanent employment to the amount of labour which it requires at the picking time; and that would be the case even assuming that it were a Government Department. It is nothing to do with private capitalism or the competitive system; there must be fluctuations in the amount of staff required from season to season in a particular trade. I do not think, therefore, we can refuse to make the necessary arrangements for that surplus labour; and if we cannot manage to dovetail it in with other trades at their times of excessive demand, I think it must be maintained.

93228. It seems to me it would be far more unreasonable of the hop-picker to expect somebody else to maintain his labourers eleven months in the year in order that he might have them for one month than it would be for us to say that he must arrange in some way to work without such assistance?—I try always to be moderate in my proposals; but I do not think that I should object if it were suggested that all employers should be required by law to give permanent employment to all the staff that they ever want. I am not prepared to object if that is proposed; but my proposal is more moderate than that.

93229. It seems to me that your proposal rather maintains a stagnation of labour whereas it might be possible to disperse this pool, and by the shortage of labour put pressure on the employers in that way to re-arrange their work?—I am alive to that consideration; but here, as elsewhere, I am not prepared to use the bodies and souls of these labourers as a way of getting pressure on the employers. I do not think it is legitimate to use the sufferings or the demoralisation of one class or section as a lever for obtaining a change in another class.

93230. Is it not just the fact that they are waiting there to be used that leads to demoralisation; if you can disperse them and get them away you are probably saving them?—I agree if you can, and I am quite prepared to take any steps that can be suggested with that end.

93231. Would you support a vigorous emigration proposal in congested districts, say in West Ham?—If there are any congested districts; but I am not yet sure that even West Ham is congested. It may be that it only appears to be congested, because of the lack of organisation of the seasonal fluctuations.

93232. You might test that, possibly, if you could emigrate a really considerable portion of the people, and see the effect upon those that were left?—Yes, that is a bold experimental method which I am not sure that I should be prepared to adopt.

93233. What harm would come of it supposing we emigrated, say, 5,000 labourers in West Ham, could it be any injury to anyone who was left?—I think first of all it might be an injury to those who went.

93234. I am assuming you emigrate under proper conditions?—Even then I am not sure that it would be desirable to send away from any particular district so large a proportion of the labourers in that district as to put the employers in that district at a serious disadvantage when their trade necessarily underwent its seasonal expansion. You are proceeding on the hypothesis that if the employers choose they could make their employment very much more uniform. I quite agree with that hypothesis; but I do not believe that the employers could make their employment entirely uniform even if they tried their hardest.

93235. Still you would agree with me it is as well not to encourage them the other way?—Yes; and I would take any practical steps to discourage them.

93236. You would not go quite so far as to emigrate a considerable portion?—I would not rule that out; the only thing I will not do is to let things alone.

93237. (*Chairman.*) Assuming you had your labour exchanges, and employers could only get casual labour through them, I assume they would put a limitation on the hours of a day's task?—That I should like to leave to be worked out administratively. I may remind you that as soon as there was any consideration of dock labour a minimum of four hours was fixed for an engagement by common consent. A dock labourer is not in London taken on for less than four hours at a time. That sort of regulation, I think, would very promptly arise.

93238. I was thinking rather of the other way. It is stated to us that men work now occasionally for very long hours, twenty-four or more?—That is a question of what I may call Factory Act restrictions; and I certainly should be in favour of imposing a maximum number of hours for men as for women.

93239. It was suggested to us by one witness that Overtime, much higher pay was given during the night, which has been enforced on employers for the purpose of stopping overtime; and it encourages the man who has worked all day to work all night for double pay?—That is so.

93240. You think that does operate sometimes?—Yes; speaking generally the extra rates for overtime certainly encourage individuals to be eager to get overtime, and the trade unions are in a dilemma about it. The trade unions collectively always wish to limit overtime. Their method of doing so has been to penalise it by high rates, and that tempts the individual workman to seek overtime. I think the trade unions collectively would much prefer a legal prohibition of overtime, so far as practicable.

93241. The minimum or maximum would be an administrative question which would have to be settled very much according to local conditions and the nature of the trade?—Yes, like the hours of work. I think it is essential that any scheme of public labour exchanges should set itself to be as obliging to the necessities of the industry as it can.

93242. (*Mr. Gardiner.*) With your great experience, taking your day industrial schools, do you not think it would be extraordinarily difficult to get anybody to attend?—I agree that mental instruction is the most deterrent of all treatments that you can apply to the adult man of this class, and that is why it is so good a factor of the treatment. But you must remember that the man is in the position of earning nothing, and his wife and children are suffering. It is not very much to ask of the man, when he has nothing to do, and cannot get work, that he should go and submit not to higher mathematics, but what we are calling here training, in order that his wife and children may have some aliment.

93243. In the early days, at any rate, he would be the laughing stock of all his friends?—Yes; I think we can get over that.

Mr. Sidney Webb, LL.B.

4 Feb. 1903.

Congested districts and emigration.

Labour exchanges and regulation of hours of work.

Question of willingness of men to attend day industrial schools.

Mr. Sidney Webb, LL.B.
Feb. 1908.

93244. By means of prevention of cruelty to children, and so on?—Yes; I think that so long as the man was fulfilling all his social obligations, he may have savings, I do not think you ought to press him to come, but then he would receive no relief; but directly you found he was not fulfilling his obligations, feeding his children, and so on, then you would indirectly press him to come by strictly enforcing the existing Criminal Law.

93245. You have had great experience, have you not, both before and after the passing of the 1903 Act, of education in London?—You were Chairman of the Technical Education Board before?—Yes.

Results of the Education Act of 1902.

93246. Under the Act which you are now helping to administer what in your opinion has been its result on education in London?—Leaving aside the religious question, which does not come in here, I think the net result has been a very large advance in education both in quantity and in quality; that the co-ordination of all the different grades and kinds of education has already been of great value, and, certainly, measured by the expenditure, the amount done has increased.

93247. As regards the local interest, or the interest taken by the great body of people with whom you come in contact, do you think it has tended to increase or decrease?—I think that probably differs in London and small places, and I know nothing about small places; but certainly in London there has been no less local interest, and I think there has been more general interest in education, but that has been, perhaps, because it has been so much in the newspapers.

93248. Do you think you are getting a better type of manager than you did under the old system, taking provided schools?—I do not think there is very much difference. Under the old system you got a certain proportion of admirable managers, and a number of others who were not much use, and I think that is true now.

93249. You do not think it would be true to say that the local education authority to-day is living in the main upon the interest generated by the old school board system?—Certainly not, because I think the other kinds of education, which the school board was prohibited from undertaking, are far more popular and excite far more interest than the elementary instruction.

93250. With regard to the devolution of the functions, have you any idea of giving to the local bodies as much power as you think they ought to have, not solely for the purpose of education but in order to educate public opinion?—I do not think that is a question very relevant to London. The number of people whom you can include in educational administration in London must necessarily be so tiny a fraction of the whole that whether the number is greater or smaller is relatively less important.

Changes of industrial processes and effects thereof.

93251. (Professor Smart.) It seems to me that in your first paragraph, where you answer questions one to six you have adopted a diagnosis which is very much my own; but as you put it very briefly I should like to put some questions with a view of expanding that clause. I suppose you agree with the economic proposition that the demand for all the factors of production comes not from the employers' pockets, but from the national income?—From the expenditure of the national income.

93252. That is to say the greater the wealth produced the greater will be the demand for all the factors of production taken together?—Yes, I quite agree; but there may be an ambiguity in the word "demand" as between the aggregate payment for the factors and the numerical amount of each required.

93253. I do not think there is any difference between us really; I emphasise the word "demand" rather than the word "payment" because the word "payment" always has the connotation of "money," and money is not exactly what is meant?—I agree.

93254. So that the only way to increase the demand for all the factors taken together is to increase the produce of industry?—I agree.

93255. And anything that curtails the aggregate production will lessen that demand?—Yes, that must be so.

93256. But it may at the same time redistribute that demand?—Yes.

93257. It may throw the demand on to one factor rather than on to another?—Yes, that is very often the result.

93258. But no curtailment can increase the total demand?—I think that is so.

93259. Then advance in production is due largely to the organisation of all these factors working together?—Yes, I think organisation is a very important factor in itself.

93260. So that industry in the main is a vast co-operation of all the factors of production?—That is clear.

93261. One very often co-operates by competition, does not one?—Yes, there is a constant rivalry and substitution.

93262. Rivalry is a better word. So you will agree, I think, that there are many points at which one of the elements of production, that is machinery, competes with another element of production, that is the human worker?—Yes, speaking generally I agree that is so.

93263. And when the employer finds that working by machinery is more economically effective than working by hand, he will substitute machinery for hand labour?—Yes.

93264. The immediate result of that, then, will be that more of the national income goes as what I call demand for capital, and what you would call payment for capital?—Yes, I think that is so.

93265. But then again machinery, which is one of the forms of capital, of course always requires the co-operation of labour, first to tend the machinery, and secondly to make the machinery?—Yes; but the co-operation of labour is a little different in those two cases; in making machinery human labour co-operates, so to speak, once for all; the tending of the machinery is a continuous co-operation.

93266. So it comes that an increase in demand for capital need not ultimately decrease the total demand for labour?—No, it need not.

93267. Indeed, I think the opinion of economists, and of most employers, is that the increased demand for machinery generally, and perhaps always, after more or less of an interval of time, involves increased demand for labour in these two new directions?—Yes; subject to the qualifications you have stated, I think that is correct.

93268. And so the labour now demanded may be of a different kind, or perhaps even a different generation from the labour formerly employed?—Yes, that is the practical result.

93269. Might we put it concretely in this way: A machine coal-cutter will replace the labour of hand-hewing with the labour of making the coal-cutter once for all, plus the labour of tending the coal-cutter; and it is not likely that the kind of labour now demanded will be the same kind of labour as was demanded for the pits?—That is a very typical case, that the demand may be no less, but it may be for an entirely different kind of labour.

93270. Then an economist, perhaps, would sum this up by saying the improvement in coal-getting would reduce the cost of production of coal, or tend to reduce the cost of the production of coal; the reduction in the cost of the production of coal will reduce the price; and the decrease in the price of coal will cause an increase in the demand; and this increased demand for coal will, in time, obviously demand both more men tenders of the machine and more men makers of the coal-cutters?—Yes, I think, as stated, that is correct. It would not necessarily involve an increase equivalent in amount, but there will be some increase.

93271. That is, it would probably increase the total demand for labour, but will almost certainly re-distribute it?—Yes, I think that is normally the case.

93272. So it will take part of the demand for labour away from colliers and transfer it on to machine-makers—part of the demand?—Yes.

93273. It would be very hard to convince the colliers that the demand for labour had increased?—Probably quite impossible.

Changes of industrial processes and effects thereof.

Effects of machinery and changing industrial processes.

93274. And perhaps that accounts for a good deal of the misconception on the subject?—Yes, I think that is the explanation. I quite agree with that.

93275. I think you will agree that this throws a new and serious obligation on the community, namely to make its labour mobile, both as regards place and as regards kind; or perhaps you might call it more adaptable?—I think that is so. You will notice it is not so much the introduction of machinery as the occurrence of any change. It is the changeability of the industrial process which throws this obligation on the community.

93276. And the man who cannot adapt himself to these changes and new conditions will probably sink?—Yes, that is the dreadful result.

93277. Might we sum this up by saying that the obligation now implied by the industrial system is "more exacting," not in the sense that the labour required is in any way better, but that it is labour which can only be used in co-operation with machinery, while this machinery and these processes continue changing?—Yes, I think there is no doubt that, speaking generally, occupations have become more specialised, while the kinds of occupation are perpetually changing, and consequently the chance of being thrown out is doubled in both directions.

93278. I suppose we may say that in the manufacture of almost all goods machinery is playing a larger and larger part?—Yes.

93279. It seems to come to this, then, that the various forms of capital, including machinery and processes generally, are playing a determining part with regard to labour?—As regards the kind of labour that is called for, and as regards the conditions of its work.

93280. I am pointing to this, that the mere ability to labour has nothing to do with the question now that the labour must be able to conform itself to conditions which are actually laid down by capital?—I see the point, and I agree that that is so, that the mere will to work and the muscular strength now goes a comparatively little way towards securing employment.

93281. I wonder if you would agree with putting it in this way: we practically resolved, I may say, when we entered on the competitive system, that the working man's right to work at all was to be conditioned by his "economic contribution to the upkeep of the community," but we have translated this "economic contribution" into "economic worth to some employer," which means that the man's right to be in the world at all is determined by the ability of the employer to find a place for him to work?—Speaking generally, I think that is a correct way to put it. I should say that the labourer has to convince some employer that that employer can make a profit out of him before he will get employment. Although the labourer's work may be really quite intrinsically useful to the world, unless he can find an individual employer who can make a profit out of it, he will not be employed.

93282. I do not want to interrupt, but I rather object to those words "make a profit out of him." You agree that the function of the employer is not to exploit the worker but to organise his work?—Yes, I do not object.

93283. Does it not follow, if a man, by want of education, want of skill, want of physique, want of knowledge, want of care, or want of steadiness, or by mere bad luck in having got connected with an incompetent employer, is unable to co-operate with capital, his chance of employment will be very much curtailed?—Yes, I think that is a good description of what you may call the unemployed class.

93284. And there are, I suppose, very few sides of industry where machinery has not entered?—Very few.

93285. Are there any?—Yes, there is still a certain demand for physical labour, but even at the docks machinery is being introduced.

93286. And a nple men have been brought up to these trades already?—Yes, certainly. The lower forms of industry are, generally speaking, the fullest.

93287. So that when men fall down from inability to co-operate with capital into these lower ranks of labour, that rank of labour will tend to form a swamp?—Yes, I think that is what has happened

93288. And a swamp of the lowest kind of labour, out of which there seems to be almost no drainage?—Yes, no drainage except the hospital and the cemetery.

93289. Then I come to my point: Is not this a perfectly adequate explanation of the phenomenon of unemployment concurrent with an increasing demand for labour?—It is always difficult to put these things into abstract terms, but I think if I follow you that that is a correct description.

93290. The unemployed are like soldiers who fall out on the march, they add nothing to the effective strength of the army; indeed they deduct from it?—Certainly.

93291. If that is so, then the general effect will be: First to put a premium on brains and high skill?—Yes, they are more required than ever.

93292. Secondly, to turn many of the rank and file into machine tenders?—Yes, that is going on.

93293. Thirdly, to increase the national income, and so the total demand for all the agents of production, including labour?—Yes, I think that is steadily so.

93294. And, fourthly, to form a swamp of what we may call unadaptable labour?—Yes, that is the result at present.

93295. Those are the four tendencies: to put a premium on high skill; increase wealth generally and increase the demand for labour; and, at the same time, form a swamp?—I think that is so.

93296. If that is a proper analysis, surely it explains why it is contended that the demand for labour is always increasing with the increase of wealth, while the total number of men employed may be stationary, and even decreasing?—Yes, I can conceive that there may be an increase in production and therefore an aggregate demand for all the factors of production, and, nevertheless, the number of labourers employed might not increase, and theoretically might even diminish.

93297. (*Mr. Bentham.*) It would increase the national income?—Yes.

93298. As you said, the national income really is the index of the employment of labour?—No, I said the expenditure of the national income was the measure of the employment of all the agents of production taken together, but if you are increasing the amount of machinery you might theoretically not be increasing the number of labourers.

93299. (*Professor Smart.*) That is to say, the place of hands might be taken by brains and quality of labour?—Yes.

93300. (*Mr. Bentham.*) The work of the world may be done by fewer hands?—I think so. There may be more work and more wealth, and yet theoretically fewer labourers employed to do it. I do not think that this is the actual result statistically.

93301. (*Professor Smart.*) Does this not seem to you practically a new problem, namely, what we are to do with those who have fallen out of the ranks?—We know very little about the lowest classes centuries ago, but it is certainly a new problem in consciousness, and probably the size of the problem is quite new; probably it is getting a larger and larger class at present so to be dealt with, but I should not like to say that there ever was a time when there was no unadaptable labour.

93302. This, what I call swamp, is composed of men and women who are not worth the standard rate, whom employers will not willingly employ, because they cannot find a place for them; with the best intention in the world they cannot make a place for them?—That is true, and therefore the rise in the standard of living has some relevance to the problem, and makes it more reasonable to say that is probably a new problem.

93303. I put it in this way, that a body with the best intention, say a benevolent municipality, would find the same difficulty in dealing with these people in its municipal industries?—Undoubtedly the problem has nothing to do with individualism or collectivism. I hold that there would be fluctuations of employment and changes of industry, and therefore men dropping out even if you had all the industries of the country worked by collectivist organisations.

Mr. Sidney Webb, LL.B.

4 Feb. 1908.

Relations of capital and labour and its effect on employment.

Mr. Sidney Webb, L.L.B.
Feb. 1908. 93304. I think it very valuable that on the diagnosis we should have come to that point of view together. The remedy is quite different. As long as we agree on the diagnosis there is some hope, is there not?—I think I entirely agree with you about the diagnosis.

93305. Would you like to put your suggestion in a short shape, or correct my suggestion? I think your suggestions are: First to decasualise labour?—Yes, as far as possible, I think that is most important.

93306. And then you intend to take the residuum and try to raise them into fitness for private employment?—Yes, that would be the object, but I should not want the training to be measured by its success in making them adaptable.

93307. Suppose you do find places for a number of those under this scheme of yours, you will still have the residual residuum, we will call it?—Yes, there will be a residuum of incapables.

93308. Not unemployable in the bad sense, but unfit?—Unfit.

93309. Economically unfit. You do not consider this residuum is a proper subject for the poor relief?—No, I think they should be entirely dissociated from any organisation connected with the Poor Laws, because I think it vital for good administration that all the able-bodied should be dealt with by one authority. The unemployed men, the vagrants and the merely incapable men are not separated by such obvious lines one from the other that you can safely entrust their administration to separate authorities, and therefore I think they must be all under one authority for the able-bodied dissociated from the authority which provides for the children or the widows or the sick.

93310. Therefore you are looking forward in all probability to a large and a permanent body which will be in the employment of the State in some sort of light work that is not remunerative commercially speaking?—Yes, I take as my type of that, the sane epileptic, and I consider there are very many varieties of people who will have to be treated in the way in which we are now beginning to treat the sane epileptic.

93311. You also consider that this class should be taken off the ordinary labour market?—Certainly, that is essential.

93312. Is that all you have to say on this point of view?—I should like to add that whilst I hold that you would find this residuum made up entirely of people who were physically, or mentally, or morally below the average level, I think we must be on our guard against the assumption that they are unemployed because they are below the average level; they are merely the conscripts on whom the lot has fallen, and even if all labourers were on a level in capacity there would still, according to our diagnosis, be the unemployed. They would no doubt be much easier to deal with, but the mere fact that when an employer has to reduce his staff in the slack season, he picks out the less able and the less regular, and the less competent for discharge, does not mean that they are discharged because they are less able and less regular and less competent, he must have discharged some, and they are merely those whom he selects to discharge; thus while it is true to say that the selection of the particular individuals to be unemployed may be very largely due to their own personal defects, yet the existence of the class of unemployed, probably in the same numbers as at present, does not in any way depend on those individuals being relatively defective. I think we are apt sometimes to assume that because the unemployed are defective, that their defectiveness in itself constitutes the essential cause of the existence of the unemployed class, but on the diagnosis which we have discussed, that is not the case.

93313. (*Mrs. Bosanquet.*) I do not quite follow that; I thought under the diagnosis that was exactly the case?—May I explain further, that if you have either one industry in which the demand varies from season to season, or if you have an industrial system in which the demands are changing and varying, there are necessarily bound to be some men dropping out temporarily, for longer or shorter times, and that would be the case even if all the labourers were absolutely equal, one with the other.

93314. Then you refer only to the temporary unemployed?—The period of unemployment may be temporary for each individual, but there would at any time be a class of unemployed. The unemployed would be permanent, though the individuals might be constantly changing.

93315. (*Professor Smart.*) You mean such as have the sane epileptic for type?—No, I mean the normal labourer who is intermittently employed. He may at any moment lose his employment through no fault of his own, because a certain proportion of men have to be dismissed, and the mere fact that the employer dismisses those who were less capable than the others does not mean that the dismissal was caused by their lack of capacity; if he had not been able to distinguish between his men by their relative capacities, he would be compelled to distinguish between them according to the colour of their hair, or some other irrelevant circumstance.

93316. If these men had been able to rise out of the position of unskilled labour, it might have been entirely different?—No, because the whole class could not have risen out of the class. Rising like falling, is a matter for individuals and depends on their relative capacity, or incapacity compared with the others, but the fact that so many rise or so many fall seems to me not to depend on the individual capacity.

93317. (*Mr. Bentham.*) If we grant there is not employment for all, and some necessarily must fall out when trade is quiet, it naturally follows, does it not, that the more incompetent will fall out?—Yes.

93318. They will be the first to fall out?—Yes.

93319. Therefore the great body of those who are unemployed, particularly in times of depression, are the less competent workers?—That is so.

93320. That is what you wanted to convey, was it not, in your answer?—I wanted while asserting that, to guard against the misconception that the unemployment of such a number of men had been caused by their lack of competence.

93321. Because they were incompetent?—Yes, because they were incompetent. It would not have removed the unemployment, even if you had been able to make those men as competent as the others.

93322. (*Professor Smart.*) Have you studied the Bill brought in by Mr. Ramsay MacDonald last Session with regard to unemployment?—Yes, I know generally its provisions.

93323. Does it go, so far, along with your scheme?—No, I think it is founded upon a different assumption. The suggestion that work at wages should be found for the men out of employment seems to me impossible, but I ought to say that I noticed in the speech of Mr. Macdonald a phrase which led me to think that possibly he was nearer to the view that I think correct than I had supposed, because he used the phrase "educational work". Now educational work may be of great value to the persons who are at that work, but it is never found profitable by the employer, and if what you are going to give to the unemployed is educational work, then I have very much more approval. That would correspond very much to what I propose under the name of training, which of would not exclude actual manual operations.

93324. Is it a Bill which is not incompatible with your scheme?—Could it be amended?—I think it could be adapted. I do not think it is so fundamentally different that it could not be adapted.

93325. (*Mr. Bentham.*) To follow that argument with regard to the reduction of the total amount of employment by the increase of productivity, or rather a satisfactory amount of employment with an increased amount of productivity, have you not left out of account the enormous amount of carriage which necessarily follows on an increased production, and also in the way of other classes of servants of the commercial type which are needed in consequence of the increased volume of business, all of which is left out of account in considering the increased methods of production, because what we call in business the productive employment is a smaller proportion of the whole, that is so far as wages go, than it used to be, but the other part is increasing. The unproductive expenses

Unemployment not properly attributable to defective character of individuals.

Labour Party's Unemployed Bill.

Effect of machinery and other industrial changes on production and employment.

are increasing out of proportion to the productive wages. —I agree that all that has to be taken into account, and I do not suggest that in practice there is actually ever a decrease in the number of workers employed, but I think as a theoretical problem you must admit that it is possible that the introduction of machinery, or the equivalent industrial change, might result in the production not of more commodities, but of the same amount of commodities for much less labour, in which case you might not have a larger volume of production, but you would have the same volume of production produced at less cost of labour, and at more cost of interest or payment for capital.

93326. As a matter of fact has it not always been found that there has been a larger volume of trade by reducing the cost of production?—I think that has always been the case.

93327. Therefore, all these other subsidiary kinds of employment naturally follow which absorb a good many men who would otherwise have been employed probably in productive labour?—Yes, I think that is true in practice.

93328. Then again the increased profits probably would cause an increased demand for servants?—All that has to be taken into account, but I think it is all expressed in the statement that the measure of demand is the amount of the product. The product may appear either in rent or as interest or as profits or as wages, but you include all those in the product. I do not think that I differ from your statement, and I do not think that it is really inconsistent with the more theoretical aspect which I had previously been giving.

93329. Your suggestions for the dividing up of these various classes of applicants for work, entail rather an intricate discriminative machinery?—Yes, it would need good officers and very careful administration. It is a difficult task. I do not disguise from myself that it would be very difficult.

93330. Possibly in time many of the men who come on a second time, or a third time, would get known and they would naturally fall into their own class, so the difficulty would be principally with the new-comers, would it not?—Yes, I think with new-comers you would have to proceed upon the assumption that they were common undifferentiated labour about which you know nothing, very much in the way that such men are treated at the docks now: they are taken on just for what they appear to be without any assumption.

93331. Taking this first class who would be treated at the central labour depot, who would be subjected practically to no unpleasant kind of work, and neither to training, they would simply be waiting, as it were, until they were called on?—Yes.

93332. Would that not be rather a pleasurable kind of occupation?—I think that you would have to have a certain amount of regulation: to begin with the men would have to be in attendance for the whole day: they would lose their liberty in a sense; secondly they certainly ought to be occupied during that time, and therefore they would lose what they very much value, the life of idleness. But I may point out that this class would be the result of promotion; these would be the highly selected men from the whole mass, and the fact that it was not altogether unpleasant, would be a very useful means of discipline, both of the class itself and of the class below, because you cannot manage such men except by allowing both hope and fear, and the fact that this first class had a comparatively comfortable existence, would afford a very useful stimulus to the men in the lower class, and at the same time would keep the first class in order by enabling them to be threatened with relegation to an inferior class.

93333. Except for that function there is very little difference between this and what we read of in pre-1834 days, and standing in the pound all day?—There is the very important difference, that there was in those days no selection, and the still more important difference that there was no lower depth to which the men could be relegated. Thus you did not then have the two elements of hope and fear: thirdly, in those days you had a state of idleness, which is the father of all irregularity.

93334. With the suggestion of State-aided provident insurance against unemployment, you probably hope that that class would be absorbed in that way, or rather there would be no necessity for their being connected with the central labour depot so far as they would be insured against unemployment?—That is so. I think the men who could insure either by premiums or by their own savings, would not need to come on this organisation, and I would encourage their growth in every way. I would give them a preference for employment.

93335. Have you considered at all what amount of State-aid would be required, and what amount it would take weekly to insure against unemployment: I mean of an ordinary man who is able to take any occupation that is offered to him?—I think it is almost impossible at the present time to form any estimate for the unskilled labour class, because all our data relate to the skilled trades. In the case of the skilled trades the amount is already considerable. The common trade union contribution of 1s. a week has very often to be increased by levies. I believe at this moment the carpenters are paying 1s. 9d. a week. I consider that the amount of premium against unemployment would certainly have to be 2s. a week, or possibly more but the system of State-aid to insurance against unemployment which prevails over a certain part of the Continent (it is known as the Ghent system) proceeds on the basis of the State supplying half the cost of the out-of-work pay to the trade unions.

93336. In the seventy established unions, the unemployed payment is a very small amount per member according to this Return. In 1906 it only came to about 8s. 5d. per member per year. In the highest year, 1904, it was 14s. 3d. per member. We are told that we might take it as some indication that the number of unskilled workers, labourers that is, who are unemployed might be somewhere near the number of trade unionists who are unemployed. If that be so it is not a great amount per worker per annum, 14s. 3d., and it seems as though 1s. a week would be considerably over the mark to provide for unemployment, and with State-aid it would require a less amount still?—I am afraid that I do not know of any materials which would help me to that calculation. I may say that I doubt whether those figures would be trustworthy for this calculation.

93337. (Sir Samuel Provis.) Do you think at the present time that a scheme such as you have indicated could practically be carried in the shape of an Act of Parliament?—Yes, I think that public opinion is quite prepared for a large measure of constructive policy in dealing with the unemployed, and I believe that the representatives of labour would not be indisposed to support a scheme on such lines as I have suggested.

93338. You think that the opposition would not be sufficiently serious to render it impracticable to carry a scheme like that?—No. I think the opposition would come from two quarters. In the first place the employers would object even to the small amount of new restriction which it is proposed to place upon them, but I think that they could be convinced that the restriction would be very small, and not expensive to them, and their opposition could be largely mitigated. The other opposition, which would be serious, would be on the ground of expense. I do not pretend that the scheme can be carried out without considerable expense: first of all for the organisation of the national labour exchanges, which would be necessarily a somewhat expensive process requiring very competent administration, and then there would be the necessity of maintaining the residuum of labourers who by that organisation were deprived of their present miserable chance of work. I do not think that that expenditure would be at all wholly a new additional burden: partly they are maintained at present by the Poor Law or by the distress committees, and partly they live by all sorts of miscellaneous predatory ways upon the public, but it would be from the Treasury point of view a new item in the Estimates, and therefore would excite resistance, but I think public opinion is prepared for a large constructive measure of dealing with the unemployed and would be willing to incur the expense if it saw even a chance that it was going to be a complete measure which would really deal with the situation.

Mr. Sidney Webb, LL.B.

4 Feb. 1908.

State-aided insurance against unemployment.

Practicability of large scheme for dealing with unemployment.

Probable opposition to scheme (1) by employers (2) generally, on ground of expense.

Mr. Sidney Webb, LL.B.
Feb. 1908.

93339. I suppose I may take it that you have not put yourself in a position to arrive at any sort of estimate of the expense?—No, I do not think that I can help the Commission by any figures in that way. I have vaguely thought, in order to see whether the scheme was practicable, that possibly 100 exchanges would be required in London, and you may go on to assume that if 100 are required in London, possibly several hundred more would be required for the whole country, and if you were to estimate, again very roughly, what several hundred labour exchanges would cost for rent and salaries of clerks, you might put it, with a very wide margin of error, at £1,000,000 a year for the labour exchange organisation alone. The cost of providing maintenance for the men out of work, as I say, is not altogether a new burden, but merely a shifting of the burden, and a making more systematic and complete the amount now provided. I have not been able to put any figure to that.

Question of children of poor widows.

93340. (Mr. Bentham.) With regard to the children of widows, I think you say that they recruit the unskilled class rather more than other classes of the community?—Yes, I said I was afraid that was so. I have just a little statistical reason for that in an analysis which was communicated to me of the number of outdoor paupers in a certain union for a certain period in which enquiry was made, as to what occupations were being pursued by their children over school age and the coincidence between the children of parents in receipt of outdoor relief and beginning at an unskilled labour occupation was rather marked.

93341. It is quite natural that a widow who is in receipt of relief as soon as the children get to a working age should put them to employment, no matter what it may be; possibly the employment which pays the best remuneration as children would be least skilled when they grew up; so there is a likelihood that may be true, but what is the remedy for that? Would you say that a full maintenance period should be given to children until they have learned a trade?—I think the first remedy is more care in placing out the boys. The unfortunate fact is that the poor widow is generally least of all parents in a position to take that care, and I cannot help regretting that the boards of guardians who are maintaining those children do not seem to me to have extended their feeling of responsibility for the placing out of children to those whom they maintain as outdoor paupers.

93342. It has come within my experience that when a boy has earned a scholarship and the guardians have offered to continue the relief to let the boy run the term of his scholarship, the widow has refused and said she wanted him to work and would not let the child run the scholarship; that has occurred in many cases in my own experience.—I am afraid that is so in the case of pauper parents; they are attracted by the high wages that their children can immediately earn.

93343. Is not the remedy for that to say that the guardians should see that these children are put into suitable occupations, and maintenance provided for them till they can earn a living themselves?—That is my view.

93344. That is not to push them on to their own resources as is the common practice of the Poor Law in all cases?—I quite agree. I think the interest of the community in the future of the child ought to outweigh the expense involved in putting the child to a beneficial occupation, rather than to one in which it will earn the highest wage, but I think we ought also to consider that even if the boards of guardians and the parents took all the care they could, there would, nevertheless be very great difficulty at present in increasing largely the number or proportion of boys who could be put to skilled trades; you might substitute Jones for Smith in an apprenticeship, but there is a very real difficulty in appreciably increasing the number and proportion of apprenticeships.

Question of increasing apprenticeships.

93345. Are you quite sure of that point, because it is rather important. I have known advertisements inserted in the papers for apprentices which they could not get; there has been very little response?—I do not mean to say that some increase might not be possible, but speaking of London, I think it is demonstrably impossible to apprentice all the boys of London to a skilled trade, even if the State set itself to do it.

93346. It has now come to be an actual fact that the country boys provide the workmen for London; that London does not produce its own?—I am not prepared to accept that as a permanent position, but unfortunately, it is true to a large extent.

Question of increasing apprenticeships.

93347. So that the argument applies more particularly to the country?—No, not at all, because that is to assume that the London boy is necessarily to grow up as an unskilled labourer. I think we have got to take drastic steps to prevent the London boy growing up as an unskilled labourer. If he cannot be apprenticed in London, the community must provide some other means of education.

93348. It seems a desirable step, but what is possible in that direction?—I think this plan of an extension of the half-time clauses of the Factory Act to the age of eighteen or twenty-one, coupled with the provision of half-time trade schools, is not only a possible, but the only possible, remedy.

93349. Taking the building trade, it will still require the co-operation of the employers to take these people on as improvers, will it not, or as apprentices. If there is a disinclination on the part of the employers, all the training possible would not remedy it?—I do not think there is any disinclination on the part of the London employers to take on a bricklayer's improver at the age of nineteen or twenty. He does at present take on any youth of nineteen or twenty, who comes to him with that amount of bricklaying knowledge. The trouble is that there is no opportunity for a London boy between fourteen and nineteen to acquire that knowledge. I think you could give them that knowledge in a trade school.

Difficulties and advantages of 'labour exchange and training' scheme.

93350. At a trade school, bricklaying would be a rather unlikely subject. There would be a limit to it?—No, pardon me, we have a very large school of building in South London where bricklaying is a very prominent feature, and we have a number of bricklaying classes.

93351. Do they build them up and pull them down again?—Yes. At Brixton we arrange specially so that they can build a wall and pull it down again.

93352. In your suggestion that an employer should guarantee occupation for a month, would there not be a danger of their taking the usual course and not giving a sufficient guarantee, because they always had the pool to fall back upon?—Yes, that is the real danger and the real drawback to any scheme of organisation of casual labour. You have to face the fact, that unless you can prohibit casual labour you must facilitate it, that you can only take one out of those two alternatives. What you allow you must organise, and if you organise it you facilitate it.

93353. Increased facilities would exist for an employer to stop a man at a moment's notice, which do not exist at the present day, therefore, there would be less need for him to guarantee regular employment.—That is so theoretically; I admit the objection. In practice, the pool of labour is so abundant that the employer has an almost unlimited freedom now. I have thought of the difficulty, and I would meet that difficulty by administrative regulations. The employer who sent for his labour in ways that were convenient to the labour exchanges, who gave adequate notice, and so on, would find things made more easy for him than the employer who behaved in an inconsiderate manner.

93354. As to the class which is just below your second class, who would be put in the day industrial schools, if they did not register themselves and were not put in these schools, they would be still at liberty to form unemployed processions in the street and get public sympathy, and the unemployed question would appear in the public eye to be as bad as it ever was. How would you deal with that? Would you use any compulsion?—Yes, indirectly. As I say, so long as a man is fulfilling all his social duties I recognise that you cannot conveniently interfere with him; that is to say it he has savings, or out-of-work pay from his trade union, you practically must let him be a free man, but you do not find that those men form the processions. The men who form the processions are men who have not savings, and who have not out-of-work benefit, and their children are being fed in the schools; their homes are insanitary, and generally speaking they are failing to fulfil their social obligations in all directions. At present we cannot

enforce the existing law against them, because the magistrates will not convict. There are 40,000 children being fed in the London schools to-day, all of whose parents are failing to fulfil their duties. We cannot practically proceed against any of them, even such as are wilfully neglecting their children, because it is difficult to prove that they have an opportunity, but if you had this opportunity open to all persons, then I think you could proceed drastically against those who were not fulfilling their obligations, and thus force them to the only way by which they could get maintenance.

MR. ARTHUR H. D. ACLAND, called; and Examined.

93358. (Chairman.) You are Chairman of the Consultative Committee of the Board of Education?—I am.

93359. I may perhaps explain the class of points upon which we should like to examine you in order to get information. It has been impressed upon us by a great number of witnesses that one of the most fruitful sources of unemployment and pauperism is the manner in which boys and young persons on leaving school slip into unskilled employment of a casual character early in life, from which they get discharged and when they become adults they gradually go down and down until they become unemployed; therefore from the industrial point of view we are very anxious to get certain information from educational experts. It is not our business, of course, to review the whole of our educational system, but upon that and cognate points we are anxious to have information. I believe you and Mr. Sadler occupy official positions as advisers, do you not?—I thought the best thing I could do would be to describe how Mr. Sadler and I are related to this question. I propose to leave all what I may call the expert side of this question to Mr. Sadler, but I may explain first of all that Mr. Sadler was formerly head of the branch of the Board of Education which makes enquiries into foreign systems and reports on a variety of matters of education. He has acquired a good knowledge of what is done abroad, as well as what is done at home, in relation to the subject you have just mentioned, and also on the Consultative Committee of which I am Chairman, he is Chairman of the sub-committee to which this particular subject has been referred.

93360. What is the exact title of the Committee of which you are Chairman?—The Consultative Committee of the Board of Education. It is a statutory body appointed under the Act of 1899, under which Act there was to be such a committee of an advisory character to the Board of Education. The first Chairman of that Committee (of which I have been a member since the beginning), was Sir William Hart-Dyke. He resigned last year and I was appointed his successor. The committee is composed of about eighteen to twenty persons, who are held to represent education in England and Wales as fully as can reasonably be done with a body of that kind, and to us are referred from time to time such subjects as the Board of Education desires us to enquire into. I was going to show that I think we are enquiring through this sub-committee on the lines which you have just indicated, by reading a few words from an interim report of the sub-committee which is enquiring into this question, and this finding of course is wholly apart from our coming here to-day. "Grave economic evils may be traced to the fact that immediately on leaving the elementary day schools boys can easily find employment which is injurious to the habit of steady work, and therefore deteriorating in its effect upon character, and which involves no systematic training for a skilled trade. Such forms of employment are for the time relatively highly paid, but cease at the point when the boy begins to need and demands a man's subsistence. There is some reason to fear that these forms of employment, parasitic in their economic character, are increasing, especially in great centres of population, and that to them may be traced part, at any rate, of subsequent unemployment." I only read that at once in order to show that apparently some part of our enquiry is on all fours with the words which you have just used. Perhaps I may describe exactly what the reference to us is, that will make it quite clear. The reference to us from the Board of Education is this:

93355. That would be putting the powers into operation that we already possess, against vagrancy and so on?—Yes, I think it requires no more than that.

93356. A more rigid enforcement of the Vagrancy Act. Proceedings against people who have no visible means of subsistence, against begging, and in other conceivable ways?—I think that would be quite sufficient.

93357. You think public sympathy would not go with the cases because this system of treatment and training had been adopted?—Yes.

Mr. Sidney Webb, L.L.B.

4 Feb. 1908.

"To consider Clause 8 of the Education Bill for Scotland, introduced into the House of Commons by the Government in 1907, and to advise as to its applicability to England and Wales, and whether, apart from, or in addition to, such legislative change, to consider and advise the Board of Education as to whether any means, and if so, what can be devised in respect of rural areas and urban areas respectively, for securing; first, that a much larger proportion of boys and girls should on leaving the public elementary schools commence and continue attending at evening schools than at present do so; and, secondly, that employers and other persons or bodies in a position to give effective help shall co-operate in arranging facilities for such attendance on the part of their employees, and in placing suitable hours and subjects for the schools and classes." That reference does not specifically mention the question of compulsion, but when I quote from Clauses 7 and 8 of the Bill which was introduced for Scotland last year by the Government, it will be seen that indirectly the question of compulsion is involved. I want to make it quite clear, because it is really very important to quote from a Government Bill which for the first time has brought in, in any way, the possibility, even, of compulsory evening schools. I think perhaps I had better quote from the clauses involved. It is a Bill brought in last year by Mr. Sinclair, the Secretary of Scotland, and the Lord Advocate, therefore that of course very much enhances its importance, because it is brought in absolutely with the assent of the Board of Education of Scotland. There are two important clauses. The 7th clause is: "Amendment of law as to exemption certificates," and it says: "It shall be lawful for a school board"—of course in Scotland all education authorities are school boards, therefore that means, "all educational authorities"—"in granting exemption from the obligation to attend school to children, to impose as a condition of such exemption: (a) attendance at a day school; or (b) where a suitable continuation class is provided attendance at a continuation school after the age of fourteen"—that is the point—"until such age not exceeding seventeen as the school board shall think fit." I am only reading the essential words. Then that is followed by this provision: "If any person knowingly employs a young person above the age of fourteen at any time when his attendance is required by a condition imposed under this section he shall be liable on summary conviction to a penalty not exceeding 40s. in the case of a second or subsequent offence not exceeding £5." That, of course, is the mandatory part of it. Then follows this: "If any parent or guardian of a young person above the age of fourteen by wilful default or by habitually neglecting to exercise due care has committed an offence similar to the above, they will be liable to the same penalty." Then the next clause is: "By-laws for attendance at continuation classes," and the school board are to have power to make and vary and revoke by-laws for requiring the attendance at continuation classes until the age of seventeen, of young persons who are not otherwise receiving suitable education. These by-laws are not to take effect until they have been submitted to the department, (the Board of Education of Scotland), and any person aggrieved by such by-laws may forward notice of his objection to the department, but a by-law when confirmed by the department does not require confirmation by any other authority. That I think broadly makes clear the way in which the Scottish Education Department approach the question, that by-laws may be issued by authorities for this purpose of compulsion, providing that they had been previously submitted

Mr. Arthur H. D. Acland.

4 Feb. 1908.

Proposals as to evening schools and continuation classes in Scotland.

to the Board of Education, and opportunity had been given for any aggrieved person to make a protest.

93361. It is really very much on the lines by which compulsory attendance at elementary schools was obtained here: Power was given to the local authority to frame by-laws, then ultimately when the country became habituated to them, a universal law was made without protest?—It is the same sort of thing. The way in which we began with our children under fourteen is to be applied to this wholly new class of young people from fourteen to seventeen, but the fact that it could be introduced for the first time by a Government Bill is a matter of great importance.

93362. Did it pass the Second Reading, or was it only introduced?—I am afraid I cannot answer that question.

93363. I suppose you are engaged in considering that question and you will probably report details with regard to the ages and so on, which in your judgment might be advisable?—Quite so. What I thought would be interesting would be, following that up as regards Scotland, to say a few words about what the condition of opinion in Scotland is, and especially in Glasgow. That is told to us by Mr. Struthers, the Permanent Secretary of the Scottish Education Department, because it is, of course, largely upon the opinion, as he states it, at present in Scotland, that the clause was introduced. Such a clause would never have been introduced into a Bill unless it was found there was a certain amount of public opinion behind it. Therefore, very briefly I think I would say a few words as to what he has told us. I need hardly say as Permanent Secretary of the Education Department he knows Scottish opinion very well, and I may add that he has a very, wide knowledge of the whole subject of education in Scotland, in a very remarkable degree. This is what he says: "The proposal to give power of compulsion is now made for the first time and has naturally attracted much attention in Scotland, and been widely discussed. There have been meetings of all the important school boards. Many amendments have been suggested but scarcely a single school board has taken exception to the principle of this clause, and there is no indication that it will be unacceptable to the great bulk of the population. This favourable reception is no doubt partly due to the fact that the adoption of the clauses is permissive; at the same time, however, the larger school boards not only do not object to it, but are actually ready to put it in force." He says: "I believe the extent of the opposition consisted of resolutions from two small school boards, and a few letters to newspapers. I have seen no notice of urgent meetings of trade unionists or working-class people or any section of the population who considered themselves injured by the proposal, and I do not believe that this lack of opposition was owing to the clauses being insufficiently known." There appears to be no doubt at all that all persons concerned were thoroughly aware in Scotland, especially in a great city like Glasgow, of what was being proposed, because it was not expected that the clauses would be made much use of in country districts, but its application of course to Glasgow is a matter of the highest importance in its relation to our great cities in England.

93364. Was there no objection, as far as you know, in Glasgow or in the adjoining districts?—Mr. Sadler would answer that question better than I could, but in a moment I will point out what our committee has done. As a matter of fact they have been to Glasgow. I would like to add what Mr. Struthers says about the probable effect. He says the clause does not necessarily interfere with the wage-earning capacity of the young people. This is a matter which depends rather on the form of the by-law. The by-law might provide for classes in the afternoon, for instance, and the clause says that the employers must give facilities for attending, but it is extremely unlikely that this compulsion would be exercised. The probability is that most of the classes would continue to be held in the evening. Even then there is the question of overstrain, and whether allowance should not be made off the working hours, and this, as he said, raises various difficult questions, amongst others the half-time question, but it is to be hoped that the new arrangement will be of great benefit to the class of boys and girls who, on leaving the day schools, pass into occupations such as that of the errand boy, which provide no training at all for their future lives. It may be expected the adoption of compulsory attendance at continuation classes will eventually lead to the provision of something more than the general instruc-

tion now for the most part given; and the adoption of the present proposal will allow of much more definite forms of training. The view was that the continuation school might be to some extent modified, but in a good many cases it would lead to direct technical instruction for a certain number of hours in the day time in connection with particular employments. Of course, that has been adopted, as Mr. Sadler would explain to you if you asked him, in Germany, and I think in Switzerland; at any rate his idea was that there might be some compulsory teaching in the daytime as well as some in the evening. I think that is all I want to say about Mr. Struthers. I should like to say quite briefly what our own sub-committee have done. They have made enquiries on the spot under the chairmanship of Mr. Sadler, at Liverpool, at Manchester, at Birmingham and in Glasgow, and they have also paid special attention to one or two particular firms like the Cadbury firm near Birmingham, and the Rowntree cocoa firm in the immediate neighbourhood of York (they have been to York), with a view to ascertaining the views of some employers who are believed to be rather favourable to some movement of this sort. I think I will only add that our work, broadly speaking, is called confidential, but in view of the enormous importance of the work and of your Commission, we desire, especially as we have not made any report at present, and could not do so for some months, to place at your disposal any information we have. That, of course, Mr. Sadler will do in any way you desire. I would just add this with regard to the particular branch of the subject which is before your commission, and which, of course, affects the unskilled labour more than the skilled; I think that the way in which we may approach the result which the Scottish Bill aims at, if it can be obtained with the approval of public opinion, is first of all to be worked from what I will call the skilled side; to enlist the employers in favour of some proposals of this sort by legislation, with a view to their own apprentices and their own young people getting really valuable aid, and that if we can enlist that side of the problem, which is rather more what I would call the skilled side, and get them really interested in something of this sort, we shall have got a considerable body of opinion on our side, and with that draw in the unemployed side of it as well. It would be better not to approach it solely from what I may call the unemployed point of view, but rather to approach it from the other point of view as well, at any rate in order to bring in that branch with which you are specially concerned. On that matter I do not wish to say anything more, but there is another educational matter I should like to allude to, if you will permit me.

I should like to say one word about the question which may affect what I have now been speaking of; any continuation after the elementary school, and anything which is done as regards trade schools, or anything intended to fit the young boys for skilled work later on, I allude to the question of what is called manual instruction. I allude to it entirely in reference to our elementary schools. I hold very strongly indeed that without overcrowding the curriculum or over-burdening the teachers, which would, of course, be a very great blunder, it is extremely important in our elementary schools to do a great deal more than we do at the present time in providing in the ordinary curriculum something more of this, which is called in a broad way, manual instruction for our young people. Of course we must do all that we can to make them familiar with and capable in the use of their own language, and I am sorry to say that in that we fall very short. We have heard ourselves from employers, in enquiries we have had at the consultative committee, how inadequately prepared many children are, when they leave school at fourteen, to write the simplest kind of letter, or sometimes even to read intelligently what is put before them, therefore I do not in any way disregard the enormous importance of their being well prepared in what we roughly call the three R's. That is fundamental, but I think it is quite possible at the same time to do more in the way of this employment of the hand and the eye, and I would urge it for two reasons. The first reason is because it promotes dexterity which may be very useful later on, and there are a good many boys (and I do not exclude girls) who, if they acquire this dexterity, and if they find it the most interesting part of their elementary school life and become really absorbed in it, as some boys will, if they get the opportunity they will be much more likely to return to continuation classes with a willing mind instead of an

Enquiries of sub-committee of Consultative Committee of Board of Education.

Importance of manual instruction in elementary schools.

importance
of manual
instruction
in elementary
schools.

unwilling mind if they find that there is something offered to them there which is going to carry on this particular kind of work in school which they have found pleasanter to them, and more interesting to them, than the other part of the work. Then, besides the question of dexterity, I think that we do not realise in our schools how much this training of the hand and eye may do for the subjects which we already teach in the school. It has been too much treated as a separate isolated subject, to be taught only by specially prepared teachers in a separate workshop, as it is rightly taught, no doubt, to the older scholars, and there left as if it was an isolated force. That is not the way in which I look upon manual instruction at all. It ought to be brought into relation as far as possible with other subjects in the school, and in some of our better schools this is being realised, but, of course, it takes a very long time to change old fashioned methods. It ought to be brought into actual relation with drawing, and drawing of some kind has to be done in all our schools. It ought to be brought into close relation with science (perhaps science is almost too big a word for what can be done in the elementary schools under fourteen), but at any rate with object lessons, and all simple science teaching which can be given, and it ought to be brought into relation with arithmetic and such mathematical teaching as they get. That is to say that wherever they can be made to prepare anything themselves fitted for the particular subject in which they are being instructed it may be cardboard, it may be clay, at a later stage it may be wood, and in some of the later stages in the elementary school it ought to be metal, manual instruction ought to come to be looked upon as a fundamental part of the teaching woven into the life of the school. I rather want to lay stress upon that, because hitherto it has rather been felt to be an isolated subject, very expensive and troublesome to undertake, which really, except in comparatively few cases in the large towns, practically could not be undertaken. I do not hold that view. I think if we really tried our best, we could do a good deal. I will try to describe briefly what happens to the children in many of our schools. It is like this in a vast number of schools, I do not mean in the very best, where there is a manual centre close at hand and where great pains are taken with the staffing of the older scholars schools, but I mean in a great many of the schools from the point of view of this use for the hand and eye. The child (we will take the case of a boy, although a great deal of this applies to girls) goes to school at three, or four, or five, he spends either two years, or three years, or four years in the Infants' school. In the best of our infants' schools (and we have a great many good infants' schools) this hand and eye training is well developed for children of all ages, and the boy of seven coming out of a good infants' school will have become at that age very much interested in the use of his hands, and in various infants' school occupations the use of his hand and eye will have been very well developed. Now, what is called technically manual instruction in a manual training room frequently does not begin till twelve. Now, this little boy of seven who passes out of the infants' school in the larger districts where the schools are distinguished from one another, comes into the older scholars' school, and he very often comes into the hands of one of the weakest teachers in that school at seven years of age, and for the first year or two he gets practically nothing of this sort at all. I really do think that in our schools a lot of these boys at seven and eight years of age are very much to be pitied; they at once come into a great deal which drops what was brightest and best in the infants' school, and they have to be in many cases diligently crammed with the three R's, and not much else. What I think we ought to see is something done to keep this better side of the manual instruction, which is given in the simplest form in the infants' school, right through from the infants' school to the top of the school. It is what the Board of Education, when I spoke about it, desired to be done where manual training is taken, but it is not what actually happens in a great number of our schools, as I will show in two or three minutes. What the Board of Education says under the head of manual training is quite right, the manual training of boys should be continuously progressive, from the kindergarten occupations of the infants' school through the clay and cardboard modelling of the younger scholars to bench work and the

use of tools of wood or iron handicrafts by the older scholars. But, as a matter of fact in a vast number of schools between the kindergarten and the bench work there is very little handwork at all, and in the vast mass of our schools there is no bench work at all, and no hand work, except drawing, after the kindergarten stage. I will just give one or two figures on that point. There are grants given for manual instruction, and I go on the basis of those grants. If I leave out the infants' school children altogether, there are in older scholars schools (that is the schools over infants' schools) roughly 4,250,000 children. Take half of those as boys, and say 2,100,000. You understand in my view some form of manual instruction ought to be given to those boys. Of course, I know this is an ideal, but all these things are ideals to be worked to. As a matter of fact the number of boys who earned grants for manual instruction in this country in England and Wales during the last education year for which the figures are available was 102,000, that is one boy in twenty-one.

93365. Can they earn the grants in infants schools or below the age of seven?—No. I will just go to that. From the point of view of what I think is desirable, I was saying as a matter of fact only one boy in twenty-one out of those boys (these figures are very rough) is earning it, but if you take the children over twelve, out of that four and a quarter millions there is rather more than one million in those schools over twelve years old, and if you take half of them as boys, you have got, taking the same figure of 102,000, getting manual instruction, one in five, that is to say those for whom the grant is available, four are not getting it and one is getting it. I hope I have made that fairly clear. I do not want to lay down the law about the way the grants should be given, but in my opinion some form of manual instruction should be given to those of from seven to twelve or from seven to fourteen. I could give one other instance in connection with an education authority which I have been quite recently connected with, and have only just left, in the West Riding. We have there 17,500 boys in the upper standards, which practically is equivalent to those over twelve, and we have earning grants for manual instruction only 1,000. That is one in seventeen. In a great district like the West Riding (I am not saying this is not partly the fault, if you will, of the authority) which, leaving out, of course, the great county boroughs, leaving out the non-county boroughs (which are independent for elementary education) still leaves a population very largely industrial of about one million, I say that to have only 1,000 earning grants for manual instruction, is, in my opinion, very unsatisfactory. That was what I wanted to say, because although I know that these things must be very slow, I do myself sincerely believe that manual instruction can be embodied in the teaching of our elementary schools without disadvantage to the other part of the curriculum, and with immense advantage to certain types of boys to whom that kind of thing appeals in a way which perhaps no other part of their school life will appeal, and not only that but it will tend to improve a great deal of the other work which is done in the school, because it will bring out faculties which will not be brought out in any other way. It will be an advantage to the whole education which is given up to fourteen altogether. I should like to see, in what is done in schools under the Board of Education, rules, and by other authorities, a very great deal more attention given to this subject. I feel that at present the subject has not, in spite of what may be done in London and a few big towns, attained anything like the importance which really attaches to it. I can give one short instance of what I mean. I hold in my hand a scheme (it does not matter where it is) for the application of an endowment to what is called the higher division of an elementary school, something of a *quasi* secondary character, such as they have a great deal of in Scotland at the top of the ordinary elementary school. I think that that is exactly the place for manual instruction. If any such sort of higher school at the top of an elementary school, or higher branch, is to be started, I think that is exactly the place where manual instruction should be made absolutely compulsory, and yet, when I read the curriculum (and this is a scheme only a few months old) I find the curriculum is this: English literature, history, geography, arithmetic, natural science and its application

Mr. Arthur
H. D.
Acland.
4 Feb. 1908.
Need of re-
form of pre-
sent system
of manual in-
struction in
elementary
schools.

Numbers of
boys earning
grants for
manual in-
struction in
England and
Wales.

Numbers
earning the
grant in the
West Riding.

Higher
classes of
elementary
school, the
proper place
for manual
instruction.

Mr. Arthur to agricultural industry (which is quite right), and, of course such other subjects as the Governors or the local authority think right. In my opinion that curriculum ought to have been so drawn up as to include the words manual instruction in the very forefront. That gives an illustration of what my feeling about the subject is.

There is perhaps one thing I should like to say that arises out of the question of health, which has such a very important bearing on the future of these young people some of whom, for want of health, perhaps among other things, fall into destitution and unemployment, and that is that recently, in relation to another enquiry, we have had brought before us some very remarkable facts about the atmosphere of elementary schools which I think are not commonly known to the public and which are of very high and serious importance indeed. Certain scientific men have from time to time tested the atmosphere of our ordinary schools in various ordinary conditions. The investigation has not spread over a very wide sphere. I think a very great deal more investigation should be held, but what it tends to show is this, that the atmosphere of an ordinary school room with, let us say, forty or fifty children in it, whether infants or older scholars, is infinitely worse, tested by such tests as scientific men can employ, than the atmosphere of a factory, and also infinitely worse in the ordinary case than the atmosphere, even if the ordinary very poor home. That is to say that the child, even in a one-room home of a very poor character in a large town is in a better atmosphere and a more healthy atmosphere than the ordinary atmosphere of an ordinary school. If that be so, some of the medical men with whom we have had to deal in this question, especially with reference to the attendance of the younger children, say practically something of this sort: "From the hygienic point of view education in school is a necessary evil; the less they are in school the better, and therefore the less early they go to school the better." That is putting it quite bluntly, but at any rate I venture to mention this because all these hygienic questions in their bearing upon unemployment and deterioration are of the highest importance. It is quite clear that this question of the atmosphere of our schools, and therefore of the enormous importance of going into the question of ventilation of our schools in a way in which we have never gone into it before, becomes of very very serious importance from the point of view of national health.

93366. (Mr. Gardiner.) May I be allowed to take advantage of your great experience in the administration of education in the West Riding to ask whether you can give us any opinion as regards the size of the authority and, secondly, as regards the way it is trending in the view of educational efficiency and progress. Do you find, expert as you are, there is rather a drawback through its not being in direct touch with the electorate?—Do you mean with the electorate or the children?

93367. I mean the authority being elected by the county council and not by the ratepayers?—I have always held in very large counties like the West Riding and Lancashire, the authority as an elementary authority is much too large. I think as a secondary authority it can do its work fairly well, but I think it would have been an immense advantage if a county like the West Riding had been broken into, say six, eight or ten parts which could have been absolutely autonomous as regards elementary education.

93368. As regards the effect on your administration of Part III. authorities, have you found them a source of difficulty in the West Riding?—I am not quite sure that I follow you.

93369. Have you found the effect of the Part III. authorities under the Act that you have been administering in the West Riding difficult?—You mean the non-county boroughs in our midst?

93370. The urban districts which practically control their own elementary education?—And which are autonomous.

93371. Yes. Has that made your work of secondary education more difficult?—I do not know that I should say it has. Of course, these are populations taken out of our midst and that makes our work rather more scattered in consequence, but we have not had any friction with them. As regards secondary education where they also have certain powers we are working in a very friendly way with them.

93372. Have you found the disappearance of the old school board has left a gap in the local life of your area?—It is because I think we are too far away from the children that I was very anxious myself (I know how difficult it would have been), that we should have had much smaller autonomous authorities. I think what you say is a very great disadvantage as regards such a very large authority administering the education of the children in a population of 1,000,000 who are not concentrated as they would be in a great town, but are scattered at enormous distances. We have lost what existed before, the direct interest of members of the school board in the children of their own immediate neighbourhood. It is very difficult to set up an equivalent interest in the various district committees which have been appointed instead, therefore I do think that the loss now of the men, and perhaps even still more of the women, members of the school board who had a direct interest in their own children, has been a very great loss.

93373. As regards the appointment of these district committees, what method did you adopt when the Act first came into operation?—They are elected mainly by the district councils, and they have added members from the county council. It is a compound body.

District committees under West Riding education authority.

93374. You have a district committee between the local education authority and the group of school managers?—Yes. I may point out that in a district where there is a very large number of board schools, the managers practically, as regards those schools, do not count, because the local committees are the managers of the board schools.

93375. You have had to set up something analogous to advisory committees in order to keep you in touch with these people?—No, we have only these district committees with whom we keep in touch as much as we possibly can.

93376. (Chairman.) Are they the managers of the schools?—The managers of the board schools.

93377. Not of the provided schools?—No, that is to say instead of making separate managers for each board school we make the district committee practically the managers of the board schools within their group.

93378. Then the district committee is really the consequence of having a double system of education?—Yes, practically. It does represent us in a great many particulars, and the district committees are extremely useful: for instance, in enquiries with regard to secondary schools (that was my branch of the work), they were of great service to us in helping us with local enquiries of all sorts. In fact, we could not have done without them.

93379. (Mrs. Bosanquet.) Did I understand you would not differentiate between the boy and girl education, it should run on parallel lines?—With regard to manual instruction?

Desirability of giving manual instruction to girls as well as boys up to a certain age.

93380. What kind of manual instruction?—What I think is this, that up to the age when they can take up domestic subjects, girls ought to take some kind of manual instruction. I ought to have made that rather more clear. Boys and girls alike so often drop all hand work, except drawing and needle work, at the age of seven; they ought to go on with it up to eleven or twelve, when they are ready for some further development.

93381. (Sir Samuel Provis.) I am not quite sure for what area you establish your district committees?—They vary very much in size. I am afraid I cannot give it to you exactly.

District Committees in West Riding.

93382. Do you take the urban or rural districts, as the case may be?—Yes, they are largely based on them. In some cases I think some of the smaller urban districts. In some cases I think some of the smaller urban district councils have been brought together. I am afraid I have not all those figures in my head.

93383. You have in your mind going upon the lines of the urban or rural districts?—Yes, and the bodies are largely elected by either one urban district council, or a group of urban district councils.

93384. In the case of the West Riding, where you have a number of urban districts, in parts of it you combine these?—Yes.

Mr. MICHAEL ERNEST SADLER, called ; and Examined.

93385. (*Chairman.*) You are Professor of the History and Administration of Education in the University of Manchester?—I am.

93386. You have been good enough to prepare a very interesting paper, which, if you will kindly hand it in, we will treat as your evidence-in-chief?—Certainly. (*The Witness handed in the following Statement.*)

1. The evidence submitted in the following statement has been gathered in the course of two inquiries. The first of these has been conducted, under my direction, by members of the staff and former students of the Education Department at the University of Manchester. The second is now being made by the Consultative Committee of the Board of Education, a Sub-Committee (of which I am chairman) having been appointed for the special purpose of collecting evidence for the Committee. The Manchester University Inquiry began three years ago, and resulted in the publication, last November, of a volume bearing the title "Continuation Schools in England and Elsewhere." This book is published by the Manchester University Press, and a copy has been forwarded for the use of the Commission. The inquiry of the Consultative Committee began in May, 1907, and is still in progress. It is not possible, therefore, to state our conclusions, but I am authorised by the Consultative Committee to report to the Commissioners the nature of the evidence which we have received.

Uneducative Labour during Adolescence ; Its Apparent Increase.

2. In both the Manchester University and the Consultative Committee Inquiries, the evidence discloses general concern as to the deteriorating influence of certain forms of boy and girl labour, especially in cities and the larger centres of population, both in England and Scotland. In both of the inquiries close personal investigation has been made in London, Manchester, Liverpool, Glasgow, Leeds, Birmingham, and in a large number of other districts. Seventy-nine witnesses supplied evidence in the Manchester University inquiry, and forty-five others have already given evidence in the course of the inquiry which is being conducted by the Consultative Committee.

3. Under the industrial and commercial conditions which now prevail, it is easy for a boy of thirteen or fourteen to find some kind of virtually unskilled work for which are offered wages that for the time seem high, and flatter his sense of being independent of school discipline and of home restraint. In this work there is often little mental or moral discipline, though it may involve long hours of deteriorating routine. The work lasts for a few years, but leaves the lad, at the very time when he begins to want a man's subsistence, out of line for skilled employment and only too likely to recruit the ranks of unskilled labour. The same evil exists in the case of girls. Certain forms of industry which make large use of boys and girls who have recently left the elementary schools, are, in part, (except where the employers make special efforts to meet their responsibilities) parasitic in character, and get more than they ought, and more than their promoters realise that they are getting, of the physical and moral capital of the rising generation. Many callings connected with transport and communication, and some branches of manufacture, use juvenile unskilled labour to a degree which, if no counteracting measures are taken, must cause grave and lasting injury to the national life. It should be added that in this matter some Government Departments are to blame. Evils resulting from such deteriorating forms of boy and girl labour are widely felt. But we have little statistical proof that these evils are increasing out of proportion to the growth of population. Such evidence, indeed, as is available points to the conclusion that in some callings, the uneducative use of adolescent unskilled labour is rapidly extending ; but part of the apparent increase may be due to a growing sense of the importance of the subject and to the consequently closer attention with which it is being observed.

4. In the Report of the Census of England and Wales 1901, the Summary Table XXXVII. (Cd., 1,523, pp. 209-211) shows the occupations of boys and girls under each year of age from ten to fourteen inclusive. Table XXXV. in the same volume (pp. 200, *f.*) shows the occupations of males and females between fourteen and fifteen, but, subsequently, under groups of ages, the first of which groups extends from fifteen to twenty. In order that we may ascertain with precision the extent to which adolescent labour is employed in different industries up to the threshold of manhood and womanhood, it is desirable that in the next Census the Summary Tables should show the occupations of males and females under each individual year of age from fifteen to twenty.

5. In two occupations, however, it is possible to measure the increase of the uneducative employment of juveniles, viz., under the heads of : (a) "National Government ; Civil Service (messengers, etc.)" ; and (b) "Conveyance of men, goods and messages ; messengers, porters, watchmen (not railway or Government)."

6. Table A. below shows that the number of messengers (boys and girls) under fifteen years of age employed by the national Government was more than four times as large in 1901 as in 1881, and that the increase of juvenile messengers in the Civil Service was 141·2 per cent. between 1881 and 1891, and again 73·1 per cent. between 1891 and 1901. Table B. shows that the number of boys and girls under fifteen years of age who were employed as messengers, porters, watchmen (not railway or Government service) was nearly three times as large in 1901 as in 1881. The number of boy and girl messengers under fifteen (excluding railway and Government service), in 1901 was nearly as large as the total number of persons (including adults of all ages) employed in the corresponding capacity twenty years before. The number of juvenile messengers, etc. in this category showed an increase of 74·6 per cent. from 1881 to 1891, and of another 66 per cent. between 1891 and 1901, though the increase per cent. in population during the same decennia was, respectively only 11·65 and 12·17 per cent. Though the number of messengers, porters and watchmen (not in railway or Government service) has increased from 131,171 in 1881 to 185,487 in 1901, the number over fifteen has actually decreased from 85,139 in 1881 to 51,936 in 1901, a decrease of 38 per cent. It should be added that nearly all the persons employed in this category are boys. The girls form only 3·5 per cent. of the total.

TABLE A.
MESSENGERS, ETC., UNDER FIFTEEN EMPLOYED BY
NATIONAL GOVERNMENT.

Year.	Boys.	Girls.
1881	1,831	22
1891	4,412	58
1901	7,684	56

TABLE B.
MESSENGERS, PORTERS, WATCHMEN, UNDER FIFTEEN
YEARS OF AGE.

Year.	Boys.	Girls.
1881	45,144	888
1891	78,169	2,246
1901	128,787	4,764

7. Some light is thrown upon the economic results of the uneducative use of adolescent labour by the returns of applications to the distress committees set up, under the Unemployed Workmen Act, 1905. The two returns already made to the House of Commons on the proceedings of the distress committees in England and Wales (Cd. Papers 392 of 1906 and 326 of 1907), show that nearly one out of every three qualified applicants for assistance under the Act were reported to be under thirty years of age.

Mr. Michael E. Sadler.

4 Feb. 1908.

Occupations of boys and girls after leaving school.

Mr. Michael E. Sadler. 8. In preparing the following tables, I have selected from the two above-mentioned returns a number of typical towns in different parts of England, and have arranged them in groups according to their geographical position. It will be seen that, both in London taken separately and in the whole of England including London, the number of applicants under thirty years of age who were found on investigation to be qualified for assistance under the Act, formed a larger percentage of the total number of qualified applicants in the year ended March 31st, 1907, than in the period extending from the establishment of the distress committees to March 31st, 1906. In some towns the percentage of the younger men had gone down. In others it had greatly increased. In almost all cases, it is seriously large.

9. In the following Tables the percentages refer to the number of qualified applicants who were under thirty years of age :—

1. LONDON (SELECTED DISTRICTS) AND CERTAIN SUBURBS.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
Battersea - - -	27	18·7	- 8·3
Bethnal-green - -	12·9	26·9	+ 14
Camberwell - - -	17·8	28·6	+ 10·8
Poplar - - -	19·7	37·8	+ 18·1
Shoreditch - - -	15·1	30·1	+ 15
Stepney - - -	19·7	16·8	- 1·9
East Ham - - -	31·2	27·6	+ 3·6
West Ham - - -	29·1	30·8	+ 1·7
Hornsey - - -	7	35·6	- 1·4
Dartford - - -	22·2	23·2	+ 1
Walthamstow - -	27·3	27·2	- ·1
Croydon - - -	29·6	25	- 4·6

2. CERTAIN TOWNS IN LANCASHIRE AND CHESHIRE.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
Manchester - - -	25·8	29·9	+ 4·1
Salford - - -	23·7	21·8	- 1·9
Stockport - - -	27·8	21·6	- 6·2
Liverpool - - -	35·5	35·5	*
Birkenhead - - -	43·3	52	+ 8·7
Bootle - - -	25·7	25·2	- ·5
Warrington - - -	42·3	66	+ 23·7
Wigan - - -	12·8	17·1	+ 4·3
Bolton - - -	19·4	20·7	+ 1·3
Oldham - - -	20·4	12·9	- 7·5
Blackburn - - -	24·7	28·5	+ 3·8
Preston - - -	27·7	23·3	- 4·4

* The same as before.

3. CERTAIN TOWNS IN THE WEST RIDING OF YORKSHIRE.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease
Leeds - - -	20·4	26·7	+ 6·3
Bradford - - -	30·7	18·6	- 12·1
Halifax - - -	23	32·9	+ 9·9
Sheffield - - -	18·7	32·9	+ 14·2

4. CERTAIN TOWNS IN THE NORTH-EAST OF ENGLAND.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
Hull - - -	39·4	29·7	- 9·7
Scarborough - - -	36·5	38·1	+ 1·6
Middlesbrough - -	17·7	34·1	+ 16·4
Sunderland - - -	37·5	44·2	+ 6·7
South Shields - -	28·4	25·3	- 3·1
Newcastle-on-Tyne -	17·5	31·2	+ 13·7

5. CERTAIN TOWNS IN THE MIDLANDS.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
Birmingham - - -	18·4	17·3	- 8·9
Wolverhampton - -	14·6	22·6	+ 4·5
Derby - - -	32·4	46·1	+ 13·7
Leicester - - -	23·4	31·4	+ 8
Nottingham - - -	31·9	27·4	- 4·5
Northampton - - -	16·5	7·6	- 8·9
Burton-on-Trent - -	40·1	32·8	- 7·3

6. CERTAIN TOWNS IN SOUTH WALES.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
Cardiff - - -	30·4	*	-
Swansea - - -	23·4	23·4	†
Newport (Mon.)- -	26·6	33	+ 6·4

* No return.

† The same as before.

7. CERTAIN TOWNS IN THE WEST OF ENGLAND AND
ON THE SOUTH COAST.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
Bristol - - -	31.9	18.5	- 13.4
Plymouth - - -	39.9	39.8	- .1
Devonport - - -	29.5	28.9	- .6
Southampton - - -	29.6	18.4	- 11.2
Portsmouth - - -	21.3	16.3	- 5
Brighton - - -	29.1	27.5	- 1.6
Bournemouth - - -	48.3	28.05	- 20.25

8. CERTAIN TOWNS IN THE EAST OF ENGLAND.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
Norwich - - -	36.9	40.5	+ 3.6
Great Yarmouth - - -	26	25.3	- .7
Ipswich - - -	*	43.6	-

* No return.

9. LONDON AND THE WHOLE OF ENGLAND.

Name of Place.	Up to March 31, 1906.	Twelve months ended March 31, 1907.	Increase or Decrease.
London - - -	23.9	27.4	+ 3.5
Whole of England (including London) }	27.3	30.2	+ 2.9

10. It should be added that in both the returns more than half of the persons whose applications were entertained were drawn from the ranks of general or casual labour.

UNEMPLOYED WORKMEN ACT, 1905.

APPLICANTS (WHOSE CASES WERE ENTERTAINED IN
LONDON OR PROVINCES) ENGAGED IN GENERAL
OR CASUAL LABOUR.

—	Period to March 31, 1906.	Year ended March 31, 1907.
Total number of applicants whose occupation was returned as general or casual labour - - -	37,902	31,534
Percentage of total of all occupations	51.5	52.2

As an educational basis for increased economic efficiency and independence, the work of the elementary schools should be individualised by reduction in the size of large classes and the period of school life lengthened. Mr. Michael E. Sadler.
4 Feb. 1908.

11. A sound, practical and sufficiently prolonged training in the elementary school is the only firm basis for that technical and civic instruction which, if given during adolescence, would save great numbers of young men from falling into the ranks of unskilled labour, with its special risks of unemployment, and would increase the economic efficiency and domestic skill of great numbers of girls who, at present, receive little practical training for the duties of the home. It is desirable, therefore, (especially in districts where the leaving age is under fourteen years of age) to prolong the period during which children are compelled to remain in attendance at the elementary day school. But our statistical knowledge of the present state of things is incomplete. So far as we know, the attendance at the elementary day school is being prolonged in England and Wales to a more advanced age than was formerly the case. The last figures are found in an Appendix to the Board of Education Report for 1904-5, but have been omitted from subsequent reports. The arrangement of the figures was ambiguous, but they showed that the number of pupils who remained at the public elementary schools in England and Wales till they were between thirteen and a half and fourteen and a half years of age, had more than doubled in the ten years, 1894-1903 inclusive. During the decade the totals showed steady annual increments from 135,524 to 198,775. This is all the more satisfactory in view of the fact that an increasing number of children pass on to secondary schools at twelve years of age or earlier. The number of children leaving the public elementary schools between fourteen and a half and fifteen and a half years of age similarly rose from 33,748 in 1894 to 47,681 in 1903. It is to be desired that the statistics of the Board of Education, admirable in nearly all respects, should in future contain a table showing year by year, the number of children who leave the public elementary schools, precisely classified according to sex and age.

12. It is not possible to say how many boys and girls are in elementary and secondary schools in England under private management. The only comprehensive Return on the subject was issued by the Education Department so long ago as 1898 (Cd. 8634). But in State-aided secondary schools in England and Wales, if those be taken alone, the number of pupils increased from 33,519 in 1904-5 to 66,014 in 1905-6. In the official tables, these pupils are not classified under individual years of age, but it is believed that over 60 per cent. of the number are over twelve years of age.

In England and Wales, the limits of compulsory attendance at school vary according to the bye-laws of different districts, a minimum being laid down by statute. The main provisions of the present law may be thus summarised:—

(a) Children may be employed in agriculture at the age of eleven (if the local bye-laws contain a special provision to this effect) provided that they attend school 250 times a year up to the age of thirteen.

(b) With this exception, no child under the age of twelve can obtain either partial or total exemption from the duty of attending school.

(c) A child between twelve and thirteen (or, if the bye-laws so provide, between twelve and fourteen) can only obtain total or partial exemption upon the conditions which the bye-laws of the district prescribe.

(d) In those districts in which the bye-laws are still restricted to children under thirteen years of age, a child between thirteen and fourteen can obtain total exemption either on passing the fourth standard or on having made (since reaching the age of five years) 350 attendances in not more than two schools during each year for five years, whether consecutive or not.

(e) A child between twelve and fourteen may claim partial exemption (if such exemption is allowed by the bye-laws of the district in which the child

Desirability of lengthening period of school life.

Mr. Michael
E. Sadler.
4 Feb. 1908.

resides) on having made 300 previous attendances in not more than two schools during each year for five preceding years whether consecutive or not.
13. The general effect of this complex system is illustrated by the following table which shows what pro-

portion of the population of England and Wales of elementary school age on April 1st, 1901, was on the register of public elementary schools in the year ending January 31st, 1901, these figures being taken as the nearest comparable to one another:—

Ages.	Census*, April 1, 1901. Estimated Population in England and Wales at each year of age.			Board of Education Statistics†, 1900-1. (Year ending Jan. 31, 1901.) No. of children on School registers on last day of school-year. Boys and girls not given separately.	
	Boys.	Girls.	Total.	Boys and Girls.	Percentage of total population of that age.

Evils of
half-time
system in
textile
industries of
Lancashire
and York-
shire.

14. Even, however, within the limits of compulsory school attendance, the law allows children to be granted exemption from school in order to go to work during certain hours of the day. Serious social evils resulting from this half-time system are found in the textile districts of Lancashire and Yorkshire. Four out of every five of the total number of half-timers in England and Wales are employed in the textile industries of these counties. The following table shows the recent steady increase in the number of such partial exemption scholars on account of whom additional attendances were claimed during each of the last three years. (Statistics of Public Education in England and Wales, 1905-6-7, Cd. 3886, 1908.)

Year.	Number of partial exemption scholars on account of whom additional attendances were claimed.
1903-4	78,876
1904-5	80,368
1905-6	82,328

15. This increase has been due to the great demand for labour in the mills, during the recent period of prosperous trade. In the preceding period there was a steady decline in the number of half-timers. In the course of the Manchester University inquiry to which reference has been made above, Mr. P. Sandiford conducted a special investigation into the working of the half-time system in the textile trades of Lancashire and the West Riding. His Report is published in "Continuation Schools in England and Elsewhere" (Manchester University Press), pp. 318-351. The conclusion to which his investigations point is that the system of partial exemption from school attendance under fourteen years of age for purposes of employment in mills, is physically, intellectually and socially deleterious, and (from a national point of view) economically wasteful.

16. Mention should also be made of the fact that many children who are in regular attendance at school are employed for wages out of school hours. Such employment often tends to be excessive and physically injurious. The Inter-departmental Committee on the Employment of School Children, which reported in 1901, (Cd. 849) came to the conclusion that in England and Wales, in the year 1898, 300,000 children were in attendance at school and also in paid employment. This total, which included half-timers, was 8 per cent. of the whole number of children in attendance at school. It should be added that an official investigation in 1898 showed that the same evil was rife in many parts of the German Empire.*

* In 1898, the Imperial Chancellor caused an inquiry to be made as to the number of children under fourteen years of age in the German Empire, who were employed in labour other than factory labour, agricultural employment, and domestic service. Out of 8,334,919 children of school age in the German Empire, 532,283 were reported as being employed in labour other than factory labour, agricultural employment, and domestic service. The figures may be taken as approximately, though not absolutely, correct. The percentage of children of school age employed in labour in the different states and provinces varied within wide limits. In Bavaria, it was only 1·58 per cent., but it should be remembered that in Bavaria the age limits of compulsory attendance at the elementary school are six to thirteen, whereas in nearly all the rest of the German Empire the upper limit of attendance at the elementary day school is fourteen. Therefore, many children who would have fallen within the scope of the return in other parts of Germany, were excluded in Bavaria. The highest percentage of children of school age employed in labour in any part of the Empire, was 22·8 in the kingdom of Saxony. The explanation is that in the Saxon home industries much child labour is employed. The same is true of the Thuringian States, in which the percentages varied from 15·16 to 19·24. In Prussia, the percentage was 5·18; in Hamburg, 5·67; in Würtemberg, 6·52; in Alsace-Lorraine, 7·27; and in Baden, 9·74. (See Appendix, No. III., in Minutes of Evidence of Employment of School Children Committee, Cd. 895, 1902.)

aw relating
to school
attendance.
Scotland.

17. The complexity of the present law of school attendance in England and Wales is not favourable to the growth of a clear public opinion in favour of prolonging the period of school attendance to fourteen years of age. A simpler and more satisfactory arrangement is in force in Scotland. The Act which now regulates the attendance of children at school in Scotland was passed in 1901. It declares it to be "the duty of every parent to provide efficient elementary education in reading, writing and arithmetic for his children who are between five and fourteen years of age." It forbids any person to take into his employment any child: (1) who is under the age of twelve years; or (2) who, being of the age of twelve years and not more than fourteen years, has not obtained exemption from the obligation to attend school from the school board of the district. Thirdly, it gives power to any school board, where after due inquiry in each case such exemption seems to be justified, to grant to individual children over twelve years of age exemption from the obligation to attend school for such time as the school board shall think fit, and with such further conditions as to the amount and manner of further attendance at school which the child shall give until it reaches the age of fourteen, as the school board in question shall think it desirable to impose. But each school board which grants exemption is required to enter the names of the children so exempted in a register, and to record a statement of the circumstances in which, and the conditions upon which, such exemption has been granted in each case.

18. Moreover the Scotch Education Department is empowered by the Act to call upon any school board, at any time, for a return of the children to whom such exemption has been given, and of the circumstances relating to each case. If, after due inquiry, the Department finds that the attendance of scholars within the district of a school board, or in any part of its district, is unsatisfactory, and that exemption from school attendance has been granted unjustifiably or with insufficient conditions, it may call upon the school board to recall exemptions thus granted, or to take steps to improve the school attendance in its district. If the school board fails to comply with these requirements within a reasonable time, the Department has power to withhold or reduce the Parliamentary grant payable to the school board in question. The results of the working of this Act are satisfactory. In 1905 the estimated population of Scotland between the ages of twelve and fourteen was 186,901; the number of scholars of twelve to fourteen years of age on the registers of all schools in Scotland was 178,521; the number of children aged twelve to fourteen who, whether conditionally or without conditions, were exempted from school attendance by the school boards was 7,822, or 4 per cent. of the total number of pupils between twelve and fourteen who were on the school register. The great majority of those who were allowed to leave school under fourteen were granted exemption on condition that they should attend evening continuation schools till reaching the age of fourteen. Thus the proportion of children in Scotland who do not remain under some form of educational supervision till they are fourteen years of age is small. It is desirable that similar arrangements should be adopted in England.

ols.

19. But, along with measures to keep the children longer at school, steps should be taken to increase the educational efficiency of the elementary day schools. There is increasing dissatisfaction with the condition under which teachers and scholars in great numbers of public elementary schools have to do their work. In many urban schools the number of pupils assigned to each certificated teacher is much too large for true educational efficiency, or for individualised instruction. In secondary schools receiving grants from the Board of Education, the rule is that the number of scholars taught together at one time must not, as a rule, exceed thirty, and must in no case exceed thirty-five (Regulations for Secondary Schools in England, 1907, Section 13 B.). These regulations, it is true, are mainly concerned with children over twelve years of age, whereas the great majority of the pupils in public elementary schools are under twelve. But as the need for individualised teaching is at least as great in the case of children under twelve as in the case of older children, it is to be desired that the rule, which now applies to secondary schools, should be

extended to the whole of the work of the public elementary schools. As the rule which limits the size of classes in secondary schools already applies to their junior departments, the children in which are under twelve years of age, there is a precedent for the extension of the rule to other schools giving instruction to children of like age.

20. Moreover, it is much to be desired that steps should be taken in the elementary school organisation to develop corporate life and to strengthen the connection between home and school. The curriculum in the elementary schools should include a larger amount of hand-work and of practical training than is at present given. The experience of the industrial schools proves that practical training has a valuable influence upon character. But care should be taken to avoid a utilitarian spirit in the framing of the courses of study. In order that the rising generation may grow up with alert minds, with the power of adapting themselves to new conditions, and with a sense of civic duty, it is essential that the course of education in the elementary schools should widen the outlook of the mind and quicken the power of sympathy with others and the sense of individual and social obligation. One of the chief means of securing this is the study of good literature.

Continuation Schools and other Forms of Further Education; Valuable Means of Increasing Social, Civic, and Economic Efficiency.

21. Attendance at continuation schools in England and Wales is purely voluntary. Nevertheless, in the session 1904-5, 21·2 per thousand of the population of England and Wales attended evening classes which were under inspection by the Board of Education. In 1905-6, the attendance had risen to 21·9 per thousand of the population. It is true that in this total, some students may have been counted twice over. Those who attend more than one evening school are counted once for each school. But, on the other hand, the statistics take no account of the large number of students who attended the numerous classes which are carried on in the evening without inspection or aid from Government. When, therefore, all necessary qualifications have been made, the statistics show that a remarkably large proportion of the population avail themselves of opportunities of instruction after the close of their day's work.

22. The number of students attending evening classes under Government inspection is increasing. Ninety thousand more attended in 1905-6 than in the corresponding session three years before. For three generations evening school instruction has been one of the most characteristic features of the English educational system. In no other country is greater zeal shown in the voluntary attendance at evening classes. The educational facilities afforded by those classes are appreciated by intelligent and vigorous young people, especially in the great centres of industry and commerce. Out of every ten students attending the evening classes six were men. Nearly a third of the total number of students were twenty-one years and over. The Government paid in grants 9s. 3d. per head of the total attendance. During the last few years much has been done, especially in London and in the manufacturing districts of the Midlands and the North, to make the work of the evening schools bear more practically upon the industries of the neighbourhood. There have also been improvements in the grouping and classification of the evening schools in many towns, some of the schools being charged with the duty of providing suitable courses of preparatory instruction from which the student passes on first to an intermediate evening school and thence to the advanced courses at the technical institute. There has also been an increase of interest on the part of employers of labour in the education of their workpeople.

23. In the course of the Manchester University Inquiry into continuation schools, it was ascertained that out of facilities sixteen English railway companies, fourteen gave direct assistance towards or contributions to the expenses of technical classes, in order that their employees might attend them either free or at very low fees. Seven of the sixteen railway companies excused day work under certain conditions to apprentices and pupils, to allow of their attending technical classes in the day time. Out of a total number of thirty-four engineering and ship-building firms of whom inquiry was made, eighteen

Mr. Michael E. Sadler. excused day work to apprentices or pupils to allow of their attending technical classes in the day time, or had done so in exceptional cases. Ten out of the thirty-four firms granted special facilities for attendance at evening classes. Out of twenty-three other firms engaged in different branches of industry, nearly all encouraged attendance at evening classes, while seven made attendance at certain continuation classes compulsory for special categories of employees, and nine excused day work to apprentices or other employees to allow attendance at technical classes in the day time. (Full details of the educational facilities thus granted to apprentices and workpeople, and summaries of the employers' reports on the results will be found in "Continuation Schools in England and Elsewhere," pp. 265-308.)

Unsatisfactory condition of evening continuation schools in many parts of England.

24. On the other hand, the present condition of the evening continuation schools in many parts of England is disappointing. In the Manchester University Inquiry, seventy-nine experienced evening school teachers and administrators answered a series of questions on the subject of evening school work. In answer to the question whether the evening continuation schools were doing, on the intellectual side, work commensurate with the labour and funds now devoted to them, thirty-seven replied in the negative and thirty-three in the affirmative. In answer to the question whether the evening continuation schools were doing, on the moral and social side, work commensurate with the labour and funds now devoted to them, thirty-three answered in the negative and thirty-five in the affirmative. As the replies came from all parts of the North of England and from many districts of the Midlands and South, these replies show widespread dissatisfaction at the intellectual results ordinarily obtained in the evening continuation schools. Those who answered the questions had, on the average, had between seven and eight years experience in teaching in evening schools.

Causes of defects in evening school work.

25. The more serious defects in evening school work may be traced to five causes:—

(1) Many of the teachers engaged in evening school work have already been engaged in long hours of service in the day school.

(2) Great numbers of young people are employed during such long hours during the day time that they are too tired to undertake serious intellectual work in the evening school.

(3) In the country districts, reasons of expense make it difficult to provide the necessary variety of instruction especially of a practical character.

(4) In many places little has been done to link the evening classes with the work of the day school in such a way as to encourage the pupils to come to the evening schools on the conclusion of the day school course.

(5) There is much wastage of ability and of character during the few years which generally elapse between the close of the day school course and the taking up of evening school work. Unskilled employment at thirteen with good money draws a boy into a way of life which leaves him at sixteen or seventeen without a trade to his fingers and with the habit of steady learning gone out of his head. The elementary school-master sees that much that he and his colleagues have succeeded in doing for such a boy disappears during the two or three years immediately following the day school course. On the other hand, the teachers of the technical evening classes are hampered by the fact that many of those who wish to enter have forgotten much of the knowledge which they require as a foundation for technical work. Thus, inquiries which begin at opposite ends of the line lead to one and the same conclusion, viz., that the years between thirteen and seventeen are the point of educational leakage.

Statistics of continuation school attendance.

26. In the county of Northumberland there are approximately, in each year, 10,000 boys and girls over fourteen and under sixteen years of age. The number of those between these ages who were in regular attendance at evening school ten years ago was about 500, or 5 per cent. But in the session 1906-7 the number was not much larger. So far as it is possible to estimate the figures, out of every three boys and girls between

twelve and seventeen years of age in England and Wales, Statistics of two are attending neither day school nor evening class. continuation school attendance. Probably the position is worse than this, but it is not possible to speak with certainty. The statistics of pupils attending secondary schools are not detailed enough. In giving the number of pupils in attendance at continuation schools, they do not show the precise ages of the pupils, but group them under terms of years, viz., twelve to fifteen, fifteen to twenty-one, and over twenty-one. It is desirable that these groups should be broken up and classified according to sex and to yearly intervals. As things are, we cannot measure with any precision the growth or decline of the number of those in attendance at continuation schools during the years which follow the close of the day school course. The most recent statistics encourage the belief that the efforts made in many districts to persuade boys and girls to attend the continuation schools immediately after the close of the day school course have met with success. The number of students under twenty-one years of age who attended evening schools in England and Wales in 1904-5, was only 729 more than in 1903-4. But in 1905-6, the number of students under twenty-one had increased by 10,236.

27. In several towns in the North of England successful efforts have been made to strengthen the link between the elementary day schools and the evening continuation schools. At Widnes, about four out of five boys who leave the day schools begin at once to attend the evening schools. This high record of attendance is due to the fact that the United Alkali Company and Messrs Gossage make it a condition that all apprentices between fourteen and eighteen, whether bound by indenture or not, shall attend classes on three evenings in the week during the winter, their fees being paid by their employers.

High percentage of attendance at continuation schools in certain towns in North of England.

28. In the non-county boroughs of Lancashire in the session 1906-7, one out of three of all the boys and girls leaving the elementary day school went straight on to the continuation school. At Colne and Littleborough half of those leaving the day school began at once to attend the evening school. At Rochdale, during the years 1905-7, 55 per cent. of the boys under seventeen who had left the day school, and 25 per cent. of the corresponding category of girls, were in attendance at evening classes. At Halifax about 58 per cent. of all the children, boys and girls, who left the elementary day schools in 1906 joined the evening continuation schools within a year. In 1907-8, of all the boys between thirteen and fifteen in Halifax who were not in attendance at the day school, 69 per cent. were at the evening schools. The specially high attendance in the case of boys at the evening schools in Halifax is due to the care with which each boy on leaving the day school is visited by a representative of the Principal of the Technical College in order that the lad and his parents may realise the advantage of leaving no gap in his education.

29. In several cases large employers of labour compel their younger workpeople to attend continuation schools. Messrs. Brunner Mond & Co., at Northwich, require all apprentices and youths under nineteen in their employment to attend evening school nine times out of every ten that the school is open. The works manager at Messrs. Brunner Mond & Co's reports that as a result of this compulsory attendance at continuation schools: "Our younger generation of mechanics show a very marked improvement both in ability and keenness for work, and it is a pleasure to deal with many of them on account of the interest which they display." When Messrs. Brunner Mond & Co. first made attendance at evening schools compulsory, there was some little trouble in the class-rooms, due to the fact that some pupils came unwillingly. But the firm summoned a meeting of the parents and told them that they intended in future to employ no boy who did not regularly attend the evening school. The parents were recommended to inform their sons that the matter was no joke as the firm were determined to have the new regulation properly carried out. From that time forward no difficulty has occurred, and the present arrangements work smoothly both with the pupils and with their parents.

Compulsory attendance at continuation schools required by Brunner Mond & Co., and beneficial results thereof.

30. Messrs. Cadbury Bros., Ltd., at Bourneville, near Birmingham, require all employees under sixteen to attend evening classes during the winter for two evenings

compulsory a week and two hours per evening. Students are advised as to which courses should be taken. Parents or guardians of applicants for employment in the works are required to sign a form of agreement that the boy or girl in question shall attend evening continuation classes up to sixteen and shall receive instruction in gymnastics and swimming during work hours up to sixteen or fifteen years of age, respectively.

31. Messrs. Rowntree & Co., Ltd., York, have established at their Haxby Road factory, a domestic economy school which is under the supervision of the Board of Education. All girls under seventeen in the employment of the firm are required to attend for two hours a week during work hours. The subjects taught are cookery, dressmaking and hygiene. There are three teachers and about 520 girls are under instruction.

32. The Edinburgh School Board appointed, in the autumn of 1906 and 1907, Mr. David McNally to visit the employers in the city in connection with the continuation classes. Four hundred and ninety-five employers were interviewed. The Board's representative was received with cordiality, and his requests were in almost all cases promptly and fully complied with. The employers asked for details regarding the classes, the conditions of enrolment and the provision for technical, commercial, industrial and trade instruction. Many valuable suggestions were made. The employers guaranteed the fees of 760 employees. Some employers offered special rewards to those in their employment whose work at the classes was specially meritorious. Certain large employers were invited to allow the convener of the Higher Education Committee or some other member of the Board to address a meeting of their employees on the subject of the continuation schools. Thirty such meetings were held between September 10th and October 8th, 1907.

Compulsory or Voluntary Attendance at Continuation Schools; Preponderating Reasons for Compulsion.

33. The chief reasons urged against requiring all young people not otherwise at school to attend continuation classes up to seventeen years of age are the following:—

- (a) Overstrain likely to be caused by evening school attendance at the end of a long working day;
- (b) Impracticability in certain trades of permitting attendance of juvenile workers at day continuation classes during working hours;
- (c) Special difficulties of requiring attendance: (1) in the case of girls; (2) in the case of all pupils in thinly-populated rural districts.

34. On the other hand, the reasons in favour of compulsory attendance may be summarised as follows, and, in the opinion of the witness, outweigh the objections named above:—

(a) Our present system of attendance in England is educationally wasteful. More should be done to husband the intellectual powers of the rising generation and to direct them more systematically towards social ends. The quality which, under the more advanced conditions of modern industry, has most "selection value" is an adaptive mind combined with strong moral principle. By means of a prolonged course of suitable education, adaptiveness of mind and firmness of character can be enhanced. But the continuation classes for young people during adolescence should be held, as far as possible, during the day-time to avoid overstrain.

(b) Wherever compulsory attendance at continuation schools has been tried in England, whether for boys or girls, it has been found practicable and beneficial. Compulsory attendance at continuation schools has been tried on a much larger scale in Germany and in Switzerland, and with satisfactory results. In nineteen out of the twenty-five Cantons of Switzerland attendance at continuation schools is obligatory for boys up to seventeen years of age and in one Canton it is obligatory for girls as well. In twenty out of the twenty-six constituent parts of the German Empire, the attendance of boys at continuation schools is compulsory (either throughout the State or in districts adopting a special bye-law),

while in four of those States and in some districts of a fifth, it is compulsory for girls also. In all these cases the results appear to be, on the whole, satisfactory and to command general, though not unanimous, approval.

35. Throughout Germany the law throws upon the employer the duty of giving to his younger workpeople the necessary time for attendance at the continuation classes which the local education authority may prescribe. This duty is imposed by Secs. 120, 142, and 150 of the Imperial Law of Industry of June 1st, 1891, extended by the Industrial Law of June 30th, 1900, Sec. 120. These sections are as follow:—

Sec. 120.—Employers of labour are required to grant to those of their employees* under eighteen years of age who attend a continuation school arranged by the Government or by the local authority the necessary time for school attendance as prescribed by the authority in question. Classes are only allowed on Sundays if they do not interfere with attendance at Divine service.

Sec. 142.—By the bye-law of a district or town council attendance at continuation schools can be made compulsory for male persons under eighteen years. The regulations necessary to enforce compulsory regular attendance at such schools may be fixed by the local authority, and the duties of pupils, parents, guardians and employers may be so defined as to ensure the regular attendance, the discipline and the orderly behaviour of the pupils. Those pupils are relieved from the attendance at such compulsory schools who attend a guild or "Fach" school, provided that such a school is recognised by the superior administrative authority as equivalent in status to the said continuation school.

Sec. 150.—A fine of 20 marks (£1) or, if this is not paid, imprisonment up to three days for every offence, is imposed upon anyone contravening any of the above regulations.

36. In addition to this permissive statute, however, there are in eleven States of the German Empire, State laws prescribing the minimum period of attendance at continuation schools. The conditions of attendance at continuation schools in different parts of the German Empire are shown in the table appended. (*See Appendix No. X.*)

37. The most highly organised system of compulsory continuation schools is that established in the City of Munich under the direction of Stadtschulrat Kerschenscheiner. In Munich, attendance at continuation schools is compulsory: (a) For boys up to the eighteenth year; and (b) for girls up to the sixteenth. Business people and employers no longer complain in any way of the compulsory continuation school system. Those who are liberal-minded feel that it is a burden which ought to be borne in the public interest. Speaking generally, public opinion among employers, workpeople and apprentices alike is entirely favourable to the compulsory continuation schools in Munich. Apprentices especially approve the system because the schools are grouped according to trades. A large number of apprentices continue to attend the schools voluntarily when their period of compulsory attendance is over. The general interest taken in the work of the classes is shown by the fact that there have never been fewer absences without excuse than during the last five years. The apprentices go between 7.0 a.m. and 9.0 a.m. or between 1.0 p.m. and 7.0 p.m. There is no instruction after 7.0 p.m. Many trades give a complete day for the attendance of apprentices at the continuation school. In general, there is no need of regulation to enforce attendance. The pupils come willingly and gladly. If a scholar does play truant, he has to appear before the education authority and is cautioned. If the offence is repeated, a money fine is imposed, and, if needed, the offender is imprisoned. By means of strict regulations, the attendance of domestic servants of every kind is assured. Every girl has to attend a continuation school for at least three hours per week until she has attained her sixteenth birthday. In case of her absence without adequate excuse, the parents and the employers are punished.

* By the Industrial Law of June 30th, 1900, Sec. 120 is altered to include the following:—Male persons, female-clerks, female apprentices.

Mr. Michael
E. Sadler.

4 Feb. 1908.

Working of
the system of
compulsory
attendance in
chief centres
of textile
trades in
Germany.

38. The difficulty of enforcing compulsory attendance at continuation schools in the case of young people employed in mills has been pointed out by those who have considered the possibility of adopting such a system in England. The witness has, therefore, just completed an inquiry into the working of the system of compulsory attendance in eleven of the chief centres of the textile trades in Germany, viz., Colmar, Mulhausen, Chemnitz, Crefeld, Plauen, Elberfeld, Barmen, Meerane, Augsburg, Berlin and Forst. Attendance at continuation schools is now compulsory for boys to the end of their sixteenth year at Plauen; to the end of their seventeenth year at Chemnitz, Crefeld, Elberfeld, Barmen, Meerane, Augsburg, Berlin and Forst; and up to the end of their eighteenth year at Colmar and Mulhausen. At Plauen it is also compulsory for girls up to the end of their sixteenth year. Factory employees, within the age limits of compulsory attendance, leave the mills early in order to attend continuation classes between the hours of 5 p.m., and 7 p.m., or 8 p.m. at Colmar, Elberfeld, Meerane and Augsburg. Continuation classes are held during work hours for shifts of younger mill-hands at Mulhausen, Plauen, Barmen, and Chemnitz. The amount of attendance required at continuation classes is three lessons a week at Mulhausen and Meerane; four lessons a week at Colmar, Chemnitz, Crefeld, Elberfeld, Berlin and Forst; and six lessons a week at Plauen, Barmen and Augsburg. The system of compulsory attendance is reported as working satisfactorily and as meeting with the approval of employers and workpeople at Colmar, Mulhausen, Chemnitz, Crefeld, Plauen, Elberfeld, Augsburg and Forst. At Barmen there was grumbling at the beginning (1905), but the arrangements are now reported as working smoothly. At Meerane, where the plan of compulsory attendance at continuation schools was introduced after a great struggle, the position is now satisfactory and the local education authority hope that further concessions will shortly be made by the employers. At Berlin where compulsory attendance began in 1905, the system is working fairly well, but it is too soon to form a final judgment as to the results.

Best
method of
introducing
compulsory
attendance at
continuation
schools in
Great
Britain.

39. The witness thinks that the best manner of introducing into Great Britain the system of compulsory attendance at continuation schools will be by means of a Permissive Act which could be adopted in districts which felt ready for the change. This plan was embodied in the Education (Scotland) Bill, 1907, Sections 8 and 9:—

8. (1) It shall be lawful for a school board from time to time to make, vary and revoke bye-laws for requiring the attendance at continuation classes until the age of seventeen of young persons who are not otherwise receiving a suitable education, and that at such times and for such periods as may in such bye-laws be specified:

Provided that no young person shall be required to attend a continuation class held beyond two miles measured along the nearest road from the residence of such young person.

(2) Bye-laws so made shall not take effect unless and until they have been submitted to and confirmed by the Department, who are hereby empowered to allow, or disallow the same, as they may think proper, nor shall any such bye laws be confirmed:—

Unless notice of intention to apply for confirmation of the same has been given in one or more of the newspapers circulated within or by handbills posted throughout, the district to which such bye-laws relate, one month at least before the making of such applications, and

Unless for one month at least before any such application is considered a copy of the proposed bye-laws has been kept at the office of the school board and has been open during office hours thereat to the inspection of the ratepayers of the district to which such bye-laws relate, without fee or reward.

Any person aggrieved by any proposed bye-law, or by any proposed alteration of a bye-law, may within such last-mentioned month, forward notice of his objection to the department, which shall consider the same before granting confirmation.

The clerk of the school board shall, on the application of any such ratepayer, furnish him with a copy of such proposed bye-laws or any part thereof, on payment of *sixpence* for every hundred words contained in such copy.

A bye-law when confirmed by the Department shall not require confirmation, allowance or approval by any other authority.

(3) If any person knowingly employs a young person at any time when his attendance is by any such bye-law required at a continuation class he shall be liable on summary conviction to a penalty not exceeding *forty shillings*, or in case of a second or subsequent offence not exceeding *five pounds*.

(4) If any parent or guardian of a young person by wilful neglect, or by habitually neglecting to exercise due care, has conduced to the commission of an alleged offence under the immediately preceding sub-section, or otherwise to failure on the part of the young person to attend a continuation class as required in any such bye-law, he shall be liable on summary conviction to the like penalty.

(5) The Department shall not allow any bye-law unless they are satisfied that there is a suitable provision of continuation classes within the parish or burgh to which it bears to be applicable.

(6) The production of a written or printed copy of a bye-law, if authenticated by the signature of the clerk to the school board, shall, until the contrary is proved, be sufficient evidence of the due making and existence of the bye-law, and, if it is so stated in the copy, of the bye-law having been allowed by the Department.

9. All prosecutions for offences under either of the two immediately preceding sections of this Act shall take place before the sheriff in the manner provided by the Summary Jurisdiction Acts, and penalties shall be recoverable by imprisonment in terms of those Acts.

The expression "continuation class" means a class conducted in accordance with the Code of Regulations of the Department for classes providing further instruction for pupils who have left school.

40. The witness suggests that any district adopting a bye-law compelling attendance at continuation schools should receive continuation school grants from the Board of Education at double rates. This would serve as a lever for moving local opinion in favour of the adoption of compulsion. The witness estimates that if attendance at continuation schools were made compulsory on all young people up to seventeen years of age, the total annual cost, central and local, would be about £1,495,000 per annum. This calculates the cost of continuation school teaching at an average of 23s. per head. But any very highly-organised system of technical continuation schools, closely adjusted to trade needs, and taught by expert trade teachers in buildings suitably equipped, would entail a much larger expenditure per head. In the continuation schools in Munich, in 1906-7, the average cost per student was £2 17s. In the judgment of the witness, this expenditure for continuation schools would be remunerative to the nation through the enhanced industrial skill of the workers and foremen, and through the civic and social betterment which would accrue from so carefully organised a system of educational discipline.

41. On the other hand, the enforcement of compulsory attendance at continuation schools and, with it, a further restriction of the hours of adolescent labour, would certainly curtail the money earning power of many young people during the years from thirteen to seventeen. This would undoubtedly be a hardship to great numbers of families and would involve a temporary shrinkage of the margin of comfort in the case of many more. For these reasons the change should only be made gradually and by instalments. The economic life of the nation as a whole would be invigorated by better technical education and by the restriction of the hours of deteriorating employment during the years of adolescence. The intellectual and moral gain derived from judicious forms of such restriction would be followed, gradually but almost certainly, by a material gain.

General Conclusions.

42. The witness, therefore, submits the following general conclusions —

A.—Education in itself is no panacea for the evils of economic distress and unemployment. But, directly and indirectly, it could do much to lessen those evils in future, especially in the following ways :—

(i.) Reforms in education would do much to increase the adaptiveness and social efficiency of the rising generation, and thus to increase the mobility of labour among the workers.

(ii.) More systematic instruction in the higher forms of the public schools, in social and economic subjects, would give to many of those who are likely to become employers a stronger sense of responsibility for the wise and public-spirited organisation and direction of labour.

(iii.) Education can help to form the habit of mind which resents waste, alike in use of material, of food stuffs, of time, and of human service.

(iv.) Education could do something to extend the sphere of employment by increasing the power of leaders of industry and commerce to discern and seize new economic opportunities. It could touch the problem of unemployment and lessen some of the loss and suffering caused by it by training up a generation which would quickly grasp the bearing of systematic remedial measures and, in applying them, realise the need for patience and for careful discrimination between the deserving and the undeserving. But the most fruitful work of education lies in its indirect influence upon social relationships, in quickening human sympathy, in strengthening the feeling of brotherhood, and in creating the desire for a finer quality of human life.

B.—(i.) If education is to be made an effective instrument in securing the benefits mentioned above, it is necessary, as one of the first conditions of success, that changes should be made in our elementary education. The conditions under which the teachers in most of our public elementary schools have to do their work are incompatible with the full intellectual and moral efficiency of the schools. Classes should be smaller. The liberal education and professional training of the teachers should cover a longer period. There should be more practical work in the curriculum. There should be better classification of the pupils according to aptitude. For certain categories of pupils the whole course should be simplified. Abundant opportunity should be offered for the transference, at suitable ages, of promising pupils to secondary schools (of varying types), and thence to places of higher education, by means of scholarships and (where necessary) maintenance allowances.

(ii.) The period of attendance at the day school should be lengthened and the English law of school attendance simplified. The adoption of Sections 2, 3, and 9, of the Education (Scotland) Act, 1901, is desirable for these purposes.

C.—The work of the schools should be brought more closely into relation with the homes of the children :—

(i.) By giving head teachers such help in their clerical duties as to enable them, as is already done in many cases, to confer with the parents of the elder school children with a view to the wise choice of and technical preparation for subsequent employment.

(ii.) By strengthening the position of the managers of each individual school, so that each school may have a body of persons personally interested in the work of the teachers and in the future of the pupils. Further trial should be made of the experiment (already successful in many cases) of appointing to the body of managers representatives of the parents of children in the school.

(iii.) By giving encouragement to such efforts as those of the Fern Street School Settlement, Devons Road, Bow, E., and of the Finchley Education Committee to secure suitable employment for the children in the schools. In large towns it would be found helpful to have a special officer on the staff of the local education authority who would collect information as to the ways of entering trades and other callings, and place himself, at appointed hours, at the service of parents who might wish to consult him with regard to the future of their children. Such an officer and his colleagues would need to be in close communication with the head teachers of the schools.

D.—Increased efforts should be made by the State to encourage local education authorities, voluntary associations, boys' and girls' clubs, etc., to organise continuation classes affording, according to the needs of the different localities and of different callings, courses of instruction which would be practically useful to young people of from fourteen to seventeen years of age. These classes should be carefully graded, as is already the case in the best organised centres. They should in all cases be so planned as to train young people for healthy living and for the duties of citizenship. They should cultivate humane interests as well as technical skill. In the organisation of such classes local education authorities and others should confer with the associations of employers and of workers in each trade. An effort should be made to persuade every boy and girl on leaving the elementary school, to join a continuation class, so as to prevent a wasteful gap in his or her educational course, and the risk of the loss of the habit of learning. By a card record system the local education authority (aided by teachers in the day and continuation schools, Sunday school authorities, club workers, etc.), should keep up personal communication with the boys and girls during the years immediately following the close of their elementary school course, and with their parents also. Improvements should be made in the staffing of continuation schools, and relief given to overworked and jaded teachers.

E.—Ultimately, some form of compulsion to attend day or evening continuation classes, between fourteen and seventeen years of age, will be found desirable, not so much in the interests of exceptional individuals as in that of the rank and file. Some of the present evils of unemployment may be traced to the lack of educational care and of suitable technical training during the years of adolescence. Compulsory attendance at continuation schools should be accompanied by reduction in the hours of juvenile and adolescent labour where those are now excessive. Employers, including Government Departments, manufacturers, commercial firms, retail tradesmen and employers of young domestic servants, should be placed under statutory obligation to allow young persons of less than seventeen years of age who are in their employment, to attend courses of physical, technical and general instruction for four hours a week, at any rate, during the winter months, at times of day when the pupils are not too tired to profit by the teaching.

It is advisable that the Government should pay grants at a double rate to districts which may adopt a by-law making attendance at continuation classes (held in the day time or in the late afternoon wherever practicable) obligatory upon all boys and girls (if not otherwise at school) up to seventeen years of age. The attention of Government Departments should be drawn to the social evils resulting from the inconsiderate use of adolescent labour in callings which afford no hope of adult employment, and no preparation for a skilled trade. In the post offices, in large towns, classes should be organised (by co-operation with the local education authority) for the instruction of telegraph messengers, in shifts, during the hours of duty.

93387. (*Chairman.*) Your Statement deals with two periods of education, the first, the normal period, or

what is deemed the normal period of elementary education, and secondly in connection with continuation schools. You speak more than once of dissatisfaction as regards the conditions under which teachers and scholars have to do their work, and I think also as regards the results. Do you think that dissatisfaction is at all widespread?—I think there is very wide dissatisfaction among the teachers in elementary schools at the size of the classes which they are required to teach.

93388. I was thinking rather as regards the parents of the community at large. Has any dissatisfaction been evident, or made itself known to you, in consequence of our expenditure on education not stopping unemployment, and in this case, from an industrial point of view not fulfilling anticipations with regard to it?—I think the general effect of the evidence we have received in the two inquiries, the results of which I am prepared to submit to you, is, that it is desired in the national interest that great improvement should be made in our elementary day schools, and that the root of any real reform of further education must be planted there.

93389. We are looking at this question mainly from the industrial point of view. I think you make some very valuable suggestions in the second part of your Statement, as regards the changes that might be made. I will not allude to B. in Paragraph 42 of your Statement; the suggestions seem to me excellent, but they are really purely educational, and therefore they are a little outside our purview; but in C. you deal with a question which has been very much before us, that is, how far you can utilise our system of elementary education by bringing teachers more in contact with the parents and helping the parents of the child to obtain employment for the child. I will take you through those four sections. I assume the head teachers do, to a certain extent, confer with the parents of the older children now, do they, as regards their technical preparation for subsequent employment, or is there very little communication?—A great deal is done by all the best teachers, men and women, but I think it is generally felt that much more might be done than has been accomplished at present.

93390. A teacher would hardly look upon it as his necessary business; he would do it out of kindness or interest in the child?—Yes, but teachers are very devoted to the interests of the children.

93391. In a poor district the teacher is a sort of social centre, around which a great deal gravitates?—Yes.

93392. Then you think that the managers might be utilised to some extent in the same way?—Yes, it is very important I think with a view of getting proper employment for the children, and directing them to the right kind of employment, that there should be connected with each school a body of experienced people, who know the conditions of life in the various trades, and who can help forward the boys and girls after they leave school. There is some danger, in more centralised systems of administration, of depriving the bodies of school managers of the special responsibilities which they used to have in regard to the school, and therefore to lessen their interest in the work.

93393. There is also a difficulty, is there not, in regard to the poorest parts of London, and the poorest parts of populous centres, in getting residential managers who are qualified to take the interest?—I believe there is a very large amount of voluntary work which might be more utilised in the management of schools if larger responsibilities were thrown upon the managers. The effect of the better education of girls and women has been largely to increase the number of public-spirited women who are specially fitted for this work.

93394. Reversing it, given increased responsibility, you think there would be no difficulty in finding competent managers who would take an interest?—I think a great deal more ought to be done to utilise the services of voluntary managers. Where it has been tried, the experiment of putting on the body of managers a couple of representatives of the parents of the children, has had good results. We have in the University of Manchester two schools of demonstration and experiment, where we try to work out new methods of teaching, and on the committees of those schools we have elected representatives of the parents. On several occasions we have obtained from them guidance and help which we could not possibly have got in any other way.

93395. Then you go on to suggest, and this is a new idea I think, that it would be helpful to have a special officer on the staff of the local education authority, who would collect information as to the ways of entering trades and other callings, and place himself at appointed hours at the service of parents who might wish to consult him with regard to the future of their children. Has anything of that kind been at all tried?—In the Fern Street School, Devon's Road, Bow-by-Bromley, there has been started what is called the school settlement. Two or three people connected with the school actually live close to the school, and their business is to visit the children's homes as friends and neighbours, to help in organising various clubs, parents' gatherings, a play centre, and country holidays, and to keep in touch with the children leaving school, and to assist them in finding suitable employment. That takes the school as the unit. In the urban district of Finchley advice in the choice of employment is being given by the education authority itself to young people on leaving school. Every child on coming within six months of the close of the elementary school career is noted in a list, and the parents are communicated with, a friendly letter being sent suggesting they should come to the office and talk over with the education secretary the kind of life that they propose to put the child into, so that the education secretary may help them as to the best kind of preparation for that life; a number of employers in the City are communicated with, so that if they have vacancies they may write to the education authority in Finchley, with a view of suitable candidates being sent for their approbation.

93396. (Mr. Phelps.) Could you tell us in that connection what they do in Germany?—The education conditions in different parts of the German Empire vary very much, but the whole organisation of the educational care of young people during adolescence has made remarkable advances in the last ten years. If it is convenient to you perhaps I might speak about Germany *en bloc*, as it is a rather long and difficult subject.

93397. (Chairman.) Before we leave this point, is this a new departure at Finchley?—It is quite new. Perhaps to save the time of the Commission I might throw a good deal of the substance of these documents into the form of a memorandum, because the details are numerous but important. (See Paragraph 42 (C) of Statement by Witness.)

93398. We should be much obliged to you if you would?—If advice as to employment is to be wisely given to young people on leaving school, it is necessary that the education secretary (or whoever else gives the advice) should know a great deal about the conditions of trade and about the various occupations in the district concerned. I believe that Mrs. Ogilvie Gordon has suggested that this experience should be collected and made available in large cities under the charge of a special officer. I am sure that in a large town such a plan would be beneficial; but the duties of the officer would require the services of at least one man with some assistants, as he ought to be in different parts of the town on different days, at convenient hours in the evening, for consultation with the parents. Care should also be taken to study the interests of girls, and for this reason women should be employed in such a bureau of information.

93399. Of course, if a system like that could be generally established, and you could link up one place with another, there could be communication between those different officials?—I think that is exceedingly important.

93400. You think it would be capable of considerable development in that way?—Certainly.

93401. It is very rarely that parents let the teachers know what occupation they wish their children to go into, is it not?—The skilled artisans in the industrial districts seem to me to be taking an increased interest in the future of their children. It is dangerous to generalise about a large subject of this kind, but I have been impressed, wherever I have been in England during the last three years, with the marked growth in intelligent interest in educational matters on the part of the skilled artisans. I do not think it has extended at present very much beyond that.

93402. The class it has not extended to is the class we particularly want to help, because they would be probably unskilled, and probably the parents of a low grade of unskilled labour?—Yes, but a great deal can be done to

widen the present range of interest ; I am hopeful about the turn things are taking.

93403. We will turn to Germany for a minute. What has been sometimes suggested to us is that the parent or the guardian of the child should be asked, after the child has been to school for a certain time, to designate the class of employment for which it is intended. Is there anything of that kind in Germany ; is the parent obliged to let the teacher know what occupation he intends the child to follow ?—No ; but in certain parts of Germany the period of compulsory school attendance does not end at fourteen ; in such cases every child is necessarily, where the bye-law or the law so requires, under educational supervision during the years of adolescence, and the courses at continuation schools are being more and more made practical, so as to fit the boys, and in some cases the girls, for industrial employment.

93404. Employment in Germany follows hereditary lines a great deal, does it not ?—I do not think I can speak about that. It varies very much in the different districts. Would it be convenient to you to know exactly what is the condition of the law in Germany on this whole subject ? So far as voluntary attendance at continuation school goes, I think that in many towns and districts of England, we are at the top of the tree.

93405. That is, of course, where the attendance is voluntary ?—Yes.

93406. The drawback to having compulsory attendance is that you would increase the number, but you would bring down the standard of the attendance as regards ability and capacity. Is that not generally the case ?—That has not been my experience of seeing it at work in Germany, but speaking again very broadly, the general effect of the German system is to raise the level of the mediocre, to take much closer care of the residuum, but not to give quite as much opportunity and freedom, as is the case in this country, to the exceptionally clever or energetic.

93407. I think it would fit in with your evidence if you were just to describe to us fully the German system of continuation schools, and anything that is peculiar as regards their ordinary elementary education as distinguished from ours ?—Attendance at continuation schools beyond fourteen is obligatory on part, or the whole, of the younger population by local by-laws in nine states of the German Empire, and in the Reichsland of Alsace-Lorraine.

93408. May I ask by "local by-law" do you mean that the whole state passes a law, or that it is optional to the local authority of whatever state ?—In the ten states of which I am about to speak, there is a general permissive law which can be adopted by the town or district, and therefore in these states compulsory attendance at continuation schools is in patches, according to the option of the district concerned. They are the following : Prussia, with a population of 31,000,000, with the exception of two parts of Prussia, Posen and West Prussia, where attendance at continuation schools is obligatory by general law and not by by-law ; there are those two parts of Prussia which are exceptional.

93409. The compulsion is in force either by by-law or general law ?—The compulsion is in force all over Posen and West Prussia, but in the rest of Prussia only locally. Prussia, Saxe-Altenburg, Saxe-Coburg-Gotha, Anhalt, Brunswick, Oldenburg, Mecklenburg-Strelitz, Schwarzburg-Rudolstadt, Lippe and Alsace-Lorraine are the ten constituent parts of the German Empire in which the attendance at continuation schools is compulsory, if local by-laws require. There are eleven states in which attendance is compulsory by state law, within varying limits—Bavaria, Saxony, Württemberg, Baden, Hesse, Saxe-Weimar, Saxe-Meiningen, Mecklenburg-Schwerin, Schwarzburg-Sondershausen, Waldeck and Reuss the younger line. It is obligatory for girls as well as for boys, in Bavaria, Württemberg, Saxe-Meiningen, Waldeck, and in parts of Prussia. There are five states in which attendance at continuation schools at present is wholly voluntary—at Hamburg, Bremen, Lübeck, Reuss, the elder branch, and Schaumburg-Lippe ; but in one of those, Bremen, it becomes compulsory on April 1st next.

93410. What is the result of these laws, some of which are compulsory and others of which are locally optional ?

Have you any idea what proportion of the German population is compelled to attend these continuation schools ?—Complete statistics do not exist. The work of comparing statistics of attendances at continuation schools is one of great complexity and difficulty, and there are not sufficient materials for a complete answer to your question. I have prepared a summarised answer so far as an accurate statement is possible. In England and Wales, where our attendance is purely voluntary, there were by the last published statistics, about 22 per 1,000 of the population in attendance at evening or other continuation schools under Government inspection. Some qualification ought to be made as regards those figures, because in a few cases the same students may be counted twice over ; secondly, the attendance of many of those students is irregular ; in the third place, the duration of the course is often, for the individual student, short. The three parts of Germany where I think I have been able to get figures as exhaustive as our English figures, are the following, Württemberg, Baden, and the City of Munich. In Württemberg, the attendance per thousand in the year ending January 1st, 1906, was 28·8 per 1,000 of the population.

93411. What proportion is that 22 per 1,000 should you think, to those who could attend ?—Of those who leave the elementary schools it is certain that not more than 1 in 3 ever comes under any systematic form of educational care afterwards. I believe, but there is no statistical proof of it, that the proportion is much worse, and that 1 in 5 is nearer the truth. 1 in 3 is, I think, practically conclusively proved. Our lack of statistical knowledge is remarkable, and I should like to lay before the Commission some suggestions for its improvement.

93412. Do you mean in Germany or in England ?—Attendance in England, but it is true in Germany too. The figures in Württemberg that really compare with the English and Welsh figures is 28·8 per 1,000. That omits the attendance at Sunday Schools, which is one of the forms of compulsory attendance. If you include that, the number rises to 44 per 1,000 of population, but I have omitted Sunday Schools, because we have a very large Sunday School attendance in England, and it is not fair to include it in Württemberg, and not include it in England ; then further, the two things are not comparable, because in Württemberg the attendance at Sunday School is more devoted to secular studies, and is much more highly organised. Secondly, in the city of Baden the attendance at continuation schools is 37·7 per 1,000 of the whole population. In the city of Munich, which, so far as my knowledge goes, has the best organised system of continuation schools in Germany the attendance is 40·1 per 1,000 of the population. Just as there are qualifications to make on the English figures, so there are remarks to add on the German ones. Attendance at a continuation school in Germany, being in these cases enforced, is steadier and more prolonged than is generally the case with us. In the second place it is often, though not universally, more closely directed to the industrial and domestic needs of the boys and girls respectively. In the third place much more care is taken to train and supply teachers who are specially prepared for continuation school work. In the fourth place the attendance through the years of adolescence immediately following the close of the day school course is much more thoroughly enforced than with us. The weakness of the English system is that the number of boys and girls attending continuation schools immediately after the close of the day school course seems to be at present almost stationary. The increase is in the case of the older students.

93413. By older, what age do you take ?—I mean over eighteen.

93414. (Mrs. Webb.) Does not the fact that the bulk of the people are, you may say, over the age of mere youth bring in also an element of uncertainty in the statistics ? Do you not have the people who go from one place to another and get entered twice ? Is there not more going from one polytechnic or one evening school to another evening school, so that you get the same person enter as a separate person, where as in Germany you do not get that ?—Possibly. That applies, I think, more to London than to any other town in England.

93415. I was thinking of this. I know clerks wander about, they go in first for typewriting or shorthand in one

Mr. Michael E. Sadler.

4 Feb. 1908.

Proportion of the population attending continuation schools in England and Wales, and in certain parts of Germany.

Attendance at continuation schools in Baden and in Munich.

Uncertainty of statistics of continuation school attendance in England.

Mr. Michael place, and then they go off to another place for something else?—Quite so.

4 Feb. 1908. 93416. Whereas, if they attended, as they do in Germany, they would only be represented by one person instead of being represented by six persons?—I have no reason to think that our figures are so faulty as that.

93417. I was only thinking it is a possible element to increase the percentage of attendance in England?—Quite so. I think it is really very difficult to be absolutely certain about the completeness of these statistics, for the reasons I have mentioned.

ation 93418. (Mr. Patten-MacDougall.) Do you happen to have any statistics about continuation schools in Scotland?—I have not them on this particular point. But, speaking broadly, there is the same tendency in Scotland as in England. The advance of continuation schools in the last three years has lain in the great improvement of the more specialised technical classes, and though there has not been exactly stagnation, there has been a want of encouraging growth in those introductory classes which are specially appropriate to boys and girls who have just left school. There is one more thing which I should like to add with reference to the point which Mrs. Webb has raised. In England we are so fortunate as to have a great variety of voluntary effort in the care of young people of this age; for instance boys' and girls' clubs. Only a small part of those clubs have classes which are inspected by the State, but we ought not to ignore the fact that the educational value of the work of those clubs is very great, and although there is no means for a statistical comparison, I think there is no doubt that the amount of voluntary effort with young people is greater in England than it is in Germany.

Attendance at continuation classes in England and Germany compared. 93419. (Mrs. Webb.) The net result is greater in Germany; if you take the compulsory effort of Germany you get more effort on the whole?—The attendance at classes under Government inspection in the places where I have been able to make the comparison is, as those figures have shown, larger in Germany than it is in England.

Increasing tendency in Germany to hold continuation classes in working hours and not in leisure hours. 93420. Would that enable you to say distinctly that there was more absorption of the leisure of the young boy and girl in Germany than there is in England?—The danger of having systematic intellectual work at the end of a long days' course has been borne in upon the organisers of German education, and the Prussian Minister for Industry and Commerce in an official Order issued, I think, last year, declares that he will not recognise any new continuation classes unless they are held in the daytime or in the late afternoon. There is no doubt that the vast majority of German continuation classes are still held in the evening, but the whole set of opinion is towards putting them into the day time; and in future the Prussian Minister proposes to discourage the recognition of Sunday classes.

93421. Then the continuation classes take the place of work, not of leisure?—Increasingly. One of the bases of it is the Imperial Law of Industry, June 1st, 1891, Sections 120, 142 and 150. Employers of labour are required to grant to those of their employees under eighteen years of age, who attend a continuation school arranged by the Government or by the local authority, the necessary time for school attendance as prescribed by the authority in question.

93422. (Chairman.) Does that limit the number of hours they can work?—Is there any arbitrary limitation or is it merely that they have to find time?—They have to find time. Section 142, I think, answers your question: "By the by-law of a district or town council, attendance at continuation schools can be made compulsory for male persons"—since 1900 for females also—"under eighteen years. The regulations necessary to enforce compulsory regular attendance at such schools may be fixed by the local authority, and the duties of pupils, parents, guardians and employers may be so defined as to ensure the regular attendance, the discipline, and the orderly behaviour of the pupils." The attendance is fixed by the local authority after consultation with those who employ in the trade.

93423. Talking of voluntary efforts, there are in England a good many what I may call voluntary technical schools which are supported by employers?—Yes.

93424. Would the figures that you give include those who attend those schools?—Yes, in so far as they come under Government inspection, which is nearly always the case.

93425. In Germany is there anything of the same kind, that employers have technical schools for their own particular trade or business?—Yes. In many parts of Germany, I am not sure it is not the case in all, all the employers of a particular trade in a particular district are formed into an association and that is taken as one of the units of the organisation of continuation classes.

93426. They do not start their schools on their own behalf for their own particular trade individually?—I cannot answer that question universally, but as a general rule it is now being done by the local education authority.

93427. You have given us, I think, all the figures that you propose now about Germany, have you not?—It might be of interest to you to hear the results of inquiries we have just finished as to the application of this system of compulsory continuation schools to the textile districts in Germany. One of the points I hoped to mention was the objection to the half-time system in the textile trade, and the difficulty of getting day attendance in our English textile districts.

93428. Is the textile trade in Saxony or the whole of Germany?—A good deal in Saxony. There is a good deal in Alsace-Lorraine; there is now a good deal of it in Berlin. We took several centres of the textile industry including Colmar, Mülhausen, Chemnitz, Crefeld, Plauen, Elberfeld, Barmen, Meerane, Augsburg, Berlin and Forst. Those are the chief textile towns in Germany. The attendance at continuation schools is now compulsory for boys to the end of their sixteenth year at Plauen; to the end of their seventeenth year at Chemnitz, Crefeld, Elberfeld, Barmen, Meerane, Augsburg, Berlin, and Forst; and up to the end of their eighteenth year at Colmar and Mülhausen. At Plauen, it is also compulsory for girls up to the end of the sixteenth year. Factory employees within the age limits of compulsory attendance leave the mills early in order to attend the continuation classes between the hours of 5 p.m. and 7 p.m. or 8 p.m. at Colmar, Elberfeld, Meerane and Augsburg; so they are actually sent away from the mills early. Continuation classes are held during work hours for shifts of younger mill hands at Mülhausen, Plauen, Barmen and Chemnitz, and the amount of attendance required at these classes is three times a week at Mülhausen and Meerane; four times a week at Colmar, Chemnitz, Crefeld, Plauen, Elberfeld, Berlin and Forst; and six times a week at Baden and Augsburg. The system of compulsory attendance is reported as working satisfactorily, and as meeting with the approval of the employers and workers at Colmar, Mülhausen, Chemnitz, Crefeld, Plauen, Elberfeld, Augsburg and Forst. At Barmen at first there was grumbling, but the arrangements are working well now. That, I think, means that a system of compulsory attendance at industrial and continuation schools, which began in those regions of Germany where the small master workman is still strong, has spread through the influence of the State and public opinion to the factory districts, and is now being actually tried in the mills.

93429. Are you able to say whether this extension of continuation schools has been carried out without much opposition from the employers in Germany, or have they opposed it steadily?—There has always been a minority of persons opposing; but the motive power for the change has come from the employing class. The employed class has had singularly little to do with it. I cannot find a single case in Germany in which on the local education committee which is charged with the special duty of organising continuation classes the associations of the employed have any representatives at all.

93430. It is all the employers?—It has been done by the employers plus expert central government.

93431. May we not assume from that that the employer recognises the benefit to the trade?—Yes; and I believe though I do not feel sure about this, that it is an effort on the part of the small master workman, by developing his own scientific power, and the dexterity and adaptive

Technical schools supported by employers, in England and in Germany.

Probable origin of continuation school system in Germany.

skill of his men, to hold his own in the economic struggle with the product of the factory system; and that historically that is the origin of the whole system in Germany.

93432. That is very interesting; it is the small masters? —I feel I cannot say that is absolutely certain, but the beginning of the whole of the system of compulsory attendance at continuation schools in Germany was in South Germany, not in North. It began in Württemberg, in Saxony, Baden and Bavaria; it spread very much later, within the last ten years almost, into the factory districts. Those southern parts of Germany are the centres of the old medieval industrial tradition, where the medieval guild still persists in a changed form, and it was the desire to equip themselves for the struggle with England industrially, and subsequently a desire to ward off from Germany the bad effects of the factory system, that seems to me to have lain behind this very remarkable development of State supervision.

93433. (*Mrs. Webb.*) Might I ask whether the small master in Germany corresponds at all to our small master? The small master in England so very often does the worst part of the trade, the least skilled. Do the small masters in Germany do a different part of the trade?—In such a city as Munich some of the best and most intelligent people in the industry are the small master workmen.

93434. You would admit that is different from England, would you not, or what is your experience?—I am not sure about all trades; but I imagine that the great change of the industrial revolution was to divert that kind of power to the organisation of industry on factory lines.

93435. They do not seem to be an analogous class?—No.

93436. (*Chairman.*) You have given us two causes for this improvement, one was their desire to compete with us, and the other to eradicate or diminish the evil of factory production?—Another set of conditions which has made this development possible in Germany ought to be mentioned. Owing to the requirements of compulsory military service and instant mobilisation, the whereabouts of every adult male is known day by day to the authorities; and that knowledge on the part of the police or municipal authorities of the whereabouts of every person forms a convenient basis for extending the supervision of the State during adolescence for educational purposes. In Germany during the last summer I happened to see a good deal of Dr. Kerschensteiner, who has organised the whole or the continuation school system of Munich; and he told me there is no question of difficulty in Munich because the police know all about everybody.

93437. Do you know whether the individual has to keep his domicile registered, or is it the duty of the police? Is there a penalty on the individual if he goes away from where he is domiciled without giving notice?—I should like to ascertain that, if I may, so as to give the answer correctly; but substantially it comes to this: you may not move about without giving notice of your movement. Of course, when you are staying in Germany, after you have been there a certain time, you are regularly visited by the police, and you have to give notice of your arrival in a new place. Again, the German mind seems to me to be more disposed than the English mind is at present to look up to the authority as its adviser. I do not think that is wholly good.

93438. (*Mrs. Webb.*) Is it wholly bad?—No; I think the facts point to there being two different ideals of life. So far as I can find out, and I have tried to make a dispassionate investigation of it, the general results of this system of compulsory attendance at industrial and other continuation schools are regarded with general, though not with universal, approval in Germany. I have myself questioned every boy whom I have been able to find who has gone through the process, and I never yet found a boy who has not said it has been a good thing.

93439. (*Chairman.*) What is the conclusion you draw from that: that we have to proceed very tentatively here?—Very. A number of things have happened within the last year which I think give us much reason for encouragement. People are just beginning to realise that education is a national concern; that it should not be stratified according to, broadly speaking, rather vague social classes, but that it is really an aspect of national

life, and that it must have a very much closer relation to industrial efficiency, and also to the sense of social obligation, than it has had before.

93440. What evidence have you in support of those two propositions? Do you think that feeling pervades any but a rather limited class?—It has been my duty during the last three years, to make on behalf of nine of the local education authorities in England very close investigation into the social and economic conditions of their areas with a view to advising them as to their general educational policy.

93441. Both elementary and continuation?—The whole. When I began, my special task was to advise in regard to higher and secondary education, which included continuation schools and technical schools; but it was necessary also to have regard, in a broad way, to the elementary schools as well. That has given me the opportunity of living in a curiously varied number of districts in England in the last three years, and permission to consult, privately and otherwise, men and women in every station of life, and often to obtain from them very valuable and intimate advice. The districts that I have worked in are Liverpool and Birkenhead, Newcastle-on-Tyne, Huddersfield, Sheffield, the county of Essex, Derbyshire, Hampshire and Exeter; thus it happens that I have had the opportunity of studying industrial and commercial, maritime, agricultural and extra-metropolitan districts; and what I venture to say is the outcome, really, of that period of study.

93442. Did you come in contact with the wage-earners below the skilled classes?—Yes; I tried, as far as my time allowed (I always lived in the places) to consult casually and otherwise persons in every kind of occupation.

93443. So that really what you put forward before us is not your own ideas, but you believe you are accurately representing the views of those with whom you came in contact while on your inquiry?—Yes; I do not mean to say that all the people have formed in their minds this conception that education is a national thing, but it really comes to that.

93444. (*Mrs. Webb.*) It is a feeling of greater obligation about education?—Yes, a greater sense of its importance. You will remember in "The Borough" Crabbe describes the schools at the beginning of the 18th century, and he begins by saying:—"To every class we have a school assigned, Rules for all ranks, and food for every mind." That was really the English ideal of education; the education of the poor was a matter of charity, and a very meagre stint, too; the education of the highly born was largely one of manners; and the education of the middle classes became a subject for struggle between contending parties, and was to a large extent a matter of private enterprise. What has happened during the last ten years in England is that we are beginning to feel that the thing is one whole, and that has opened a new idea to people, it has opened before people's view a new idea of the significance of education for the mass of the people. Then, in the second place new stress has been laid on the importance of the physical side of education, not simply upon physical training during school time, but upon better feeding, better air, and also the better preparation of girls to improve the conditions of home life for their children. There has also been in the last five years a great awakening on the part of the more intelligent employers as to the power of education to increase the adaptiveness and even the trustworthiness of their workpeople.

93445. Do they think it has already increased it? Do they feel that is based on actual experience?—I think I can answer that exactly. Perhaps I ought to explain that the two inquiries on the special point you asked me to give evidence upon, have been these: One was made from the Department of Education of the University of Manchester; it extended over three years, and ended last November; and the other is the one Mr. Acland has spoken of. In the Manchester University inquiry we communicated with a large number of employers under different categories of trade, and the result was this: We found that out of sixteen railway companies, fourteen either gave direct assistance towards the fees of their apprentices attending continuation classes, or otherwise aided them; that out of a total of thirty-four engineering and shipbuilding firms, eighteen excused some day work to their apprentices in order to allow of their attending

people.

technical classes. Out of twenty-two other firms, chosen from all kinds of industries, nine excused day work to apprentices or other employees to allow of attendance at technical classes in the day time, and seventeen out of the twenty-two gave encouragement in other forms to their young people to attend; and with few exceptions all the firms who supplied us with this information are satisfied that the attendance at continuation schools, where the school has been suitably taught and suitable in curriculum, has been very beneficial to their work. In one case, almost the only case in England where compulsion has been tried on a systematic scale for many years (I mean at Messrs. Brunner, Mond & Co.'s, at Northwich) we have absolute evidence, from the people concerned, on the point that you mentioned.

93446. (Chairman.) When you say "compulsion" is it compulsory on the employees?—Yes, at Messrs. Brunner, Mond & Co.'s. there are special arrangements that all youths, not apprentices only, under the age of nineteen, shall attend the evening school at least nine times out of every ten that the school is open.

93447. You mean their school in their workshop?—In Northwich?

93448. No, in their works?—No; they go to school at Northwich, and many of them go to Widnes. The attendance at Widnes of young people during the years when they have just finished their elementary school course is 80 per cent. in the case of the boys. That is the highest in England; and the reason is that Messrs. Gossage and the United Alkali Co., who are the chief employers there, have made attendance compulsory, and that has started the custom in Widnes. Then to answer the question that has just been asked about what the effect is, the works manager reports: "Up to the present we have gained in two things: first, better understanding of a mechanical drawing; secondly, greater ability in setting out work. As regards No. 1, up to a few years ago very few mechanics understood a drawing, and still fewer could make a hand sketch to illustrate an idea. Many of our lads now show great ability in hand sketching with chalk or pencil, and can be employed in measuring up for alterations and repairs, placing their measurements in an understandable form on paper. They all can grasp the meaning of an engineering drawing. As regards No. 2, amongst the fitters, boilermakers, and smiths, we have certainly felt the improvement in a marked manner. To give an instance. Take a repair to a connecting rod end, the smith shows markedly greater ability in making correct allowances for fitting shop work, and when the rough forging comes to the machine tool, the fitter can mark it off to a drawing, or gauge and set up in the machine almost without assistance. It used to be the most difficult of all things to teach an apprentice to set up his work, but now in many cases it comes to him naturally. Amongst the young men who are now in the works, and who only attended the evening school classes, I have some exceedingly clever men, and men who take an interest in the work for the work's sake. I consider that our younger generation of mechanics show a marked improvement both in ability and keenness for work, and it is a pleasure to deal with many of them on account of the interest they display." That is almost exactly the kind of evidence that we have got over and over again in Germany as the result of requiring attendance at such classes.

Deteriorating
forms of
boy and girl
labour.

93449. Have you any evidence at all as to its result on unskilled labour?—I have been making inquiries with a view to ascertaining how far it is true that these deteriorating forms of boy and girl labour are increasing relatively to the population; but this Commission would know so much more about the subject than I that it is not necessary for me to offer evidence upon it.

93450. If we are individually fairly well informed, it is because we have had good witnesses before us. Perhaps you will give us your contribution?—I find it very difficult to form any statistical judgment as to whether these deteriorating forms of boy and girl labour are absolutely increasing, or whether more public attention has been directed to them, and that therefore we are noticing them more.

93451. Would you describe what you mean by "deteriorating forms"? Would you take the very cheap factory work which is mechanical, and which generally

results in persons, when they become adult, being turned off, or are you taking the casual street employment: forms of newspaper boys and messenger boys, and so on?—I think that under these heads some of the most demoralising employments for boys are those which come under the Census return of messengers. In the second place, the results on boys and girls of half-time employment in a textile factory are bad. We have made a special inquiry into that; I simply summarise the conclusion that it is socially deteriorating and physically deteriorating. Thirdly there is a considerable employment in the Government service (postal and other) of young boys who are turned off at the close of adolescence, never having been trained for skilled work. There is also a considerable amount of uneducative employment of youths in a number of other trades, but I found it extremely difficult to prove that the amount of such employment is increasing. The only two cases in the Census where I have been able really to gauge increase or decrease are these. The reference in the Census summary is to "messengers, porters, watchmen, not railway or Government." The number of persons, boys and girls, under fifteen employed as messengers, porters, watchmen, not in railway or Government service, in England and Wales shows an increase of 74.6 per cent. during the decade 1881-1891, and another 66 per cent. in the decade 1891-1901, though the increase in the population during the same decennia was respectively only 11.65 and 12.17.

93452. What was the initial figure, because as you know percentages are a little misleading, it might have been a small figure?—Boys, 1881: 45,114; 1891, 78,169; 1901, 128,787, all between ten and fifteen. The number of girls is much smaller; nearly all the messengers are boys, the girls are only 3.5 of the total. The number of boys and girls engaged as messengers between 1881 and 1901 has nearly trebled. There are more under fifteen now than the full total in 1881. Then I take Government messengers under fifteen, the numbers of which are very much smaller; the boys were 1,831 in 1881; 4,412 in 1891; and 7,684 in 1901, which is an increase of 141.2 per cent. in the earlier decade, and 73.1 per cent. in the second. I tried to make the same calculation for other trades, but the difficulty, as the Commission probably know, is this: The Census tables show the number of boys and girls in the different occupations under each individual year of age up to fifteen, but they do not show the numbers under each individual year of age beyond fifteen; you get a five years group. In order to determine statistically whether boys and girls are taken on and then dropped at the close of adolescence, we must have the figures separately for each year of age during the period from fifteen to twenty. I venture to think it would be a very great gain to our knowledge if in the next Census it were decided to extend up to twenty, or at any rate to eighteen, that classification under each individual year of age, which is already made in respect of the five years from ten to fifteen. It would be a small change, but it is really essential if we are to have exact knowledge of what is going on in this respect. The figures which I have mentioned are the only ones in the Census which give clear proof of the rapid growth in the last twenty years of what I have called deteriorating employment. But there is no doubt what the general impression is. In our Manchester Inquiry into this question of continuation schools we got very careful and elaborate replies from ninety-seven persons with an average experience of from seven to eight years of work in continuation schools. Sixty-five of them worked in cities, twenty lived in small towns, and twelve in country districts; and almost universally those whose work had lain in industrial and commercial centres drew attention to the danger of these deteriorating occupations during adolescence.

93453. What class of person would they be usually? Would all these ninety-seven be much the same, or would any of them be connected with the wage-earning class?—A good many of them are related by family to the wage-earning class, they are mostly teachers in elementary schools, not wholly, but all of them are persons engaged in continuation school work. We wanted to get first-hand knowledge. Then we sent some very highly skilled investigators to different parts of England; and the point upon which you asked me to give evidence, the existence of this deteriorating boy

labour.

labour, was impressed upon us in regard to London by our special investigator, and by the other investigators who made inquiries in Leeds, St. Helen's, Bootle and Liverpool. In the Consultative Committee Enquiry we have had forty-five witnesses, and we have specific evidence of deteriorating boy labour, and to some extent deteriorating girl labour, in different parts of Scotland, in London, Manchester, Liverpool and other towns. So there is no doubt that the existence of the evil is very widely felt. But it is desirable to ascertain whether the evil is really increasing or not; yet, except so far as proof is given by the figures which I have quoted, I cannot found a theory on any firm statistical basis.

93454. There is nothing against the theory either one way or the other; it is a sort of inchoate mass of figures which does not enable you to come to any conclusion?—I am quite sure the evil is very serious, and I suspect that in the large cities it is a growing evil; but whether it is relatively increasing in proportion to the total mass of employment is a matter that does not seem to be capable of statistical proof at present except in certain cases.

93455. (*Mrs. Webb.*) It is not of much importance, is it, if it is really very great, whether it is increasing or not?—I confess I sometimes have very serious fears about this aspect of the factory system—whether certain developments of machinery are not making it profitable to sub-divide the process largely by automatic machinery or to divide it into small bits which a boy can easily learn, and then when the boy comes to demand a man's wages to turn him off and replace him with another. There is no doubt that there are certain parts of certain trades in which this plan is being practised now, for example, in some branches of electrical and mechanical engineering.

93456 (*Chairman.*) It is a modern development of what has been long in existence, but has very much increased of recent years?—Probably.

93457. The figures that you have given us relate only to the messenger employment, and, as I understand, you have not been able to get any figures dealing with the second part of this question, namely, the employment of juvenile labour in factories under conditions which result in their discharge when they come to adolescent age?—Not from the Census, because there is very little employment relatively under fifteen, which is the maximum age up to which we can show the figure under each individual year of age. We really want to know the number of young people of each sex employed in each group of occupations under each individual year of age up to twenty.

93458. Might I put this question, which will perhaps a little elucidate what you have been saying? Did any of your investigators tell you, from their knowledge and information received, that a boy on leaving school had no difficulty whatsoever in big towns in getting this class of employment?—Yes; that is almost the universal testimony, and it has several results. It gives the boy during adolescence relatively a large amount of pocket-money, which makes him independent of home control or largely independent of home control; and in the second place accustoms him to a certain standard of personal expenditure which it is difficult to maintain later.

93459. I suppose you would go further and say that it makes regular employment under strict conditions subsequently very distasteful?—Yes. Many of these boys lose the habit of learning; they get very quick, but they lose the habit of steady application. Here is rather an interesting case. Mr. Kittermaster, who is the head of the Shrewsbury School Settlement at Liverpool, was going to read a paper on Boy Labour and Unemployment at a Congress, and he went round the boys in his class to get facts from them out of their own lives. One boy, finding out what he wanted, said: "I will write you an essay on unemployment." He sat down, asked for a pen, and actually wrote this little essay on the subject: "There would not be half so many unemployed men walking about the streets of our large towns as there are now, if those men, when they were boys, had been apprenticed to some suitable trade." This is a boy who had gone all through it, and whose father was of the same type. "There are at present in Liverpool many boys who work at coalyards for seventy-

six hours weekly, and also errand boys who work nearly as many hours as the above mentioned . . . By-and-by, as they grow older, they just begin to realise their folly of not trying to get a situation in which they might have learnt a trade that would have been of some use to them in after life, instead of having to go out and swell the ranks of the unemployed. Many of the boys in Liverpool, as soon as they leave school, first look out for a job as a printer's errand boy. After a while they get tired of that particular job, and they either get dismissed or they leave. They go on like this for a long time, until (say) they are about eighteen years of age, and at that age they are too big to work as errand boys, and they get jobs as dock labourers, or some join the Army or Navy." That is actually a document written by the boy himself. I have analysed—though I do not want to lay very much stress upon it—the statistics in the returns of the proceedings of distress committees under the Unemployed Workmen Act in the two returns that have been issued, taking groups of towns geographically in order to see whether the percentage of entertained applicants under thirty years of age has been increasing or decreasing in the year ended March 31st, 1907, as compared with the preceding period (not a year in all cases) which we are able to compare with it. Apart from the fact that the percentage of the entertained applicants who were employed in casual and general labour has increased in the later as compared with the earlier period and is now 52·2 of the total number of applicants, the number of those who are under thirty years of age is striking in nearly all districts. The figures are given in the Memorandum of my evidence. I took a number of selected districts, taking London and the suburbs, the chief towns in Lancashire and Cheshire, towns in the West Riding, towns on the north-east coast, towns in the midlands, towns in South Wales, towns in the west of England, towns on the south coast, and towns in the east. The table shows what the percentage was in each of the two periods, and whether it has increased or decreased.

93460. You have told us there is an increase in one sense; is there an increase in the number under thirty?—Yes. The figures are for London and the whole of England. Up to March 31st, 1906, which is a period of irregular length from the establishment of the Committees, 27·3 per cent. were under thirty; and for the twelve months ending March 31st, 1907, the percentage was 30·2, an increase of 2·9 per cent. In some of the towns I do not understand the differences. For instance, at Bournemouth in the early period the percentage of entertained applicants under thirty was 48·3, but in the twelve months which ended on March 31st last, it was 28·05. Therefore, it looks to me as though the figures must afford a rather doubtful basis upon which to found any firm generalisation.

93461. (*Mrs. Webb.*) We have had special information about Bournemouth?—The worst case that I came across anywhere—and I think I have taken nearly all the chief towns—was Warrington. The percentage of entertained applicants under thirty in Warrington in the period ending March 31, 1906, was 42·3 and in the following twelve months it was 66, an increase of 23·7 per cent. It is not too much to say that the whole return throws a serious light upon the points which you ask me to answer.

93462. (*Chairman.*) Now do you want to say anything more about the disease which you have diagnosed?—I should like to associate myself with what Mr. Acland said about the very great desirability of improving the conditions under which teachers and pupils in the public elementary schools do their work. Need of improving atmospheric conditions in elementary schools.

93463. I think we have dealt with that; I think you have established clearly a case that calls for treatment, and somewhat drastic treatment. Now we should like to ask you about remedies. I understand that first and foremost you would put compulsory attendance at continuation schools?—I think I should hardly put that first.

93464. Put it just in your own order then?—I have not come to a conclusion about it, but I have a feeling that what is really wrong is something in our economic structure generally, that is to say, that something much more than an educational change is necessary. But I would like to confine myself to the educational part of the remedy, which I think is capable of being made one of Educational charges necessary.

Mr. Michael
E. Sadler.

4 Feb. 1908.

Educational
charges
necessary.

great importance. So far as the educational change is concerned, I believe that the most important thing for us to do is to extend to elementary schools the present regulation as to the size of classes which operates in secondary schools. By the Government Regulations for Secondary Schools, Chapter 2, Section 13 (a), the number of scholars taught together at one time must not, as a rule, exceed thirty, and must in no case exceed thirty-five. It is not possible for the teachers to individualise the pupils, or really to make hand work and practical work an effective part of the training, if they have each more than thirty or thirty-five children to deal with. Then in the second place, every encouragement should be given by the Board of Education to the local authorities in extending the opportunities for a liberal secondary education and in prolonging the period of professional training for teachers. In the third place, the hygienic conditions of a very large number of the elementary schools seriously need improvement.

93465. May I go back to the teachers? At present, are persons who are trained in secondary schools eligible for teaching in elementary schools?—Yes. By the recent changes of the Board of Education, intending elementary school teachers are encouraged to spend four years during adolescence in a secondary school.

93466. Must a man have passed through an elementary school in order to become a teacher in an elementary school?—No; but the vast majority of teachers will naturally have done so. Then I am inclined to think that we should gain a great deal in England by substituting for our present very complex arrangement of by-laws (which have necessarily grown up, as you were saying to Mr. Acland, by slow degrees) the arrangement which was introduced into Scotland by the Education Act of 1901. That has all the merits of simplicity. Under it, it is the duty of every parent to provide efficient elementary education in reading, writing and arithmetic for his children who are between five and fourteen, the leaving age being fourteen; special exemption may be given by a school board to children between twelve and fourteen. But every exemption has to be recorded and if the Scottish Education Department feel that exemptions are being given on insufficient grounds, they may interfere and may penalise the authority by reducing the grant. The result is, that in 1905, the last year for which I have got the figures, of all the children between twelve and fourteen years of age, only 4 per cent. were exempted. So practically with a few exceptions the Scottish school age is now extended to fourteen. In many cases, for example in Glasgow, any child who is so exempted is required to attend evening school until the age of fourteen. I should like myself to substitute for our complex system of by-laws this perfectly simple and well-working Scottish Act, and thus to get a straight selva of elementary school life to work from. That puts very shortly the chief changes which I should like to see in the elementary schools as a foundation for further reforms in the education given during the years of adolescence.

Importance
of making
curriculum in
elementary
schools more
humane.

93467. Of course, that is a little outside our subject. You would to a certain extent alter the curriculum to make it rather more practical?—Yes, but it is very important to keep it humane, and to make it more humane than it is. The real benefit which elementary education can render in helping to solve the problem which you are considering, is not only in increasing technical dexterity and adaptiveness, but in giving a certain alertness of mind and a sense of social responsibility and a new ideal of life.

Need of
increased
manual
instruction.

93468. Would you agree with what Mr. Acland said about manual instruction?—Yes. I think it is really almost impossible to develop the brain all round unless you develop it through the training of the hand as well as through the training of memory and speech.

93469. Mr. Acland pointed out the system of manual training he would suggest, and said it should be begun somewhat earlier in the schools?—He speaks with great knowledge about it, and so far as I have knowledge of the subject I associate myself with what he says.

Question of
compulsory
continuation
schools in
England.

93470. Coming on now to the question of continuation schools, this proposal was made as regards Scotland and so far as you know it was fairly well received?—Yes, that is so. I have myself made personal inquiries in Glasgow, Edinburgh and Dunfermline, and I have found

that opinion is much riper in Edinburgh and Dunfermline than it is in Glasgow for the adoption of this permissive clause.

Question of
compulsory
continuation
schools in
England.

93471. What do you think would happen, and what would be the state of public opinion, if it was proposed to apply it to England?—I believe it to be the next step which it will be wise to take, but we in England need first, I think, a period of discussion and propaganda; and the publication of the Bill as the Scottish Bill was published, with a view to discussion rather than to immediate enactment, would be a useful thing.

93472. I assume you also want a statement of the cause necessitating this alteration or reform in the law?—I am not quite sure that I have understood you.

93473. You have given us most important evidence to-day about it, and I understand one of the correctives of the state of things which you find is to enforce compulsory attendance for a longer period at school than now exists. The facts that you have been stating to us to-day as to the large proportion of boys who are leaving school to take up profitable or deteriorating employment (thus eventually drifting into the unemployed) I do not think are generally known; therefore, would not a statement of the case for the Bill have a very considerable effect on public opinion?—I think it would. I am not at all anxious that, so far as actual legislation goes, we in England should move hurriedly in the matter. There is much inertia to be overcome. The public does not realise the extent of the evil which is being done. Discussion will throw light upon the question. Opinion will ripen as the facts are disclosed. I judge from my own case. What we have found out during these three years' inquiry has made me realise the evil much more vividly than I did before, and has prepared my mind for extensive action which I did not previously realise to be necessary. Similarly, I think, the public generally will be drawn to similar conclusions when the facts of the case are better known.

93474. (Mrs. Webb.) Is there ever any practical danger of moving too fast in England?—I did not mean that. I want to move as fast as is possible, only I think that the best way of securing effective public action in England is to convince the people, and we can convince them partly by studying the matter and publishing the results of our study, and then by pushing the points home by meetings and agitation.

93475. (Chairman.) Very much as compulsory attendance was obtained in the elementary schools?—Quite so.

93476. It was not universal at first?—That is so.

93477. You would not advocate a proposal suggesting universal compulsory attendance, would you?—Most certainly I should advocate giving the local authority permissive power to adopt an Act on the Scottish lines, but I should like to see a double Government grant offered to those districts which adopted bye-laws making attendance at continuation schools compulsory. I believe if you doubled the grants for continuation school attendance paid to any district which made attendance compulsory for boys or girls up to seventeen, you would very soon get a considerable number of districts to act. Opinion is forming in that direction. I would justify such action on the ground that it would be a very great national benefit to increase the efficiency of the people by this improved education. If, however, attendance at continuation schools is made obligatory, it will be found that great improvements must be made in the teaching staff. Too many of the teachers in evening schools are already tired by their day-work. Again, each local authority should regard the problem of day and evening education as one thing. No teacher ought to be allowed to teach in the morning, afternoon and evening sessions. Two sessions in any one day should be the limit.

93478. You have had a very long experience in connection with educational work; would you mind stating of what it was? For a great many years you were connected with the Education Department as one of the heads?—On leaving Oxford I was connected with the University Extension Movement up to 1895, and then I became Director of Special Inquiries and Reports at the Board of Education; and since 1903 I have been Professor of the History and Administration of Education at the University of Manchester.

Experience
of witness.

93479. So these enquiries to which you allude have already been spread over more than ten years?—That is so; but only within the last three years have I ever closely studied this continuation school question.

93480. Is there anything more you would like to add on this particular point?—No.

93481. (*Mrs. Webb.*) Might we ask you to say something about industrial schools in your memorandum?—Certainly. The old English tradition of elementary education is that you ought to train people through the hand for industry. The French Revolutionary tradition was that you ought to enable them to read books in order to bring about political change with a view to improving their condition. We have had in England, two parallel and concurrent traditions of elementary education—one in the industrial schools which are one outcome of the characteristically English view of education, and the other in the ordinary elementary schools which were, in part, the outcome of the revolutionary movement at the end of the eighteenth century. The latter had the defect of being too bookish, and the other had the defect of being too utilitarian. The tendency of all educational thought during the last few years has been to fuse those two traditions and to show that each has something to learn from the other. Efforts are being made to correct the bookishness of the public elementary school by the practical work of the industrial school; and to enlarge the utilitarian work of the industrial school by the humane and stimulating elements found in the more literary education of the other. There is every sign that those two tendencies are melting into one another all over the world.

93482. Has not the industrial school been a good deal injured by its association with a sort of servile pauper idea?—Yes, because it is the direct outcome of the period when people thought the elementary school was only a matter of charity and closely related with the Poor Law.

93483. Would it not be of great advantage to hand all industrial and pauper schools over to the education authority?—I do not think I know enough to answer that question. Through the work of Mr. Legge, who is now at Liverpool, and who was the Inspector of Industrial and Reformatory Schools under the Home Office, a great improvement was made in the intellectual outlook of the industrial schools. Now he is carrying his experience into the Liverpool elementary schools, and trying, with the authority of the local education committee, very important experiments in practical work in the elementary schools.

93484. (*Mr. Patten-MacDougall.*) Both Mr. Acland and yourself, I think, have spoken about the physical deterioration of these schools owing to bad ventilation, insanitary conditions and other conditions, as I understand it. I think in the Bill to which you have referred, the Scottish Bill, there was a clause, was there not, providing for the medical examination of the children in schools, and that medical examination, I suppose it is within your knowledge, does now exist in the Edinburgh board schools?—I do not know about that.

93485. Is that the line you suggest for meeting what you say is a grave defect of the present system, namely, bad ventilation and bad sanitary conditions?—I think our study of the physical conditions of education will lead to great reforms. As I have been about from school to school, I have been very much impressed by the bad atmosphere of many of them. The points that Mr. Acland has referred to are the result of scientific investigation, reported to the consultation committee.

93486. There was a proposal in the Scottish Bill last year was there not, for the medical examination of all the pupils attending schools in Scotland?—I believe there was. I am sorry to say I did not bring my Bill with me, but there is one instance now at Dunfermline where it is helped by Mr. Carnegie. I think it is very important to bring all this continuation school work into close connection with the factories. At Messrs. Cadbury's, at Bournville, the boys and girls who are employed there have periods of physical training during work hours and I was very much struck in visiting these works with the beneficial results of that.

93487. Are the schools they attend on the premises or outside?—The evening schools which they attend are outside and are attended after work hours are done; but Messrs. Cadbury's have a splendid swimming-bath and a room for Swedish drill for the girls and another for the boys with a gymnasium.

93488. By "connection with the factories" do you mean that the instruction should at all be connected with the particular trade or business which they are associated with, or do you mean that it should fit into the hours?—I meant that it should fit into the hours as well as the other. If we are going practically to educate these young people in factories, the education will have to be given, to a considerable degree, in the daytime. At Messrs. Rowntree's all the girls receive two hours a week very practical training in household work and cooking, in shifts during work hours, in beautiful school-rooms built by the firm and by teachers who are employed all day and who are engaged by the firm. Then there is the very serious matter of the telegraph boys in the Government service, especially in the large towns. I would suggest that it might be found practicable in some of the big post offices in the large towns to have one or two rooms which would serve as schools where, with the help of the local education authority, these boys could receive appropriate education. There are 448 telegraph messenger boys at the Manchester Post Office; they are at a very critical period of their life, and it is very difficult to have them off in the daytime. As you know, most of them are paid by the job.

93489. (*Chairman.*) Are they not paid by the week?—No, most of them are paid by the message. It has been suggested to me that the best course would be to have a little continuation school in the Post Office, officered by the local education authority, for these boys, and that that would cause the least waste of time during their work. It has happened to me that I have been for several years in charge of a staff. At Christchurch I was in charge of a large staff of cooks and other persons, including apprentices, and I was very anxious to give these boys a better technical and general training. It would have been perfectly possible for us by arranging their hours of work to send those boys off in the daytime to a continuation class of that character. I think many people who are the heads of large offices could, if the duty was laid upon them by the State, so organise their work as to spare a boy at suitable hours for attendance while on day work. That is why I should like to see in England the obligation laid upon all employers to do this. I am sure that with a little organisation many firms, which now think they could not spare their boys, would be able to do so, and that they would gain much by the increased efficiency of the work. But I am bound to say that I have not yet found anybody in Lancashire who will say that the young people between fourteen and eighteen could be spared off during mill hours from the cotton mills.

93490. (*Mrs. Webb.*) Was there anyone in Lancashire who said that, when it was a question of the young people at nine being spared originally?—There was a little group of people to whom Robert Owen belonged, who always said it.

93491. (*Mr. Bentham.*) That is rather a different point. That was a question of whether they might be partly employed and partly excused, but your question relates to whole employment at that age. Half-time is recognised in Lancashire, but you would let them out when they are on full-time to attend the classes, at least, so I understand you?—Yes. It is really a double problem. Personally I think it will be possible to abolish half-time in the textile trades by two stages, first of all, making thirteen the minimum for total exemption, and then fourteen. Beyond that, if we are going to grapple with the educational needs of adolescence, these boys and girls who are in the mills from fourteen to eighteen ought, as it seems to me, to have part of their continuation work done in work hours and not in the evening. For some of the boys and girls the physical strain is not too great—for some of the boys at any rate; but if you are going to make the continuation school work intellectually severe, I think it will be necessary to do it partly in working hours or in the late afternoon.

Mr. Michael E. Sadler.

4 Feb. 1908.

Training of girls at Rowntree's. Problem of the telegraph boys.

Desirability of compelling employers to organise their work so as to give opportunities to boys and girls of instruction during day-time. Difficulties in regard to half-timers in cotton mills.

Mr. Michael E. Sadler. 93492. There is a great difficulty in following the processes of manufacture under such a system, is there not?—The reason I made an inquiry into the working of the system of compulsory attendance at continuation schools in the textile districts of Germany was to find out what they were doing there as compared with what we are doing here in England. Nobody seems to be in a position to compare thoroughly the real conditions in a German cotton-mill and in an English cotton-mill. I suspect that the conditions of work in the English mill are more severe than they are in the German mill.

Increased interest among the working-classes in the education of their children.

93493. (*Mrs. Webb.*) I understand that you are distinctly of opinion that there is an increased feeling of obligation about the education of children on the part of the better kind of artisan?—It is quite remarkable, and certainly it is growing year by year among the best artisans.

93494. Do you think it is extending downwards at all?—I think it is a very infectious thing.

93495. In your opinion the provision by the State of free education has not diminished the sense of parental responsibility about education?—That is a very many-sided question, and I should not like to venture on a short opinion about that.

93496. I gathered that you think the interest has increased?—The desire to get opportunity for their children has increased. What strikes me nearly everywhere is that people talk about what the State shall do for them, but very little about what they shall do for the State.

93497. But on the whole does it make them feel more or less responsible about their children?—It has made them more ambitious for their children.

93498. What you want to develop is a sense of the other side of the obligation?—Yes. I think that we can do a good deal more by means of teaching to make the younger generation feel that they owe personal service to the community, and I think that that is the real weakness, the psychological weakness, in our English position. So many people seem to regard the State as simply meaning the mass of well-to-do people—not themselves.

93499. You think you have already got a greater feeling of parental responsibility now, and you want to develop a feeling of obligation towards the State?—I did not go so far as to say I think there is a greater feeling of parental responsibility; I think it is so hard to generalise or to compare. I think there is a distinct increase of ambition for the children, and I desire that local public authorities should extend the opportunity.

93500. Does that accompany any capacity of the parents to make some sacrifices in order that the child shall enjoy the advantages offered by the community—because there is a good deal of sacrifice involved in permitting a child to continue its education?—I believe that there would be a willingness to make more sacrifices. It may interest the Commission to know how much has been done to extend the range of educational opportunity. Mr. Bompas Smith and I have during the last year been investigating the scholarship system which is giving such opportunity, and we find that £400,000 a year is spent in England alone on scholarships and in maintenance allowances.

93501. That is an enormous increase?—It is enormous.

93502. And practically it has all been done in fifteen years?—There have always been scholarships in England to a considerable amount, but the aggregate value has greatly increased since 1902.

Mr. JOHN H. ROBERTS, Mr. ARTHUR J. CROXFORD, and Mr. HENRY STONE, called and Examined.]

Mr. John H. Roberts, 93503. (*Chairman.*) You gentlemen appear on behalf of the Metropolitan Rate Collectors' Association, I think?—(*Mr. Roberts.*) Yes.

Mr. Arthur J. Croxford, 93504. You have prepared for us a Memorandum and certain replies to some questions which have been submitted to you?—Yes. (*The Witnesses handed in the following Statement*) :—

Mr. Henry Stone. In submitting the following memorandum upon the practicability of abolishing the Commission allowance to owners under Sections 3 and 4 of the Poor Rate Assessment and Collection Act, 1869, the Metropolitan Rate Collectors' Association respectfully desires to state that the remarks contained therein are not in any way put forward as being the views held upon the subject by any of the Metropolitan Borough Councils, but are prepared as the result of a discussion by the members of this association upon the probable economic effect such abolition would have upon the total amount of the rate collected.

1. It appears that either Section 3 or Section 4 is in operation in all the Metropolitan Boroughs with the exception of two, but the rates of Commission allowed vary from 5 to 25 per cent., and from 17½ to 25 per cent. under the respective sections.

2. In some Metropolitan Boroughs, where the abatement borders upon the maximum allowed by the sections, the whole of the proportion of the general rate allocated to the direct purposes of the Borough Councils is swallowed up, and the balance actually collected is not sufficient to satisfy the demands arising from the central authorities and the guardians of the poor, in respect of the properties for which the allowance is made.

3. One of the chief points to be considered in the event of the abolition of the sections appears to be what course the owners would take should application for the rate be made direct to the occupier.

A large number of houses in the metropolis let at inclusive weekly rentals are assessed at amounts of over £20 rateable value, and although the occupier is legally liable, and application is formally made to him for payment, yet the amount is almost invariably paid by the owner or his agent. Moreover, the rate collector is often requested by the owner to send the

several applications direct to him so that the tenant may not be inconvenienced.

In view of the action so generally taken in these cases, it appears probable that the owner would, in his own interests, carry out the terms of the contract with the tenant in regard to houses for which he now compounds, and pay the amount of rate due before the time arrives for the issue of summonses for its recovery, so that in actual practice the percentage of cases where the rate to be recovered from the occupier paying an inclusive weekly rental would be small.

This conclusion seems to be borne out by the action of the owner after a quinquennial revaluation. If, during the quinquennial period, such an increase in rent has occurred as to fully justify an increase in the rateable value to above £20, he generally proves amenable to circumstances and continues to discharge the usual outgoings just as when he received the compounding allowance.

4. There seems also to be somewhat of an anomaly when comparing the houses coming within the working of the sections and those outside. Two houses, each let at a weekly inclusive rental, have rateable values, one of £20 and the other of, say, £30. The owner of the first gets an abatement for compounding of anything up to 25 per cent. In the second case the rate is paid in full, and yet the general experience is that the smaller house is the more likely to command a reliable tenant, and will probably incur less loss of rent to the owner than the larger one; in fact, as a rule, houses at rateable values of £20 and under form one of the best letting classes of property in the metropolis.

5. On the other hand, there are some boroughs where many of the smaller houses (cottages rated at from £8 to £20) stand empty for a considerable portion of the year, and, moreover, are let to a migratory class of tenant, from whom it would be difficult, if not impossible, to recover the rate, experience proving that in very few cases are the effects sufficient to satisfy the warrant of distress. In such kinds of property it is hardly likely that the owner would take the same action with regard to the rate, and it would be incumbent upon the councils to go direct to the occupier. Here it would be necessary to adopt some such method as a monthly, or even weekly, collection of the rate. This would involve a very large increase

Likely of parent making more sacrifice for the education of children.

Probable course which owners would take should applications be made direct to occupiers for the rate.

in the cost of collection, in addition to the loss by reason of empties, and as this particular class of house prevails in certain defined localities (generally in districts upon the borders of the metropolitan area) the loss would fall very heavily upon the individual boroughs concerned.

The same conditions seem also to prevail in a considerable number of the large blocks of workmen's dwellings.

Losses of this nature the association considers must of necessity arise in respect of property of this class, for one reason on account of the difference in the legal procedure open to the owner, and that which has to be followed in the recovery of the general rate.

The owner may distrain at any moment when rent is owing, but the local authority has to issue a summons for the defaulter to appear before a justice of the peace or magistrate, and get a warrant signed before the distraint can be made. The length of time occupied by this process allows plenty of opportunity for the tenant to abscond, and that this often occurs seems specially borne out by the number of committal warrants issued in districts where direct collection from occupiers of small property is in vogue.

6. Another feature which will very largely influence the cost of direct collection is the question of the separate rating of tenement houses. Some metropolitan boroughs do not entertain a separate rating of tenements unless structurally severed, while others assess each separate letting. This, of course, means an enormous addition to the work and cost of collection, and although it will add largely to the total rateable value and the contributions to the Central Authorities, will not result in a correspondingly large increase in the total amount of rate collected, for occupiers of this description of tenement will probably prove the most difficult of any to recover from, not only by reason of the lack of effects, but also from the frequent alterations which take place in the number of rooms taken when changes of tenancy occur. The houses usually divided into separate tenements are those which, if assessed as a whole, would be of a rateable value considerably over £20, and this method of letting is largely adopted simply because the owner finds it difficult to secure a tenant sufficiently reliable or substantial to take the whole house. If however, the separate tenements are assessed according to the London County Council scale the total would represent a value considerably in excess of what the owner would be willing to take from a reliable yearly tenant, and although the councils would be paying upon the increased values, the losses from empties and irrecoverables would probably reduce the amount collected to that originally received from the one assessment.

The case *Davis v. Wallis* (Islington) will have a very important bearing upon this question when decided.

7. Having gone fully into the several aspects of the matter the association have come to the conclusion that taking the metropolis as a whole, the abolition of the compounding system would result in a considerable increase in the total of the rate collected, but that in certain specific districts if direct application to the occupiers is substituted, the loss from empties, increased cost of collection and irrecoverables, would be greater than the allowance for compounding.

8. If the association may be permitted, they would respectfully submit that measures somewhat on the following lines would serve as an alternative to the compounding sections.

That the owners of all houses let at weekly or monthly rentals, inclusive of rates, should be made liable for the payment of the rates.

That in computing the gross value of a house of this class a certain percentage (up to, say, 10 per cent.) varying according to local circumstances, be deducted from the gross rental before applying the scale laid down by the London County Council for calculating the gross value.

This is suggested as a means of putting the payment in respect of precepts levied on rateable value; and the actual amount collected upon the same basis, giving the owner some compensation for occasional loss of rent, but leaving the empties to be allowed for in the usual manner.

9. The association have also considered the probable effect the direct application for rates upon occupiers of this class would have in connection with the interest taken in local government affairs, and their experience at municipal elections leads them to the conclusion that the amount of interest taken depends almost entirely upon the activity of the local party organisations, and that personal interest without such influence would be practically nil.

Question I.—Is composition by owners for the payment of rates the rule in your districts?

*Answer I.—*In all boroughs with the exception of Islington and Lewisham.

Question II.—Is direct payment by occupiers (a) possible, and (b) advisable? If in your opinion it is impossible, would you kindly say on what grounds?

*Answer II.—*We hesitate to say that it is impossible, but the owner would have to be prohibited from discharging the rates where houses are let at inclusive rentals to make it practicable.

We are decidedly of opinion that it is inadvisable for the reasons stated in the Memorandum.

Question III.—Do variations in the rates effect rents where composition is the rule?

*Answer III.—*Yes. In many cases if the rates are increased owners raise the rents.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

*Answer IV.—*In our opinion the direct payment of rates would not induce occupiers to take any greater interest in local government. See paragraph 9 of the Memorandum.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

*Answer V.—*No experience in weekly collections. We do not think such collections possible to be attended with satisfactory results.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

*Answer VI.—*We believe that if a weekly collection were compulsory, and that if owners were not allowed to pay direct, the cost, with the consequent loss, would be greater than the abatement now allowed to owners.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

*Answer VII.—*The system of compounding has no appreciable effect upon the value for rating purposes of the property compounded for.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

*Answer VIII.—*An allowance for payment of rates in advance in the instances of direct payment would not be taken advantage of by those concerned often through want of means and also from the possibility of a weekly or monthly tenancy terminating before the close of the period the rate covers.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

*Answer IX.—*We do not consider that the present system of collection of rates tells unduly on occupiers paying direct.

93505. (Chairman.) Speaking generally, you are not in favour of attempting to collect the rates weekly with the rents?—(Mr. Roberts.) No, we are not. We consider that would mean so great an increase in the expenditure that it would be hardly advisable, from an economical point of view, to introduce it in London.

93506. We rather want to look at it from two points of view—from the expenditure side, and also from the

the rents.

social side. I quite understand that it would give a great deal more trouble, and I quite understand that it would be very unfair to attempt to put the weekly collection upon rate collectors when previously they had only had to collect from the landlord. But dismissing that, and looking at it simply as an abstract question, there is no insuperable difficulty except in certain cases in collecting the rates with rents where the rent is paid weekly; is there?—No; I think there is no insuperable difficulty in collecting weekly. But you see the present machinery of the landlord is so split up from what it was or would be with a collection by the rate collector. There are so many landlords, and it takes so short a time during the day for each landlord to collect his own rents, that many of the people who would be going out and would not be at home during the after part of the day, pay the landlord, but they would be away from their homes when the rate collector called.

93507. But could not the two be collected together?—The rent and the rates are now collected together.

93508. Could they not be collected together, and the man who collected on behalf of the landlord be held responsible for the payment of the rate?—That is exactly what we think is the most desirable point, and that is what is actually done now; the landlord pays in almost all cases.

93509. But the tenant or the occupier only pays in the shape of rent, which includes the rate; and it has been suggested to us that the two can be put separately and collected at the same time?—So as to show the exact amount of rates the tenant is paying?

93510. Yes, that practically was the idea. It is suggested in order that the tenant or the occupier may take an interest in local taxation and see that it does directly affect him, at least in many cases does when the rates rise. That is roughly the idea that is behind these questions. Now may I ask you, as representing the Metropolitan Rate Collectors' Association, whether rate collectors, as a rule, are whole time men?—Almost every one of them now is throughout the Metropolis; that is one of the conditions of appointment almost throughout the boroughs of London.

93511. Your entire business is collecting rates, I suppose?—Yes, and giving such information as is required by the overseers in making up parish lists, borough lists, and jury lists.

93512. I suppose none of you are employed by the Imperial Government for the collection of taxes?—I think with the exception of one in Deptford, there is not one in London now.

93513. It is contrary to practice, I suppose?—Quite contrary.

93514. Then as to the terms of your appointment, are yours permanent appointments?—Yes, now they are permanent appointments.

93515. I suppose there are a good many rate collectors who have held their offices for many years?—Yes. I have been for about sixteen years a collector, and I have been twenty-six years in the service of the borough, having spent about eleven years in the office before I became collector. Many other collectors have done as much, and one of my brother collectors has held the office for thirty odd years.

Difficulties of
collecting
rates by the
week.

93516. Where I understand there would be a difficulty about collecting the rates by the week, is in buildings which are divided into a number of tenements?—The greatest difficulty with us would be with that class of tenant.

93517. And it would be very difficult to apportion between each tenement the exact proportion?—Yes, because very often the rooms that are occupied one week are differently let the next week; a man takes one room one week and then the landlord lets the whole floor perhaps and sometimes two floors together.

93518. And that constitutes a very considerable difficulty?—It is a very considerable difficulty.

Variations in
allowance
made on
compound-
ing.

93519. Looking at it from the economical point of view, at present there is a very great variation in the allowance I see which is made; I suppose that depends very much upon the locality?—Yes; it has been gradually reduced in many of the boroughs of London down to so little as 5 per cent., I believe, in some of them.

93520. I assume the percentage would generally indicate the nature of the district where the rate had allowed to be levied?—Yes, but it varies very much in some made-up parishes; in Kensington, for instance, it varies from 25 to 10 per cent.

93521. There are some very poor parts in Kensington? Very poor—as bad as any in London.

93522. Up in the north of the borough, where you get a shifting population?—That is right.

93523. And in that part near Wormwood Scrubbs?—Yes, just by the Canal, and what is known as Notting Dale.

93524. What is the percentage in a bad district? Would it be the maximum, the 25 per cent.?—The class of house varies very much in the district. A small house always lets better than a larger one; and although it seems rather to follow that you could say that the more rooms there are in a house, the better tenants will you get, it is not so. A man who can get a small house that will just take one tenant goes to it if he is a respectable man, whereas with the larger houses, they are chiefly let out in tenements, and there is no doubt a different class of tenant altogether collects there.

93525. A house of £20 in London is a better letting house very often than a house over £20?—Yes, it lets very much better.

93526. What is the minimum that is allowed on compounding? It is limited by Act of Parliament, is it not?—Yes; it is 25 per cent. under one section, and 30 per cent. under another section. Under the one section it is a compulsory rating of the owners, but the council have to pass a resolution that the owners shall be compulsory rated. There they are allowed 15 per cent. under any conditions, and their empties as well. Under the other section, the owner must enter into an agreement with the council, and then he is given anything up to 25 per cent. which the council may agree with him.

93527. Are you paid according to the amount collected, or by a fixed salary?—It is a fixed salary almost everywhere.

93528. Then, naturally, if you have got a fixed salary, and you now have to collect rates periodically from the owners, your work would be very different if you had to collect the rates weekly from the occupiers, I mean it would be a very much heavier job?—It would be impossible to be done. Our time is quite fully occupied now. There is so much clerical work now with the different points brought up by the Local Government auditor, that I should think one might say that 15 or 20 per cent. more of one's time is taken up now than was the case a few years ago.

93529. Assuming any idea of the sort was given effect to such as I have suggested to you, one of two things would happen—either the collectors would have to be very largely increased, or the work would have to be done through some agency independent of the collectors, which would enter into a guarantee for the performance of the work?—Yes. I must say I think it would be quite a different class of men who would be employed for the weekly collection, because one could hardly see oneself turned from the position of rate-collector at present into a weekly collector of 2s. or 1s. a week from different tenants.

93530. What is your opinion of the effect of compounding? Does it diminish the interest in elections, or do you think it would not matter one way or the other?—I think it has not the slightest effect. I think so far as one can gather from the experience of local elections, there is no doubt that it is entirely dependent upon the local organisation of one Party or the other.

93531. It is one Party or the other, or whatever may be the nature of the cry?—Yes, exactly.

93532. Is there much less interest taken in Poor Law guardians' elections than there is in borough council elections?—Very much less. I was very much surprised at the first election I attended of the guardians to see the very little interest, indeed, that there was taken in it.

93533. Your experience extends over a number of years?—Yes, it does. I have attended those elections ever since I went first in 1882.

London.

93534. Should you say that of all the elections that have taken place in London, including the old school board elections, there was less interest taken in the guardians' elections than in any other?—Yes.

93535. Has that always been the case?—I believe it has, except one got a better result some years ago when the voting papers were taken round by the policeman, and were collected also from the houses afterwards.

93536. I mean since the Ballot Act it has always been so?—Yes.

93537. (Sir Samuel Provis.) You have got two classes of cases, have you not—cases that would come under Section 3 and cases that would come under Section 4?—Yes.

93538. Let us take the class under Section 3 first of all. That is a voluntary arrangement with the owner?—Yes.

93539. Do you find in those cases the owners generally will agree?—A good deal depends, of course, upon the rate of deduction allowed by the local authority, but in almost all cases they do enter into the agreement.

93540. Do you find that in cases under Section 3 the local authority lay down a certain sum for the overseers which they may allow to the owner, or does it vary in particular cases?—I have only an experience of Kensington, but I believe it is very generally adopted that they do lay down a certain abatement for certain streets, which would mean different neighbourhoods and different classes of property.

93541. Therefore they would have regard to the nature of the property?—Yes, they would determine the deduction, according to the nature of the property.

93542. Would it be in all cases where the property was under £20 rateable value that agreements would be made where Section 3 is in force?—I think not in some parishes. (Mr. Stone.) In Deptford it would. (Mr. Roberts.) In Kensington I know they put down one class so low as 5 per cent., and of course, it would not pay the owner in that case if he had any empties.

93543. I suppose the reason why the local authority prefer to go under Section 3 rather than under Section 4 is that they may select the cases for agreements?—I daresay that has something to do with it, but the great thing which would influence them is that they are not obliged then to allow the 15 per cent., and they can make their total deduction under the agreement less than what they are compulsorily bound to deduct under Section 4.

93544. In point of fact the allowance is generally less than 15 per cent.?—I believe the average has brought it down from 10 to 15 or 12½ to 15.

93545. Now let us come to Section 4; there the owner must have the 15 per cent.?—Yes.

93546. He may also have a further 15 per cent., or at least a sum not exceeding 15 per cent., if he pays whether the house is occupied or not?—Yes.

93547. How far do the owners agree under that later provision in the cases in which an order under Section 4 is in force?—That depends a good deal on the property, and whether they are likely to get many empties or not. Taking 15 per cent. with empties sometimes pays a man better than it does to take the 30 per cent.; but generally speaking if the council have allowed the second 15 per cent., making 30 altogether, almost invariably the owners compound or enter into an arrangement.

93548. In those cases under Section 4 the owner is entitled to 15 per cent. absolutely, and the amount within the 15 per cent. additional to which he is entitled is a matter of agreement with the overseers?—Yes.

93549. Do the local authorities say as regards the empties, that is to say, as regards paying whether the houses are occupied or not, that there shall be a particular scale?—Yes.

93550. Do I make clear to you what I mean?—Yes, I think so. You mean do they allow various percentages?

93551. Different rates of percentages?—I might say that our general experience now is that almost all the boroughs in London have done away with Section 4, Sect. 4 of the Act in London.

Since the passing of the Act of 1869 the conditions have very much altered. At that time the council were giving their percentage on the amount of money they collected themselves; now they have to give the percentage on the whole of the amount collected, so small a portion of which is under their own control; and it lies very heavily upon them now. In fact, the commission is, from an economic point of view, really out of date; it does not apply, and the conditions are not the same now as they were in 1869.

93552. So that practically we are thrown back on Section 3?—Yes; and even Section 3 is worn out under present conditions. It is not quite fair, in my opinion, to allow it on that basis.

93553. Not quite fair, do you say?—I think not. I think the rating should be on a different basis if there is going to be an allowance to the owner, because it comes so very heavily in some parishes when on the smaller houses they are giving almost the whole of the local authority expenditure back to the landlord, thus throwing the whole of the expenditure upon the other ratepayers who are not under the compounding allowance.

93554. But then in the case of Section 3 the local authority have determined in the particular case whether they will agree or not?—Yes, they have the power, but you see it is not altered every day. If it is in force it remains in force year after year until some particular person perhaps brings it up.

93555. So that you think under Section 3 the owners would always agree practically?—Yes, I think they would if there was anything like what they consider a decent allowance.

93556. Would the local authority agree?—I do not know, and I think I cannot go quite so far as to say the local authority would. I think they have seen the point much more clearly now than they did some few years ago. During my experience the conditions have altered very much, and the rates of deduction have altered very much too.

93557. Would it be possible for the rate and the rent to be collected by the same man, but as separate items collected at one and the same time?—And for that man to hand the result over to the council?

Difficulty of collection of rent and rates at same time.

93558. Just so?—I should pay direct to the Council.

93559. You would pay the rate direct to the Council, but you would pay the rent to the landlord. Might we not have the same person to collect both the rates and the rent?—And to send an account in?

93560. Yes, he would account to the local authority, the council, for the rate?—I should think it would be very difficult, and very unadvisable.

93561. Just tell me why you think it would be difficult, I want to hear the reason?—For one thing it opens the door to so many people having the handling of the money, and I do not quite see that one could be certain of getting the amount of the rate the same as the landlord gets his rent. The landlord is not bound to divulge the amount of the rent he gets. The Council have the power of making an assessment on the house, and they do ask him to make a return of the rent, and at that particular time, no doubt, he makes the return fairly accurately; but during the course of the five years it may vary very much, and I think he might put down an increase as due to the rates when very often it is an increase in his own rent and goes into his own pocket.

Mr. John H. Roberts, Mr. Arthur J. Croxford, and Mr. Henry Stone.

4 Feb. 1908.

Mr. John H. Roberts, Mr. Arthur J. Croxford, and Mr. Henry Stone. 93562. Supposing you had the same man to collect the rent for the landlord, the landlord for his own sake would see that the amount of the rent was made known to the collector so that it should be collected?—I hardly think that sometimes it would be for his own sake.

4 Feb. 1908. 93563. That is the only way in which he would get his rent?—I confess I see very great difficulty, having had some experience with tenants of a very poor class, and having had experience of the landlords.

Difficulty of collection of rates weekly from poor tenants. 93564. What is the nature of the difficulty that you see? I am not combating your view, I only want to get out the facts?—I think to start with that very often when you come to the very poor class of tenant, he would soon find out if the landlord were collecting the rate in the ordinary way, and he would not pay it, because he would know at once that he would not be bound to pay it. We issue our summonses once in a half-year, or once in a quarter, according to the quarterly or half-yearly collection.

93565. But he is bound to pay the rate as soon as it is made, as the rate is due the very day after it is allowed by the Justices?—You would never get a man in a poor district who is probably going out within a week to pay three month's rates.

93566. I think now you have to collect the rates every three months?—Yes; but you might get an order week after week on him and you might have to summon him for these different amounts.

93567. Supposing you are collecting the weekly rent, what is the insuperable difficulty of collecting the rate for the week at the same time?—If he refuses to pay, what would you suggest our position would be?

93568. You would have to recover the amount from him?—By summons and warrant? He would be gone before we could get it.

93569. Why? Would not the same difficulty arise with regard to the rent?—No, I think not. He would know the time that it would take us to get out a summons, and he would say: "I can get two or three months clear before there is a summons issued; so I will wait; I will pay my rent, but I shall not pay the rates, and then when I am obliged, I will go."

93570. Is not this really one of your many difficulties, that the amount paid in respect of a particular week would be very small?—Yes.

Extra cost of summonses, etc., which would be entailed by weekly collection of rates. 93571. If you wanted to get a warrant for that amount, would the cost of getting the warrant be more than the rate was worth?—Actually there would be no cost to the council, above what would be caused by the other rate-payers. We get the summonses signed by a Justice of the Peace, and while one lot is being printed, they could all be printed. But it is only done now once in three months or six months as the case may be; and if it came to be continual, of course it would mean a very considerable extra expense.

93572. Under the plan that is suggested, you would be obliged to enforce the weekly payment of the rates, consequently, supposing that in a particular week the rate was not paid, you would allow a week or a few day's grace and then you would take out a summons for that particular sum; is that practicable?—I think not, because you could not get a sitting of the magistrates, and if you go to the Police Court, the expenses would be 1s. or 2s. for the summons, and 1s. or 2s. for your warrant to start with.

93573. There would be no expense, would there, in enforcing the payment of these small sums?—If taken before a Police Magistrate there would.

93574. What would the expense be?—I think 1s. for the summons or 2s., in some cases according to the place in which a summons is taken out, and 3s. for the warrant. Most of the boroughs, I believe, take them before a Justice of the Peace and not before the stipendiary magistrate.

93575. And they recover the fees as part of the cost?—We charge 6d. or 1s. on each to cover the cost of granting the summonses.

93576. Supposing that a method such as we are discussing was adopted, you would require to have a very large number of collectors in any populous parish, would you not?—Yes.

93577. What is your own parish?—Kensington.

93578. Supposing you had a weekly collection of rates in the case of tenement houses, you would want a large number of persons to collect them, would you not?—I really have had no experience, but I should think that must be so in some instances. Take a man who went round from house to house to collect his 1s. or 2s.; what would he do? 300 a day.

93579. How many collectors are there in Kensington now?—Ten.

93580. How many would you want if you had a weekly collection of the rates in respect of the tenement houses?—I am afraid I could hardly tell you that. My experience does not cover the collection of rent there.

93581. Would you want twice as many?—I should think no man could go round once in a week to a fourth of some of the districts.

93582. Therefore, you would want four times as many?—In some districts; in others you would not want any more.

93583. It would necessarily depend upon the number of tenement houses in particular districts?—Yes.

93584. Therefore, it would apply more in the poorer boroughs than in the larger ones, obviously?—It would apply entirely to them.

93585. Would you want a great number in addition, on the whole?—I should think so. I must admit that my experience there is very small, because our work is so largely clerical work. It is not a matter with us of just walking round every morning from house to house.

93586. Supposing you had a great number of collectors, you would have a great number of accounts to be examined by the local authority, would you not, and there your clerical work comes in?—The weekly collection would mean in Kensington twenty-six times the amount per house.

93587. Would the examination of the accounts by the local authority present a great difficulty?—It would mean extra clerks to do it. A good deal depends on how often the return had to be made to the office. It is weekly with us now, and we are paying into the bank three times a week.

93588. Are the collecting and deposit books examined in the clerk's office once a week?—Yes. Of course a good deal depends on these tenement houses and whether you should go now upon every single tenement. Some parishes in London have adopted that, others have not—Kensington, for instance, has not. Our tenement property largely consists of four or five tenements in a house; if those were separately assessed and you had to go and find these people at home all at once, the work would be very largely increased, because so many of them are taken by women, who either help to maintain or wholly maintain the household, and who for three parts of the day keep their particular rooms closed; they go largely to the laundries in the morning, and to other classes of work, such as charing and all sorts of things.

93589. With regard to that class, exactly the same thing would happen to the rent?—But the agent who collects in so many of these cases has an office open where people can go and pay the rent. There is one particular agent in my old district—not the one I collect now—who had a very large amount of this property to collect, and his tenants came largely to the office to pay when they were not caught in the morning when the collector went round.

93590. It has been suggested that with a plan of the kind I have just been mentioning the cost of the plan would be covered by the saving there would be in there being no compounding; should you agree with that?—No, I should think not.

Great increase of collectors which would be necessitated by weekly collection of rates.

Great increase of collectors which would be necessitated by weekly collection of rates.

Question of saving cost by abolition of compounding.

93591. Do you think it would be more?—You see a very large amount of what is put down for compounding in the return by the county council would be covered by empties, which would be allowed for if the compounding were not in force. So it would only be transferred from one column of losses to another.

93592. But you see you are getting rid of that?—Yes, but you will still have your empties to deduct from the total amount of commission, so it would make the amount saved considerably less than appears to be the case now. It is not simply the elimination of that column of compounding allowances, because a large portion of that goes into the "empty" column instead.

93593. It is suggested that there might be a plan under which the rent and the rate were put together, and the owner would still pay to the local authority; have you any opinion upon that plan?—I consider myself that it is entirely to his interest to pay it.

93594. Have you seen some books that have been prepared which contain a column showing the amount of rate and the amount of rent?—I have not.

93595. (*Handing specimen.*) (*For copy see Appendix No. IV. (A), handed in by Messrs. R. V. Broodbank and A. E. Thorp.*) There you see there is a column which shows the rent, a column which shows the borough rate, and a column which shows the weekly total. In the case where the agent collected the whole amount and would pay the rate to the local authority, the advantage of the plan is that the occupier would see that he was paying the rate as well as the rent. You see all this would bring home to the occupier how much he is really paying in respect of the rate, because he would agree to pay the rent together with the rate, that whole amount would be collected from him by an agent of the landlord, and the landlord would pay the rate as at present to the local authority?—I have had some experience with a good class of tenant, what one might call the skilled artisan who lives in a small house. That man is generally satisfied with his rent, and pays as regularly as possible. He is sufficiently well aware of the local conditions and local politics to be perfectly content to pay his rates and rent in one sum. When you come to the man who is living in a tenement, I do not think he would take the smallest interest whatever.

93596. Therefore you do not think that this method would make any difference?—I do not think it would from my own point of view. I have gone rather deeply into the matter generally. I have been many years connected with elections, and naturally many of the voters come to the rate-collector and ask him questions.

93597. Have you had any experience with regard to the collection of rates under the Public Health Act outside London?—No, I have not.

93598. None of you?—(*Mr. Stone.*) No.

93599. There is an arrangement there under which the local authority can, in the case of tenements, require the owners to compound, but it is not of general application, and consequently the local authority can say to owner A: "You shall compound," but it does not follow from that that owner B. will have to compound. Do you see the difference? Whereas under Section 4 of the Act of 1869 only they must require every owner to compound, under the Public Health Act they can require only a particular owner to compound. Would you see an advantage in the plan being extended to the poor rate?—They do not compel every owner to compound under Section 4, do they?

93600. Yes.—He is compulsorily rated; but he does not compound though he is allowed the 15 per cent.

93601. That is the position—that is to say, he gets the allowance of 15 per cent.?—Yes. Now I gather what you mean.

93602. Under the Public Health Act they can distinguish particular cases, and they can say: "We will call upon owner A. to compound, but we will not call upon owner B. to do so, although he has got property which would come under the Act." You see the advantage of that is that where the occupiers are people you are quite sure of getting your rate from, you will not make an arrangement with the owner, but where the occupiers are of a kind you do not feel sure about, you will?—I do not quite see when you come to alter your methods where you could make a difference between a house rated at £20 and one at £21. They are under exactly the same conditions. With regard to the Public Health Act, it has just struck me that this would apply to the houses coming under the £20, which are of course subject to the compounding clauses of the Act; but when you come to a £21 house, which is entirely outside the arrangement, you could not touch that. But the conditions are exactly the same, and the landlord pays just the same. We have scores of them, and really it makes very little difference to him if he finds that he is justly rated for his house. The only time he gives any trouble is when he has had an exceptionally heavy time with losses and runs away and that kind of thing—I mean through people going away without paying. We get as little trouble from the £21 house as we do from the £20 house, and, what applies to one appears to me to apply to the other.

93603. That difficulty rather arises from taking a fixed sum at any point, does it not?—Yes.

93604. (*Chairman.*) As a rule, I suppose when rents are due the landlord tries to recover them by distraint?—Yes, that is his process.

93605. He can distrain under a very simple process, but the local authority can only distrain under a much more complicated process?—That is so. The landlord can go in at once with his warrant. He can go round on the Monday morning, and if the tenant does not pay the rent, he can give him notice and go in.

93606. Could the law be assimilated so that the local authority could distrain as easily as the landlord?—A change in the law can bring in any change in that direction.

93607. What would be the objection to that? I suppose the objection is that at present the landlord has priority as regards the tenant?—Yes, and also one other, namely, that there has always been a feeling that a man on being summoned for rates should show cause before the magistrate why he has not paid, and sometimes poverty is the cause of his not having paid, and it being shown that he is too poor to pay he has the privilege of being discharged of that amount altogether.

93608. Is the summons ever dismissed on the ground of poverty?—Certainly. An amount is discharged from the books in almost every district in every half-year in some exceedingly poor cases.

93609. (*Sir Samuel Provis.*) You bring up a list, do you not?—No, they appear before the magistrates.

93610. Do you not submit a list before the magistrates?—No. Sometimes, afterwards, they go before the committee, and then, of course, there is only the collector; but that is not the case when they come before the magistrates; there they have to put in a personal appearance.

Difference
between
distraint by
landlord for
rent and by
local
authority for
rates.

ONE HUNDRED AND FORTY-SEVENTH DAY.

Monday, 24th February, 1908.

AT SCOTLAND HOUSE, WESTMINSTER, S.W.

PRESENT.

The Right Hon. Lord GEORGE HAMILTON, G.C.S.I.,
etc., etc., etc. (*Chairman*).
Sir SAMUEL B. PROVIS, K.C.B.
Mr. F. H. BENTHAM.
The Rev. T. GAGE GARDINER.
Mr. GEORGE LANSBURY.

The Rev. L. R. PHELPS.
Miss OCTAVIA HILL.
Mr. FRANCIS CHANDLER.

Mr. R. H. A. G. DUFF (*Secretary*).Mr. J. JEFFREY (*Assistant Secretary*).

Mr. WILLIAM FREDERICK HAMILTON, K.C., and Mr. WALTER LLOYD JONES, called ; and Examined.

Mr. William
Frederick
Hamilton,
K.C., and
Mr. Walter
Lloyd Jones.

24 Feb., 1908.

93611. (*Chairman*.) You have been kind enough to prepare for us a paper of a very interesting character, with statistics, which we will take as your Evidence-in-chief, and I will supplement it by a few questions ?—
(*Mr. Hamilton*.) May I say that it is a matter of regret to me that Mr. Carlile is not able to be here. He has been very unwell for some time, and at the present moment he is in the south of France. He knows more about the Church Army than I do. (*The Witness handed in the following Statement.*)

Extent.

1. The following is the experience of the Church Army taking the period of four years and nine months ending September 30th, 1907.

2. *Numbers.*—*Single men.*—The homeless and destitute men dealt with in the Labour Homes numbered from 4,850 in 1903 to 6,522 in 1907. Homeless men provided with food and lodging in exchange for work through the agency of the King's Labour tents, and Receiving Homes, totalled 330,000 in 1905, but the numbers fell to 75,000 in 1907. (*For details see Appendix No. XI. (A) .*)

3. The total numbers above shown as being helped in Receiving Homes and King's Tents, are very considerably in excess of the actual numbers of individuals, owing to the repeated admissions of the same persons, though this was, as far as possible prevented. A fair estimate of the number of individuals dealt with would probably be one-tenth of the total.

4. *Married men.*—These are provided with temporary work at the Labour Depots; the greatest number helped in this manner was in the winter of 1905-1906 when 26,228 men were provided with employment.

5. During the winters of 1904-1905 and 1905-1906, the society could only deal with about 75 per cent. of the married men who applied for work at the London Depots (*For details, see Appendix No. XI. (A) .*)

6. *Classes.*—The single men assisted were drawn chiefly from the unskilled labouring class, and an analysis of trades of the Labour Home inmates for the years 1903 to 1907 inclusive is attached (*see Appendix No. XI. (B) .*) A large proportion of the men entering Labour Homes who profess to be skilled workmen have either little skill or are physically inefficient. Many of the men helped are ex-soldiers. In 1907, out of 1856 admitted to London Homes, 302 were ex-soldiers, 16·3 per cent.; and 22 per cent. of the men who passed through the provincial Homes had been in military service. It is very rarely that any seamen apply for help.

7. *Character.*—*Single men.*—During the period, January 1903, to September, 1907, the total admissions to Labour Homes were 9,597 to London, and 19,936 to Provincial Homes. Of the grand total of 29,533 men, 11,364 (38·5 per cent.) had never been in prison or workhouses; 11,471 (39 per cent.) had been in workhouses, and 6,698

(22·5 per cent.) had been in prison. (*For further details, Character of see Appendix No. XI. (A) .*) 890 men of the total men assisted failed to present admission orders at the Homes; 21 per cent. of such defaulters were workhouse cases. Army.

8. 18·5 per cent. of the men admitted to the London Homes and 7 per cent. in the Provincial Homes failed to satisfy the three days' work test necessary to qualify them to remain as inmates. About 17 per cent. of Labour Home inmates in 1907 were dismissed or absconded. Dismissals are almost invariably caused through drink. The men admitted as a rule worked well.

9. *Married Men.*—The married men provided with work at the Church Army depots have all been recommended by responsible persons, as deserving of assistance. Speaking generally, the married men who are assisted work willingly and industriously.

10. Amongst the married men given day work there are few dismissals, but many do not come after the first day, lacking industry and perseverance. Men of troublesome or vindictive character are rare. Lack of initiative; objection to steady employment; and excessive drinking seem to be the chief faults in the men who seek assistance from the society.

11. Few of the married men helped were members of any trade union or provident society. In the winter of 1905-6 out of 244 men who were employed by the Church Army on the particular day when the enumeration was made it was found that:—

Sixty (24·6 per cent.) had at some time been members of a trade union or a benefit society.

Eleven (4·5 per cent.) were at the time members.

One hundred and seventy-three (70·9 per cent.) had never been members of either.

12. *Period of Duration.*—Large numbers of single men who in the winter apply to the society for help appear to be unable to find employment in the summer. In the winter months the Homes are always filled, and hundreds of applicants have to be refused owing to lack of space. In the summer months the majority of the Provincial Homes are usually from two-thirds to three-fourths filled, and the London Homes generally have vacant accommodation. In 1904 there was an exceptional pressure in summer on the London Homes, and rather more than usual in 1905 and 1906. The Provincial Homes have also been more used in the last three years than formerly.

13. With regard to the married men, the pressure was greatest in the winters of 1904-5 and 1905-6, both in London and the provinces. Last year showed a great reduction in the numbers of married applicants. Assistance is only given to married men during the winter months.

14. The officers in charge of the Depots for married men say that about 30 per cent. of the men have presented themselves in successive winters, and as far as can be gathered quite 90 per cent. of the men are

general labourers, and about half of the latter percentage have not been in continuous employment for several years.

Causes.

15. The majority of applicants are unskilled workers and their average earnings are small. Even when there is a willingness to make provision against unemployment the earnings do not permit of it.

16. However industrious and deserving the unskilled worker may be, a period of unemployment with the consequent lack of nourishing food and the worries attendant upon such a condition of life, soon reduces the physical efficiency of the man; this, with the increasing shabbiness of his clothing makes it more and more difficult for him to obtain employment, and eventually he swells the rank of the chronically inefficient and very casual worker, and, if married, his wife and children have to work to maintain him.

17. Taking the single men in the Labour Homes, the following were the causes of unemployment of men admitted in 1906-7, statements having been verified by reference to employers:—

Why Unemployed.	London Homes. Per cent.	Provincial Homes. Per cent.
Through fault of worker	671—36·2	1,482—31·8
Through illness of worker or the failure of employer	385—20·7	713—15·3
Through slackness of trade	800—43·1	2,471—52·9

Effects.

18. The effects of distress due to unemployment are:—

(a) The men and their families physically deteriorate owing to lack of proper food and clothing.

(b) The competition for all casual work by the large numbers of the unemployed has a grave tendency to reduce the wages of unskilled workers.

(c) Unemployment causes deterioration in the skilled worker, in habits and ability. Employers have often called attention to the fact that men known as good workmen develop a distaste for steady work after a long spell of unemployment. Church Army officers working amongst the married men, report that about half of those who apply for temporary work appear to have lost all ambition or hope of permanent employment, and have grown quite contented to depend upon casual work for short periods, and they attribute this to the gradual deterioration of the men from unemployment.

The Church Army.—Men's Social Work.

19. The Church Army is an incorporated society. The object of its Social Work as described in Paragraph 3, Section C, of its Memorandum of Association, is generally to promote the welfare of the poor and the relief of distress by combined social and spiritual agencies."

20. The Social Work of the Church Army deals with married men and single men in the following manner:—

(a) Married men recommended as needy and deserving help are provided with day work during the winter at labour homes or depots. They are paid piece work rates for the work done, and an addition is made to the earnings, proportionate to the number of persons dependent upon the worker; this addition equals from 50 to 100 per cent. on the earnings.

(b) Single men are dealt with at the labour homes, the receiving homes, and at the King's Labour Tents; and some are sent to the Church Army Farm Colonies to be trained for Emigration.

21. *Married Men's Work.*—The number of men helped last year was 18,914, who between them received 112,994 days' work, and each man on the average obtained six days' work. £11,423 were paid away in wages, and the sales of the produce of the men's labour realised £7,134.

22. The wages paid at special depots included a bonus of from 50 to 100 per cent. over and above the trade rate of wages, proportioned according to the number in the workmen's families; the maximum amount a man was allowed to earn, including bonus, was 3s. 4d. per day in London, and 2s. 6d. in the provinces.

23. £3,000 were paid away in wages at various provincial homes, and a bonus was paid in addition but was not provided out of Church Army Funds, and is not included in the before named sum of £11,423.

24. No charges were made to the fund for working expenses, rent, etc., where the depot was attached to a Labour Home, and in these cases the work of supervision was voluntarily undertaken by the officer of the Home without extra remuneration.

25. There was a loss of about £5,400 on the work, partly accounted for by bonuses amounting to £4,000; partly by excessive waste arising from lack of skill, and partly by the extra cost of delivering all firewood by trucks rather than by van, in order to provide labour for more men.

26. *Labour Homes.*—Objects:—

(a) To provide temporary work for the unemployed homeless and destitute man of good character, where he will be able to feel that by his own exertions he is earning food and lodging until such time as permanent employment can be obtained.

(b) To provide a refuge for the destitute man of weak or vicious character, where he will be free from temptation, and subject to good moral and religious influences, and where he will be compelled to cultivate habits of industry, cleanliness, and self-restraint.

27. The qualifications for admission are:—

(a) Destitution.

(b) Freedom from such infirmities as would prevent a man earning his livelihood in the ordinary course.

(c) Willingness to work, and to abide by the rules and regulations.

(d) Must not be under sixteen years of age or over forty-five.

28. The limit of stay is four months, and each man has to undergo a three days' test of his willingness to work and capability of working, before he is entered on the books.

29. Every man on entering the Home signs an agreement, a copy of which is attached (*see Appendix No. XI. (C)*).

30. In order to put a premium on industry, men are paid at piece-work rates. A sum of 6s. per week is charged each man for his board, lodging and washing; this sum is deducted from a man's wages weekly. Of the balance, he is allowed to draw 1s. per week pocket money, the remainder being reserved for him until he leaves the home.

31. This system of reserved pay tends to ensure a man's good conduct, and to keep him in the Home sufficiently long to enable him to derive benefit from the home life, and the moral and religious influences of his environment. Under the agreement the inmate is liable to forfeit his reserved pay in the event of misbehaviour, idleness, etc., or should he leave without the permission of the officer in charge; very little money is forfeited under this rule, the sum amounting only to about £30 per annum, out of a total of nearly £25,000 per annum paid in wages. The money so forfeited is devoted towards the emigration of deserving Labour Home inmates.

32. Attached is a copy of the rules and regulations of the Home (*see Appendix No. XI. (D)*). It will be seen that amongst other things the men have to attend family prayers, morning and evening, and Divine Service twice on Sundays. They are free to go out after 6 p.m., but must return to prayers at 9.30 p.m. Every man must be an abstainer whilst an inmate.

33. The last statistics available are for the twelve months ending September 30th, 1907. During this period 6,522 men passed through the Labour Homes: 1,334 of these were ex-soldiers, and 4,303 of the total had been in casual wards, workhouses, and prisons.

34. The average ages of inmates of the Labour Homes last year were as follows:—9 per cent. were under twenty years of age; 33 per cent. were between twenty and twenty-nine; 35 per cent. were between thirty and thirty-nine; and 23 per cent. forty years and upwards.

35. *Results.*—The number who passed the three day test was 5,864, and 4,961 of these passed out of the Homes: 40·5 per cent. went to situations or were restored to their friends, or emigrated; 42·5 per cent. left of their

own accord to seek work, after an average stay of fifty-one days, during which period their conduct and industry were satisfactory; 17 per cent. were dismissed as unsatisfactory. For averages for a period of four years and nine months (see *Appendix No. XI. (A).*)

36. The Homes are not financially independent of each other, but have one common fund. The Church Army organises the labour and disposes of its produce, meeting the deficiency out of funds given for the purpose by the philanthropic public.

37. The work done in the Homes consists almost entirely of wood-chopping. The sales of the produce of the men's labour for the twelve months realised £50,248; the receipts from board and lodging came to £15,611, and from other sources £1,196. The cost of materials, working expenses, and maintenance of the men came to £76,231, resulting in a loss of £9,176.

38. It may be of interest to note that more than £11,000 were paid away to the men in cash; without this the Homes would have shewn a profit of about £2,000.

39. The aggregate number of days' work done in Labour Homes was 226,286 (including 37,063 days to married men at various provincial Homes) and the loss works out at 9½d. per man per day, a cost of 5s. 6½d. per week, or not more than £14 per year, including all rent, management, etc., and the £11,000 referred to as having been paid away.

40. The average earnings of the men were 12s. 9d. per week.

Wood-chopping in Labour Homes.

41. If the Labour Homes were institutions trading in the ordinary way, very few of the inmates would be given employment at wood chopping. It is work which requires considerable skill and training; a good wood chopper could easily earn 24s. per week, and he would make 6,000 13-inch bundles out of a fathom of wood (216 cubic feet), whereas Labour Home inmates barely average 5,000 from a similar quantity of wood. The shortage is due to excessive waste arising from lack of skill.

42. The bulk of the firewood is delivered by hand in order to employ more labour, and this adds considerably to the cost. If it were desired to trade for profit the Society would saw all its wood by power, and chop and tie the sticks by machinery, and a considerable saving could be effected by having all the London trade carried on at one depot.

43. The firewood produced is sold at trade rates, and in the majority of cases direct to the consumers.

Complaints against Church Army's firewood business.

44. It has been stated that Church Army methods of production enable the Society to undersell the trade but as its object is to provide as much labour as possible, it is very evident that the finished articles do, and must cost considerably more than they would if produced in the ordinary way of trade.

45. Two officials of the Firewood Choppers' Trade Union waited upon the Church Army in the autumn of 1906. They were asked whether they complained of the Society underpaying its men or underselling the trade; the answer to both questions was in the negative. The object of their visit was to request the society to abandon wood chopping as an industry.

46. It has been urged that the manufacture of firewood by the Society may affect the employment of other wood choppers. This is quite true, but whatever work a man is employed upon the produce of his labour will compete with someone or other.

47. The average number of inmates in each Labour Home is twenty-five. The institutions are purposely kept small in order that the officer and his wife may get to know each man intimately, and so have an opportunity to encourage the unfortunate and advise and guide the weak and vicious in their efforts towards reformation.

The King's Labour Tents.

48. *The King's Labour Tents.*—These are opened only in very severe weather and when the Society has not sufficient accommodation for all the applicants for admission to the Labour Homes.

49. Each man receives a pint of soup and a piece of bread when entering, and a similar meal when work is finished, and he is also given an order for a bed in a common lodging house. The tents are worked night and day, from the time they are opened in the early winter till the end of March.

50. The loss on this work exclusive of donations, was £1,541 for 43,422 cases, equal to a cost per head of 8½d., after allowing for the value of the work done and includes all cost of management, etc.

51. *Receiving Homes.*—The Receiving Homes provide temporary accommodation for homeless and destitute men on the same conditions as the Labour Homes, but the period of stay may be limited to three nights.

52. Each man on admission is compelled to take a bath and his clothing is fumigated, and he sleeps in a bed provided with the usual bedding. He works from 6 a.m. to 6 p.m., and is provided with four good meals during the day. He is free to go out after breakfast the morning after his admission, or he may stay for three days, working in return for board and lodging. The net cost for 1907 was £580 for an aggregate of 75,380 days, equal to a cost of 1½d. per man per day.

The Church Army League of Friends of the Poor.

53. *Aim.*—To bring rich and poor into personal touch, and to give such assistance to deserving families as may permanently improve their position.

54. *Methods.*—To give each member of the League the name of one poor family to whom the member is expected to act as a real "friend," visiting the house, making the acquaintance of the wife and children, finding out the causes of their poverty, procuring work for the husband if unemployed, helping with sympathy, wise counsel, and where possible with practical assistance to aid them to overcome their difficulties. In this work members use all the many organisations of the Church Army: Labour yards, food tickets, hospital and nursing letters, Fresh Air Homes for the Sick, training for the young, Labour Homes, and emigration.

Remedies.

55. *Emigration.*—As there have been in recent years such large numbers of physically efficient men of good character quite unable to find employment in England, the Church Army has considered emigration a most successful and ready means of permanently benefiting them, and at the same time of lessening the competition in the home labour market.

56. The Society sent out to Canada in 1906, 3,000 persons, and in 1907, 1,595 persons, of whom £24 were men, 22½ women, and 533 children. The men readily found employment, and very few of them proved unequal to the work demanded of them. The few cases of failure were men whose character did not bear out the statements of the persons by whom they were recommended.

57. The Society assists in the emigration of selected cases who may be unable to raise sufficient funds to pay their own expenses.

58. Each applicant has to be well recommended and to furnish references as to good character and suitability for emigration. The cost of passage and railway fare the other side is advanced by the Church Army, and an undertaking is received from the emigrant that the money so advanced will be refunded by him within three years after his arrival in Canada.

59. The Society has its own officers at Montreal, Toronto and Winnipeg, and emigrants are met on arrival and despatched to situations obtained for them by the Church Army agents, or are maintained until situations are otherwise secured.

60. £1,215 has been refunded by emigrants for fares and advances made to them.

61. *Appendix No. XI. (E)* gives the occupations of the men emigrated in 1907.

62. *Labour Farms.*—The Society for some time owned two farms, one a freehold of 750 acres of land in Essex, and one leasehold of 150 acres in Surrey. The latter has been given up because there is ample room on the recently acquired Essex farm to do all the work of the Society for some years to come. A short statement of the working of the farms is appended marked F. (see *Appendix No. XI. (F).*)

63. Considerable success has attended the use of these as training ground for men preparing for emigration, but little has been done for fitting men for agricultural employment at home.

64. The effect of outdoor life upon the physical condition of the men has been excellent, but in the present state of the agricultural market only those of the highest skill can find continuous employment.

65. From the Society's experience, land colonies with unskilled labour can hardly be expected to be self-supporting; but the men, after a short training, could earn a large proportion of the cost of their maintenance. On a small scale the cost of management and supervision is heavy. On a large scale, it is impossible to provide work on the farm in bad weather or at certain times of the year, and the spells of idleness so caused make the cost heavy, and have a bad effect upon the discipline and industry of the men. Some industry that can be followed when out of door work cannot be given, is essential.

66. The men employed on the farm have been roughly taught according to the time of the year and the period of their stay, ploughing, sowing, harvesting, hedging, ditching, draining, etc., and to erect rough out-buildings. Most of these men have been emigrated by the Church Army.

67. The work of the Church Army proves that a very large proportion of unemployed are able and willing to work. But there are thousands who are, from simple lack of nourishment, physically incapable of hard work, and thousands more are unwilling to work if it can be possibly avoided. The former could and might be helped if the latter class were out of the way. Idlers seriously hamper the efforts of societies like the Church Army, and it would be a general benefit to the community if they were committed to penal labour colonies for an indeterminate period.

68. The Church Army asks the Commission to consider the suggestions contained in the attached paper (*Appendix No. XI. (G.)*) for a reorganisation of the Poor Law system and the establishment of penal and voluntary colonies to deal with all classes of unemployed men.

69. In the opinion of the Church Army considerable restriction should be placed on the immigration of aliens, until such time as the distress from unemployment has been rendered less acute than at present.

For the proper organisation of labour, it seems essential there should be a national employment bureau; that there should be telegraphic or telephonic communication between all depots of the bureau, and, if possible, a daily sheet should be issued giving full details of the demand and supply in the labour market. Some arrangement also appears desirable for the cheap conveyance by rail of men migrating to fresh situations, and for the recovery of the cost of removal by deduction made by the employer from the man's earnings.

93612. (*Chairman.*) In Paragraph 2 of your Statement, you give the number of homeless and destitute men dealt with in the Labour Homes; the Labour Homes give a more or less lengthened and permanent reception to the persons who go through them, as I understand?—Yes.

93613. And they are quite distinct from your shelters?—We never call the Homes to which you refer shelters; we call them Receiving Homes. They are quite distinct from the Receiving Homes, and they are quite distinct from the King's Labour Tents. The King's Labour Tents are only resorted to when there is special distress.

93614. In addition to the Labour Homes, the Receiving Homes and the King's Labour Tents, you have certain Labour Depôts, have you not?—For married men, yes. Those are also for periods of special distress. We take at the Labour Depôts married men of good character who have been recommended to us and who are in distress, and we provide them with work until such time as they are able to find employment.

93615. May I take it that the four branches of this part of your work would be Labour Homes, King's Labour Tents, Receiving Homes and Labour Depôts?—Yes. In addition to those, we have lodging-houses where men are able to get lodgings at a cheap rate. There we do not have labour done. The man pays 6d. for his bed, and he gets superior accommodation.

93616. Do you give him an order for those lodging-houses?—No. Instead of going to a common lodging-house, he can go to a superior lodging-house, where he pays for his accommodation.

93617. Has he got the means of paying for his accommodation from working with you?—He may have done so, but not necessarily.

93618. The persons you have had to deal with mainly are the unskilled labouring class?—Yes, substantially. May I say with reference to our Labour Homes that we have Labour Homes scattered over England, and then we have one in Edinburgh, one in Glasgow, one in Dublin, and one in Belfast. The Labour Homes in the provinces are managed by local committees, who interest themselves in the men and try and find them situations. These local committees look after the men, and devote a great deal of time in endeavouring not only to provide work for them, but to reform those who need reformation.

93619. Will you please look at Appendix B. (*see Appendix No. XI. (B.)*) which gives the classification of the inmates or occupants of the Labour Homes. There does not seem to be much difference in classification between those in London and those in the provinces?—No, there is not in classification.

93620. Do you think you can rely, as a rule, on the statements that are made to you by the inmates; are they fairly reliable?—I think they are. The men have no inducement to make untrue statements, because one is trying to find them work in the particular branch that they know.

93621. It has been suggested to us, I think, by previous witnesses that there is a double tendency which rather tends one to counteract the other—there is a tendency on the one hand for a certain class to make out that they have fallen from rather a better state, and there is a tendency, from shame, of another class to conceal what their original position was, and to describe themselves as general labourers?—Mr. Lloyd Jones, who is the assistant secretary of the Church Army Social Department, says that the references are taken up and inquiries are made, and that the descriptions in this table are verified by reference to the employers.

93622. Do you find that the information given is generally accurate?—(*Mr. Lloyd Jones.*) If the information is not verified, the Society does not consider itself justified in allowing the man to remain. The man is told that as long as he explains his past history, it does not matter what it has been, but that if he attempts to mislead the Society he will not be accepted.

93623. So you think that we may accept this as a fairly accurate classification?—(*Mr. Hamilton.*) Yes, I think so.

93624. A great many of these persons are not only of little skill, but a great many of them are what you would term physically inefficient, I presume?—Yes.

93625. That is to say, they belong to the class who, in time of prosperity would be the last to be taken on, and in time of adversity the first to be discharged?—Yes. Part of the physical inefficiency results from the fact that they have gone down and down. We have found when we have taken especially the younger men from London who were physically inefficient, and put them on to farm colony work, that working in the open air, and good food and good lodging for six or seven months, makes a wonderful difference to their physical efficiency.

93626. Then their physical condition is not due so much to inherent defects in physique as to want of proper nourishment and occupation?—Partly that; it is partly of course due to inherent defects of physique.

93627. You have a considerable number of ex-soldiers coming to you, I understand?—Yes, a great number.

93628. You get their characters, I suppose?—Yes.

93629. What are their characters?—I can speak from my own personal knowledge. I act as secretary to the Emigration Department of the Church Army, and very many of the cases come personally through my hands. We find that the ex-soldiers who apply for emigration have nearly all of them good characters. Mr. Lloyd Jones has prepared for the Commission a Statement giving you figures for three groups: (1) Workhouse and casual ward cases; (2) ex-soldier cases; and (3) ex-prisoner cases. That Statement shows that the number of ex-soldiers admitted for the year ending September 30th, 1907, which is our financial year, was 1877; out of those 123 failed to pass the work test, thirty-five were transferred to other institutions, 112 remained in the homes for some time, and 1607 passed out. Of these

Question of credibility of applicants to Church Army.

Physique of men assisted by Church Army.

Character of ex-soldiers applying to Church Army.

Mr. William 1,607, the good were 456, the doubtful 934, and the bad Frederick 217. (*Handing in Table, see Appendix, No. XI. (H.)*)

Mr. Hamilton, 93630. I think from those figures we may fairly assume that you have got a large proportion of those men who were Mr. Walter Lloyd Jones, bad bargains in the army?—Yes.

24 Feb., 1908.

Seamen applying to Church Army.

93631. You say it is very rare that any seaman applies; do you mean by seamen a man who has been in the Royal Navy, or a man who has been in the Mercantile Marine?—Both. I remember seeing an able seaman in the King's Labour Tent, and asking him how it was he was there. He said he could not get work. I had my doubts about that, because I knew at that time that in Southampton the Union Company were anxious to find sailors.

93632. That is your experience even as regards the Mercantile Marine?—It is very rare that any seaman comes at all. I think one reason is that the mercantile seaman is a very handy man.

93633. (*Mr. Gardiner.*) When you are speaking of seamen, do you include firemen?—I do not think we have any firemen. (*Mr. Lloyd Jones.*) When we say "seamen" we do not include stokers. (*Mr. Hamilton.*) I was thinking of A.B.'s and ordinary seamen.

93634. (*Chairman.*) And of the men in the Mercantile Marine?—Yes. This man that I spoke to had been in the Navy.

93635. In Paragraph 7 of your Statement, you deal with character. Of the 29,533 men dealt with between January 1903, and September, 1907, 38·5 per cent. I see had never been in prison or in a workhouse, 39 per cent. had been in a workhouse, and 22·5 per cent. had been in prison?—Yes. (*Mr. Lloyd Jones.*) I should like to say that in the table I have just handed to you (*Appendix No. XI. (H.)*), giving a summary of the workhouse and casual ward cases, the numbers of ex-soldiers and the ex-prisoners, will not agree with the figures in the Statement Mr. Hamilton has previously put in. The figures that are contained in the latter Statement are confined to the classes in the Labour Homes; this table also includes cases dealt with in other ways.

93636. I think we may assume that the persons you have had to deal with were, to use your own expression, a rather rough lot, because taking those who had been in prison and in workhouses, I see they comprise 61 per cent?—(*Mr. Hamilton.*) Yes.

93637. Passing on to the married men, you have Labour Depots for those, you said?—Yes, Labour Yards and Labour Depots, which are only used in the winter when there is extra distress. The principal industry for those Labour Yards is wood-chopping. With regard to the married men we adopt a different rule. We put them on piece-work, and we add bonuses ranging from 50 per cent. to 100 per cent. according to the number of their family. No man is allowed to earn more than 3s. 4d. per day, but he ought to earn that easily in the day with the bonus.

93638. Are these Labour Depots confined to married men?—Yes. It is done with the purpose to try and keep a home over the men's heads, because if they once lose all their furniture, they very soon drift into the ranks of the permanently unemployed.

93639. In these cases, nearly all your dismissals were due to drinking, I see?—Yes.

93640. You have found that a limited number of these persons have been members of a trade union or a provident society?—Yes. Might I explain that? There was a separate census taken of the married men who were in the labour yards on a particular day. That was taken in the winter of 1905-1906. There were 244 men there, and in Paragraph 11 I give the percentages of the persons who had been members of a trade union or a benefit society, or who were at the time members.

93641. I see that eleven out of the whole number were members at the time?—Yes.

93642. Then in Paragraph 12 you deal with the period of duration; to whom does that apply?—That applies to single men. The Labour Homes are not so full in summer as they are in winter, because it is then easier to find employment, and there is more employment offering. At that time, too, we have no depots open for the married men.

93643. What is the period of detention in the Receiving Period Homes—three days I think it is?—They are not entitled to remain for more than three days, but as a matter of fact, they do remain frequently for much longer periods, especially if there is a chance of permanently helping the men. We reserve the right to send them away at the end of three days, and to say to them, "We only have you here for three days;" but many men are kept for longer periods.

93644. In Paragraph 14 you refer to the officers in charge of the "Depots" do you include there the Receiving Homes?—No.

93645. You say that those officers estimate that about 30 per cent. of the persons you have had to deal with have come for relief in successive years?—That is so. This paragraph refers to married men.

93646. They also say that about 90 per cent. are general labourers, half of whom have not been in continuous employment for several years?—Yes. (*Mr. Lloyd Jones*) That 90 per cent. is 90 per cent. of the married men who apply at the Church Army Relief depots in the winter time for assistance; that is the statement of the officers, etc., dealing with married men.

93647. (*Mr. Gardiner.*) And I suppose the words "half of them" means 50 per cent. of the 90 per cent.?—(*Mr. Hamilton.*) Yes; about half of the 90 per cent. have not been in continuous employment.

93648. (*Chairman.*) Now going on to the causes, I suppose the great majority of these persons are unskilled, workers, whose work is intermittent either from their being casual labourers, or from their being connected with some seasonal or periodic trade?—Yes. A casual labourer in London has a much greater field for employment than a casual labourer in the country. We call them casual labourers, but in London they are labourers who are always taking different jobs; they are not always working for the same people.

93649. That is your experience, is it?—Yes.

93650. When you say they are not always working for the same people, do you mean that they are working at a different class of job?—No. A dock labourer would work for different employers, but he would still work as a dock labourer.

93651. And the same would apply to the building trade, I suppose?—Yes.

93652. That is, the labourers in the building trade would stick to that trade?—Yes. As a rule, a bricklayer's labourer prefers working as a bricklayer's labourer, but we sometimes are able to find for men, who have never done any work in connection with the building trades, employment as builders' labourers.

93653. Have you any idea at all as to whether a large proportion of these persons who come to you are dock labourers?—I do not think they are. Of course the dock labourers apply in the neighbourhood of the docks.

93654. A very considerable proportion of the general labourers would be connected with the building trades, I suppose?—Many would, no doubt, especially in the last two winters, when the building trade has been very bad.

93655. We have had very much evidence as regards the causes and effects of unemployment, and what you say corroborates what we have already received. You state that you think "The competition for all casual work by the large numbers of the unemployed has a grave tendency to reduce the wages of unskilled workers"?—I will tell you why I think so. In Bermondsey, which I know something about, one finds that the wages of the casual labourers—that is of the labourers generally—are eked out in times when they are out of work by the earnings of their wives and daughters. In Bermondsey, many girls are employed in the factories, and, of course, they are employed at very cheap rates. When you have a great number of women and girls working, that tends to reduce the price of labour everywhere.

93656. Now coming to the paragraphs in which you especially deal with the Church Army, you state that it is an Incorporated Society?—Yes. It is incorporated under one of the Companies Acts, which allows an association formed for charitable or religious purposes to register without the word "limited" by the licence of the Board of Trade.

Character of men assisted by Church Army.

Labour Yards and married men's work.

Dismissals through drunkenness.

Trade unionists among men assisted by Church Army.

Duration of unemployment.

Number of men applying for relief in successive years.

Casual labourers.

The competition for all casual work and its effect on wages.

The Church Army—balance-sheet and financials.

93657. Do you publish a balance sheet?—Every year we publish very full accounts.

93658. I suppose you are dependent on the proceeds of the work you give and on subscriptions?—Yes.

93659. Have you got any endowment?—We have invested funds, but no endowments, because we can use them for capital purposes. One is obliged to be very careful about saying we have an endowment, as we may have the Charity Commissioners interfering.

93660. What sort of amount of subscriptions do you get?—I am treasurer, and last year in legacies, donations, subscriptions and collections, we got roughly between £75,000 and £80,000.

93661. That is including subscriptions?—Yes; I call all those voluntary contributions.

93662. And legacies?—Yes. Lately we have had some large legacies; but I am taking now an ordinary year.

93663. Would that be about the average for the last three years?—Yes, I should think so. I find that the average for the last 3 years has been £77,000.

93664. You did not send us a balance sheet with your papers, did you?—No, but we have a balance sheet which is just now being audited. I hope the audited accounts will be signed to-day. I will send to the Commission as soon as possible a full copy of the accounts of the Church Army, which will show exactly our voluntary contributions and everything else relating to our accounts (*see Appendix No. XI. (I)*).

93665. As regards the net expenditure, what relation do your subscriptions bear to the sales of work; would they be about half and half?—May I point out that the subscriptions and donations I have been talking about are for the whole work of the Church Army, much of the work being religious. Our Labour Homes really cost us very little; (For cost of Labour Homes (*see Appendix No. XI. (J)*) the social part of our work is a very inexpensive part of our work.

93666. The subscriptions carry on your general work?—Yes. The Receiving Home at Banner Street, I may say, which is our largest receiving Home, is self-supporting.

93667. Really! And what about your Labour Homes?—We paid the men in cash between £11,000 and £12,000 for the year, so if we had kept the money which we paid away to the men in wages, we should have been self-supporting.

93668. There is a paragraph here, I think, that throws light on that?—Yes, Paragraph 37: "The work done in the Homes consists almost entirely of wood-chopping."—I am talking there about the Labour Homes, and I am not talking about the married men's Relief Depots or the Receiving Homes. "The sales of the produce of the men's labour for the twelve months realised £50,248; the receipts from board and lodging came to £15,611"—that is what they pay themselves; we deduct 6s. a week for their board, their lodging, and their laundry. Receipts from other sources amounted to £1,196. "The cost of materials, working expenses, and maintenance of the men came to £76,231, resulting in a loss of £9,176.

93669. Then you say that you pay the men certain bonuses?—Yes. We paid £11,000 to the men in cash, and without that the Homes would have shown a profit as I say, of about £2,000. In Paragraph 39, I state what is the loss per man per day.

93670. Going back to the Labour Homes, they are nearly all situated in towns, I suppose?—I think they are all in towns, speaking from memory.

93671. Have you any place in the country, any farm colony, for instance, where you send people to?—We have one farm colony now, but we did have two. We have one at Hempstead in Essex.

93672. You make all your profit out of wood-chopping, do you?—Yes, that is we should make a profit of £2,000 if we did not pay £11,000 in wages to the men.

93673. Perhaps you are aware there have been great complaints of your competing with the wood-choppers?—Yes, I know.

93674. They have been here and put in a Statement?—Of course, it does compete with them, but we do not undersell them, and as we employ so much more hand labour, it costs us more to produce than it does them. We have tried several experiments, and we find that wood-chopping is the most economical form we have of helping the men.

Mr. William Frederick Hamilton, K.C., and Mr. Walter Lloyd Jones.

24 Feb., 1908.

93675. I suppose the real difficulty is this: That whatever you put the people to, you must more or less come in competition with somebody?—I think so. We cannot found a new industry; we have not the capital, and it would not be right. If you could found a new industry and provide work which never was done before, and were able to get rid of the produce of that work, you would, of course, compete with nobody, except that you might raise the price of labour a little.

Wood-chopping. Competition of Church and Army in firewood trade.

93676. The same difficulty would occur, no matter what the class of work was to which you put your people provided it had to be, as it probably would be to a certain extent, subsidised by subscriptions?—I think so.

93677. Why did you select wood-chopping; do you know?—Because we found that in other things we lost so much money. For instance, we tried basket-making at the Southampton Labour Home, because that is near the centre of the strawberry growing country, and we thought we could make strawberry baskets, I will not say with a profit, but at any rate without losing much. After trying it for some time, we found we were undersold by the strawberry baskets that came from abroad, which were made with cheap labour and where they had an abundant supply of osiers and other material. So that was abandoned. We could not compete against them as it cost so much and we had to give it up.

Failure of Church Army's attempt at basket-making.

93678. Now let us go on to the King's Labour Tents. Those, I understand, are only started in very severe Labour weather, and I see that a man receives a pint of soup and a piece of bread when entering. What work are these men put to—is it wood-chopping again?—Yes.

93679. Then I see that a man gets a similar meal when the work is finished, and that he is also given an order common for a bed; is that what you were alluding to just now?—These orders are given for common lodging-houses.

Orders for common lodging-houses.
